1. One set is similar to, if not identical with, the bizarre objects: the woman with freckles and red hair was felt by him to be part of his personality, a 'thing', an undigested object. This and similar objects, or fragments of objects, can be brought together, but cruelly to each other; or in combination, dangerously to him. They are also useless for dream thoughts, for storage as memory, or, as Freud said, for notation, and therefore no good for unconscious waking thinking. Furthermore, they are feared as evidence of the disintegration, under destructive attack, of his personality. They are feared as hostile to him because they have been destroyed so that they now exist only as fragments and not as wholes. They are felt as an internal or external *social* conscience of a hostile and murderous kind because of what he has done to them.
2. The second set, the *α*-objects, the red-haired, freckled woman, are felt to be visual images and to be capable of association. But it is felt that these visual images, by virtue of their suitability for dream-thought, make imminent the depressive position. This carries with it the danger, the certain danger, of the emergence of a murderous super-ego ('brutal'); and also the problem of the onset of the depressive position, namely depression, a synthesis that reveals the enormity of the destruction already done, and the illimitable vista of the yet unintegrated elements that have *not* been synthesized.

[Undated]

> Let us endeavour to see things as they are, and then enquire whether we ought to complain. Whether to see life as it is will give us much consolation, I know not; but the consolation that is drawn from truth, if any there be, is solid and durable; that which may be derived from errour must be, like its original, fallacious and fugitive.
>
> Samuel Johnson,
> in a letter to Bennet Langton, 21 September 1758
> (*Boswell's Life of Johnson*, 1934, vol. 1, p. 339)

I assume that the permanently therapeutic effect of a psychoanalysis, if any, depends on the extent to which the patient has been able to use the experience to see one aspect of his life, namely himself as he is. It is the function of the psychoanalyst to use the experience of such facilities for contact as the patient is able to extend to him, to elucidate the truth about the patient's personality and mental characteristics, and to exhibit them to the patient in a way that makes it possible for him to entertain a reasonable conviction that the statements (propositions) made about himself represent facts.

It follows that a psychoanalysis is a joint activity of patient and analyst to determine the truth; that being so, the two are engaged – no matter how imperfectly – on what is in intention a scientific activity.

But not at all, it might be objected by a painter; why should the two not be engaged in an artistic activity? An analysand who is a painter or a musician may indeed be hostile to the dominant role played by speech in analysis, and the hostility may include amongst its complexity of component strands some that could be related to a belief in the intrinsic superiority of art to science.

I shall exclude this problem because I wish to limit this to that aspect of the psychoanalysis which can be made explicit verbally – although I may on some other occasion investigate the implications for psychoanalysis of the artist's claim to be concerned with truth,

including the claim of the artist in words. I content myself with the observation that the analyst is only concerned with the truth of a particularly limited area of knowledge.

If a psychoanalysis is indeed a scientific activity, it should, in proportion as it is properly conducted, display logical features common to all the sciences, and in so far as its conduct is imperfect will display phenomena of illogicality, irrationality, unscientific conduct, some of which are already well known to psychoanalysts, and all of which must be present in every attempt to establish facts scientifically – no matter in what field of human knowledge, and no matter how great a degree of success is obtained in achieving a properly scientific conduct of the investigation. The awareness of the pressure of these illogical elements has led those whose work forces upon them the recognition of the need for the establishment of the truth, to define rules of such a kind that obedience to them might lead to the exclusion of these irrational elements. The wish to establish effective rules of this kind has contributed much to the adumbration of a scientific method and to its continuing discussion and formulation.

The discussion may for convenience be regarded as centring on what is, or should be, the scientific method, and on what are, or should be, the aims of those who employ such methods. One attitude expresses itself in a need to declare what the rules or laws are that have to be obeyed if a scientific investigation is to be carried out. Indeed, if there is to be a scientific method, it is the rules of the method which constitutes the qualities that make it appropriate to call it a method. But why should there be a scientific method at all? Why not call it 'science'? The answer is twofold:

1. In the pursuit of a science, thought has to be translated into action; something has to be done. And it is this fact, often unrecognized, that limits the freedom of thought and imposes the need for rules to give effect to the limitation. This same feature, the need for action as an essential characteristic of scientific activity, constitutes the main source of all the differences that have been noticed to exist between science and mathematics. Science is about something, purely by virtue of the fact that something has to be done, that thought has to be translated into action, and it is the action into which it has to be translated that the scientific thoughts are about. But mathematics do not have to be translated into action;

the mathematician can elaborate his system of logically necessary propositions, but it is not about anything unless someone chooses to use it as a subsidiary to his scientific system – and even so it cannot with reason be said even then to be 'about', say, chemistry or physics or a bank balance, any more than a gearbox can be said to be 'about' a motor car. But though the very nature of scientific method (as intrinsically bound up with the translation of thought into action) exacts the promulgation of rules, this is not the only element from which the pressure to regularize springs.

2. I have already spoken of the phenomena of illogicality, irrationality, and unscientific conduct that obtrude in human activity – as anyone, even without psychoanalytic experience, knows. These elements, whether they are discerned in the observer or in the environment, arouse pain usually of the mental variety known as anxiety, and in certain people impel them to embrace a scientific outlook and to give effect to their cravings in the production of a scientific method with the characteristics I have adumbrated, and designed to produce results of a kind that seem to earn for themselves the title, 'laws of nature'. The use of the term, 'law', like many others employed, is intended to satisfy two classes of conditions. First, the emotional state of the individual who wishes to foster, against his sense of internal disorder, a feeling of predictability and memorable experience (and the stability that flows from a conviction of these two) and a belief in the existence externally of a similar situation – one that is felt to support experience remembered and to develop in a manner that is predictable. The second class of conditions belongs to what common sense declares to be a world independent of the observer which has characteristics of its own, notwithstanding any that may be attributed to it by the observer or any that might, through oversight or otherwise, be subtracted from it. Amongst these characteristics there may be relatedness of one element to another, either of the kind adumbrated in the so-called scientific law or of some other to which the scientific law is an approximation.

But here I have introduced the idea that there might be kinds of relatedness, and this will certainly need very thorough investigation by anyone whose work is so closely concerned with relationships as is the psychoanalyst's. It is a matter I shall investigate further when I

discuss the function of words as hypotheses. For the present I wish to emphasize the significance of the two classes of conditions to which the scientific statement must apply: its significance as a member of the class of elements associated with the mentality of the beholder, and as a member of the class of elements assumed by common sense to exist independently of the observer. It is this that leads me to say that there is a sphere of human thought and activity that can be embraced by the title, 'The Science of Psycho-analysis and the Psycho-analysis of Science'. It is within this area that this discussion finds its subject. The subject has no beginning or end, and it is therefore accidental that I commence by stating two hypotheses, both possessing the high degree of generalization common to high-level hypotheses that are being employed as premises in a scientific system.

In accordance with my aim to attempt to conduct a psychoanalysis on scientific principles, I propose the following hypotheses, which are to be the premises for further hypotheses.

Hypothesis 1. No cure can be permanent or have the qualities essential for permanence unless it is based on what reason and common sense alike tell both analyst and analysand is the truth about the personality and mental mechanisms of the analysand, and so make it possible to attempt a scientific view or truthful view of external reality – partly because a false view leads to mistakes potentially fatal, but also because a false view, e.g. psychotic, needs a great expenditure of effort and the construction of elaborate social apparatus.

Hypothesis 2. The truth about the personality and mental mechanisms of the analysand, as demonstrable by the analyst to the analysand, leads to a permanent cure – as that would be understood by analyst and analysand taking a common-sense view of the results of such a demonstration.

From these premises it should be possible to deduce secondary hypotheses of such a kind that they lend themselves to verification empirically in the way that is familiar to all those who employ scientific methods, no matter what discipline they pursue.

This, however, is not my aim here. The introduction of these two primary hypotheses is a part of my attempt to demonstrate how the general principles of all sciences can be particularized when

applied to psychoanalysis. Therefore, though I may find it necessary to deduce hypotheses that are empirically verifiable from the primary hypotheses, I shall do so not with a view to verifying the hypotheses, primary and secondary, but for the purpose of psychoanalysing the unsolved scientific problem that this scientific procedure brings in its train.

Thus: suppose that I have, in the course of my work with the patient, deduced certain lower-level hypotheses, which, in the manner of such hypotheses, are of decreasing generalization. As a result, I am now in a position to test and verify these hypotheses.

The patient comes into the room, sits on the couch and . . . I have already carried my description far enough for present purposes. I have said that we are concerned to establish the truth, but the philosophers who concern themselves with the validity of perception, and psychoanalysts who have an intensely practical interest in this matter, will already have their problems. How do I know it is a patient? Or a room? I have no doubt about these sense impressions, but they are private to myself. How can I claim that my senses have, in the world of external reality, a factual counterpart – a real room, a real patient?

It is perfectly legitimate to deal with this as Braithwaite has done by limiting the discussion to a problem that (even excluding the problems of the phenomenalists) is, as he says, quite enough for one book. And for the time being I shall follow his example. But only for the time being. I shall therefore assume that I may use such data for my investigation as common sense tells me are facts in the world of external reality. By these means I limit the area of discussion to that part of the subject which is concerned, as Braithwaite says, with "the relationship of public scientific laws to public facts of observation". By this he means that he is excluding all problems that arise through the fact that sense impressions, on which all scientific work ultimately comes to rest, are private to the beholder and cannot become a matter for scientific investigation until they are made public, i.e. undergo transformation in the observer that enables them to be communicated to another. As will be seen later, this process, which I call public-ation, is in my opinion no different from the process involved in the individual who has to transmute pre-verbal into verbal thought if what is implicit is to become explicit, or what is unconscious, conscious.

In the psychotic, what is unconscious is not the material ordinarily associated with the repressed, but the ownership of the material. He remains unconscious of this by virtue of continuous projective identification, which takes the place of repression. But the projective identification *is* unconscious; therefore the material remains conscious, but the projection of it is unconscious.

[Undated]

Disorder of thought

To call an affliction a disorder of thought is to shift the emphasis away from what is thought – the content of the thought – to that which contains the thought; on the other hand, from the architecture to the theme is to shift the emphasis from the container of what is thought, to the content of the thought.

* * *

Envy contributes to the belief that external objects are the patient's thought. Since he cannot admit dependence on an external object, he claims (in order ultimately to escape feeling envy) that he is, like the breast that feeds itself, the producer as well as the consumer of that on which he depends for this life.

How to keep awake

Since it is essential that the creative worker should keep his α-function unimpaired, it is clear that the analyst must be able to dream the session. But if he is to do this without sleeping, he must have plenty of sleep. The need for this now becomes apparent as a way by which α-function can be preserved for the sake of analysis, i.e. neither for waking up nor for going to sleep, but for a special and entirely new function, and not – as has hitherto been supposed – because the capacity for judgement is peculiar in being easily and rapidly fatigued. It is because α-function is by nature intended to make sense impressions or an emotional experience available either to the unconscious or to the conscious, *or* to make wakefulness or consciousness available to the emotional experience – as, for example, in learning a skill, from walking to fighting. Making oblivion available is not the same as repressing, but if the analyst has not had enough sleep, α-function may produce oblivion.

Time, cause, and Oedipal situation

Provenance: guilt related to the Oedipal situation. The idea of cause belongs to criminal investigation. In its simplest form there are:

1. feelings of guilt, passive and active – i.e. I am guilty of . . . You are, or someone is, guilty of . . . ;
2. someone must have done something, i.e. caused it;
3. the person or thing that caused it must be antecedent to it;
4. the denial that the guilt caused it.

In other words, these ideas (of causation + time) derive from very early experiences, just as 'foot' derives from early references to the body in the exploration of what we call space. In 'time', one thing is before (antecedent), the other after (subsequent); but in 'space', does the infant have a left or right, before or after, or what? If it sees its foot and then its hand, does it feel its foot caused its hand?

31 January/1 February 1960

Narcissism and social-ism

These two terms might be employed to describe tendencies, one egocentric, the other socio-centric, which may at any moment be seen to inform groups of impulsive drives in the personality. They are equal in amount and opposite in sign. Thus, if the love impulses are narcissistic at any time, then the hate impulses are social-istic, i.e. directed towards the group. And vice versa; if the hate is directed against an individual as a part of narcissistic tendency, then the group will be loved socialistically. That is to say, if A hates B, as an expression of narcissism, then he will love the society. "I hate B because he is so harmful to the society that I love", might be an assertion symptomatic of what I would call a state of narcissistic hate of A for B. I maintain that in a narcissistic statement there is always implied a social-istic statement. The two *must* go together: if one is operating, so is the other.

It follows that if narcissistic hate is felt for A, then social-istic love is felt for B. If A is one person, then B will become a *group* of people all possessing the admirable characteristics that distinguish B from A who lacks them. Put in still other terms: if one group of impulses is dominated by narcissistic trends, then the remaining impulses will be dominated by social-istic trends. Let X be a person: if his hate impulses are social-istic, his love impulses will be narcissistic. But suppose his impulses towards himself, say love impulses, become narcissistic, then all his other impulses will become social-ized, and he will split himself up into a 'group'. Love of self need not be narcissistic; love of the group need not be social-istic. At one pole is one object: at the other pole an infinitude of objects. At one pole there will be one object to which one group of emotions will be directed: at the other pole a number of emotions will be directed to the infinitude of objects that owe their numbers to a splitting of one object.

6 February 1960

Beset as he is by the examples in history of the many occasions on which men of great ability and integrity have been unable to maintain a grasp of the truth about the phenomena that they wish to investigate, and made further aware of the pitfalls attending his search by the fact that his study is itself an investigation of a most serious source of errors in human judgement, the analyst's problem is to find a method – if there is one – by which he can be aware that he is falling into error, and even (if possible) of what kind of error he has become the victim. The search for this method constitutes for the psychoanalyst the search for a scientific method. For him the scientific method is that procedure, or series of procedures, by which error is made to declare itself.

As we have seen, one area in which a solution might be sought is in situations in which common sense can be brought to bear. One of these situations is in analysis itself in so far as a personality is observed in changing conditions of mood, circumstances, and time. Features that appear constant amidst the changes may be accorded a certain degree of probability. What meaning we are to give such constant features, what use we are to make of them, and how we are to use them, must be debated further.

It must be noted that unfortunately it may not be the features that are remarkable for their constancy amidst change that are the analytically significant ones; it is likely that it is those phenomena we most wish to investigate (and are therefore associated with the observations, the truth of which concerns us most) that least lend themselves to the check of common sense. The other situation in which common sense is brought to bear is in the situation produced by public-ation. As we have already seen, this involves recording and communication, both of which are consequently seen once more to be matters that deserve serious study and constant work devoted to their improvement. Presumably no safeguards exist against the eroding effect of connotation and communication that is exerted by changes in the

cultural atmosphere of the group, but the fact that these changes render communication precarious adds force to the need for elaboration of rigorously accurate methods of record. Furthermore, the fact that the communication that Bach wished to make when he inscribed his score may not be that which his audience received, and the fact that the communication that his audience received may not be that which some present or future audience may receive, need not be inimical to the search for truth by the group in history. For the continued existence of the communication, its preservation by the group may be interpreted as a sign that the group continues to receive something from the communication. What is it that inheres in the communication that causes it to be meaningful in what appears to be so many different ways to so many different people?

11 February 1960

Compassion and truth

1. Compassion and Truth are both senses of man.
2. Compassion is a feeling that he needs to express; it is an impulse he must experience in his feelings for others.
3. Compassion is likewise something that he needs to feel in the attitude of others towards him.
4. Truth is something man needs to express; it is something he needs to seek and to find; it is essential for fulfilment of his curiosity.
5. Truth is something he needs to feel in the attitude of others towards him.
6. Truth and compassion are also qualities pertaining to the relationship that a man establishes with people and things.
7. A man may feel he lacks a capacity for love.
8. A man may lack capacity for love.
9. Similarly, he may feel he lacks a capacity for truth, either to hear it, or to seek it, or to find it, or to communicate it, or to desire it.
10. He may in fact lack such a capacity.
11. The lack may be primary or secondary, and may diminish truth or love, or both.
12. Primary lack is inborn and cannot be remedied; yet some of the consequences may be modified analytically.
13. Secondary lack may be due to fear or hate or envy or love. Even love can inhibit love.
14. Applying (8) and (10) to the Oedipus myth, the death of the Sphinx is a consequence of such lack, as the question posed was not intended to elicit truth, and consideration for itself could not exist to erect a barrier against self-destruction. Tiresias may be said to lack compassion less than regard for truth. Oedipus lacked compassion for himself more than he lacked regard for truth.

12 February 1960

> All our ideas are reducible in the long run to the data of sense-experience.
>
> F. Copleston, *A History of Philosophy*, vol. 6, p. 8

Montesquieu's theory [Copleston, p. 11] is not simply an empirical generalization but deals with ideal types of government. This raises an interesting possibility: if there are theories, e.g. quantum mechanics, in which there is no level of empirically verifiable data but a level of statistical hypotheses that take the place of empirically verifiable data, could one have a theory in which the place of empirically verifiable data was taken by hypotheses of ideal types analogous to statistical hypotheses? And if so, what is the relationship of the hypotheses of ideal types to premises or high-level hypotheses of increasing generalization? Are generalization and idealization the same thing? If not, in what way do they differ? There may be a place for three types of hypothesis that need to be distinguished:

1. high-level, generalized and not empirically verifiable, therefore
2. statistical hypotheses, taking the place of empirically verifiable hypotheses and embodying a probability statement. This involves the question: *how* does the scientist use these probability statements?
3. ideal-type hypothesis, which says that in a given state (which in fact will never be found) there does exist a state of ought-to-exist-ness of whatever it is that the hypothesis is referring to. For example, take the statement that 'excessive splitting and projective identification lead to a disintegration of the personality'. 'Excessive projective identification' is an ideal state and not an empirical generalization. The hypothesis asserts that in so far as this ideal state is realized, a disintegration of personality ought to be found. Is this a probability statement in a statistical hypothesis? No: but

> I suspect it is a statement that is 'understood' when a statistical hypothesis is used, and this is the clue to the problem posed by Braithwaite (*Scientific Explanation*, p. 124) as to *how* a scientist uses a probability statement in a statistical hypothesis. The ideal-type hypothesis may be regarded as a primitive non-mathematical probability statement, what Braithwaite would call "reasonableness" (p. 120). It should not, as far as I can see, ever embody in itself a probability statement. In any case, I consider the probability statement is often employed as an assertion of a measure of certitude. But if I do not regard the ideal-type hypothesis as identical with a statistical hypothesis, I also cannot regard it as a high-level generalization, for clearly it is used in psychoanalysis as a low-level hypothesis.

In place of the level of empirically verifiable data, there is no step as yet between the statement, 'excessive projective identification leads to disintegration of the personality', and perception of sense data in the empirical experience of analytic treatment.

If this is so, then in psychoanalysis the hypotheses of a scientific deductive system may be hierarchically arranged, not with high-level hypotheses of increasing generalization and low-level hypotheses of increasing particularization, but with high-level hypotheses of increasing idealization and low-level hypotheses of increasing realization. Or it may be a special kind of scientific deductive system in which generalization and idealization are combined, and realization and particularization are combined. How does this compare with the realizations of mathematical formulas?

Before attempting an answer to this, we must consider certain similarities and contrasts that emerge by comparing mathematical formulas with dreams. The elements of a dream, by being used as the starting point for a series of free associations, can be made to yield thoughts and ideas coherent with each other and displaying in their integrated form a construct (Freud's latent content of the dream) that seems to show a great expansion of meaning compared with that displayed in the dream from which it has been derived. Certain algebraic formulas, treated according to rules laid down in advance – not free associations – similarly yield an expansion that is coherent within itself and, like the latent content of the dream, is often found to be applicable to data of an empirically verifiable

kind that, in the coherent form that the mathematical expansion has revealed, provide a realization for the system of formulas that make up the original algebraic calculus. By analogy, the latent content of the dream is employed by the psychoanalyst to 'interpret' empirical data presented by the patient, and so reveals a coherent form that may be regarded as a 'realization' of the latent content of the dream.

In both these instances the 'realization' has been sought in the domain of phenomena considered to exist independently of the observer. In some sense the algebraic calculus, like the latent content, may be regarded as an attempt on the part of the individual to produce a mental apparatus as well adapted to comprehension of his environment as the visual sensory apparatus is well adapted to sight of his environment. The latent content of the algebraic calculus can so far be treated, for purposes of comparison, as parallel. It is necessary to observe, if confusion is to be avoided, that the latent content is being used to achieve comprehension of data deemed to be independent of the observer, even though the latent content is a product of the mind of the observer and the data to which it is being applied are facets of the observer's personality. This independence would be challenged if the latent content was applied, or deemed to be applicable to, the problem associated with the production of itself – in short, if it were felt to be a latent content relating to a dream of which it was the latent content. Similarly with the algebraic calculus: the selected fact of Poincaré would ordinarily be expected to apply to data independent of the observer and to be designed to give order and coherence to these phenomena. But I have suggested that the selected fact – latent content, or algebraic calculus in this instance – is itself an attempt to deal with the internal psychic incoherence (shown in the Kleinian theory as the paranoid-schizoid position), at least by an externalization in which, and through which, the individual is able to offset internal feelings by a sense of external achievement. Is it possible that there could be a latent content relating to a dream of which it was the latent content? Is it possible that there is an algebraic calculus, or that in any algebraic calculus there is a facet, such that the coherent whole expressed by the calculus found its realization in the realm of elementary mental phenomena from which it originated, as well as in data independent of the observer?

14 February 1960

Fundamental, basic, inborn character disorder

There are occasions when it is important to know what are the fundamental characteristics of the patient with whom we are dealing. By this I mean that there are certain qualities of personality – a capacity for loving is one – which are of great importance in determining the nature of the person and of his behaviour. We would like to know what are the patient's fundamental characteristics, but curiosity on this topic is hampered because the questions that are the tools of curiosity are often ill-suited to the investigation we have in mind. The vocabulary that we employ to frame our questions has been elaborated to serve purposes that are often very different from those of the psychoanalyst; we are hampered, in a manner with which we are already familiar, in our attempts to frame theories and solutions of problems. But we give insufficient attention to the obstruction of the formation of the question. For example, I have said we would like to know the fundamental characteristics of the patient, but this question as it stands does not provide the emotional experience of the analysis with sufficient precision to admit of an answer. I do not suggest there is any question that does, and if I now propose some elaboration of my question it is not to solve a problem but to propound it. The question, 'What are the fundamental characteristics?', I shall replace by two others:

1. What are the characteristics that are inborn and irreducible by any means (short of a physical disaster of the kind experienced in certain forms of physical illness or brain damage) that have been shown to be associated with character change?
2. What are the characteristics, which an answer to the first question would specify, that occupy the dominant executive position in this man's psyche? That is to say, if a capacity for love is one of his main inborn characteristics, does it in fact inform his outlook and behaviour?

It now becomes clear that the two questions multiply. Thus, taking question 2, what is the 'executive position'? Is there such a thing? Or does it simply depend on how strong are his feelings of love? And if so, is 'How strong?' a question we can ask, or is there some other more apposite? And so I could continue the elaboration of questions. But that fact itself shows no useful purpose is served by an attempt at abstract systemization, and at the same time that such elaboration is necessary at some time and somehow. I shall show that the essential point is that such questions should be given a chance to proliferate in the analyst's mind, and that this chance should occur in the analytic session itself. If induction means anything, it should mean 'producing questions'. This and *α* should be the supreme mental activities of the analyst – not theorizing, though he must express theories. The interpretations themselves, which are acts, must not be confounded with theorizing; theorizing must not become an activity of the analyst when analysing; it is, as Darwin pointed out, inimical to observation.

17 February 1960

Animism, destructive attacks and reality

In the earliest phases of development objects are felt to be alive and to possess character and personality presumably indistinguishable from the infant's own. In this phase, which may be considered as anterior to the development of the reality principle as Freud describes it, the real and the alive are indistinguishable; if an object is real to the infant, then it is alive; if it is dead, it does not exist. But this 'it' that does not exist and is not alive – why is it necessary to talk about it or discuss it? The problem is to give an answer *verbally* about objects in a *pre-verbal* state. The difficulty will constantly crop up in what I have to say, and my solution of it will constantly demand indulgent understanding from the reader.

In this instance it is necessary to talk about this object which should be non-existent and therefore impossible to discuss. Its importance lies in the fact that the infant, if enraged, has death wishes, and if the object is wished dead, it is dead. It therefore has become non-existent, and its characteristics are different from those of the real, live, existing object; the existing object is alive, real, and benevolent. (I propose to call the real, alive objects α-elements; the dead, unreal objects I shall call β-elements.) In order to distinguish the distinction between real and unreal that I am making here, from the distinction between real and unreal which is appropriate to Freud's description of the interplay between pleasure principle and reality principle, I shall call these objects proto-real objects belonging to the domain of proto-reality. The infant, in all the early phases of its life, is dominated by the pleasure principle. It is therefore, in so far as it feels pleasure, surrounded by these proto-real objects felt to be real and alive. But should pain supervene, then it is surrounded by dead objects destroyed by its hate, which, since it cannot tolerate pain, are non-existent. But ordinarily they continue to exist because the sense impressions still operate. Should intolerance of these objects grow beyond a certain point, then the infant commences attacks on the

mental apparatus that informs it of the reality of these sense impressions and of some object that is felt to be beyond the sense impressions. The existence of the real objects can be denied, but the sense impressions persist, e.g. after the eyes have been shut. It is therefore felt that the real objects have now forced their way into the personality. The next stage, imposed by yet more powerful intolerance, is the destruction of the apparatus that is responsible for the transformation of the sense impressions into material suitable for waking unconscious thought – a dream-thought. This destruction contributes to the feeling that 'things', not words or ideas, are inside.

Excess of death instincts for whatever reason or duration, in addition to contributing to an excess of dead objects – painful and proto-unreal – means that animism (an animistic view) cannot develop. The need to placate contributes to a complex state in which the dead object has to be re-animated and worshipped. These objects are then not so much gods and idols that are believed to be alive and endowed with human attributes, as objects chosen specifically and precisely because *they are dead*. Contrary to common observation, the essential feature of the adored or worshipped object is that it should be dead so that crime may be expiated by the patient's dutiful adherence to animation of what is known to be inanimate and impossible to animate. This attitude contributes to the complex of feelings associated with fetishism.

The breakdown in animism affects the capacity of the individual to transform sense impressions into material suitable for use in dream-thoughts. Objects sensed are felt to have life and personality, to be capable of combination and interaction. Thus dream-thoughts and dreams become possible, thereby making it possible to learn from experience.

The dead, non-existent objects are products of murderous hate; guilt invests them with attributes akin to those associated with conscience, omnipotence, omniscience, but not the qualities necessary for employment in dream-thoughts.

18 February 1960

α

The occasions when the patient expresses a number of feelings verbally – "I am anxious, I don't know why." "I am feeling a bit better, I don't know why." – may be an expression of an experience such as I suggest takes place when he has a dream. That is to say, he has an emotional experience on which dream-work-*α* is done so that the emotional experience can be made available, stored for use in consciousness. Ordinarily *α* operates to enable a conscious emotional experience to be stored in unconsciousness; it just occurs to me that this may be very like the function performed by logic in the elaboration of a scientific deductive system in which premises and derived hypotheses are so arranged that they follow each other.

But how is *α* related to logic? There are logical dreams, but on the whole they would seem to be rare. Yet the ordinary dream has a logic; it is 'narrativized'. The patient today said he had had a dream, but in fact could only report disjointed fragments in a way not unlike the ordinary session. (He said, incidentally, that in twenty years' time a new patient might be cured by psychoanalysis in half the time that he is.)

But what else can one say about the construction? Freud assumed that the interpretation, the latent content, was the origin of the dream, and that it had been worked on by the dream-work to produce the dream. I say that the origin is an emotional experience – perhaps even an experience that is emotional and nothing else – and that this is worked on (rationalized?) to produce the dream, the manifest content as we know it, and that it is the *analyst* who then does the *interpretation* to produce the so-called latent content. Then what validity or significance is to be attached to this product, the latent content?

20 February 1960

Attacks on α

The patient has the capacity to exact an emotional relationship from the analyst, and to reject it. A state is produced in which one cannot 'remember' what has happened in the session. Some points are clear: (1) The patient denies information to the analyst. (2) The patient arouses 'inevitable' emotion and denies any material that would allow *α* to operate and therefore the analyst to profit by the experience for the patient's benefit. Is this not unnecessarily elaborate? Why not just deny information? Because it is essential for there to be an *experience* from which no benefit is to be obtained. (3) The patient has the occasional vivid experience, e.g. he is loathed by his family. (4) The patient denies *α* and so loses a sense of reality, e.g. he is not able to see the irresponsibility of continuing the analysis. The prevention of visual imagery makes the experience not storable or usable either in conscious waking thought, unconscious waking thought, or in dream-thought.

February 1960

Displacement

Painful feelings related to a situation that has immediately arisen are displaced – for example, feelings of rejection, i.e. of rejecting and being rejected. The true self is felt not to be wanted nor yet to want the other true self; something must be done with these feelings. They are entertained, but the subject of the thoughts is no longer felt to be the person, someone in the past, who has immediately stimulated them, and around that person there is spun out a web of hostile reverie. Such past objects are carefully preserved; maybe they are specifically created for that purpose in the first instance. Note that the painfulness of the feeling is largely increased by the feeling that the rejection is of a true self and cannot therefore be assumed to be capable of resolution.

What seems to have happened is that the immediate cause is suppressed, perhaps before it has become clear to the patient that he has been stimulated at all. And at once the old 'memory' is substituted for the awareness of the current event. The subject of the early story becomes the main character, after the patient, in the current daydream, which has been drawn across to shut out the thinking proper to the immediate reality situation. Is not this account sufficient?

Another version: the feelings of rejection and hate are split off from the personality and are felt about someone absent in time and space.

To what extent are the mechanisms of dream-work evident elsewhere? For example, can all cruel and hostile feelings be displaced into a stammer? Or are they all condensed? In short, is it not possible that the mechanisms that Freud describes as peculiar to dream-work are in reality found to be operating over a wide area of the psyche and in a great number of different functional fields?

* * *

(I need to work out displacement condensation etc., and the relation to context and therefore changes in meaning.

Also need to work out relations of bizarre objects to animism; in particular the fact that they have character only because they are ghosts. In this way they differ from inanimate objects that are felt to have life and independence – the ordinary characters associated with an animistic view.

Also work out the theory that interpretation is an attempt to relate an individual's peculiar and particular characteristic to the social group, because the analyst who makes it is a member of a group and so associates the individual with himself, and because interpretation is into the language of the group.)

22 February 1960

It is curious how much anxiety I feel about following up my views. Today's session with X made me feel more than ever that not only my theories but my practice also are on the right track.

Why cannot X wake up if he cannot 'dream'? It must be for the same reason that you cannot let something become unconscious if *α* is not done to that something. The inability to have visual images of what is taking place means that the emotional experience cannot be preserved either in the conscious or the unconscious. (In this I have equated *α* with having visual images – this is not so, I think.)

How important is attention? And is it the same, as I think it is, as 'dreaming' what is going on?

Paying attention to what is happening here and now involves:

(a) respect for the truth,

(b) respect for myself,

(c) respect for my objects.

But

1. I have just displaced this by thinking I was giving a paper to the Society.
2. I have emotionalized it by making it an occasion where I am loved and admired.
3. I have replied to a hostile criticism from X with a moderation that does me credit.
4. In short, my mind is wandering, and I am transforming the task, which I have already put off for an hour, into an event that is pleasing and successful.

Is this not very like a dream, wish-fulfilment and frustration-evasion and all? (And may not all this be 'digestion', a way of fixing an experience in mind?)

I am not in bed asleep and a prey to emotions, but I am sitting up at a table on a not-so-soft seat. The experience I am having is perhaps painful, and pleasant only in so far as I am able to transform it – Freud's idea that the dream preserves sleep. What is the painful fact I am denying? That it is difficult to write, that no one loves me, and that I have to work? Perhaps my denial of these painful emotions has the effect that I then have a painful sleeping emotional experience on which I then again have to do *α* dream-work to produce the manifest content of the dream.

If this is the case, the dream-work-*α* may have as its function the exclusion of material that would otherwise distract from the main task in hand – the actual conscious object of my writing. But my idea is not that – it is that the dream-work-*α* transforms this experience so that I can store it and remember it. This may be too simplified, and yet it seems to fit some important facts with X.

24 February 1960

α

There are the following states that need to be distinguished:

1. genuine 'dream', but carried on with the analyst for fear of annihilation if 'dreamt' elsewhere (this is an attempt to make a current emotional experience available for dream-thought and conscious thought; it is a definite and desperate attempt to make external reality and internal psychic reality available to thought, and therefore to usher in an ability to learn from experience);
2. hallucination of a dream, forced by the inability to dream and incapable of yielding associations (no associations, as with hallucinating the breast that yields no milk; starvation of reality means there is nothing to set against phantasy);
3. artefact; a try-out but inevitably failing to yield associations of any value or reassurance against the dread of hallucination, the superego and annihilation (related to fear of annihilation);
4. confusion due to excessive projective identification (not relevant to this situation).

* * *

"I feel there is something I have forgotten. It's a ridiculous idea and no grounds for it that I know of, but there it is. My apparatus is not working properly. Dr C thought it should be ten times more efficient; only doing one tenth of one in the States, but he forgets it is quite a difficult matter. But it's very interesting having to do it. I think it is a half only. Dr C is a very clever man, but he is wrong about this. The Z-chamber – it holds me up a bit." (This apparatus is what you feel you have forgotten.) "It is a matter of research; it holds me up. Letter from D. I was delighted to have it." (Stammering very badly all the time.) "Kept thinking about it all day. She's a nice person; not very interesting and a letter really just like a man. Keep having lots of dreams but I can't remember them." (Lack the apparatus that makes

it possible to 'remember' and to do research.) "A dream that was horrible, though I can't really see what was horrible about it. A woman – and I was in an old-fashioned bus in which there was a lot of woodwork. The windows were shut. I asked if we could have them open so as to have more air. A surly kind of man who reminded me of you was very hostile, and I don't remember what happened next." (Inability to remember and feeling you have forgotten, associated with feeling of not being able to emerge from a state of mind – inability to get 'air'.) "Had lots more dreams." (Either none or I'm to be overwhelmed by them. Inability to dream.) "A dream without associations is not very much use." (Like the research, it reveals disjointed bits that have 'no associations'.) "Another dream in which I was stammering and it made it difficult to talk to the girl." (Not really felt to be dreams at all, and this feeling goes towards producing a feeling of 'impotence' – inability to dream.)

This session increasingly gave me the feeling that he was having, or was about to have, a psychotic breakdown. Everything pointed to the idea that he felt as if he could not breathe, that some man was refusing to let him get air in; and he was swearing and attacking the man with his oral flatus – the stammer. His attitude was euphoric, perhaps megalomanic. I drew attention to what seemed to be evidence that he felt unable to learn from the experience he was having with me.

The session seemed to be very important because it bore out my theories. It is evident therefore that I should want it to bear out my theories, and that I should regard it as important if it appeared to do so. So far, so obvious. Other sources of distortion involve deeper and deeper analysis for their discovery. He said something about research always leading to an infinite number of unknowns. But I cannot be sure how he phrased it. But how he 'phrased it' is very important; what did he *say*? I am pretty certain that that was what he meant, but when I interpreted it I was saying in effect that he felt that whenever he learnt anything, it revealed by that very fact the great number of disjointed elements that remained incoherent.

What I have said is that I do not know precisely what he said, and that I do not know precisely what my reply was. I thought he said approximately *Y*, and that I replied that what I thought was approximately *Y*, had a meaning that was approximately *Z* – which

I now assume I have rendered approximately. Well, either this means that in my view and with my personality it is impossible to have any but the most tenuous contact with someone, or that for some reason much fuss is being made about an experience – contact with another – which is quite ordinary and taken by most people in their stride.

No: it may also mean that the ordinary view, or lack of it, is not good enough for psychoanalysis. But the view I am putting forward can hardly be regarded as an improvement on the ordinary view. It is destructive and only suggests that we cannot 'know' what happened in an analytic conversation. What I am trying to say is that I can give a description that pulls together all the scraps of ideas that I associate with the session, and make them cohere in a way that gives them meaning. I can then feel the session was a meaningful experience. But I am also wanting the analysand to say it was meaningful. He might say it was, and that for him its meaning was that he had a psychotic breakdown. This would not satisfy me; I need to believe that it was meaningful for him in a sense that he has 'felt better' for it. And *I* want to be able to 'feel better' for being a psychoanalyst, i.e. for having such experiences. This means one wants to believe that everyone, including one's self, feels better for attempting to 'understand' one's self and others. But 'understanding' here means being able to do dream-work-α, to allow α to operate during one's emotional experience of another person. This reminds me of 'reality starvation' in the extreme case of the psychotic. The need to know the truth then becomes a matter of psychic need. And the α operations need to be investigated to see what they are – the mental 'digestion'.

This seems to throw light on the function of the intellectual leader. He is someone who is able to digest facts, i.e. sense data, and then to present the digested facts, my α-elements, in a way that makes it possible for the weak assimilators to go on from there. Thus the artist helps the non-artist to digest, say, the Little Street in Delft by doing α-work on his sense impressions and 'publishing' the result so that others who could not 'dream' the Little Street itself can now digest the published α-work of someone who could digest it. Vermeer was able to digest the facts in a particular way, or perhaps they were particular facts. The same presumably is true of the scientist. But why did the work done by Aristarchus not have any impact for close on two thousand years? And why did Kepler's work succeed relatively

quickly? It may be that it was less a matter of concern at the time of Aristarchus. Is opposition necessary? Must the reality view be opposed before it can flourish?

Note the difference between the leader who is to show the *way* to thinking, and the 'mother' on whom the psyche is to be allowed to be parasitic – projective identification, psychotic dependence.

27 February 1960

Mathematics

1 + 1 = 2. But suppose we sexualize the plus sign: then 1 + 1 = 3 presents no difficulty. But it does not mean that 1 + 1 *must* = 3. For that, it would be necessary to do more than sexualize the plus sign. It would be necessary to make it at least ♂ + ♀ = 3. It would probably be necessary to make the plus sign mean 'sexual intercourse with intent to procreate children in adequate conditions between adequate people'.

What is happening here is that the plus sign is being treated as a variable as well as the terms of the expression. What mathematics can evolve if all the signs and terms in an expression are variables? There would seem to be nothing but chaos possible, but it is not so. For example, 1 + 1 = 3 has a meaning if I say 1 = a man, and 1 = a woman. In this case the 'value' of the plus sign has been affected 'contextually'. This reminds me of 'contextually' contingent propositions (Braithwaite, *Scientific Explanation*, p. 112).

28 February 1960

The scientist's mistrust of human intellectual effort tends to make him look longingly at the machine that can so often be made to appear the ideal recording instrument, a matter of rigid scales, pointers, unchanging weights, and so on. This attitude, which has something to commend it, yields matter for speculation if one considers it as betraying suspicion of anything that possesses life. How are we to find the truth, to gain knowledge, if facts can be recorded only by an object incapable of judgement or anything we regard as thought on the one hand, and on the other if thought is possible only by an object incapable of recording facts?

The difficulty may not be real in any significant way, but seems so because the method of formulation, in terms of knowledge, truth, and reality, leads to fallacious exaggeration of some elements of the problem, to the exclusion of others. Progress is less impeded if we consider 'know' to refer to a relationship, and reality and truth to refer to qualities of mental phenomena necessary to sustain mental health.

[Undated]

Need for a scientific method

Preoccupation with the psychology of the philosopher might lead to disregard of the truth or falsity of his ideas taken in themselves (F. Copleston, *A History of Philosophy*, vol. 1, p. 9). Similarly, it is presumably true that in addition to distortion produced in the analyst by his own conflicts, there must be other elements that might contribute to his failure to be scientific, e.g. insufficient knowledge of the subject. We may too easily assume that *all* difficulties can be dealt with by more analysis. The subject of this discussion is how to determine, elaborate, and display the procedures that constitute correct analysis, or that conform to standards that at least avoid methods that could not possibly be scientific in any circumstances. And, reciprocally, how to see that findings allegedly psychoanalytic cannot possibly be scientific even if true.

The first requisite is a means by which one could tell that one was going wrong; the second, a means by which one could rectify the mistake.

I think I was wrong with X. I object to this after years of experience. My objection is based on a feeling that I have tried hard and made endless efforts to be on the right tack. But this is my avowal. I know the criticism and can be critical because I have a picture of myself as a sulky man, feeling very sorry for myself in the plight in which I have been pleased to depict myself. The view that I have 'tried hard' and 'made endless efforts' is flattering to my esteem, but it is a view set in a moral outlook in which 'trying hard' is a virtue that will be rewarded. And if it is not, I have a right to be annoyed with someone – fate or X perhaps.

It occurs to me that I may be going wrong because I don't please myself. That is to say that it is a sign I am going wrong if I am not pleasing myself in the sense of making myself pleased, and in the sense that I am not pleased with and by myself. But am I stating a symptom or a cause? And doesn't this mean that I believe something

has caused 'this', or that 'this' is causing something? I am caught in a web of my own devising.

It means that I have not the ability, character, or personality that I conceive to be pleasing. But who is the 'me', the character who thus passes judgement on whether or not such characteristics as I have are 'pleasing'? And to whom are they, or are they not, pleasing?

I have a picture, a visual image of someone who is loved by all. But this also sounds like a state I once believed to exist, say when I was a baby, and it further sounds as if I had never got over it. This would mean that the ambition is not suitable to my present age, just as my capacities are not suitable to or matching my ambition – which may also have been true of infancy or childhood.

It looks as if the need was to reconcile my awareness of my character – that is to say, my character as I think I know it – with my conception of a desirable character. But 'desirable character' is merely meaning a character that would be desired. And the character that is desired turns out to be a character that is desired. In short I must feel loved by myself and others.

Here I think I see I have linked up with the discussion of socialism and narcissism [*see* 31 January/1 February 1960, p. 120]. I wish to feel that when I love and admire myself I am also loved and admired by the group. Well, why not?

I now have a picture of myself called on by the chairman to say something in the Society. But I decline, as I have nothing to say. And everyone thinks how modest I am – except a few people, who are puzzled. This is probably what is called a day dream, but it might be called a night dream with greater approximation to descriptiveness of its content. In fact I think this is what I mean by an α-element. If this is so, and the visual images and pictures I have mentioned so far are examples of them, then the dream-work-α may be a more stately process than I realized, and the α-elements are more slowly produced.

But I think there may be more. I noticed just now that I had a vision of Mrs A unable to have visual images while doing her auto-analysis; I might easily have failed altogether to notice it. In that case, the α-elements may be produced far more rapidly and incessantly than I realize. I wonder if dreams, i.e. the actual emotional experiences, are not the emotional experiences I do not have, or cannot allow myself to have, during wakefulness. They then have to be retained, if I am to learn from the experience, by being converted through dream-work-α

into α-elements, and then these α-elements are combined according to certain rules to make them approximate to what in daytime wakefulness would be narrative of the event in which I am participating and which I need to record.

I could schematize it thus:

Emotional experience → dream-work-α → α-elements → rationalization and 'narrativization' → dream
Sensation of waking event in which personality is participating as in an unfolding narrative → dream-work-α → α-elements → dream-thoughts

A comparison of the two levels suggests that some kind of approximation is being attempted between an awareness of an external event and an internal process of manipulation, 'digestion', of the same event. In the first case the origin can be taken to lie in an emotional experience, associated with dream-thoughts, leading to an awareness that then has to be dealt with (like any other emotional experience, no matter what the origin) by dream-work-α which converts it into α-elements; these then undergo a process of 'narrativization' to make them approximate to the emotional experiences of waking life in which the personality is participating in a temporal sequence that accordingly has a narrative quality, so that the emotional experience originating in dream-thought is rendered suitable for storage and waking conscious thought. In the second case the emotional experience in which the personality is consciously participating as a temporal sequence in which one event succeeds another (thus having a narrative quality) is being worked on by dream-work-α to convert the sense impressions of the external narrative experience into α-elements that are capable of storage and lend themselves to use in dream-thoughts; these, though unconscious, proceed equally whether the personality is asleep or awake. One of the reasons why sleep is essential is to make possible, by a suspension of consciousness, the emotional experiences that the personality would not permit itself to have during conscious waking life, and so to bring them into reach of dream-work-α for conversion into α-elements and a narrative form, consecutive and dominated by a causation-theoretical

outlook, suitable for being worked on by conscious rational processes of thought. Dream-work-*α*, and its product of *α*-elements, is therefore an essential link between dream-thought and conscious rational thought, and the raw material on which both have to work.

Free-floating attention, regarded as necessary in analytic work, might then be described as that state of mind in which the analyst allows himself the conditions in which dream-work-*α* can operate for the production of *α*-elements. The psychotic patient knows this and sets himself out specifically during the sessions to attack anything and everything that makes the production of *α*-elements possible either in himself or the analyst, or, for that matter, anyone else.

[Undated]

Need for study of scientific method

> Though we are aware that any knowledge at which we arrive is the result of a process on our part, we do not reflect on the nature of the process – at any rate in any systematic way – and make it the object of a special study. But sooner or later knowledge of our mistakes and the desire to be sure that we are getting the genuine article, i.e. something that is really knowledge, lead us to reflect on the process. We do so, prompted by the hope that we can discover the proper process, i.e. that in which we shall be safe from error, or at least to determine within what limits we can carry out such a process. But in the end we find ourselves having to ask whether we are capable of knowing at all and are not merely under the illusion of thinking that we can know.
>
> Prichard, 'History of the Theory of Knowledge',
> from *Knowledge and Perception*, 1932, p. 69

Prichard points out that in ordinary life when we are seeking knowledge, our interest is chiefly absorbed in the nature of what we are trying to know, and not in the process by which we try to get to know it. It is probably true that most psychoanalysts are similarly absorbed in psychoanalysis rather than in the process by which we arrive at a knowledge of psychoanalysis. This preoccupation with the subject, to the over-shadowing of the study of the process by which it is learned, is excusable; for the subject is vast and there is much to learn. And yet one may permit oneself some surprise at this imbalance, for psychoanalysis itself may be seen as born of a doubt about the realities of the knowledge we have, and of the processes by which we obtain it. The central feature – the analysis the aspirant has to undergo – is imposed because it is supposed that without that experience the candidate's inadequacies relate to and prejudice the mental processes by which he acquires knowledge of his patient. Furthermore, psychoanalysis is itself a technique for the investigation of the human mind,

and it can be said to have discovered – in the course of the work that culminated in Freud's paper on the 'Two Principles of Mental Functioning' [1911b] – the origin of the elaboration of psychoanalysis itself, namely the pressure of inner needs that demand more than hallucinatory gratification. [*Marginal comment added later*: The demand is for the *reality*. A parallel quotation from Freud to balance Prichard would help.]

Nevertheless there has not yet been much work done relating psychoanalysis to the general body of scientific history, or its methodology to the elements common to the methodologies of all scientific discipline.

Criticism of psychoanalysis also applied to other sciences

It has been a common criticism of psychoanalysis that its methods are not scientific. It is therefore with some surprise that the student of psychoanalysis who turns to the study of scientific method in order to learn of the respects in which psychoanalysis, and his own method of practising it, falls short in scientific rigour and precision, finds that the scientific defects that are charged against psychoanalysis are observed by the more self-critical scientists in the practice of their own disciplines. It might be said that the history of mankind is full of instances of the kind of experience described in the quotation from Prichard [Ibid., p. 151] – instances, that is to say, of the falsification of a theory followed usually by the questioning of the theory, but sometimes by the questioning of the methods by which the supposed knowledge was obtained. Plato's well-known description [*Republic, Book VII*], in which he likens mankind to men in a cave seated with their backs to the light, is a famous instance of overt expression of suspicion of the validity of knowledge based on the perceptions of men held in the cultural framework of a group. In more recent times, Hume's attack on the idea that the scientific hypothesis is based on anything other than the tendency of the human mind to associate various elements, did much to prevent the growth of an almost mystical belief that a 'natural law' was the statement of a truth that various elements were constantly conjoined because their conjunction was a function of some linking force parallel with, but independent of, the

human tendency to see them as conjoined. Despite the somewhat way-ward approach that Hume made to the problem, his insistence on the part played by association as a function of the human mind carried enough weight to be disturbing, notably to Kant who felt impelled to refute him. Yet despite the vulnerability of Hume's attitude it is doubtful, in the opinion of some philosophers of science, whether Hume has ever been really answered (cf. Bertrand Russell, *History of Western Philosophy*).

At the moment I do not wish to go into this subject further than is necessary to indicate that historically there are two elements in what we now call scientific methodology that have a very considerable ancestry. One is recognizable today as the philosophical problem of perception centring on the difficulty of knowing what validity is to be attributed to our belief in the real existence of an entity that in fact can only be seen to be a deduction from sense data. The other is the belief in a contribution made to any hypothesis by some force variously though vaguely adumbrated, yet having enough precision to make a not wholly hazardous guess at its nature – as I hope to show. It is these two elements that make it appear to me to be worthwhile to approach phylogenetically a subject of which the psychoanalytic discussion by Freud provides the ontological counterpart. A further reason for making this twofold approach will, I hope, become apparent in my discussion of narcissism and the social component of the individual's instincts; for I want to show the great importance that the political nature of man (in Aristotle's sense) plays in all scientific methodology, and in human personality problems as they are investigated through the agency of psychoanalysis in its operational conformity with scientific methodology.

This is perhaps the appropriate moment to draw attention to the fact that this discussion may be regarded throughout as the scientific methodology of psychoanalysis *and* the psychoanalysis of scientific methodology; my preference, in the interest of accuracy, is for it to be seen as both simultaneously.

I shall commence by making the phylogenetic approach. I prefer the term, 'phylogenetic', because I wish to avoid any suggestion that this is an historical summary. What it is will emerge in the course of the exposition, but I may say that my main object is to point to certain phenomena in the social history of the subject because they are germane to my argument, and not for any other reason.

The fate of the heliocentric theory

First I must draw attention to the uncertain fate of various ideas often well expressed and established in their time. Such a one is the heliocentric theory of the earth's movements, which was put forward by Aristarchus of Samos and attested by Archimedes and Plutarch. It appears to have 'disappeared' – as far as any practical influence it had – until it was put forward again nearly two thousand years later by Copernicus. This fact merits attention by any scientist: here we have a hypothesis that we now suppose to be true because it is attested by the correlation of many findings. It could have been verified by observation, yet it was completely displaced by another hypothesis. It is true that the equipment did not then exist for any profound verification, but this does not explain the establishment of a geocentric theory unless we assume the importance of a phenomenon to which I shall draw attention later, but which I shall not anticipate now. (The observational equipment lacking telescopes meant that verification was carried out by techniques that favoured the geocentric view and did nothing to support the heliocentric view in a way that made public-ation possible, and so denied the heliocentric view the support of 'common' sense.)

Relationship between cosmology and phantasy

The lack of means for establishing the reality of the earth's movement round the sun as a factual counterpart of the heliocentric theory meant that there was freedom to entertain views that appeared to be supported by the observations available to the ordinary individual, and at the same time enabled those observations to correspond with certain classes of internal phantasy, and for certain classes of internal phantasy to be externalized to the exclusion of others. Or I should say that certain phantasies could then be externalized by virtue of the geocentric cosmology, leaving others to be given some different outlet. This state of affairs is common to all cosmologies and not simply to those existing during the dominance of a particular school of thought. I wish to emphasize that while it is true that internal phantasies play a very big part in supporting a given scientific view, or even in precipitating its adumbration, the traffic is two-way, and the view

that the community holds on what it quite reasonably regards as scientific grounds dictates what phantasies are to be externalized in the prevalent cosmology, and what phantasies are to achieve some other outlet. A little thought will show the seriousness of this situation.

Consequences

Let us suppose – and what follows is only intended to be a postulate – that the geocentric view makes it easier to externalize a phantasy of the superiority of the all-providing breast or mother. Then the phantasy of the dominance of the male would need to find a means of externalization in some activity – scientific, political, aesthetic or religious – that lent itself to such externalization.

My object in making this postulate is not to establish a hypothesis that lends itself to particularization and thence to formulation in terms that make empirical verification possible; the time is not ripe for that. My object is to indicate that in addition to the obvious importance of establishing correct methodology (because only in that can we approximate to confidence in the kind of knowledge our methods win for us and so achieve a corresponding and proportional freedom from errors that might be disastrous) there is the fact that our methods are prey to forces derived from a class of phenomena of which little is known but which it is very much the business of psychoanalysts to study. I refer to the phenomena associated with the need to establish a particular scientific view for the greater ease in externalization of one particular class of phantasies, and the further associated phenomena that derive from existent cosmology (those to which it allows an outlet in externalization) and the phantasies which its existence compels to seek some other outlet of externalization. I suggest that there is a vested interest in the maintenance of an existent cosmology, or for that matter any existent scientific deductive system, which derives from manifold sources but with only two of which I wish to concern myself here. One is scientific and realistic – for example that seen in the maintenance of Newtonian Laws even after the behaviour of Mercury's perihelion had shown them to be inadequate, but there was no Einstein to propound a relativity theory to take their place – and the other is emotional and relates to group and individual phantasies. It is notorious that there is the strongest resistance to the

upsetting of an established scientific deductive system, even though that system was itself feared, hated, and opposed at its inception.

The meaning of 'scientific deductive system'

By the term, 'scientific deductive system', I mean one in which certain hypotheses occupy a high level in the particular system, and are used as premises from which lower-level hypotheses are deduced. Lower-level hypotheses are of decreasing generalization until the lowest level of all, which have a degree of particularization that makes them suitable for verification by empirical experience such as scientific experiments, or, in the case of psychoanalysis, clinical experience. Although it is not a matter of immediate moment, I consider it of great importance that there should be established a calculus that represents the scientific deductive system, and in all cases where the scientific deductive system is represented by the associated calculus I include calculus and scientific deductive system as essential to each other; unless otherwise stated, I wish it to be assumed that when I speak of a scientific deductive system I refer to it and the associated calculus that represents it.

[Undated]

Commentary on the scientific deductive system

1. Destruction of the capacity for assimilation of sense impressions is not total in any analysable patient. The non-psychotic part of the personality is associated with the continued functioning of the capacity for assimilation of sense impressions.
2. The word, 'assimilation', is not employed as a technical term.
3. 'Sense impressions' here bears the ordinary meaning, but without the implications that the term carries in everyday use, and which will be seen to be specifically excluded by the theories concerned with the psychotic part of the personality.
4. 'Phenomenon' and 'thing-in-itself' are terms used in the Kantian sense to mean things as they appear to the observer, and things as they might be supposed to be in reality without an observer.
5. 'Things-in-themselves' has much the same meaning as Bradley ascribes (in *Principles of Logic*) to the term, 'things in actuality'.
6. The term, 'object', is chosen partly because it carries a sense of concreteness, partly because it is sufficiently abstract to allow me to invest it with a special meaning. Yet this special meaning is difficult to convey. The patient uses a word, but his word does not name the same thing as is named by the same word used by the analyst, or even as used by the non-psychotic part of the patient's personality. He appears to feel that the word is not the name of a phenomenon nor yet the name of the thing-in-itself, but is *identical* with the thing-in-itself. Unfortunately, this is further complicated by the fact that the thing-in-itself seems to be regarded by the patient with the same expectation that we entertain for an idea. Thus, if someone moves a table, it is to him as if someone had interfered with his mind. It is for a word thus used that I reserve the term, 'object'; it is identical with bizarre

objects, but I mistook their origin (*see* 'The Differentiation of the Psychotic from the Non-Psychotic Personalities', 1957).[1]

7. The essential point of this hypothesis is made by the words, 'as words are ordinarily articulated'. The statement can be made to appear almost tautological if it is remembered that the words are, as I have said, objects and therefore do not lend themselves to procedures appropriate to the ordinary use of words. The essence of 'articulation', as used here, is that it is a name for the process of bringing elements together, integrating them, so that the combined parts form a complex whole. The meaning I attach to the word will be clearer if its use is contrasted with that of 'agglomeration', which I discuss below. The further problem of the justification for such a view will also be discussed in the usage of the term, 'agglomeration'.
8. The words used as those objects that are ordinarily called feelings are those terms employed in ordinary speech that the mathematical logician, J. H. Woodger (in *Technique of Theory Construction*, p. 10), calls "statement-forming assignatory functors" and includes amongst the class of logical constants. But the mathematical logician is attempting by abstraction to gain in precision a method of communication that is more exact than that of ordinary speech. This hypothesis, on the contrary, is concerned with a method of communication and thought that is quite different from that of ordinary speech and employs words incidentally, not essentially.
9. Intensity is expressed proportionately to the violence of the muscular movement. Verbal expression is incidental to the central feature, which is the change of musculature evidenced by the tongue and vocal cords in movement; for this reason a stammer cannot be interpreted without reference to the muscular movements that give rise to the sounds. The sounds are important, but they are incidental to the movement of tongue, lips, and vocal cords. For this reason the analyst is well advised, in attempting to interpret a stammer, to intuit the muscular movements involved and to ask himself what they portend; he should not be misled by the

[1][In *Second Thoughts*: see Volume VI. *Ed.]*

sounds made into devoting his exclusive attention to them. The whole topic of muscular movement under the dominance of the pleasure principle, as it is described by Freud (motor discharge), is apposite in this discussion.

10. The use of the term, 'agglomeration', is liable to give rise to misunderstanding, unless it is remembered that it is appropriate to a particular situation when that situation is viewed by the light of a particular hypothesis and during the time it is so viewed. For since the analyst is concerned to find a fresh standpoint that affords him a hypothesis giving meaning to the phenomena presenting themselves to his scrutiny, in so far as he is successful in doing this he will be successful in making what (from one point of view) seems to be an agglomeration into what (from the point of view of his new hypothesis) is seen to possess a kind of integration. This in fact is what happens if the theory I am here propounding is applied to this very phenomenon of agglomeration.
11. The emotions and feelings may appear to have a direct relationship to the analyst. An angry patient mentioning the words, 'train' and 'policeman', may at a superficial view be angry with the analyst. In fact the anger joins the 'train' and the 'policeman'. The relationship with the analyst is as described in (9) above.
12. Projective identification is the name given by Melanie Klein to her discovery of a mechanism by which the patient splits off a part of his personality and projects it into an external object. The part may be regarded as good or bad; it retains its identity in its new habitat and is felt to control the person or thing into which it is projected; the part thus rejected by the patient is felt now to be persecutory to him. At the same time the mechanism – in so far as it is felt to be actual and not an omnipotent phantasy – leads the patient, being still identified with the split-off part, to feel confused with the person or thing into which he has projected this part of himself. This very brief summary is intended to be a reminder only: the full meaning of the term can only be sought by reference to the totality of Melanie Klein's work in which the theory and its implications are worked out.

* * *

Unassimilated sense impressions (Phase D)

i. The destruction (1) of capacity for assimilation (2) of sense impressions (3) does not impair retention of the sense impressions. They are stored and are available; but they are felt by the patient to be indistinguishable from phenomena (4) or things-in-themselves (5). They are devoid of relatedness to other retained sense impressions.

ii. The stored unassimilated sense impressions appear in the patient's communications to the analyst as objects (6) which are given a name, the name usually being a word in common use.

iii. These objects cannot be articulated (7) as words are ordinarily articulated.

iv. The intensity of the patient's feelings appears in the analysis as muscular movements, changes in mien, changes in posture, attitude. The feelings are contained in words; the words are not names of the feelings, but are felt to be the feelings themselves. The words employed for this purpose are those in articulated speech to suggest relatedness, such as 'and', 'with', 'in', 'outside', and all verbs (8).

v. Changes in musculature and varied expressions discriminate intensity of feeling, but not one feeling from another (9). They are intended to effect evacuation of accretions of stimuli.

vi. The feelings are objects no matter in which guise they appear in the analysis.

vii. What appears to be an articulated sentence is an agglomeration (10) of objects, and is therefore not to be distinguished from the agglomeration manifest to the analyst as apparently inarticulate or incoherent speech.

viii. All emotion, however expressed, whether in words or changes in musculature – such as is evidenced by a smile or stammer or attitude – is the link (11) between other objects, and has no reference to an external person or thing.

ix. The analyst remains as real and not an aspect of the patient himself, only as a necessity demanded by the exigencies of projective identification (12).

x. The agglomeration (itself a whole object but differing so fundamentally from what is usually subsumed under the term, 'whole

object', that it is undesirable to use it in this context) is intended to be a vehicle suitable for conveyance by projective identification and is correspondingly amenable to the process of return to the personality ejecting it, either because he wills it or because the person or thing intended to harbour it forces it back into its owner.

xi. The objects formed by the process that excludes assimilation are amenable to the usages of a personality employing projective identification and its introjective counterpart, but do not lend themselves to any function other than evacuation and return.

xii. An object is useless except for its employment in projective identification.

xiii. Evacuation of emotion, evidenced by the absence of all connections that *are* emotions, leads to disintegration of the patient because that which holds the objects together is no longer available. This differs from splitting in that it is a passive falling apart of the objects.

* * *

Repair of capacity for contact (Phase L)

1. Increasing strength of the ego leads to an increase in strength of the imprisoning capacity of the word which is the manifestation of the object that is a part of the ego contained in the word.
2. Because of 1, objects cannot fuse.
3. Because of 1, objects cannot link.
4. Owing to dominance of 2, objects cannot be agglomerated or articulated.
5. Failure of agglomeration and articulation increases sadism and thus initiates Phase D.
6. Phase D is suffused with frustration modification so that Phase L is reactivated.
7. Objects can now link.
8. The links are Death instincts and Life instincts.
9. Objects join destructively.
10. Objects join in sexual intercourse.

* * *

Repair of capacity for assimilation (Phase A)

a. Repair of the capacity for assimilation is manifested in analysis by verbal statements that appear superficially to be disjointed free associations.

b. Though expressed verbally, they are a method of communication of visual images, auditory impressions, olfactory impressions, emotions.

c. The verbal statements are evidence of the production of material suitable for employment in dream-thought by a process analogous to dream-work in reverse.

d. The material for which these statements are the evidence has the character of the objects of Phase L, but they are capable now of articulation with each other to form complete wholes, of storage and the concomitant notation, and of reproduction. They are consequently not suitable for projective identification.

e. These verbal statements are devoid of any element of personality; thus they contrast with the objects of Phase D which are indistinguishable from parts of the personality with which they are impregnated.

f. These verbal statements are transformations, still in the process of further transformation, of immediate sense impressions of immediate events. In this respect they are similar to the objects of Phase L, but differ in that they are in process of change associated with assimilation, whereas the objects of Phase D are in process of being ejected unchanged, or destroyed by splitting.

g. The dream-thought material represented by these verbal statements may be distinguished from the objects of Phase L by the fact of their integration one with another.

h. The integration is betrayed by the emergence of feelings of hate and fear of the analyst as super-ego, and trust in and affection for the analyst as a loved object.

j. Projective identification is seen to be employed in the conveyance of whole objects – not simply fragments.

k. The dreams that are reported carry associations that the patient can communicate.

* * *

A. The destructive splitting of the super-ego involves destruction of the capacity for assimilation of all phenomena of internal and external reality.

B. The projective identification of the phenomena leads to an impoverishment and weakening of the personality to a point at which annihilation of the personality is felt to be imminent.

C. The destruction of the capacity for assimilation leads to a deprivation of the personality of all elements necessary for development, thus producing a mental state analogous to the physiological state of starvation, and an augmentation of fears of imminent annihilation.

D. Dread of annihilation forces an attempt at repair of the capacity for assimilation and, *pari passu*, an increased impulse towards destruction of the capacity for assimilation, since such increased capacity is associated with the production of material for dream-thought (Phase A, b. & c.) and therefore of awareness of the super-ego (Phase A, h.).

E. Predominance of life instinct over death instinct leads to dominance of the impulse to repair the capacity for assimilation (Phase A).

F. Similarly, should death instincts predominate, the destruction of the capacity for assimilation becomes dominant (Phase D, i.).

G. In so far as life instincts predominate, Phase A comes into operation.

H. In view of the fact that Phase A involves the restoration of the super-ego (Phase A, h.), the attempts at repair of the capacity for assimilation only take place in the presence of the analyst who, as the trusted object brought into view by the presence of predominant life instincts, is felt as a barrier against annihilation – despite fear of him induced by reparation of the super-ego associated with the sub-dominant death instincts.

I. Following H., the phenomena of Phase A, f. become evident – that is to say, the transformation of the patient's sense impressions of the events currently taking place in the analysis.

J. A. and C. lead to an inability to dream.

K. The dominance of life instincts (E.) forces the use of dream-thoughts (D.) for the production of dreams.

L. For the reasons given in H., the patient is able only to dream in the presence of the analyst, and so there come into operation sessions that are indistinguishable from dreams from which a person is unable to awake; or, alternatively, sessions in which the patient resorts to the forced rationality of wakefulness.

M. Should the patient's fear be too intense, or his capacity for tolerating it be too small, he will compromise (K.) and produce, instead of an actual state of dreaming, either a consciously contrived dream or a hallucination of a dream.

N. The contrived or hallucinated dream is a compromise between K. and c.

O. The contrived or hallucinated dream can yield no associations, in this respect appearing to be defective in the domain of mental life in a manner analogous to the defects of the hallucinated breast in its inability to supply what the real breast supplies.

P. In contrast with the dream of L., the contrived or hallucinated dream of O. can be interpreted to display its qualities but not its content, for it has none that can be elicited.

Q. In contrast with the contrived or hallucinated dream of O., the dream of L. can be interpreted to display its content as well as its characteristic peculiarity distinguishing it from non-psychotic dreams.

R. Both the dreams of L. and O. must be distinguished from dreams reported as such by the patient.

[Undated – 1960]

Analytic technique

More than one patient has said my technique is not Kleinian. I think there is substance in this. I would put it as follows: I consider that the behaviour of the patient is a palimpsest in which I can detect a number of layers of conduct. Since all those I detect must, by that very fact, be operating, conflicts are bound to occur through the conflicting views obtaining contemporaneous expression. In this way, the conflict that is so important to the patient's sufferings and to theories of dynamic psychology is, according to me, accidental and secondary to two different views of the same situation.

Winnicott says patients *need* to regress: Melanie Klein says they *must not*: I say they *are* regressed, and the regression should be observed and interpreted by the analyst without any need to compel the patient to become totally regressed before he can make the analyst observe and interpret the regression. But by itself my theory will not do. That is to say that the patient feels he gains by being able to say, for example, "I am only a junior analyst". It seems to me that as I have stated it, it does not give due weight to the transference – and this is the objection that would be made. But it could, I think, easily prove only to be a matter of adjustment.

27 March 1960

Technique: meaning and interpretation of associations

There is a value, when listening to the associations, in making a mental distinction between the *meaning* of the associations and their *interpretation*. The patient says, "I went on Hampstead Heath yesterday and did some bird-watching".

Taking the meaning first:

1. Does he mean he was scrutinizing their sex life?
2. Or is it an attempt to describe getting into the hands of the police by behaving in a suspicious way?
3. Or does he mean he has at last taken some exercise?

And so on with other speculations. Then, having decided that point, what is the interpretation?

In conjunction with the rest of the analysis together with current transference, the preceding associations and the meaning as decided above, you finally produce the interpretation.

[Undated – 1960]

Scientific deductive system

How would a s.d.s. be produced for analytic theory? Can there be anything analogous to the 'law of gravitation'? It seems possible to produce a series of formulas that might succinctly express schizophrenia. Let us try it in the way that Braithwaite did it:

First, I think, must come the rules of the 'game'. But do the rules then come from the nature of the subject? Yes: that would seem to be the common sense of it. What are the rules of psychoanalytic schizophrenia? I jot down a few at random as they occur to me.

1. The patient always attends at the stated time and place. Analyst like-wise – or is it so? Sometimes it sounds as if that is not so. Perhaps in this respect the analyst is free to do just what he chooses.
2. The patient pays his fees regularly.
3. Analyst and patient are freely interchangeable.

These seem adequate for a start, but I could add two more.

4. The patient can do what he likes.
5. The analyst must give only strictly accurate interpretations.

But these are rules of the psychoanalytic game. We want rules of a s.d.s. Are they the same? Should the rules relate instead to Kleinian theory? There is no reason why they should not relate to any or all of these things.

[Undated – 1960]

The painful component

The solution of any problem must be regarded as having been faulty in the first instance if the consequence is neurosis. And yet the solution was a victory for right, moral right; and the victory consolidated the 'rightness' and morality of the part of the personality that triumphed. The triumphant part is included in the super-ego; it is the morality of the super-ego that is challenged, just as it is the 'id-ity' of the id that is challenged by the super-ego. The pain of readjustment consists in having to admit that the 'unworthy' part of the personality was right. The 'wicked' triumph – but make things worse by triumphing on the home ground as it were, in the realm of morality itself. The victorious aspect of the personality writes the history books, but the victorious side varies considerably from time to time. Unsaleable books, unreadable and unread papers do not constitute a social component; the thinker *must* be a man of action. The physical act of writing and carrying through all the other acts, up to and including public-ation, constitutes being a man of action *for the writer*.

[Undated – 1960]

The synthesizing function of mathematics

If a formula, or rather a calculus, is available, it may bring order to events that otherwise appear to lack any relationship. Thus a patient makes two remarks, and then makes two more; they appear to be entirely without any connecting link. It could be said that the two remarks, together with the other two remarks, make four remarks, and therefore that these facts could be seen to be related to each other in that together they made four facts. But it would be very unlikely that the mathematical application had served to effect the illumination of a relatedness of any consequence. Nor is it easy to see how, as things are at present, any calculus that has been constructed, or is likely to be constructed in the near future, would illuminate the relatedness of a series of disjointed associations of the kind with which we are familiar in analysis, particularly perhaps in the analysis of a psychotic patient. Moreover, it has to be remembered that we are always concerned with seeing the relatedness of the apparently disjointed and unconnected aspect of the elements in the analytic situation; the observation that two remarks and two other remarks make four remarks produces no flash of recognition because it effects no illumination of the point of intersection between paranoid-schizoid and depressive positions.

I use this phrase deliberately so as to emphasize a peculiarity in the use I am making of these two Kleinian concepts. I am here regarding them as comprising classes of events, and I am suggesting that no interpretation is of value unless at the moment at which it is given it involves, partly through the element of contrast which is inseparable from the juxtaposition, the illumination of the disorder of scattered, familiar, and apparently unrelated elements, and the order, cohesion, and relatedness of those same elements. Furthermore, this interpretation is not psychoanalytically effective unless, when given, it is common sense, i.e. one that involves agreement in two or more senses in the analyst and the patient, and between the analyst and patient in whom these senses are in accord. Judged by these criteria,

the suggested 2 + 2 interpretation can be seen to break down because it is so unlikely that it will serve the function of intersection between the two classes represented by the paranoid-schizoid and depressive positions.

* * *

Causation

The cause is that fact which is selected to give coherence to elements whose relationship to each other is either not perceived, or else seen to be such that it is irrelevant or inimical to the scientific deductive system of the beholder. In particular, the hypotheses that act as premises to the system, together with the beholder's common sense and the elements for which a cause is to be found, are brought together so that time is shown to link the elements to each other and not to separate them. It is intended to refute or deny the idea or possibility that time separates one element from another, just as in other contexts it may be desired to find a fact that demonstrates the coherence of elements that otherwise might be supposed to be separated rather than linked by space.

It is not, therefore, that there are many different opinions as to the cause of a certain event, but many different scientific deductive systems and therefore many different elements that can be selected as the intersection of the class, 'cause', and the class, 'effect'.

[Undated]

Communication

I Importance of communication as a link between related objects

> Knowledge of modern discoveries relating to logic would dispel a good deal of the prevailing confusion (which shows itself from time to time in controversies that disfigure the pages of Nature) concerning . . .
>
> [J. H. Woodger,
> *International Encyclopaedia of Unified Science, Vol. 2*, No. 5, p. 3]

The complaint is as old as the story of the Tower of Babel, and so is the wish that the problem might be solved, if in no other way, by divine intervention (as in the 'Acts of the Apostles', II, v) or by simultaneous translation (as at international congresses), or by a discipline of rigorous mathematical logic (as is proposed in the article from which I have taken my quotation).

Psychoanalysis does not allow one to suppose that the mechanics of communication operating through a universal language – whether that language is a universally known natural language, or an artificially produced language such as Esperanto, or the formulations of mathematicians, or the notation of musicians, or even the 'universal linguistic' of art itself, the content rather than the vehicle of the content – will be likely to rid us of disfiguring controversy in our attempts to co-operate in scientific achievement. But psychoanalytic experience shows that even the attempt to deal with individual tensions has not been, and is not likely to be, successful in abolishing this controversy.

If the major problem were only the 'disfiguring' nature of controversy, the matter would be painful and worth investigation, but in fact far more serious issues are involved than the emergence of phenomena that disfigure the image that men wish to have of those of their number set apart as leaders of scientific and intellectual ability

and integrity. So many controversies are wasteful and manifestly, from the outset, unlikely to issue in any clarification of the matters in dispute; the feature of almost all scientific controversy is the impotence of the disputants who show an inability to meet each other's contentions because they cannot communicate thesis or antithesis.

Language has been invented; translation can be achieved; musical and mathematical notations exist; men compose and paint. And now psychoanalysis attempts to elucidate the barriers and links that hinder or promote the relationships that require a capacity for communication. Nevertheless, the success of psychoanalysis lies so far not so much in bringing communication nearer, as in showing unmistakably the feebleness of our methods of communication even in the communication of disagreement. But this does not touch a yet graver issue, namely the problem of communication with our successors, for it would appear on the surface that if we cannot communicate with our contemporaries, we are even less likely to be able to communicate with our successors. If this communication cannot be made, the future development of analysis is imperilled and the successful discoveries made so far could be lost to the world. That this can happen is evidenced in the fate of the heliocentric theories of Aristarchus which seemed to be so clearly propounded that there could be no reason for their disappearance. As surprising and as inexplicable is the apparent disappearance of the meaning of a whole culture when the Bulgar state was captured by the Grand Duke of Moscow in 1431.

I hope I have made clear the central importance of communication in scientific method, and why there is prima facie reason to approach scientific method by this channel; the investigation will involve discussion of the psychology of the individual as an individual and as a member of a group. It will also involve appeal to many facets of human endeavour with which I am not competent to deal; but I hope that I may make sufficient headway to indicate the nature of a problem that others may be able and willing to investigate.

II Does such a link exist in mathematics or music? The problem created by change of environment

How is it that mathematics and music are able to find a method of communication? Or is it illusory in the sense that we can reproduce

the sounds the composer intended to hear, and yet do not in fact experience what he and his contemporaries experienced when they heard the same sounds, so that the disappearance – through inability to record the essence, only its outward trappings – is as complete in the music of Bach as it is in the culture of Byzantium or in the recorded history, say, of Hubert de Burgh, of whose actions and sayings we may know all we need, but of whose thoughts and spirit we know nothing? [Powicke, *King Henry III and the Lord Edward*.]

It seems hardly possible: at least one feels that even if such a loss is admitted, the mathematician and musician yet preserve far more than the psychoanalyst is able to do, or likely to be able to do, unless he can effect some radical change in his methods of communication.

It may be that the difficulty lies in a failure to grasp what are the features it is essential to communicate. Even if the analyst is fully possessed of material that he wishes to record because it is to him essential, it may be true that the material he fails to record, because to him it is obvious and axiomatic, is in fact only so because it is a part of his cultural climate and is therefore taken for granted. But suppose the cultural climate changes; then what he has recorded may well become meaningless because the key to it has gone with the change that has over-taken his civilization; regarding the cultural atmosphere of that civilization as permanent, he will have failed to pass on any record. Theoretically, I suppose he could record something that in his epoch was essential and meaningful, but which would be banal and unimportant to his successors. Suppose the god of the Christian religion came to be explicable – in all the manifestations attributed to him – as some perfectly satisfactorily demonstrable phenomenon of physical science, without the need of any mystical suppositions: would it be possible for those living under dominance of such cosmology to understand the religious music of Bach? In what sense could it be said that a Bach cantata had been adequately recorded and transmitted to the members of the new culture and civilization? It is clear that we may gain something from studying the means by which mathematicians and musicians and artists communicate, but not all that we could wish.

III What should be the content of the psychoanalytic communication?

Such vicissitudes as are secondary to unpredictable changes in culture we cannot guard against, but there still remains the lesser but important obligation to be sure that we are recording and communicating the essentials of our work, and not simply peripheral or accidental elements that we have mistaken for the essential. And here arises the problem: what in fact does happen in correct analysis? What is correct analysis, and what is the essential germ without which we have recorded virtually nothing? This is a grave problem and one that probably requires a concept of methodology to which science is a stranger. All existing concepts of methodology are already shaken by the advances of quantum mechanics, and it appears certain that methodology will in future have to reckon with a lowest level of hypotheses in a set – that is to say, a level formerly occupied by empirically verifiable data which consists of statistical hypotheses. I think it very doubtful that such a revolutionary change in outlook is revolutionary enough to meet the needs of scientific psychoanalysis. The only course open to us is to pursue the inquiry and see where it leads.

The first point to be decided is what it is that the psychoanalyst is to communicate, i.e. to embody in a notation that is precise and permanent. (I am not here considering the communications that are made in a session by the analyst's interpretations.)

Two people are in a room together, usually for fifty minutes at a time and for five sessions a week. We are concerned here with the account that is to be given of these proceedings by one of them – the analyst. What ought he to report? Can he know to whom the report is to be made – in the sense that he will have to vary his exposition to suit the needs of his audience and therefore should know what those needs are? Or is it possible to make a communication that will have value (by presupposing an abstraction, a conventional formulation that remains constant) for those to whom the communication is addressed? In the analysis of the psychotic it has been found valuable to suppose that all interpretations are addressed to a non-psychotic part of the personality even though there may appear to be little or no evidence for the existence of such a part. The navigator is able in certain circumstances to make use of an artificial horizon; can the

analyst, communicating to other individuals, do the same? And if so, can he give a scientific description of the artefact that he proposes to use in this way? The artefact should be such that the formulations that are stimulated by a belief in its existence are lifted out of the vicissitudes suffered by any communication through the changes in convention and culture to which I have referred. This artefact (receptor) must be composed of characteristics that we assume to be immutable and outside the play of forces such as changes of civilization. I believe this artefact receptor will be found to be not very different from the 'non-psychotic part of the personality'. Certainly it would save trouble and confusion if it turned out to be the fact that the same hypothetical construct could be used in analytic practice as in a communication to an extra-analytic audience, and vice versa. For the present it is necessary only to consider such a constant in order to realize that the answer to the question, 'What is to be communicated?', cannot be considered without reference to such a construct. Superficially this can look like a demand for an answer to a question that depends for its answer on another question that has to be answered after reference to the answer to the first question. But this kind of dilemma is one to which we shall have to grow accustomed until a methodology is produced which releases psychoanalysis, and probably all other sciences, from the restrictions of a classical scientific method that is as inadequate to psychoanalytic needs as classical wave mechanics are to the needs of the quantum mechanical physicist.

IV What is the content to be?

Let us suppose that the receptor characteristics have already been elaborated and are known to us. (I shall later educe arguments showing my justification for such a procedure when I describe the α-function of dream-work, and the way in which α-elements are employed in dream-thought.) What is to be recorded and communicated? The answer is deceptively simple: the analyst must record and communicate what he has recorded and communicated. That is to say that if my intention is to record and communicate, then I have no choice in my subject matter; any departure in my report from what I have recorded and communicated makes my report a link in a relationship that is not scientific but belongs to some other category – not

what I later call a K-link, but one belonging to a different class. Furthermore, it is addressed to the psychotic part of the personality by the psychotic part of the personality, however much this fact may be disguised by the employment, or the apparent employment, of non-psychotic mechanisms. Even a verbal statement that bears the stamp of rational persuasiveness will be found to be the vehicle for projective identification and to obtain any force and significance it has from its being so employed, and none – save deceptiveness – from its rational form and characteristics.

I am aware that my statement of content for the communication and record must seem to be either question-begging or platitudinous, but I believe that this will be seen not to be the case when we have penetrated more deeply into the subject.

Suppose now the receptor *and* the content of the communication: how is the record, and communication of the record and communication, to be effected? Before attempting any answer to this, we must note an ambiguity that has crept in. 'Record' has two different meanings: in one sense it means 'to receive a communication', and strictly speaking should refer to the way in which this is done; but it also means 'to store the communication received' in such a manner that it is available first of all when I want it, and secondly when (in this instance) the reader is ready to receive it.

V α-element

But I seem to have involved myself in some kind of contradiction. This is intended to be a scientific communication, and I have already expressed the view that as such it should be addressed to a hypothetical concept, the non-psychotic part of the personality which is endowed with certain unspecified immutable characteristics. I feel I am addressing it to an actual person – intelligent, friendly, engrossed in what I am writing and, to be frank, quite warmly appreciative of my effort. Analytic experience tells me this is really myself and that I shall be in for a rude awakening when I find out the real response. 'A rude awakening': am I then asleep? By no means. But this figure, these characteristics with which I have endowed it and you, might very well exist in a dream.

I propose to call this image an α-element. (This does not refer to its function as part of a phantasy; it applies only to the visual image itself.) The hypothetical concept, the 'non-psychotic part of the personality', I consider to be a version of the α-element which belongs to a level of increasing generalization in the hierarchy of hypotheses that form the theory to which both the α-element and the hypothetical concept belong. Conversely, the α-element approximates to a level of decreasing generalization, or increasing particularization, thus having a relationship with the hypothetical concept somewhat similar to that which exists between the level of empirically verifiable data and the hypotheses of the scientific deductive system related to it.

Can the relationship of the α-element to the hypothetical concept be described as more than 'somewhat similar' to that which exists between empirically verifiable data and the generalized hypotheses representing them? Could it be described as identical? For the present I think we are justified only in noting a certain similarity. The same similarity must likewise be noted, but left for later treatment, in the resemblance that the relationship between the α-element and the hypothetical concept of the non-psychotic part of the personality bears to the relationship between the hypotheses of quantum mechanical theory and the statistical hypotheses that appear, in this theory, to take the place of empirically verifiable data.

We must consider the possibility that in a scientific deductive system the appearance of bi-polarity that is presented by the hierarchical arrangement of a theory (with premises and high-level hypotheses of high generalization at one end, and low-level sets of empirically verifiable data of high degree of particularization at the other) must be replaced by something far more complex in which what I later call 'a selected fact' has grouped about it a constellation of elements in sets that are determined only by the nature of the link and its characteristic of being attached to the selected fact. In such a system the scientific deductive system would form only one set of elements, linked by the logic of the deductive system, and possessing the selected fact as one of its elements. But I feel that we must not attempt to proceed further before examining in greater detail some of the statements I have made, and the concepts that I have been compelled to introduce without adequate explanation.

VI Dream-work-α

Psychoanalysts, and Freud in particular, have described how the dreamer compresses, distorts, displaces and disguises the dream-thoughts in such a way that the manifest content of the dream bears little apparent resemblance to what he calls the 'latent content' of the dream, namely that content which is revealed by interpretation. This transformation of dream-thought into manifest content is, Freud says, brought about by dream-work. I wish now to employ this term to describe a related but different series of phenomena. To avoid confusion with the concept already established in psychoanalytic usage, and to avoid inventing a term that introduces – by virtue of its penumbra of already existing associations – implications I would prefer to exclude, I propose for my purposes to modify Freud's term by calling it 'dream-work-*α*'. What I propose to designate by this term I shall now relate.

In the state of mind of relaxed attention necessary in making observations, the individual is able through his senses to establish contact with his environment. He is aware of his sensations and could, if required, describe what they are – as I, for example, can describe the colour of the paper on which I write, my hand holding the pen, and so on. Similarly you, the reader, can make observations of your experience as you read the word printed on the page. I shall not in this inquiry consider the individual who had a defect that prevents his experiencing even this degree of contact with his environment, but I shall consider the individual who is able to make sensory contact and yet seems quite unable to learn from the experience; for such a patient enables me to observe, by contrast, a more usual chain of events of which I might otherwise remain unaware. This chain of events, as far as I am able to tell, is something like this: suppose I am talking to a friend who asks me where I propose to spend my holiday; as he does so, I visualize the church of a small town not far from the village in which I propose to stay. The small town is important because it possesses the railway station nearest to my village. Before he has finished speaking, a new image has formed, and so on.

The image of the church has been established on a previous occasion – I cannot now tell when. Its evocation in the situation I am describing would surprise no one, but what I now wish to add may be more controversial. I suggest that the experience of this particular

conversation with my friend, and this particular moment of the conversation – not simply his words but the totality of that moment of experience – is being perceived sensorially by me and converted into an image of that particular village church.

I do not know what else may be going on, though I am sure that much more takes place than I am aware of. But the transformation of my sense impressions into this visual image is part of a process of mental assimilation. The impressions of the event are being re-shaped as a visual image of that particular church, and so are being made into a form suitable for storage in my mind.

By contrast, the patient might have the same experience, the same sense impressions, and yet be unable to transform the experience so that he can store it mentally. But instead, the experience (and his sense impressions of it) remains a foreign body; it is felt as a 'thing' lacking any of the quality we usually attribute to thought or its verbal expression.

To the first of these products, that of dream-work-α, I propose to give the name, 'α-element'; to the second, the unassimilated sense impression, 'β-element'. It may be wondered why I should need to consider β-elements at all in an inquiry into scientific method if they are a characteristic of a disturbed personality. My reason is that while I have been led to observe β-elements through treating disturbed patients, their occurrence is by no means restricted to their use by disturbed individuals – as I hope I shall presently show.

If my contention is correct, the production of α-elements is of the first importance: on an adequate supply of these elements depends the capacity for what Freud calls 'unconscious waking thinking', the ability to entertain and use dream-thoughts, the capacity for memory, and all the functions of the apparatus that Freud tentatively suggests come into existence with the dominance of the reality principle ('Two Principles of Mental Functioning' [1911b]).

The β-elements are characteristic of the personality during the dominance of the pleasure principle: on them depends the capacity for non-verbal communication, the individual's ability to believe in the possibility of ridding himself of unwanted emotions, and the communication of emotion within the group.

The α-elements may be presumed to be mental and individual, subjective, to a high degree personal, particular, and unequivocally belonging to the domain of epistemology in a particular person.

The example I have given of the visual image of the church is to a high degree particular, and must be regarded as belonging to the lowest level of empirically verifiable data. In the context in which I have cited it, it is not even a symbol, although once the individual has experienced such a visual image there is nothing to prevent its appearance in other contexts fulfilling the functions usually associated with symbols. What I wish to emphasize is that its character as an *α*-element is its suitability for employment in dream-thought and unconscious waking thinking, and not the way in which it may be employed. I may have more to say about the characteristics of the *α*-element that make it suitable for use as a symbol or an ideogram, but for the present I emphasize its character as an element – an irreducibly simple object.

I may make my point clearer by drawing attention to the last sentence in which I have had to call an *α*-element an irreducibly simple 'object'. The term, 'object', carrying with it the association of a subject, and being in any case a word referring to a word, is more complex and less elemental than the *α*-element. It is as if, in order to state how simple, lacking in complexity and elemental (not elementary) an *α*-element is, I had to say it was something far more complex which is derived, through a process in the mind, from *α*-elements. The impasse is similar to that of the quantum mechanics physicist whose knowledge of elementary particles depends on methods too gross to detect them. In this instance the verbal description perforce employs terms that are too complex and refers to ideas when the discussion is of something altogether simpler.

The function of dream-work-*α* is to produce something that bears a relationship to an idea analogous to the relationship that an elementary particle bears to an atom in physics. The function of the *α*-element with which we are concerned in a discussion of scientific method, is its key position in the apparatus by which the individual learns anything. Similarly, the function of the *β*-element which concerns us is in communication within a group.

Without *α*-elements it is not possible to know anything. Without *β*-elements it is impossible to be ignorant of anything: they are essential to the functioning of projective identification; any unwanted idea is converted into a *β*-element, ejected from the personality, and then becomes a fact of which the individual is unaware, though he may be aware of feelings of persecution stimulated by it.

I reserve the term, 'knowledge', for the sum total of α- and β-elements. It is a term that therefore covers everything the individual knows and does not know. As I use it, the term must not be supposed to imply the existence of a thing in itself called 'knowledge'; it is a name for a postulate that has no actuality; there is no corresponding 'realization' in the sense that abstract mathematical systems may have one or more concrete realizations. 'Knowledge', in my sense, will thus be seen to appertain purely to the realm of epistemology. In my use of the term it is nonsensical to talk of knowledge of astronomy, or of there being any actuality corresponding to a term, 'astronomical knowledge', other than in the sense of α- and β-elements employed by the individual in his relationship with a domain of facts.

We have now approached this difficulty: the α-elements are, by definition, indispensable to the apparatus that enables the individual to know something. But they are also what he knows in that they are elements of assimilated sense data; they are his knowledge. This may not appear to be a difficulty if we state it in some such terms as, 'We use our knowledge and experience to gain more knowledge and experience'. But there is a difficulty that I wish to make apparent, and I can do this best by supposing a phase to exist – if we go back far enough in the individual's life – in which there is no knowledge, i.e. no α-elements or β-elements.

It may well be that this early learning, or first stage of any learning, is effected by dream-work-α on the one hand, and the mechanism of projective identification on the other. This supposes that the β-elements can be employed when α-elements do not exist, and the α-elements are a later stage of β-elements – that is to say that dream-work-α operates on β-elements and not directly on sense data. There is also evidence to support a theory that β-elements are employed, or felt to be employed, as projectiles so that they are planted in an object which perhaps submits them to a transformation by its dream-work-α apparatus before the projecting personality re-introjects them. But although these possibilities offer a way out of the difficulty – and indeed are, I believe, more than possibilities – they do not cover a mechanism in which the α-element is used to explore the emotional experience in which the person finds himself.

August 1960

α

It is advisable to revert to the patient's dream over and over again – elaboration 1, 2, 3 . . . *n*; but not simply as dreams to be interpreted and related to a stimulus. *They must be related to the dream-work that the stimulus has stimulated*. How is this to be done? It may be easiest with the psychotic patient, for with him there is more chance of being able to see the stimulus, i.e. the consulting room scene itself, and his dream-work reaction to that situation. In particular it would seem necessary at first to make a distinction between α and projective identification – or at least to show that 'excessive projective identification' means projective identification to the exclusion of other methods of dream-work-α. The methods of dream-work-α are not the same as those of dream-work which is related to interpretation of dreams, but are the *reciprocal* or dream-work and are related to the capacity to dream, i.e. to transform into dream, events that are grasped only on a rational, conscious level. In this way α is the reciprocal of dream-work. Furthermore, it suggests that the element of 'resistance' in dream-work, as elucidated by Freud, is a compound of two elements: resistance, as described by Freud; and a felt need to convert the conscious rational experience into dream, rather than a felt need to convert the dream into conscious rational experience. The 'felt need' is *very* important; if it is not given due significance and weight, the true dis-ease of the patient is being neglected; it is obscured by the analyst's insistence on interpretation of the dream.

[Undated – 1960]

α
and paranoid-schizoid position

To what extent is the constant transition from paranoid-schizoid to depressive position and back again the essential mechanism of learning throughout life? As I listen to a patient, am I not all the time thinking that I see 'the point', and then rejecting it to reassume paranoid-schizoid? And is this not a kind of regurgitation? A chewing of the contemplative cud? Should that not be the visual image – a cow, milk-and-calf producer, chewing the cud? It means then that in the chaos of unconnected incoherent facts I see 'the point' – the selected fact. If I am wise, I reject it and reassume chaos. I select another fact, or the same one. I reject it and reassume paranoid-schizoid position. And may not this also give rise to situations in which the patient appears enviously to reject an interpretation that he accepted the day before? (Melanie Klein, 'Envy and Gratitude', pp. 183–184.) That is to say that as well as envy it may be an example of failure to return to paranoid-schizoid, and a wish to make the *analyst* do so; *he* has to feel that the whole of the mass of discrete objects has again lost its coherence and cohesion.

The difficulty that the schizophrenic patient has in extricating himself from a state of mind means that he tends to have great difficulty in the rapid change from Ps to D that is necessary for *α*. This contributes to the analyst's impression of lack of progress because the slowness of oscillation hinders realization of oscillation. That is to say that the successful interpretation brings relief but takes the patient into the depressive position and confronts him with yet wider vistas of uncoordinated elements. In the next session he starts where he left off – he can do nothing towards returning to Ps and back to D. In other words, he is displaying a slowness of reaction comparable with the slowness of change at the beginning of analysis when the same mood may remain unchanged for months.

[Undated – 1960]

Dream-work-α

To what extent is myth-making an essential function of *α*? It may be that the sense impression has to be transformed to make it suitable material for dream-thought, but that it is the function of dream-thought to use the material put at its disposal by *α*, the units of dream-thoughts so to speak, in order to produce myths.

Myths must be defined; they must be communicable and have some of the qualities of common sense – one might call them 'common non-sense'.

Dream-work and α

The episode of the rain storm has emerged at different times in fragments. Rain – without a raincoat – taking the only taxi – pneumonia feared for me – self in rain at my house.

Then there was his account of the baby with a horn on its nose – some cowl on its head – his wife and blood – shambles.

There was his dream of his other self. This was coherent and might be an account of what I had said to him in a session. If so, it is almost accurate, but I am his other self and it is called a dream.

What do I know about all this? Virtually nothing. It is hardly even true to say that I know he said it, because although I was present and heard him talking and saw him lying on the couch, there is little I can do to digest it. In other words, I do not *know* what took place – I *suspect*. The conditions do not exist for me to have the experience of knowing, but the conditions do exist for me to be suspicious. I can only pile one hypothesis on another. Taking the view that I need to be able to operate *α*, I find in fact that I cannot.

The obvious explanation is that I know of no theory and can find no selected fact that makes the facts cohere. What theories are there? The following occur to me:

1. He is aware of reality and delivers splitting attacks on it so that the elements appear as elements.
2. These elements are scattered in time.
3. The elements are sometimes conjoined, e.g. my house and my being wet through. But these elements were not thus joined in the episode.
4. Usually the elements are widely separated, and the matter intervening seems intended to isolate each element from another. It might be said that a kind of mental faeces links, or separates, the elements.

In all this I have described some facts (2, 3, and the first line of 4) as theories; this gives a measure of the uncertainty. Can any scientific theory be produced to meet such a position – a theory of improbability? An uncertainty principle perhaps?

[Undated]

Splitting of the breast enables the infant to take the milk without understanding its dependence on the breast and the indulgence it extends to him. Such understanding involves hate and envy, and these impel attacks on the apparatus of understanding to prevent the stimulation of envy – envy thus destroying envy. The attacks mean that *in effect* the breast as a source of understanding, the 'mental' breast, is felt to be destroyed since no apparatus to understand it means no understanding of it, and so no 'it' to understand. That leaves the sucking breast only as a 'thing' incapable of loving and understanding, and incapable therefore of endowing something else with understanding.

[None of the entries on pages 182–270 was dated, but it can be assumed that they were written between 1961 and 1967.]

[Undated]

The problem of perception: common sense and group polarity of instincts

Berkeley says the stimulus may be God; so does Descartes. I shall maintain there is truth in this and that amongst all the objects that any given hypothesis at any given moment asserts to be constantly conjoined there is always the element that is that aspect which 'God' presents. Thus if I say I see a table, I am stating that this is an empirical experience in which my hypothesis that certain elements are constantly conjoined – those elements in fact whose constant conjunction I have decided to call, 'a table' – are again conjoined; furthermore, that amongst these elements (hardness, shape, etc.) is an element that is 'God's' contribution, a presenting in me the awareness of certain sensations. In this context I regard God, or Descartes' evil spirit or Demon (in his first 'Meditation') as being interchangeable views of the same thing.

What is this God or Demon? In my view it is none other than the social component, '*Vox populi, vox dei*', of the instinctual equipment. Or, looked at from another point of view, it helps to convince me that these conjoined sensory experiences are, or are proof of the existence of, a table. In the instance of the table this may not be of moment, but throughout the history of scientific endeavour we find evidence of acceptance by the scientist of beliefs that are supposed by him to be ideas corresponding to an objective reality, but which, in the light of later knowledge, we can see to correspond to that special or particular reality that we now see to be the common sense of the time. Such evidence is not proof but is at least not incompatible with the view I am proposing: that certain perceptions of the individual are not so much qualities under investigation as impositions on the individual's outlook by common sense (in my terminology) or God's idea (in Berkeley's) or the deceptions by God and Demon (in Descartes').

[Undated]

Ultimately, a science stands or falls in proportion as it is a valid technique for discovery, and not by virtue of the 'knowledge' gained. This last is always subject to supersession; indeed, supersession of findings by new findings is the criterion by which vitality of the subject is judged.

Induction

A generalization is induced from many (number not specified) instances – until presumably we get, 'All men are mortal', as our premise. But this seems to me to be a hypothesis like any other: a hypothesis that is then used as a premise in a deductive system no doubt, but a hypothesis none the less. And it derives from other hypotheses; for example, 'men'. But are any words that are not nouns hypotheses? All? Mortal? Are? If sounds can be combined to make words, then words can be combined to make further hypotheses.

The statement, 'All men are mortal: Socrates is a man; therefore Socrates is mortal', is supposed to be a deduction from the premise, 'All men are mortal'. But the premise is supposed to be arrived at by a process of induction. That is to say that a great number of people are known to have died, and from this, inductive reasoning leads to the generalization that 'All men are mortal'. It is my contention that this is false. I do not believe anyone has ever thought that a lot of people have died and then have begun to suspect that men die, until the suspicion begins to harden into a conviction and at some given moment the generalization flashes into existence – all men are mortal.

My theory is that contact with reality induces questions, and that the process of induction gives rise to questions. The hypothesis is inspired by the need to deal with – not necessarily to answer – the question. It may still be true that the hypothesis does answer the

question, but that may only be because in a particular instance there is an answer that would deal with the question.

The question may be of little social significance. That is to say it may, like instances of sense impressions that constitute purely 'private' knowledge, be a purely private question. Such an instance would be someone who fears that he has been responsible for the death of a particular man. His doubts and questionings could then be dealt with by the hypothesis, 'All men are mortal', and from this he could establish a deductive system of which 'All men are mortal' would be the premise, and so arrive at the conclusion that the particular man had died because of his mortality and not through any action on the part of the man who felt guilty. Such an inductive process is not, perhaps, as socially valuable as that of another whose induced questions had a bigger social or public component analogous to the 'common sense' of the man whose knowledge, the facts of which provided him with the material for his scientific observations, might be regarded as 'public' knowledge for public communication.

Any contact with reality leads not to the collection of facts that common sense would regard as material suitable for empirical observation and testing, but to the induction of a series of questions, or an amalgam of the series of questions – what? why? how? where? The statement, 'All men are mortal', is a response to that *private* question, and the problem of induction that has troubled philosophers is really not so much, 'How is that premise arrived at?' but, 'What was the question to which this hypothesis-turned-premise is the reply?'.

[Undated]

Mental health

The man who is mentally healthy is able to gain strength and consolation and the material through which he can achieve mental development through his contact with reality, no matter whether that reality is painful or not. This view may owe its origins to experience in no way metaphysical, but such as might be achieved through failure to admit the existence of a physical hazard to physical progress and the resultant fall. The reciprocal view is that no man can become mentally healthy save by a process of constant search for fact and a determination to eschew any elements, however seductive or pleasurable, that interpose themselves between himself and his environment as it really is. As a psychoanalyst I include the man's own personality as a part, and a very important part, of his environment. By contrast it may be said that man owes his health, and his capacity for continued health, to his ability to shield himself during his growth as an individual by repeating in his personal life the history of the race's capacity for self-deception against truth that his mind is not fitted to receive without disaster. Like the earth, he carries with him an atmosphere, albeit a mental one, which shields him from the mental counterpart of the cosmic and other rays at present supposed to be rendered innocuous to men, thanks to the physical atmosphere.

[Undated]

I have said that the inchoate mass of incoherent, or apparently incoherent, elements can, by selection of the appropriate fact, be made to appear to the observer to come together as a whole in which the elements are now seen to be related to each other as parts of the whole. When time is essential, this selected fact is known as the cause, but this fact is otherwise no different from other facts that are selected for their apparent ability to bring these elements together as a whole. Such facts do not necessarily possess intrinsic significance; that depends on what fact the observer lacks, and that clearly depends on the observer. The acceleration of the falling body could not be 'understood' by Galileo till he had selected the fact that the fall was proportional to the time through which the body had fallen, and not the distance (is this an instance of asking the right question: 'when?', not 'where?'). This fact is not a scientific fact unless and until it can be communicated and then found to be (or not to be) one that fulfils this function of integration for a large number of people, or a society or a group, 'in common'. But at first it is a private fact and is chosen because it fits into a scientific deductive system or calculus of immense complexity, for it is co-extensive with the entire mentality of the person.

In the instance of acceleration of falling bodies, it was Galileo who required a fact that would give coherence and meaning to the facts already known to him but felt to be devoid of coherence. But the environment, the world of external reality, was for all practical purposes no different for all Galileo's contemporaries. The majority of mankind, we may be sure, were unaware of any lack of coherence in the facts that they perceived to be associated with falling bodies. Yet it is not to be believed that the individual lacked preoccupations then, any more than he does today. Every individual is in a state of mind in which he is aware of elements of a world independent of himself. A contemporary of Galileo might be as well aware as Galileo of the

facts that bodies fall, but, as is the case with the majority of individuals today, those facts presented no problem.

It is at this point that we touch on the problem of induction that has given rise to so much confusion for the philosopher of science. It has always been felt that induction is very important. Even today Bertrand Russell considers that no scientific method is possible without induction, and even goes so far as to suggest that induction is the foundation of all scientific knowledge. It is evident that he is not happy in the consequences that follow from this belief, and he expressly states his conviction that Hume's arguments (against the supposition that something additional to constant conjunction is a purely psychological phenomenon arising from the tendency of the human mind to associate ideas together) have never really been met. I hope to show that, thanks to psychoanalysis, we are now in a position to see why the philosophers who argue in favour of induction are led into an impasse from which they have so far found no escape; and also why philosophers who are not satisfied by Hume's dismissal of constant conjunction as adding nothing extra to a pure phenomenon of the human mind – namely its tendency to associate one idea with another – cannot propose any alternative that will at once express the nature of their dissatisfaction *and* fill the gap that they feel Hume's theory leaves in the structure of scientific method.

I think the fault lies in the belief that the inductive method consists of the collection of data and the inference, from the data observed, of generalizations such as are commonly embodied in a hypothesis. I believe the hypothesis is not based on what is commonly supposed to be observation, but is essentially a statement that such-and-such is a fact. This supposed fact has invariably the following features, which are essential to it as a hypothesis.

1. It states that certain elements are constantly conjoined.
2. It states that these elements are conjoined in a particular way.

When one of the elements is time, the elements are always stated to be related to each other as cause and effect. The word, 'cause', is applied to the selected fact that, for the particular individual observer, gives coherence to certain elements that have, to him, been mentally present as incoherent and demanding coherence. Essential amongst these elements are (externally) time, and (internally, and peculiar to

the individual) feelings of guilt. We shall see later the importance of this description of the nature of a scientific hypothesis, but for the moment I want to turn to the problem of induction.

I believe that philosophers are correct in expressing the need for some theoretical concept, such as induction, to represent a verifiable fact that plays an essential role in the scientific method. I also believe that the process of induction – whatever that might turn out to be – is and must be related to a sensory awareness of data of external reality. But the function of induction is to extract from the data that have been collected via the sensory apparatus, not a hypothesis but a question – preferably the right question. By 'right question' I mean that which is dictated by common sense (in the sense in which I have defined it); any other question is a matter of private concern. All scientific matters are of public knowledge of public facts made public – the scientific work consisting of public-ation.

I suggest then that the process is one of awareness of incoherent elements and the individual's ability to tolerate that awareness until such time as induction leads to the formulation of a question. (Of the nature of those questions I shall speak later.) The question once formulated gives rise to an inspiration, the selection of the 'fact' or, as I would suggest, the sophisticated fact or hypothesis. From this follow the steps by which a scientific deductive system is built up: from the high-level hypotheses acting as premises, through the intermediate derived hypotheses, through decreasing generalization to the lowest-level hypotheses, we reach the particularizations that are open to invalidation by empirical testing.

It will be noticed that I have done away with the suggestion that the hypothesis is derived from observation that certain elements are constantly conjoined; I have substituted for it the theory that the hypothesis invariably maintains that certain elements are constantly conjoined and that it is the function of the hypothesis so to do. This substitution may at first sight seem to be of very little consequence, and indeed even to be a merely arbitrary alteration in the accepted order of events. But in fact, as I shall now demonstrate, it is an emendation that, like so many in the history of science, is apparently trivial in itself but effects a change that is of an importance apparently out of proportion to its seeming insignificance. For, once it is accepted that an essential feature of the hypothesis is to state, together with whatever it states, that certain elements are constantly conjoined, then

it becomes possible to see something of the history of the hypothesis as a development in the human mind in its change to the phase that Freud calls the dominance of the reality principle. Furthermore, it becomes possible to make a new approach to the difficulties that have been raised by the philosophers of perception to the discomfiture of those philosophers who feel that a place should exist for the exercise of common sense, and that common sense and the objections of the phenomenologists could not really be brought together in anything more satisfactory than a head-on collision.

I suggest that the elements of scientific method to which I have drawn attention, namely the relationship between the psychological needs of the individual, the demands of the reality principle, the demands of reality on the individual for recognition as reality if he is to survive, the hypothesis as an assertion of constant conjunction of elements and a statement that the elements are conjoined by different forms of relatedness that may be distinguished from each other, the social component that is discerned in the fact that public-ation is an essential and not an accidental feature – all are present at an early stage in the history of the individual and the race, and are associated in particular with the development of verbal thought. Here again I think the problem is simplified if we ignore for the time being the characteristic of words which has so far dominated the picture – namely their characteristic symbols – and consider each word to be by way of what at a later stage we call a hypothesis.

Regarded in this light, I suggest the individual seeks by the emission of selected sounds, later to be distinguished by words, to convey that certain elements in his surroundings are constantly conjoined. Thus the individual may express by some sound, such as 'da–da–da'; that certain sensory impressions are always conjoined; the 'da–da–da' being conjoined with them is a method of public-ation of the hypothesis, and at the same time a reduction of the hypothesis to terms that can be verified by empirical tests. "Da–da–da", says the infant. "Yes", says the perceptive mother, "That's right; it's Daddy". And the scientific method, high-level hypothesis, generalization and verifiable statement, together with public-ation, has been born.

I do not suggest that this is going to meet the objections of the philosopher of perception who may still feel that a particular problem is insoluble. Namely the problem of how the private knowledge of sense impressions is ever to be translated into public knowledge,

or how the individual is ever to be assured that any phenomena lie beyond the sense impressions of which he is aware. I can only reply, taking a leaf out of the hypothetical book of my hypothetical infant, by public-ation – that is, speech. This problem, which appears to many philosophers to be a matter of dialectic, cannot be regarded as unimportant by the psychoanalyst who may be treating a patient whose sense impressions appear to give him information that does not correspond with what the analyst ordinarily considers to be the appropriate external facts.

* * *

When is the private fact made public? In the individual, when it has become a matter of common sense; that is, all his senses combine to give the same information. But amongst these elements of personality, in which I include the sense perceptions, I wish to include also that aspect of the senses which is held in common with the group. Private knowledge becomes public knowledge when the common sense of analyst and analysand agree that the perceptions of both indicate that some idea corresponds to an external fact independent of both observers. I shall later suggest that it is the moment of publication that is the point at which a mental phenomenon – a thought, an idea, a hypothesis – becomes an action in a psychoanalysis. When the psychoanalyst gives an interpretation that is a public-ation of private knowledge, he is translating thought into action, word into deed, just as much as the physicist conducting a laboratory experiment.

[Undated]

In my papers, 'The Differentiation of the Psychotic from the Non-Psychotic Personalities' [1957] and 'Attacks on Linking' [1959],[1] I was concerned with the effect on the patient's capacity for communication with himself and others of the minutely destructive fragmentation – originally described by Melanie Klein ('Notes on Some Schizoid Mechanisms' [1946]) – which the schizoid inflicts on these methods of communications as a part of his destructive attacks on all links. At the moment I am not concerned with the destructive attacks nor yet with the attempt, implicit in the psychoanalysis of such a patient, at reparation of the destruction and synthesis of the fragments – except in so far as it might be possible to deduce from these experiences some tentative hypotheses to illuminate the normal process of development. The elements with which we shall be concerned are hallucinations associated with intense deprivation (whether caused by the blockading effect of the patient's own envy or for any other reason, e.g. destruction of all links, murderous super-ego, predominance of death instincts), dreams, speech and its disorders (e.g. stammer), painting and drawing, and reports of difficulty with musical execution.

I shall commence with the description of a clinical experience. The patient gives virtually no information in terms of ordinary conversation. But he is able to create an impression. In my attempt to understand him I am successful in that I receive an impression, but I am unsuccessful in that the impression I receive cannot be evaluated. The patient speaks: "Well, I don't seem to have anything to say . . . I say I have nothing to say . . . it doesn't seem to me that I have, anything at all . . . I suppose I've done something wrong . . . of course I did go . . . no, it's no good."

These statements are made as if they were addressed to me. Each group of words is followed by a pause, as if I were invited to reply. My silence prompts the patient to repeat himself in a tone that betrays

[1][For both, see *Second Thoughts*: Volume VI. *Ed*.]

his sense of being disregarded by me. The phrase, "I suppose I've done something wrong", is an expression of grievance at the utterly unreasonable treatment to which he is being subjected in being made to feel guilty when in fact he has nothing with which to reproach himself. The total episode must have occupied ten minutes, and up to this point bears the stamp of a contrived situation.

The remainder of the session, after appropriate interpretations, took on an entirely different stamp and consequently becomes irrelevant for my present purpose. I propose, therefore, to dwell on certain aspects of this fragment, ignoring subsequent developments and the work that preceded it, except to say that the main characteristic was the same as that of this fragment, namely envy. Even so, the fragment expressed only one facet of the operation of this emotion. Envy in one form or another dominated every session for months on end, and the essential feature of the envy was its disastrous efficacy in cutting the patient off from every – or what seemed to be almost every – source of vitalizing influence.

The isolation of the patient was effected by the severance of his means of communication with the vitalizing influence. This is the true significance of the attacks on linking to which I have drawn attention; these attacks and their effect are clearly manifested in the destruction, namely projective identification, ideogrammatic expression, sound (as the matrix of that specialized form which in its maturity we recognize as music), and indeed the ideational counterpart of all the senses.

But in addition to these there is an attack on the Positions because they are a vital factor in the conversion of the unknown to the known. That is to say, the individual's capacity for learning depends throughout life on his ability to tolerate the paranoid-schizoid position, the depressive position, and the dynamic and continuing interaction between the two. The Positions are not to be regarded simply as features of infancy, and the transition from paranoid-schizoid to depressive position as something that is achieved once for all during infancy, but as a continuously active process once its mechanism has been successfully established in the early months. If, therefore, this is not established at the outset, then its operation remains defective throughout life (in varying degrees of intensity), and the patient cannot reap the benefits that accrue through smooth operation of the to-and-fro between the two positions that should, for a full and healthy life, be always available to him.

As I attempted to show in my paper on the attacks on linking, this means that the two main routes by which the patient can maintain communication with the sources essential for healthy development are both obstructed with degrees of thoroughness dependent on the severity and duration of the attacks on the links. I shall discuss this in detail later, but for the present pass it by to consider what these vitalizing sources are from which the patient is isolated.

I must make it clear at the outset that I cannot pretend to anything but a shadowy idea of these sources; I do not doubt that they will need psychoanalytic investigation for many years. But, broadly speaking, I believe they are sources that betray their presence and activity in the Oedipus myth.

We are accustomed, thanks to Freud's discoveries, to attribute great significance and importance to the Oedipus complex, and consequently it has come to be regarded as if it were the starting point of a dynamic process.

* * *

I wish now to regard the Oedipus myth, the Sophoclean version of that myth, and Freud's own discoveries as all being attempts at the resolution of a developmental crux. I hope to show that these attempts at resolution are far more widespread in time, and far more various in the form and method of resolution adopted, than has hitherto been realized or even suspected. One such attempt can be discerned in the issues involved in the production of a scientific deductive system and the calculus that represents it.

With this end in view I propose to examine Euclid's elements. This brings me back to the point at which I said a search must be made for the intersection of processes analogous to those which we ordinarily see in dreams, with the processes we ordinarily associate with mathematical logic. But before doing this I must give a warning: it is inevitable that I should appear at certain points of the discussion to be seeing sexual, and particularly Oedipal, symbols in certain Euclidean propositions. As I shall make clear, there is nothing new in this: in fact insights date back at least to Plutarch. But in some respects it would be putting the cart before the horse to think that Freud's Oedipal discoveries elucidate the Euclidean theorem, for I wish to propound the hypothesis that the Euclidean theorem and Freud's discovery of the Oedipus complex, together with the Oedipus myth and the

Sophoclean version of it, are alike in that they are both attempts to resolve the conflicts and problems of which they are at one and the same time the manifestation and the attempted solution. I further wish to show that the problems involved in the interplay between the Positions have also prompted attempts at resolution analogous to those to which I point as associated with the matrix or matrices of the Oedipus myth.

I have previously pointed out that the Oedipus myth itself embodies the problem of knowledge in that a question is posed, demanding an answer. One point on which I shall dwell is, what was the question posed by the Sphinx? To this I shall suggest a solution. I shall also suggest that envy plays a role in the fundamental problem, which has not been appreciated although it is of first importance. This envy is directed against the capacity of the individual that makes him able to negotiate the Positions.

To start with the Sphinx and her question – I stress, *her* question – tradition has it that the question was: what walks on four feet in the morning, on two at noon, and on three in the evening? And the answer was: man crawls on all fours as a baby, walks upright in the prime of life, and uses a staff in old age.

I shall propose a different answer. But I must first draw attention to an aspect of Euclid's Fifth Proposition in his first book. We are so accustomed to regard his use of the term, 'isosceles triangle', as bearing only the meaning that we associate with a mathematical term, that it is difficult to realize that the Greek term could be translated as, 'a three-kneed thing with equal legs'. R. B. Onians has shown – and he cannot be accused of any tenderness to Freud's theories of sexuality – that the knees, in early Greek literature, are very frequently associated with the genitalia [*Origins of European Thought*, p. 174]. This has made me look at Euclid's Fifth Proposition in a new light. It also makes one inclined to attempt a revaluation of the question traditionally attributed to the Sphinx. But for the moment I shall rest content with bringing together Euclid I.5 and the Oedipus myth.

[Undated]

The Oedipal chain

The fate of the primal scene:

1. There may be an actual sensory experience. This would correspond to the lowest-level hypotheses of empirically verifiable fact.
2. The scene assumes the character of a hieroglyph or an ideogram.
3. The ideogram becomes (a) formularized, or (b) abstract. If abstracted, then it becomes a figure constructed out of the 'elements' (of Euclidean geometry).
4. An intermediate phase derived from another context – the invention of Cartesian co-ordinates.
5. The further abstraction of the scientific deductive system that is Euclidean geometry, to produce the algebraic calculus representing the scientific deductive system that is Euclidean geometry. Thus is established algebraic geometry.
6. Further calculi.

Reverse the direction

Now the algebraic calculus has to be returned to the lowest-level hypotheses of empirically verifiable data; it can then find its 'realization' in 'space' from which Euclidean geometry supposedly springs. But in fact the calculi that have been produced are many and diverse, including those of non-Euclidean geometry. Some of these calculi are applicable to study of astronomical space. But in so far as inappropriate calculi may be used, they tend to betray their origin, and the space that is explored by virtue of these calculi is given characteristics that are markedly reminiscent of the empirical data from which the calculi were originally derived. Are these characteristics then actual characteristics of space? Are there actualities or realities

corresponding to the *ideas* of reality that the calculi have enabled the astronomer to achieve? Or are the ideas only reflecting the origin of the calculi and the scientific deductive system, Euclidean geometry – namely the space of the primitive individual from which the scientific process sprang?

Unfortunately astronomy is based on data derived from one sense, sight, so 'common sense' may be hard to achieve. Furthermore, the actual elaboration of calculi, in the way I have described it, is a kind of expanding mental universe – from primal scene to nebulae – and this fact may colour the theory of the universe which is being produced, so that it is supposed that there is an expanding universe rather than an effect of an expanding mental universe that is produced through minute and excessive splitting, and explosive ejection of the apparatus of perception – the ego. This would mean that the sense of an expanding mental universe is itself illusory and related more to megalomania than a development of apparatus for achieving knowledge.

Thus two possibilities are opened up: one is that, thanks to the elaboration of scientific methods, we are learning more; the other is that, thanks to the impulse to escape from Oedipal material, calculi are produced which are impregnated with the impulse to escape and the archaic remnants of that from which escape is sought.

But even in the original elaboration there is clearly an attempt at more than escape. Therefore there may be presumed to exist an element conducive to an accurate assessment of space which is to be as overwhelming to the man as the space, apparent to his infant capacity, was to him in infancy.

The attempt to escape will tend to betray the corresponding attempt to discover that from which escape is sought in the expanding concepts of space as the individual travels from infancy to adulthood. The psychotic shows a desire to occupy a very small space.

Can the calculi produced yield equipment suitable for investigating the problem from which they sprang? Can the calculi, which represent an attempt at abstraction as escape from an Oedipal situation, be made to explore that situation? Do calculi already exist which do just that? Can Oedipal conflicts be resolved by a *mathematical* experience? The internal universe would then be explored by a calculus turned back on its origin.

Exploration of space

In paintings of the nude we have another approach to exploration or 'discussion' of space – the earliest space of all. And Kenneth Clark [1956] shows the wish to bring mathematics to bear on it. Is it to control or to further the exploration, or to escape by mathematics?

One would suppose that painting is a kind of representation of that which becomes an ideogram, hieroglyph, diagram, or figure of geometry in another situation and in another discipline. There may be counterparts of the scientific deductive system in activities other than scientific activities. What are these counterparts? In the arts it is sometimes said that the artist is concerned with a particular aspect of truth. He must then, like the scientist who looks to his methodology, have to question his methods of achieving it. What does the artist question? Surely not simply his technique with a brush? Or with his musical instrument? The composer's tools are scales, harmonies, etc. Are there significant places in his schemes for intervals of thirds, fourths, and fifths? In short, is there a musical counterpart of the theorem of Pythagoras? And is there an 'algebraic calculus' that represents the B Minor Mass? Are the following ideas, linked by the double arrow, related?

1. B Minor Mass ↔ scientific deductive system
2. scientific deductive system ↔ musical score

[Undated]

Theorem of Pythagoras – Euclid I.47

The side subtending the right angle: the sides containing the right angle. How much can be obtained by ignoring the figure, the diagram, except in so far as it serves a function – like that of the material of a sculpture by Henry Moore – in framing the place where there is *no* material? To act as a boundary to the open space, that is to say the part where the figure is *not*.

Then the squares on the sides containing, and the squares on the side subtending, the right angle serve to enclose the triangle – the 'three-kneed thing', but also the right angle.

The construction is a trap for light.

Pons Asinorum + Positions

Euclid I.5 marks the point at which the 'elements' of geometry are left behind when the student crosses the Pons.

[Undated]

The relationship of Ps and D positions to the Oedipus complex

Paranoid-schizoid and depressive positions will from now on be called by me, 'the Positions', as a matter of convenience.

The Positions are emotional experiences intrinsic to work. All anxiety is related ultimately to The Anxiety, which has two roots:

1. the contents of the Oedipal situation, which has as its scientific deductive system (s.d.s.) the Theorem of Pythagoras and as its calculus the relevant portions of algebraic geometry;
2. fear of the Positions, which have as their s.d.s. the Pons Asinorum, Euclid I.5, and its associated algebraic calculus.

Both theorems have always engaged the attention of mankind and have been confused with each other by name, e.g. the French call I.47 the Pons Asinorum (*see* Heath [1956], *Euclid*, p. 417).

The I.47 Oedipus and I.5 Pons Asinorum belong to different axes in human knowledge, but they intersect: one is related to content of knowledge (I.47 Oedipus), the other to acquisition of knowledge (I.5 Positions).

The Oedipal situation may occupy different positions in the hierarchy of hypotheses in different s.d.s's. In some it may be an initial formula; in others, a derived formula according to the function which the associated calculus is intended to fulfil.

There must be a counterpart to this in non-scientific discipline, and the same difference in hierarchical positions will be observed.

The s.d.s. associated with Euclid I.5 and the algebraic calculus associated with it are all associated with the Positions.

The Oedipal situation is associated with Euclid I.47 and its associated s.d.s. (if different from the theorem itself) and its associated algebraic calculus.

[Undated]

The scientific deductive system and calculus via Euclid

What are the scientific deductive systems that could be used in psychoanalysis? What form would a calculus take? Can it be found in Euclid? That is certainly what I suspect. That is to say that the problem would be associated with the three-kneed thing with equal legs; and this would provoke the search, as described by Poincaré, for the harmonizing fact to be selected. What then?

If this is correct, then one would suppose that the scene described by 'blood everywhere' might be formalized, say, as 'the looking-glass murder' – rather like a film being projected end first so that the scene of bloodshed would depict itself as one in which the 'blood everywhere' was being reabsorbed through the original route. Cubism might be a kind of attempt to geometrize a scene: in this way the looking-glass murder would need to be formalized – but how? Do Lewis Carroll's chess rules for *Alice Through the Looking-Glass* give a clue?

The clue is in the translation of an isosceles triangle as the three-kneed thing with equal legs (A. D. Ritchie, *Studies in the History and Methods of the Sciences*, p. 28) and then the astounding fact – and yet I expected it and was looking for it – of the popular names for the Euclidean propositions, and in particular for I.5 and I.47, the Pons Asinorum and the Theorem of the Bride (Heath, *Euclid*, vol. I, p. 415).

The question that arises at once is that which I have already formulated about Poincaré's statement of a need to find a fact that harmonizes as a method of coping with the intolerable paranoid-schizoid position (Poincaré, *Science and Method*, p. 30). Is the mathematical discovery reassuring by virtue of its being an external creative attempt that can be set against the internal stress of depressive or paranoid-schizoid positions? Or is a formula produced which itself brings into being a calculus (and the s.d.s. it represents) that is of 'importance in various branches of science', including in particular the relationship of paranoid-schizoid to the depressive position? Certainly Poincaré

describes the former experience, that is the reassurance, the therapeutic reassurance, obtained by being able to do something creative and harmonizing externally, which can then be used as an external fact to set against *internal* depression. And yet it is a description that does not exclude the possibility of some internal adjustment by virtue of which he now possesses a capacity for seeing wholes. Are I.5 and I.47 externalizations of the Oedipal situation? Is that all? Or are they s.d.s.'s that make it possible to investigate the Oedipal situation? This point would be clinched if one found that I.5 or I.47 reached a conclusion that could then be translated into terms of lowest-level hypotheses – or, rather, into terms of empirically verifiable data – which could then be seen to have carried the theory of Oedipal conflict to a point further than any yet reached in psychoanalytic discovery.

It is possible that a s.d.s. and calculus produced under pressure of Ps ⇌ D might be important in other branches of science, or even in other branches of the same science, namely analysis, rather than in the investigation of Ps ⇌ D itself. Similarly, the s.d.s. produced under pressure of, say, the Oedipal situation might be of no use in investigation of the Oedipal situation, but of service in the Ps ⇌ D situation. In either case we know the s.d.s. to have been important in astronomy, i.e. in an entirely different branch of science. It may be only now, after this excursion into outer space, that it can be brought back after two thousand years to its own sphere.

[Undated]

An interpretation

An interpretation should not be given on a single association; a single association is open to an enormous number of interpretations. But two associations, like two points that determine a line, determine an interpretation. Not quite. What do they determine? A direction; a trend of thought perhaps. And does this mean that it is at a point of this kind that one might find the intersection or meet a logical product of the psychoanalytic interpretation with the s.d.s. known as Euclidean geometry? Is the statement that two points determine a line really an abstraction from an empirically experienced fact that two ideas, taken together, determine a trend in the speaker's mind? If so, then it is possible that the s.d.s. that is Euclidean geometry is of great importance in the science of psychoanalysis (Braithwaite, *Scientific Explanation*, p. 27) and can be used to establish calculi, e.g. algebraic calculi, to 'fix' certain psychoanalytic theories and expose fallacies in others, as was the case in mathematics when nineteenth-century mathematicians tried to represent the mathematical 'proofs' of certain eighteenth-century mathematicians in an adequate calculus.

I have noticed that something that seems clear when I write it appears to have lost all meaning when I come back to it freshly on a subsequent occasion. The words are all there and are as likely as not clear enough, but I find that I no longer know what they are about. It is like the disappearance, apparently, of all knowledge or understanding of Greek literature in Byzantium, or of astronomical or other ideas that are clearly grasped by one generation but then seem to be completely lost by subsequent generations, e.g. the heliocentric theory of Aristarchus. Is it possible that one of the great functions of abstraction is to 'fix' an element, *the* element, of empirical experience, which without abstraction is lost? Is there something permanent and indestructibly precise about the formula of a scientific deductive system that renders it peculiarly fit for the preservation of ideas? Is this a function of logic – logically necessary propositions? Would a

s.d.s. give a permanence to Melanie Klein's paranoid-schizoid and depressive positions?

How does one *find* the appropriate calculus? Or invent it if it does not exist? Galileo had to get on without the differential calculus in solving the problem of the freely falling body.

[Undated]

Probability

The statement or belief that something is probable is related to prediction. Even when it appears to refer to the past, as in a statement that something probably happened, it means that at a future date it is likely that something will be discovered which proves that such-and-such event took place.

It has been supposed that there are universal hypotheses, so-called deterministic hypotheses, which state validly that 100% or 0% of things are A; and these are contrasted with statistical hypotheses, which state that a certain proportion of things, between 0% and 100%, are A (Braithwaite, *Scientific Explanation*, p. 115). Psychoanalytic hypotheses mostly belong to the latter class, which now includes the hypotheses of any scientific deductive system relating to quantum mechanics.

Braithwaite cites, by way of example, the statement: '51% of children born are boys.' He points out that there can be two statements of probability involved thus: it is probable that the hypothesis – that it is probable that 51% of children born are boys – is true.

This at once raises the question whether any hypothesis says any more than that something is probable, unless it is a definitory hypothesis; even the universal hypothesis, unless it is definitory, only states (as I have already pointed out) that certain events are constantly conjoined. But this means that all hypotheses are really definitory hypotheses; that is, that in the view of the person using a particular s.d.s. (which for the time being expresses the view he holds) such-and-such phenomena are constantly conjoined.

What then does the rational number express? Does it express a fact that 51% of children born are boys, or that he wishes it to be understood by himself and others that he is in a state of mind in which he has a 51% feeling of certitude? If the latter, then he is also expressing the view that he is 51% liberated from the Ps position; or that 51% of the potentially unrelated facts (Poincaré, *Science and Method*, p. 30)

in the area of his mental activity have now been harmonized by the ideational counterpart of a fact he has selected.

What deductive system is this fact supposed to fit? Or for what system does it provide a lowest-level hypothesis? Any statement made by an analyst as a statement of fact about an event in analysis should be regarded as a statistical hypothesis, for it must be more obviously an approximation to the truth (rather than the truth itself) than is the case with most other disciplines. Even if we assume that an electrical recording could be made of the events in a session (which is in fact not the case in the kind of analysis with which I am acquainted), there remains the fact that at best such a recording can only bear the same relationship to fact as a pointer, reading from a piece of apparatus in a laboratory, bears to the facts it purports to indicate. Indeed, the comparison is extremely flattering to the supposed analytic record. The apparatus in the physics laboratory is, say, designed to record one comparatively simple fact – the wavelength of an electro-magnetic wave; the analytic record, though it is restricted to phenomena perceptible to hearing only, is nevertheless called on to record very complex sounds – two people talking.

But if quantum mechanics has to rely on statistical hypotheses as its lowest-level hypotheses and can thrive on them, as manifestly it does, the same may be true of psychoanalysis. The essential point would seem to be to establish the nature of the lowest-level hypotheses in a psychoanalytic deductive system. By that I mean the nature of the statement that has to be made if the investigator is to be presented with what he can regard as empirically verifiable statements of fact on the one hand, and on the other, if he is to know what kind of phenomena he has to deal with in his attempt to produce a s.d.s. and its representative calculus.

I propose to ignore for the time being statements made by other analysts and to consider only the problem involved in an attempt to produce a s.d.s. and its associated calculus, which will serve as a generalization that will be an epitome of experience on which I can draw in my analytic work, and which I can use to communicate my experience to the patient – and if possible to other workers in the field.

I propose to limit the sphere of experience on which I draw to two main areas: the totality of my own life, or such part of that experience as is available to me; and the psychoanalytic situation as it obtains when I see a patient five times a week for an indefinite period. I shall

not for the time being attempt to define this sphere with any further precision.

My experience in analysis will mostly be restricted to one part of this situation, namely the part described by Poincaré (*Science and Method*, p. 30), and one that is therefore analogous to the paranoid-schizoid position. In practice, what this means is that at the beginning of the session I shall not burden my mind by attempting to remember what the patient has said on previous occasions. There may be a time and place for attempting such a recall, but that time and place is not at the commencement of a session. Nor shall I burden my mind with attempting to recall what others, or even I myself, may have said or thought about such a patient as I am about to see. I shall not even consider what kind of patient he may be.

The reason is simple: I am concerned in a session with what I do not know. The session is the only time when I can have contact with what I do not know; at any other time I can only have contact with, or think about, phenomena which I believe – rightly or wrongly – that I have already observed. But in the session I can have contact with phenomena that I have not so far observed, or have observed only partially. It is an opportunity that is not to be missed, for if it is it can never be repeated. It therefore merits as precise a description as I can find to delineate the emotional experience to which I attach such supreme importance. It is the emotional experience appropriate to the observation of a series of apparently unrelated facts that the analyst believes are related to each other and to him in a significant manner [*see* 'Notes on Memory and Desire' (Volume VI)].[1]

At first sight it seems obvious that this emotional experience must be akin to that of the paranoid-schizoid position. But kinship must not deteriorate into identity because that would preclude the possibility of synthesis, which is essential to the analyst's work. 'Our mind . . . would be obliged to forget each of these details before examining the next because it would be incapable of taking in the whole', as Poincaré describes the state preceding the discovery or selection of the harmonizing fact. Nor is it wholly satisfactory to postulate a state of mind akin to the depressive position unless it is made equally clear that it must not be *identical* with the emotional experience associated with the depressive position.

---

[1][See also Volume VI, p. 326, and Volume V, p. 85. *Ed.*]

Freud has described the value of a state he calls benevolent neutrality, a kind of free-floating attention. Poincaré would appear to desiderate an absorption in logical mental processes that, if not in themselves mathematical, at least issue ultimately in mathematical formulation.

For convenience I propose to call this state, which is neither the paranoid-schizoid position nor yet the depressive position but something of each, the Positions. I shall further suggest that the process of discovery or selection of the harmonizing fact or, as I should prefer to regard it, its ideational counterpart, cannot be initiated or maintained without the mobilization of the mental processes of dreaming.

It must not be supposed that I am setting this up in contrast with, or as an alternative to, what I conceive to be the logical or mathematical absorption that Poincaré had in mind; nor am I suggesting that the analyst should go to sleep. But I believe that the analyst may have to cultivate a capacity for dreaming while awake, and that this capacity must somehow be reconcilable with what we ordinarily conceive of as an ability for logical thought of the mathematical kind.

[Undated]

The attack on the analyst's α-function

I have pointed out that it is essential to mental efficiency to be able to 'dream' a current emotional experience, whether it is taking place while the person is awake, or while asleep. By this I mean that the facts, as they are represented by the person's sense impressions, have to be converted into elements such as the visual images commonly met with in dreams as they are ordinarily reported. Such an idea will not seem strange if the reader considers what happens in reverie – the word itself, chosen to name the experience, is significant of the widespread nature of the experience. Certain conditions are necessary for this work of conversion to be carried out, but these conditions, as we shall see later, may be denied, so that *α* is made either impossible, or at least difficult. The analyst needs to have these conditions in his work, for smooth working of *α*-function is essential. He must be able to dream the analysis as it is taking place, but of course he must not go to sleep. Freud has described the condition as one of 'free-floating attention', but it is a state that is of value in many tasks besides analysis, for, as I have said, *α*-function is essential to proper mental efficiency, no matter what the task.

Clearly it would be helpful to establish in some detail what goes on in *α*-function; an examination of the conditions required for its fulfilment might give some clues. Indirect evidence is available from the psychotic patient who appears to be sufficiently aware of the analyst's need to be able to set out to deny him it – presumably as an extension of the patient's own attempts to destroy his links with reality, and in particular that which links live objects to each other. It is well known that in many sessions the patient is at pains to behave in such a way that the analyst is given no information at all – in so far as this lies within the capacity of the patient. Frequently he will do this by being mute, but on the occasions to which I refer, the patient is not only loquacious but is most insistent that the analyst should follow every word he says and will constantly inject comments that are intentionally evocative or even provocative. The analyst is to be

so treated that he cannot stay awake, and so interrupted and importuned that he cannot go to sleep.

This is clearly a much more positive attack on the analyst than mere mutism or other forms of withholding information. It also bears a striking resemblance to the state produced if the patient cannot wake up or go to sleep – not through lack of α-function but artificially induced.

Can it be dismissed as a somewhat ordinary exercise in sadism, or should some significance be attached to the resemblance of the analyst's predicament to the state in which the patient finds himself when incapable of α-function? The resemblance may be fortuitous and not therefore of significance. It may be the repetition, this time against the analyst's α-function, of the attack that has been previously made by himself or another on his own α-function – in which case it may help us to understand how the α-function is destroyed and what vicissitudes we may anticipate in the patient's development. More probable than either of these is an attack on α-function made through the agency of projective identification, partly because projective identification is so consistently employed that it is difficult to imagine without very good reasons for the supposition that its use would be in abeyance, and partly because any other view leads us into unnecessary difficulty in explaining the skilled nature of an attack which implies the existence of a high degree of well-organized sophisticated destructiveness quite out of keeping with what we know of the patient's condition. The operation of projective identification, if we could assume it, would go some way towards resolving a contradiction that makes a supposedly insane patient behave with the organized efficiency that the diagnosis precludes. I do not mean by this that resolution of this contradiction is a matter of major consequence, but that it needs to be resolved because this would help investigation of something that *is* a major problem – the nature and operation of the non-psychotic part of the psychotic patient's personality.

The analyst's odyssey

The patient comes to the door and looks away so as to avoid my eyes. He is dirty and unkempt; he wears gloves but they are not a pair. His face expresses almost physical pain. He holds out his hand limply to

allow it to be shaken, but he seems almost to dissociate himself from the act physically as well as mentally. He lies down on the couch. "Well", he says, "I don't seem to have much to say." There is a pause of two or three minutes. "Funny, I seem to be feeling anxious." He is tense and lies still in a posture that might, but for his tension, be described as limp. He examines his hand with detachment, as if he were witnessing a hallucination or some event from which he wishes to detach himself because he is so frightened by it. He turns his head slowly to follow the movements of his hand. He folds his hands on his chest. The operation is complete; he composes himself for slumber.

I have good reason for anxiety about this patient; I know him to be violent, and I know his fears that he may commit a murder are not groundless – or so I think. Thinking over the matter, I am not so sure. I have occasion for the same kind of misgivings about his finances; and the same kind of misgivings about my misgivings. My experience of him makes me feel reasonably sure that if I allow my attention to wander, he will quite happily – if one can apply such a word to him – let his wander too. But I decide to wait.

I may adjust my position in the chair, or even make some sound or movement much less obtrusive. At once the patient starts violently, as if I had frightened him beyond endurance, or maybe even struck him. His attitude expresses intense pain. Slowly, reproachfully, he subsides. The session has begun.

"I forget what I said", he presently announces. After a further pause, "Funny", he says, puzzled. Later on he says, "There is something I meant to say". The session gradually peters out. The tension, apparent earlier, slowly ebbs away.

I indicate it is time to stop. "Yes. Thank you", he says. And he goes out, leaving me to wonder if he seemed to be slightly shamefaced, or if I imagined it.

The session may take a different form. He may start talking to me softly, confidentially. "They are cutting the grass. Of course", more confidentially still, "I could hardly protest; the tea was awful, really awful". There is a sudden sharp mocking laugh, stifled almost as it is uttered. "Well", he goes on in matter-of-fact tones, as if to suggest he is going to get down to business, "there it is; no home, tea all over the place. I simply will not stand it." The last sentence is uttered with a kind of desperation, as if he were attempting to break through a restraining barrier formed by an inability to express himself in terms

that would link him with another person. "I will not stand it", he whispers.

On the face of it there seems to be no reason why such sessions should ever come to an end. Let us see what can be said about them.

First, I do not feel able to communicate to the reader an account that would be likely to satisfy me as correct. I am more confident that I could make the reader understand what I had to put up with if I could extract from him a promise that he would faithfully read every word I wrote; I would then set about writing several hundred thousand words virtually indistinguishable from what I have already written in my account of the two sessions. In short, I cannot have as much confidence in my ability to tell the reader what happened as I have in my ability to do something to the reader that I have had done to me. I have had an emotional experience; I feel confident in my ability to recreate that emotional experience, but not to represent it.

Another session: "I don't seem likely to do much." After a pause, "No. It seems very unlikely but . . . just *hark* at it!" He stumbles over some words, artificially, I thought. "Aah . . . just listen to me. I went to the art galleries in the end and the waitress said, she *said* it wouldn't be long. I was furious. I just broke the place up . . . oh, shut up. *Shut* up, I say. Shut *up* . . . I must have done something wrong." This is said reproachfully as if to indicate that as usual I am bad-tempered and hostile and trying to make him feel guilty. "Oh well, I suppose I must say something." He then becomes sulky and examines his quite remarkably filthy nails. "Another session going to waste. . . . I know I had something very important to say. . . . In the end I just had to get up. Oh shut up." He whispers, "Shut up: shut up".

There are many interpretations I could give, and have given in the past. They are apparently quite ineffectual; there seems to be no particular point in repeating them. What, I wonder, can have happened to them? Years of analytic interpretations, and the patience and knowledge that go with them, have been swallowed up by him, or poured into him by me, without apparently leaving the slightest trace. He might simply be a gaping hole or mouth, with nothing beyond it. He is taking up time and space and analytic experience that another patient might use to some profit. He might acknowledge some of the effort on his behalf, but it is simply as if his mouth gaped ever wider for more and more, all swallowed without discrimination of any kind. He requires more. And all through the session he

interrupts, often saying he does not want to interrupt, breaking in in a manner to which my powers of description cannot do credit, with futile, hostile commentary on his futile, hostile comment – if such disjointed phrases can be called comment. What is he commenting on? He is commenting on a relationship between two people, or on what links them. What in fact links us is endurance, fortitude, patience, anger, sympathy, love. Is the task in hand, the analysis itself, a link? It seems hardly possible because it rarely comes to a point where it might be called analysis.

Yesterday he felt it was hardly to be justified – the time, expense and effort to analyse him. He was lucid – almost – and I am reporting far more what he said than what I understood him to say. Ordinarily I have to interpret what I have understood him to say; this may be significant. It means that I am forced to have an emotional experience, and that I have to have it in such a way that I am unable to learn from it. I have consciousness, a sense organ enabling me to perceive the "psychical qualities" (as Freud puts it in *The Interpretation of Dreams* [1900a]), but I am not to be allowed to comprehend it. Then I cannot learn by the emotional experience, and I cannot remember it.

* * *

Take now a different patient. Out it pours – masses of semi-whispered, disjointed stuff, name after name, some of which I know, some I may be supposed to know, some presumably I cannot be expected to know. They are mostly doing something that the patient sees: "It didn't occur to him . . ."; "I asked him, he did realize . . .". It does not require interpretation so much as loud cries of, "Help! Help! I'm drowning, not waving."

What is it all? Can anyone stem the flood? What interpretation, when there must be so many millions? He may be proving and feeling how superior to me he is, how much further he can see than I can; it may be a modernized urination, or flatus, or defaecation. It might be, as this might be, a book by Sacheverell Sitwell in which virtually nothing is done with the material. The overburdened mind just deposits it in the lap of the analyst and says, "Here, *you* do it!"

This is really an abstraction technique. This is what I am doing here in this writing, and hoping that I shall then be able to make head or tail of it. But I can't. The essential feeling is that nothing can be made of it – there is no selected fact, nothing to make it all cohere. If

this is so, then perhaps the essential thing is an emotional situation in which the following features can be distinguished:

1. feelings of persecution,
2. a mass of apparently unrelated facts,
3. an inability to find a selected fact, or perhaps to believe it would be any good if one could,
4. an inability to see any value in the facts, to regard them as dead particles, bits of faeces.

But surely the point here is a lack of capacity for integrating? Is it that the content is significant? Or is it the cement – narrative, logic, selected fact? It can be content *and* . . . [*breaks off here*]

[Undated]

Freud described the conscious as "the sense organ for the perception of psychical qualities". If the patient, thanks to deficient *α*, cannot be awake or asleep, conscious or unconscious, can he have a conscious or an unconscious? His attacks on *α*-function make it impossible to become conscious or unconscious, but he can have a conscious and an unconscious, so he is able to perceive psychic qualities. But he cannot transform them into *α*-elements. This is where I do not accept Freud's description of the conscious as *comprehending* psychic qualities, but do accept his description of the conscious as *perceiving* them.

It is evident in my clinical experience that the patient *can* perceive psychic qualities in that he says he is anxious, or frightened, or depressed. He must then be able to perceive that, but he seems unable to learn from the experience of being anxious, or frightened, or depressed. It may depend on what he expects he would learn if he learned anything. But as I have shown with the emotional experience of having emotions in sleep, this kind of patient cannot 'dream' it and so cannot learn from the experience. Exactly the same thing is true of the emotional experience when he is awake: he cannot become unconscious of the emotions, and he cannot become conscious of them. What, then, is the position in analysis when the analyst gives an interpretation drawing the patient's attention to an emotional experience that the analyst can deduce from the patient's behaviour? At least we should expect to run into great difficulties in so far as an analysis is to be regarded as an emotional experience, for we cannot regard it as anything less and yet suppose it has some kind of reality.

It is tempting to suppose that the patient fears that if he learnt anything from his emotions, he would learn that he is alive, and from that, that his parents had had sexual intercourse; he then fears that this would release murderous envy and hate towards them and towards himself as the result of such intercourse. In one case it was clear that the patient feared just such an attack, for those reasons, from the analyst and an elder sister. "I don't know what I mean" had

this situation as one of its backgrounds – he feared that he himself was a sign that could be read to mean that his parents had had intercourse. But though we may suppose that he has other fears of what he would learn, such as that he is insane, it is wisest at this point to suppose only that the patient hates emotions and concurrently cannot 'digest' them, i.e. bring *α*-function to bear on them. And this must affect the analyst's attempt to interpret.

If the patient cannot have a conscious because of lack of *α*-function, how comes he to have sufficient of one to perceive his emotions, to act as a sense organ for the perception of psychic qualities? He *can* have a conscious; he merely cannot *become* conscious.

Let us suppose now that the patient *is* capable of the process of the formation of a presentation or idea. Is that to say that the patient is capable of *α*-function and can transform the sense impressions, be they what they may, into *α*-elements? No: it means that he can have visual images on which, as Freud says, ideation depends ('Two Principles of Mental Functioning' [1911b]).

I shall include the capacity to have visual images amongst the factors in *α*-function, but it is only one factor – though an important one. It makes storage possible because visual images are a kind of notation. One patient talked of lines and dots making up the film cartoon; it sounds like the elements of geometry (Euclidean). But before dream-thoughts are possible, it is necessary to find the selected fact and to use it for initiating the paranoid-schizoid and depressive position interplay. This means that *α*-elements cohere, separate, cohere again, separate again, converge, diverge, and so on. It is an experience in which coherence and separation are never observed; at one moment the *α*-elements are coherent, and then they are incoherent. It is similar to the experience of watching reversible perspective – at one moment one thing, and at another, another. It is similar to the dream – at one moment it is remembered, and at another there is no trace.

In distinction to this method of employing *α*-elements are two others: they can be strung together temporarily, in time, in a narrative sequence (as is the case in dream); and they can be connected logically, which is linear as in Euclid.

Curiosity, and fear of socialized super-ego

The story of the Garden of Eden and the story of Oedipus each contain a character whose attitude to knowledge is hostile – or perhaps I should say, 'two-faced', since the Sphinx demands the answer to a question and may therefore be supposed to be favouring a search for it, and God of Genesis plants the tree of knowledge of good and evil in the garden. Psychoanalysts have concentrated attention on the sexual pair and have left discussion of the attitude to knowledge on one side. Yet in man's search to know, few disciplines have penetrated so far in illuminating that source of his difficulties that lies within himself. This adds significance to the neglect of the material that might be compacted in the roles attributed to Sphinx, God and Devil (also Tower of Babel – verbal thought attacked).

But my concern here is not to elucidate these myths. I wish to clarify the similarities and differences between psychoanalysis and scientific method as it is understood and employed in spheres other than psychoanalysis. Nevertheless I believe the reader would find it rewarding to refresh his memory of these stories and to bear them in mind as he reads this; their effect thus used could be restorative during the arid passages that must be traversed in this investigation.

Tower of Babel: possibility of using a racial myth

Can we, at such a crisis as this, fall back on a racial myth on the off-chance that it is a tool that has not yet outlived its usefulness? Let us interpret, for *our* purposes, the story of the Tower of Babel. I propose to use this story in a manner analogous to the use to which a scientist might put an already existing formula of mathematics. The mathematical construction may have been invented without any intention that it should be used as the scientist proposes to use it, or indeed without any intention that it should be used at all. Yet the scientist, despite the mathematician's avowal that his formula has no meaning at all, may decide that he has found a realization that is the counterpart of the mathematical formulation and will use the formulation accordingly. This I shall now do with the story of the Tower of Babel.

First, I decide that the story is formulated in *Genesis*, but I might as easily decide to write my own version. This story I do not interpret: I use it to interpret a problem of mine. When I say I might decide to write my own version, I do not mean that the basic elements of the story can be altered. Some transformation is necessary which is not an interpretation of the story, nor yet a sophistication. It is not an operation such as Freud proposes for the elucidation of a dream: it consists in a recognition first that the story is a social version of the phenomenon known to the individual as a dream – it even has some resemblance to the consciously sought selected fact; it is an emotional experience that has been subjected to α-function.

There must be many such myths that are not recognized at all, except in a pejorative sense in which some unlikely story, or one that the listener does not wish to believe, is dismissed as a 'myth'. We cannot now say how they started, nor are we able to observe the process of myth-formation, if any, at work in our midst. If an individual, some anonymous genius, invented it, then we may suppose that the process is one marked by the following steps: the individual has an emotional experience; it is transformed by α; it is published. In almost every instance nothing further happens, for the emotional experience

is of too particular a nature to be at all widely significant. It might then be regarded, by analogy with scientific method, as a hypothesis, not false in itself, but applying to events of such extremely rare occurrence as to make it pass unnoticed, in the way that a mathematical formulation (Poincaré, *Science and Method*) might be perfectly sound yet never be employed because no realization had yet been perceived to which it might be applied as the algebraic system corresponding to its representative scientific deductive system. This must be the case with virtually all so-called dreams; they express, thanks to α-function, the stored and communicable version of an emotional experience. To this extent the narrator of his dream has been able to render the experience communicable, and has even published it, but the emotional experience itself – and consequently its α-formulation – has small social value because of its extreme particularity.

But there are others that might be grouped on an ascending scale of generalization until we reach, through myths of national significance, those, such as the Oedipus myth or the story of the Tower of Babel, which are felt to be of so nearly universal significance that their publication spreads over wide areas of racial and national thought and is also repeated in time. The individual who is able to transform such an emotional experience, by virtue of his α-function, into material that can be stored, communicated and finally published must belong to the category we loosely call 'genius'. But my point is that we must regard these stories (and later I shall consider actual historical events too) as being parallel with the algebraic calculus produced by the mathematician not simply to represent a specific already-existing s.d.s., but as a mathematical formulation that has not at the time, but may at some future date turn out to have, an actual realization to which it is applicable.

This being my view, I return to our chosen myth of the Tower of Babel. How are we to determine what the basic elements of the story are, without simply laying ourselves open to the charge of tampering with a text that, on my own showing, should be treated with respect? The theory of α-function may give us help. I suggest that we assume that the story is intended to deal with an emotional situation; further, that the visual images verbally conveyed have to be considered as α-elements. The narrative form we regard as being a method of imposing an appearance of coherence and integration on these elements whose coming together might otherwise demand explanation.

The narrative, like the words 'as if', etc. – which Freud thought could not be expressed in dream language – seems to be a method of expressing the emotion that has to be stored. I propose we ignore, for the time being, the narrative and other forms of conjunction, except for one very important point: these elements unequivocally mean that the *α*-elements, the visual images, are constantly conjoined. The function of the narrative form is to enable the individual and the race to observe and to maintain this constant conjunction.

This brings me to the application of our myth to the problem that it is to interpret. The scientist must know enough mathematics to understand the nature and use of various mathematical discoveries and formulations, such as the differential calculus or the binomial theorem: the psychoanalyst must know his myth. The scientist must also know enough to have an idea when he is confronting a problem to which a particular mathematical procedure would apply: the psychoanalyst must know when he is facing a problem to which a myth would provide the psychoanalytic counterpart of the algebraic calculus. This, one might say, is precisely what Freud did; he recognized, as a scientist, that he was confronted by a problem to the solution of which he would have to apply the Oedipus myth. The result was the discovery, not of the Oedipus complex, but of psychoanalysis. (Or is it man, or man's psyche, that is discovered when these elements are constantly conjoined?) It is in this sense that I believe that the myth of Babel, or Oedipus, or Sphinx must be used as a tool comparable to that of the mathematical formulation.

Before proceeding further with the investigation of the myth as a tool for investigating emotional problems, I must point out that already this inquiry has reached a point that has implications for the use of dreams. I have said that most dreams are of very low-level generalization, but this fact, which is a disadvantage if the matter at issue is the mental life of the group in space and time, is an advantage when the issue is something so idiosyncratic as the mental life of a particular individual patient in analysis.

The dream of the individual must be taken to mean that certain *α*-elements are constantly conjoined. The *α*-elements in themselves, and their constant conjunction as shown by the dream, must be regarded as of equal significance. The *α*-function has then served the purpose of making storable, communicable and publishable an emotional experience that is constantly conjoined and has made it

possible to record the latter fact. How does this relate the ordinary, apparently non-recurrent dream to the recurrent dream? If myth and manifest content of a dream are to be regarded as the group and individual versions of the same thing – and that thing an assertion that certain α-elements are constantly conjoined – to what use are we to put this statement? If we are to regard it as analogous to $(a + b)^2 = a^2 + b^2 + 2ab$, then presumably we need to know how the statement has been constructed and what the rules are that have to be obeyed if we are to use the statement correctly. At first sight the mathematicians appear able to do this; we can say something about the way these letters, a and b, are being used, and we can explain the rules by which their manipulation is to be guided. We can also show that certain problems can be solved if we recognize that the elements of the problem can be adequately represented by this algebraic formula. Furthermore, we can be taught how to recognize that a given problem would be aided by this particular formula rather than another, and we can pass on that information. There is, nevertheless, a gap: some individuals are more easily able to understand the explanations and to grasp when and how such a formula can be applied to advantage than others who are thought of as being mathematically ill-equipped. It is not only the mathematically ill-equipped who have difficulty in accepting the mathematical explanation of fundamentals of procedure, as mathematicians and philosophers show by their discussions of these problems, which are inseparably bound up with the nature of mathematical ability itself. But nevertheless there is no doubt that mathematicians have formed a method of recording and communicating their formulations which makes teaching of the formulations and their use assume an enviably uniform and stable discipline – at least to me who proposes that myth and dream should be regarded as corresponding to algebraic calculi and therefore as capable of yielding, after scrutiny, the tools that can interpret, through their suitability to represent a problem, the problem itself, and so open the way to its solution.

I propose now the task of establishing the fundamental rules for the use of dream or myth. The first point is that all dreams have one interpretation and only one – namely, that α-elements are constantly conjoined. The second is that every dream has a corresponding realization, which it therefore represents. This realization may be of such insignificance or rarity that it is never observed to occur, although

potentially it might do so. Sometimes it is observed, and its resemblance to the dream that represents it is so nearly conscious that the dreamer has an illusion that he expresses by saying he had a dream that came true. This usually means that the dreamer believes the facts of the realization were correctly foreshadowed in a dream in which the same or similar facts occurred in a similar narrative. This is an illusion in which the similarity that exists between an emotional experience (as it is recorded and stored through the agency of α-function) and an event (to the understanding of which the stored emotional experience is essential) has been transferred to what are believed to be two narratives. In fact, one narrative serves to mark the conjunction of α-elements required to store two different but related emotional experiences: one, that which was experienced in sleep or the waking state known in *déjà vu* phenomena; the other, that which was experienced in the course of actual events in the individual's life. Since the same dream would serve as the product of α-function operating on the two emotional experiences, it is believed that the supposed events of the narrative of the dream, and the events of the emotional experience to which the dream serves a function analogous to that of algebraic calculus to empirical data, are the same. The third point is that certain factual experiences will never be understood by the patient, and therefore will never be experiences from which he can learn, unless he can interpret them in the light of his dream or the myth in which the group has enshrined both the dream and the belief in the dream's validity for all members of the group. In psychoanalytic practice this means that what the analyst has to interpret are certain facts that befall the patient in the light of a dream that has stated that for the patient certain α-elements are constantly conjoined. Thus, if the patient reports a dream that he was seated in a railway train and gave the signal usually given to indicate an intention to stop when driving a car, and that his arm fell off, it must be assumed that certain elements are conjoined.

The following are a few of the points known to me that are relevant to understanding what the elements are that are conjoined: the patient was not responsible for driving the train; he wanted to be helpful and warn the traffic against a possible accident due to ignorance of the train's movements; this, from his point of view, worthy behaviour did not meet with success because his arm behaved as if it were having a tantrum and fell onto the grass, where it lay unhelpfully. The patient

was bewildered that such unexceptionable behaviour should provoke such a hostile response and that he should find himself vulnerable to criticism because of the behaviour of his arm which apparently was quite independent of him. The dream indicated that for this person any attempt to be cooperative or creative led to independent action by the appropriate part of his personality, that is, to thwart his creative and helpful intentions. The helpful intention was in itself good because it meant that the patient was in an agreeable and therefore rewarding state of mind. It is this rewarding state of mind that is denied to him by the independent action of his arm. This potentially pleasing state of mind is further attacked because disapproval was drawn to him from the remaining passengers by the behaviour of his arm. These were the most obtrusive elements.

At first sight it may seem that this is an interpretation, though a superficial one, of the dream. I would make a distinction between two kinds of interpretation by calling one the 'meaning' of a dream or any other kind of association, and the other the 'interpretation'. I consider the 'meaning' to be that aspect of the communication which, if it were made extra-analytically, is what the speaker consciously wishes to convey. Failure to interpret the dream is the most potent contribution the analyst can make towards producing acting out; failure to dream through lack of α-function is the patient's main contribution. But before a dream or association can be interpreted, its meaning must be established. Though it is fairly easy to say that the meaning of an association is that part of a communication that the patient consciously wishes to make, it is not easy to say what part of a dream is the communication that the patient consciously wishes to make. For, assuming the theory of α-function is applicable, the manifest content of the dream is a verbal expression of visual images that have been joined together because, being joined together, they record that certain elements of an emotional experience are constantly conjoined and, by recording it, make it available for unconscious waking thought (as in the example of the establishment of walking as a skill that can be exercised without further intervention by consciousness) or for conscious waking thought, as when the individual repeats the dream to himself or someone else, thereby making it accessible to the correlations that are the basis of the rationality of common sense, and to the criteria of common sense that are the establishment of correlations without evidence of contradictions. From this it follows that

the publication of the dream is a request for knowledge often overtly posed as such in the form of a wish to be told what the dream 'means' or predicts. At first sight this would seem to be a reasonable request to make of an analyst. In fact it is not reasonable to make it, nor is it reasonable for an analyst to feel called upon to say what a dream means. The problem is not the dream but the emotional experience of which the dream is the irrational counterpart of the algebraic calculus. And about this emotional experience the patient feels much as an infant might feel about bumping its head on the floor – it wants to know what it means. An emotional experience, then, is in some respects like a physical experience in that it can be felt to have a meaning; that is to say, it is felt to be an experience from which something can be learnt. The α-function is the first step (without which nothing can be learnt) in turning the emotional experience, or rather the data associated with it, into material from which it is possible to learn; that is, material suitable for dream-thoughts (Freud's unconscious waking thoughts) or for correlation with common sense, which implies not only conscious waking thought, but also awareness of individual attitudes and outlook, which are a part of the individual's endowment and equipment as a member of a group. This brings me to the essential feature in the conscious communication of the individual reporting a dream: it is an overt expression of curiosity. It is exposure for test by common sense of a hypothesis, as Hume would understand such a term, namely as an assertion that certain associations are constantly conjoined. As an expression of curiosity we may regard it as suitable for investigation by the application of myth, using myth as the counterpart of an algebraic calculus.

We have now arrived at this position: the core of the dream is not the manifest content, but the emotional experience; the sense data pertaining to this emotional experience are worked on by α-function, so that they are transformed into material suitable for unconscious waking thought, the dream-thoughts, and equally suitable for conscious submission to common sense. Freud clearly thought that this material was equally suitable for more than correlation with and by common sense, and attempted to apply to it the methods of scientific investigation, as if what I am calling α-elements lent themselves to that kind of procedure. This is to assume that the α-elements can be used for purposes other than simple correlation – one of the most rudimentary of scientific procedures. The manifest content, as

it would be called if we were discussing dreams in Freud's terms, is a statement that these α-elements are constantly conjoined; that being so, it is in every way analogous to the selected fact, the function of which is to display the constant conjunction of elements characteristic of the paranoid-schizoid position, and some of which it has the property of showing to be related. We shall have to consider later how the manifest content of a dream (a 'narrativized' collection of visual images) and a mathematical formulation such as an algebraic calculus can come to be fulfilling an apparently identical function when they are in every other respect so different from each other. For the moment I must point out only that the hypothesis, the word regarded as a hypothesis, and the manifest content of a dream all share the characteristics of the selected fact in being able to bring coherence to facts previously known but not previously seen to be connected. Since the core of the problem that awaits solution is an emotional experience, we must make a distinction between this and the emotional experience that is secondary to a problem that awaits solution. We have hitherto supposed that every problem, of whatever kind, is, when reduced to its abstract basic elements, the task of finding the selected fact that harmonizes elements previously known by showing them as related to each other in a way that was not apparent before the discovery of the selected fact. I have shown that this is a description that is so close to the description in Kleinian theory of the interplay between paranoid-schizoid and depressive positions that speculation must be aroused about the nature of this description, which, as a hypothesis itself, is an example of a selected fact, and about the nature of the phenomenon to which it applies. Are there in fact elements? And if, thanks to some selected fact, they are seen to be related to each other in a particular way, does this mean any more than that – the human mind being what it is – the individual from time to time has this experience of observing the harmonious inter-relatedness of these elements, whereas in fact there is no reason to suppose that any such relatedness exists? Elements and relatedness alike are aberrations of the observing instrument.

Suppose that this last is the fact: then we would be in the position of being able to observe that our observations consist of elements that we believe to become synthesized by some mental event which corresponds with a fact. But this statement is a supposition based on a supposition. It is evident that, no matter how I attempt to state this

problem, we are involved in an absurdity. This I believe to be a peculiarity related to those problems in which the emotional experience is primary. It is for this reason that I say a distinction has to be made between the experience that consists in attempting to understand an emotional experience that is secondary to the attempt to solve a problem, and the experience that consists in trying to solve a problem in which the emotional experience itself is the problem. In the first, it is possible to regard the problem as one of unrelated objects requiring synthesis; in the second, there is probably no way of regarding the problem 'as' anything at all. It is possible that there are external problems of which it is true to say that there is no way of regarding them 'as' anything at all; it may be that it is from precisely such a situation and its accompanying emotions that the selected fact extricates the observer by appearing to reveal the relatedness of some of the elements. In short, there are situations that are felt to be problems that either have no solution, or to which no solution can be found with the equipment at the disposal of the individual experiencing them. Such situations are not absolute: they may be fairly common and of short duration, but such an experience, if it lasts, itself becomes a problem that makes demands on the individual's equipment of intelligence and personality.

The essentials of this situation depend, as far as the individual is concerned, on his appreciation of the environment (that is on what he thinks are the facts of his environment) and on his appreciation of himself (that is on what he thinks are the facts of his personality). As far as the external observer, the analyst, is concerned, the situation may be regarded as limited to the following elements:

1. the environment,
2. the personality of the individual,
3. the relationship between (1) and (2),
4. the belief that the individual himself entertains about (1) and (2).

Even if we restrict the field in this way, and even supposing years of psychoanalysis, we know little about all four. The difficulty is increased because comparison is not possible; terms such as 'little' seem to say something, but under scrutiny appear to be expressions of feeling and not statements of fact. Even so, the problem has been simplified in some of its aspects by the introduction of the external

observer, the analyst. For it is legitimate to believe that by transferring the problem of the relationship between an individual and his emotional state to an external observer, we at least make the investigation approximate to the situation that obtains in scientific investigations of objects by trained observers. This raises two questions.

First, in what respects has the problem been simplified? In view of my discussion of the possibility that the belief that a scientific discovery has been made is really an expression of feelings that are a product of the transitions between paranoid-schizoid and depressive positions and back again, it would seem likely that the problem has not been simplified so much as altered in kind. Even in a discipline such as physics, in which scientific method has been rigorously pursued with apparently gratifying results, it is clear that there is no justification for any assumption other than that the facts discovered are simply a selection from the sum of knowledge of those facts, or characteristics of facts that lend themselves to comprehension by human mathematical and logical faculty, human perception, human tool-making capacity, human capacity for interpretation of the behaviour of the tools employed; they also lend themselves to adequate representation by the constructs which α-function contrives from the sense impressions supposedly related to these external objects.

The second question raises the doubt about simplification to a higher pitch still. In psychoanalysis the observer is not an external force, except in the sense of not being the analysand, because he *is* an important part of the environment. What is being investigated, as the physicists also have discovered, is not an object *in vacuo* but a relationship between the object and its environment. (As also in mathematics – see Semple and Kneebone, *Algebraic Projective Geometry*, 1952, p. 3). The alternatives may be set out in a formula:

> Suppose A to be the person concerned with his own emotional experience, a,
>
> and B to be the psychoanalyst,
>
> and C the environment less A and B.

Then

1. self consciousness would be: A knows $a + B + C$,
2. analysis would be: B knows $A + C$.

But (1) can be seen to be complicated by the fact that *A* may not recognize that *a* appertains to himself and not to his environment.

This setting out of the problem shows that analysts have not really decided if what needs to be investigated is *a*, or *A* + *B* + *C*, or *A* + *a*. Let us assume that this is not a material point and that *all* combinations, until it is proved to the contrary, need to be known. Let us further assume that in psychoanalysis, what *A* needs to know is, *A* knows *a* + *B* + *C*; to know that would be to know all that needs to be known of other combinations.

Let us fall back on the idea that, to make progress in *this* investigation, what is needed as our tool is not an algebraic calculus but a myth. The myth, or myths, we require must serve to elucidate the problem of learning, and must elucidate this problem when it is associated with investigating or learning about an emotional experience that is felt to be primary and not secondary to some other investigation. Since I know virtually nothing about this subject beyond the tentative suggestions I have been making, I shall not be disturbed by the fact that the choice of myth I make would not be the choice someone else might make. As I know no rules, I do not have to obey any, but will make up some as I go along, thus following the precedent of the King in *Alice in Wonderland*.

My first rule is to make any rule I please. The myths I choose to elucidate the problem of learning are: (1) Adam, eating of the fruit of the Tree, is thus opposed to God's will, learns from it sexual guilt, and is expelled from the Garden (= Paradise). (2) The Sphinx stimulates curiosity; hubristic vow to be ruthless in its satisfaction at no matter what cost – suicide, incest and death are the rewards of success, and pestilence for failure. (3) A co-operation to build a tower up to Heaven is punished by God who destroys the method of verbal communication that made co-operation possible. (4) The youth who seeks a mirror in which to observe his beauty is punished by God. This last choice is made in the hope that it will serve to elucidate problems of curiosity and learning associated with the personality of the investigator himself – his need to find a mirror, that is to say a tool, which will help him to satisfy his curiosity, his *loving* curiosity, about himself. The curiosity, one might say, is not disinterested. (The lack of integrity vitiates it if one is expecting scientific curiosity.) The punishment seems peculiar.

Perhaps the way to use a myth is to associate to it; this may be the analytic counterpart of the algebraic calculus that is used for a specific task when its variables are given values. Free association to a myth is the equivalent of giving the elements a value as if they were variables in a formula. The values are those that are relevant to a particular problem, and the particular problem is the personality of the person who produces the free associations. By attributing these values to the variables of the myth we understand that those qualities are, for that person, constantly conjoined. So far, so good. But what does this mean in practice? Does one ask the patient for free associations on the Oedipus myth? Or on Narcissus? This certainly does not appeal to me. Rather, I would say that, listening to the free associations, one would think something like this: the patient is wanting me to agree with him; it is obvious from the way he is putting forward a suggestion that he has a beautiful personality. It appears to me that it is a morally beautiful personality; my personality is likewise beautiful; in fact I am to be a mirror of his excellence. But there is more of this story, the myth of Narcissus: there is a god who turns him into a flower. What is the patient saying that corresponds to this? There *must* be something because my myth tells me that these elements are constantly conjoined; or perhaps this is not the right myth. Either it is the right myth, and I have so far failed to see this aspect of it as it has appeared, or I am mistaken in thinking this is the myth to be employed. Perhaps I should seek for a more appropriate one – the Oedipus myth, for example.

I can see objections. It will be argued that no analyst could possibly have such a store of myths available in his psychoanalytic armoury as this procedure would seem to desiderate. It may further be objected that there is no reason why an analyst should store myths rather than theories; surely the analyst should be asking himself, as his patient talks, what is the appropriate psychoanalytic theory – not what or which of all the myriad myths ought to be dragged in as appropriate.

Psychoanalytic theories, as propounded by the best analysts, have served the cause of scientific development well, but Freud owed more of his discoveries to his use – the unconscious method of his use – of the Oedipus myth than to other more easily recognizable aspects of his scientific method. The real nature of psychoanalytic methodology has

never been properly assessed; there is a danger that the successes of the movement will be attributed to the ability of its students to apply conventional scientific method, and not always the best examples of it, rather than to the intuitive flair that made it possible for Freud at least to do more. One consequence is a tendency for the movement to proliferate jargon – a danger that besets even mathematics, although there it is disguised somewhat through appearing as correct axiomatic formulation that is inadequately appreciated because it is no longer seen in relationship with a more concrete background. There are times when psychoanalytic theory is so propounded that it is made to sound, as a bad teacher of his subject makes mathematics sound, as if it were "an ingenious manipulation of symbols in accordance with certain arbitrarily prescribed rules" (Semple and Kneebone, *Algebraic Projective Geometry*, p. 1). An appreciation of the importance of the use of myth in scientific method is necessary for further progress, or to arrest a process of retreat from positions already won, because it helps to keep the concrete background of psychoanalytic theory in view. If this is the case, is it not analogous to the low-level hypotheses of empirically verifiable data, rather than to algebraic calculi? And if so, should not the concrete background be provided by psychoanalytic practice rather than myth, which seems in danger of being a *substitute* for a concrete background rather than the concrete background? This objection could be valid if indeed a study of myth is to be used in the study of the individual, not instead of it. That is to say, the analyst should have at his disposal certain myths, as the scientist has certain mathematical procedures; he should frequently produce his free associations to them so that he is familiar with them and their use; and he should then learn to detect from his patient's material which is the appropriate myth, and from that what is the appropriate interpretation. Free associating to his chosen myths would then become the analyst's form of practising his craft so as to remain in training for his work. The choice of myth that he would use for the purpose would be an indication of his scientific affiliation.

Suppose an analyst did not include in his canon the Oedipus myth: it would be an indication for considering to what extent he was able to regard other psychoanalysts and himself as embracing the same discipline and therefore able to communicate with each other profitably. But this, though important, is relatively not so important as

the part that association on chosen myth, and selection of the myths on which to associate, plays in the promotion of psychoanalytic intuition and, more precisely, in the repair and reinvigoration of the analyst's α-function. Perhaps for the first time my suggestion makes it possible to give a practising analyst precise advice, and even instruction, on how to keep in training. He should not bother so much with attempts to keep notes about patients but to take, say, the Oedipus myth, and write his free associations on it, noting the date. This he can repeat as often as he likes – the free associations will never be the same for different dates. If, amongst his associations, a patient's name appears, that name can be indexed if he feels he needs notes on his patients. This procedure can be repeated, five days a week, for the same myth or for such other myths as he feels disposed to include in his canon; and he can discard and return to any given myth as often as he chooses. It would be as well to use a version, or versions, of the myth for whose historicity there is scholarly evidence, as, other things being equal, it seems that a version that has withstood the passage of centuries is probably more likely to have powerful appeal to the human mind than one that may be an ephemeral aberration and therefore of too great particularity.

This procedure promotes analytic intuition in the following way: suppose the Oedipus myth is the chosen exercise; it will not be chosen unless it has some immediate relevance for the analyst, and its relevance must be that the analyst has an emotional experience that is either repeating, or threatening to repeat, itself. Even this will not explain the choice of myth, but the analyst can draw his own conclusions on that matter at his convenience. The point is that his free associations should show him what the features are, in his present situation, which are interpreted and given a meaning by the myth on which he has chosen to associate. It will again be observed that this course of action differs from the accepted view of analysis. It is not using conscious material to interpret the unconscious; it is using the unconscious to interpret a conscious state of mind associated with facts of which the analyst is aware. The interpretation of the dream will give meaning to the known facts and feelings of the analyst's life, just as scrutiny of an ordnance survey map can give meaning to natural features clearly visible to the traveller and bring him to a realization of the point that he has reached on his journey. The myth

embodies the constants and variables valid for any period of life: the free associations ascribe the immediately current values to the variables, and the scrutiny of the material reveals the problem, which is the step essential to its solution, if any.

Now let us apply the Babel myth to destruction of the α-function. One point that immediately obtrudes is the hostility of the Deity to the aspirations of men who wish to build a city and a tower to reach to Heaven, and to make a name for themselves to prevent their being scattered [Genesis XI 1–9]. The people are making bricks and slime, which are then to be put together to make the tower to reach Heaven. It seems like an artificial breast-penis. And what of the name to prevent scattering? The word as a hypothesis which brings the scattered objects together and keeps them so? It is the God who is opposed to the hypothesis, the word (as hypothesis), and it seems as if the people who *have* come together are to be scattered; the hypothesis or selected fact is to be destroyed, the fragments scattered upon the face of all the earth. This is an attack on an attempt to reach Heaven: it is an attack on linking – the language that makes co-operation possible.

[Undated]

The claim of psychoanalysis to be a scientific procedure has often been challenged by scientists of other disciplines. Stirred by a desire to repudiate what seems to be a denial of the analyst's aspiration to be honest and to state his findings truthfully, psychoanalysts tend either to assume that the criterion is based on a misunderstanding of their work, or else that there is such a thing as scientific method employed by physicists, chemists and others, but that it cannot be used in any valuable way in their own work. The explanation of this attitude probably lies in the nature of psychoanalytic training, which has to cover such an enormous area and is so closely associated with the cure of patients that the would-be analyst can hardly find time to concentrate on the essentials of psychoanalytic theory, let alone investigate metalogic and metatheory. It is likely that if he does so, he will rapidly conclude that they have no relevance to his work and so dismiss both as insignificant.

Yet he would be wrong, and it is one of my aims to show that metatheory and metalogic are of great importance in all scientific work, and of peculiar significance for the psychoanalyst – nowhere more than in the psychoanalysis of severely disturbed patients of the kind known to psychiatry as psychotic or borderline psychotic.

I shall approach the subject as if my aim were to see in what way the criticism that psychoanalysis is unscientific is justified. To do this it is necessary first to try to understand what constitutes scientific method and by what criteria it is possible to determine whether a given method is scientific or not. To this end I propose to consider the views of physicists and philosophers. I choose these two disciplines because it would generally be conceded today that it is in the field of physics that scientific method has achieved its greatest successes, and in the field of philosophy – particularly through the labours of the philosophers of science – that the most rigorous investigation of the methods by which these successes have been achieved has been set in train.

I must say at once that the idea that there is any generally accepted view of what constitutes scientific method, or indeed that there is *a* scientific method, is one of which one rapidly becomes disabused. The search, as I hope to show, is rewarding; the more thoroughly it is carried out, the greater and more fascinating is the complexity that is revealed. In the first place it is clear that psychoanalysis is not alone in being vulnerable to criticism of the scientific soundness of its methods and results.

[Undated]

Metatheory

In the following pages there are grouped together a number of propositions under a few specific headings. The headings, together with the descriptive matter, are brief to a point that makes me fear they may be regarded as cryptic; even so, for the purpose they are to serve they are far more lengthy, complex and imprecise than they should be, compared with their nearest counterparts in other scientific disciplines. For the functions they are to serve approximate to those that are performed by the lemma (proposition taken for granted) in Greek geometry, the postulate, the definitory hypothesis used as a premise, the hypothesis taken from one scientific deductive system to act as a premise in another, and even the word, regarded (as I think it can be) as a hypothesis as it is understood in the light of the constant conjunction theory of Hume. It may be thought that this is a condemnation of these groups of propositions, but although I am aware of their defects I am doubtful whether these defects are not inherent in the task I have set myself, rather than in my performance of it.

The discoveries of psychoanalysis make it no longer possible to be satisfied with the methodology of scientists or philosophers of science even in the refinements of method they have produced to counter their own dissatisfaction. The psychoanalyst is in the curious position of studying a subject that illuminates the most ineradicable source of unscientific inquiry, namely the human mind, using that same mind as his scientific instrument, and having to do so without the comfort of thinking his observations are made by an inanimate machine that, by virtue of being dead, must be objective. But clearly an inability to be satisfied that the methods of scientists of other disciplines are scientific decreases rather than increases the psychoanalyst's hope to be more successful. Yet the attempt must be made to use psychoanalytic experience to improve on classical scientific method, and to use such improvements to fortify the procedures we employ. It is as a part of this attempt that I am using these groups of propositions. I consider them to be psychoanalytic definitory hypotheses that I

propose to employ as premises in deductive systems that I elaborate later. I shall call them premises (from mathematical logic) for short. My desire to make them as short and precise as possible is frustrated because precision demands elaboration in a subject dependent, as in metaphysics, on the use of words that have already a penumbra of associations that render them at one and the same moment suitable for employment in the psychoanalytic context, and yet permeated by meanings that need to be discarded if their use is not to mislead. This fact has made it necessary for me to lengthen my verbal embodiment of the premise by references to the provenance, the genealogy so to speak, of the idea I wish to express, and although I have limited this severely to the psychoanalytic provenance and, as I am well aware, to only a small part of that, it yet amounts to a considerable lengthening of an already long description and still does scant justice to the ideas or to the workers who have previously employed them. It would be pleasant to think that omissions and failures were attributable to faulty selection from the material of previous workers, but I fear that the true explanation is likely to be ignorance of the work, maybe even important work, that others have done but of which I have been unable to keep informed. However, I hope that I have been able, by this device that I have included in each premise, to clarify the sense in which I am proposing to employ that premise.

Frustration

A sense of frustration engenders feelings that are hard to tolerate. Intolerance varies with the individual and may be pronounced, according to the age and character of the person who experiences it. The baby experiences frustration, does not like it and makes, or is forced to make, a decision: it must decide whether to deny frustration or to modify it.

This bald statement can hardly be said to represent a fact. As with all psychoanalytic theories, it is necessary to make statements, as Freud pointed out, which are sufficiently exaggerated accounts of the facts they represent to make the facts themselves stand out unmistakably and yet not fall into caricature, which induces an opposite error. But it is true that early frustration presents the baby with a problem that has to be solved, and one on the solution of which much

depends. Suppose the child to be extremely intolerant of frustration: the danger is that it will strive to deny frustration and to continue to deny it until its appreciation of the world of reality is itself impaired. In the extreme case of such denial the foundations for psychosis are being laid, for an awareness of the real world is an essential part of contact with reality. The hatred of frustration is easily extended to embrace reality itself in a way that is typical of the psychotic; it may then be extended to that part of the mental apparatus on which the awareness of reality and frustration depends.

There are degrees of intolerance of frustration, and there are degrees of intensity with which it is denied, until we reach that moderate degree of denial that passes over into the state of mind, typical of the development of the domination of what Freud called the reality principle, in which frustration and its associated feelings, painful though they are, are tolerated sufficiently to enable the personality to entertain the possibility of modification of frustration rather than denial.

Denial of frustration

Let us consider denial of frustration, taking as our example an extreme degree serious enough to produce psychotic reactions, but not so extreme that the patient is inaccessible to an analytic approach. As I have said, the intolerance of frustration extends to an intolerance of reality; since modification of reality is precluded by the state of mind itself, the hate is directed against the mental apparatus on which awareness of reality depends. Provisionally we may accept the view, put forward by Freud, that this apparatus has the following components: a capacity for thought that is available as a substitute for immediate action of the kind designed, under the dominance of the pleasure principle, to relieve the psyche of accretions of stimuli; a system of notation associated with the development of a capacity for attention on which memory depends; an awareness of sense data. The denial of frustration therefore involves denial or destruction of these functions. Again, it is a matter of degree, and some functions – notably those concerned with awareness of sense data – may suffer relatively less damage than others.

Modification of frustration

Suppose the intolerance of frustration to be less extreme: the functions I have listed as marked for destruction when the intention is to deny frustration are cherished because they are essential to the task of modifying frustration by modifying its source. This may be the environment, including special though temporary features of it, or, as in psychoanalysis itself, features in the personality that might be supposed to intensify the painful aspects of the frustration experienced. These same features of the functions peculiar to domination by the reality principle are therefore subject to quite different treatment according to the degree of intolerance of frustration: if it is great, then denial and destruction; if moderate, then growth and development. Later, these functions of the reality principle will be examined more rigorously. For the present I wish to leave the discussion of frustration at this point: the psyche copes with frustration by methods that can be seen to fall into one of two classes of reaction: denial, or appreciation with a view to modification.

Concern for truth and life

I must make clear my choice not only of these terms, but also of the realities they represent for the second of my fundamental postulates (hypotheses or premises). No single word can adequately express the ideas to which I want to draw attention. By 'concern' I mean something that has in it feelings of consideration for the object, of sympathy with it, of value for it. The person who has concern for truth or for life is impelled to a positive, not merely passive, relationship with both.

A concern for truth may seem to be so closely related to impulses that operate under the dominance of the reality principle as to make it scarcely worth while to distinguish it from them by singling it out for special mention. The reasons for linking it with a concern for life may seem equally to be obscure, but I hope to justify both procedures.

The concern for truth must be distinguished from a capacity for establishing contact with reality. A man may have little capacity for that through lack of intelligence, training or even physical endowment – he might be defective in one or more of his senses, to take an obvious example. Yet this same man can have an active yearning for,

and respect for, truth. Conversely, a highly gifted and well-equipped person may have little concern for truth about the realities with which his endowment permits an easy contact. Such unconcern will clearly be a matter for attention by the analyst for whom the psychoanalysis of the patient has truth as its criterion.

Concern for life does not mean only a wish not to kill, though it does mean that. It means concern for an object precisely because that object has the quality of being alive. It means distinguishing between objects because one is alive and the other is not. It means considering that the difference is an important one. It means being curious about the qualities that go to make up what we know as life, and to have a desire to understand them. Conversely, a lack of concern for life means regarding a living object as indistinguishable from, or as being unworthy of being distinguished from, a machine, a thing or a place.

Finally, concern for life means that a person must have respect for himself in his qualities as a living object. Lack of concern means a lack of respect for himself and, *a fortiori*, of others, which is fundamental and of proportionately grave import for analysis. It is clear that lack of such respect means lack also of a safeguard against murderous or suicidal impulses. But there are other implications scarcely less serious, though less obvious. I shall consider them as I discuss concern for truth and life conjoined.

The patient who has no regard for truth, for himself, or for his analyst achieves a kind of freedom arising from the fact that so much destructive activity is open to him for so long. He can behave in a way that destroys his respect for himself and his analyst, provided he always retains enough contact with reality to feel that there is some respect to destroy; and this he can always assume if his analyst continues to see him. If his analyst does not continue, then he has destroyed the analysis. But destruction of the analysis is to be avoided, for it entails loss of freedom – at least till a new object is found – thus introducing a need for moderation that is apparent at other points in the closed system that the patient strives to produce. An obvious instance of this is the need to avoid successful suicide or murder. In brief, it is necessary for the patient to avoid any step calculated to effect change, and yet to change enough to ensure more analysis either for the reason that he has temporarily become a greater liability and needs more care, or because he shows such promise that it would be wrong to stop just when affairs have reached so happy

a posture. But it is clear that the limitations on freedom, and the sequent frustration, are associated with the patient's sensitiveness to reality. He must therefore lose some of this freedom in keeping analysis going.

But I am exceeding the boundaries of the discussion as I wish to preserve them for the present. I conclude by repeating that my wish is to direct attention, as a matter of psychoanalytic significance, to the degree to which any analysand displays concern for truth, life, and truth and life together.

Violent emotions

Violence, attributed to the emotions by me here, is not intended to imply only quantity of feeling. I shall consider only love and hate because I regard them as comprising all others; I do not separate love and life instincts, or hate and death instincts, nor shall I consider whether the violence implies an origin in the instinctual endowment or is secondary to an external environment stimulus. It may on occasion be due to a deficiency in a capacity for thought, or some other function proper to the onset of the reality principle which tends to produce arrest at a stage where action is a method of unburdening the psyche of accretions of stimuli, and so contributes to the physical expression of love or hate which can be characteristic of violence. Violence, then, though related to quantity or degree, contributes to a qualitative change in the emotion. The qualitative changes make love and hate possess appreciably cruel strains together with diminishing concern for the object. Both love and hate thus become more easily associated with a lack of concern for truth and life.

The breast

The term, 'breast' is here used and discussed as a definitory hypothesis. 'Breast' is the name of a hypothesis breast, and the hypothesis breast is to be understood to imply that certain mental phenomena and their corresponding actualities, if any, are constantly conjoined. It will be seen that I treat the name given to an object, the word 'breast', as a hypothesis, and follow Hume's view that a hypothesis

is the expression of a subjective sense that certain associations are constantly conjoined, and is not a representation corresponding to an actuality. In psychoanalysis the hypothesis is also the actuality that it represents: breast is a hypothesis that certain phenomena are constantly conjoined, and the hypothesis states that it is itself that constant conjunction.

Breast, like all other hypotheses, is a condensation. It is a condensation into the verbal counterpart of a visual image, which is itself a condensation. I proceed now with the expansion of the condensation, but only to that limited extent sufficient to indicate by the nature of the constantly conjoined associations something of the nature of the hypothesis breast.

I am treating breast as an α-element, not as a thing-in-itself, a β-element, or as a symbol. By virtue of its function as a hypothesis, it is also capable of the functions of the selected fact that has qualified as a hypothesis through public-ation, and therefore differs from the selected fact that has a private function. It also has affinities with a fundamental postulate in a scientific deductive system. It has similarities, by virtue of its character as an α-element, to 'the elements' – as that term was originally understood when it was used by Euclid for the elements of geometry. Finally, I am displaying a facet that is extremely close to that attributed by Freud to the condensation in a dream-element, which condensation can be expanded by free association "to six, eight or a dozen times as much space" (Freud, *Interpretation of Dreams* [1900a], p. 279).

So much for the metatheory: now to consider the theory. There are a number of hypotheses relating to the breast. Some are: the breast is a link between two objects; the breast is a source of good things to its possessors; the breast can be maltreated, gouged out, cut, split. To what do these theories relate? The first refers to happenings observed in an analysis; these are believed to be related to each other and are given a meaning if they are considered by the observer – be it analyst or analysand – to be a breast. They are seen, by virtue of the hypothesis that they are a breast, to share certain characteristics, and together and individually to share in linking two objects together. Characteristics and function are believed to be made evident by the application of the term to the appropriate happenings. Put in another way: in an analysis occasions will be found to arise when the series of statements (emotional expressions and other attributes of the meeting between

analyst and analysand whose connection with each other and with the known objects of the meeting is either undiscerned, or seems to be of a kind that offers no clues that are relevant to analysis) may be seen to be so related and to have such relevance if they are recognized as the breast. The breast, then, is a definitory hypothesis that can be used by the analyst to provide the patient with the selected fact that he cannot find for himself.

Two points require comment. First, I have spoken of certain events or happenings as being given coherence, without saying what these events are to which breast gives coherence. This is deliberate and is due to the fact that they must be regarded as constants to which a value has not been assigned. Even this is not quite accurate, for amongst them are variables whose function – in the sense in which that term is used by the mathematician – is not given and may not be discoverable. Second, I have used as the name for a definitory hypothesis the word, 'breast', which has a historical meaning that is simple and direct. It may therefore be said already to be a definitory hypothesis – in my terminology – which indicates the constant conjunction presumably for a number of simple phenomena such as woman, warmth, love, sensuality, and so forth.

Why is such a word used? In what sense is it illuminating to employ a term with such a penumbra of associations (many of which are physical, concrete, primitive and sensuous) to provide a definitory hypothesis, functioning as a selected fact, for the situation in analysis which, on the face of it, bears no resemblance to the historical meaning of breast? The situation in the analysis that requires the use of the term, 'breast', requires it precisely because it has become so divorced from the penumbra of associations adhering to breast that it bears superficially no resemblance to them. It requires it because breast, if the interpretation is correct, is a hypothesis in the Humean sense which fixes a constellation of associations that are constantly conjoined but have lost their connection with the material expressed by the free associations of the analysis, these last having become conjoined with material now alienated from, or never in contact with, the penumbra of associations of breast. The juxtaposition, by interpretation of breast, to the events of the analysis can be seen to resemble, as I have already said, a provision by the analyst of a selected fact that the patient cannot find for himself, but there are also important differences. The selected fact is a discovery made by the patient or

individual and is the tool by which he ensures the constant progression, the very essence of learning and therefore of growing. This is represented by the sequence: paranoid-schizoid position, selected fact (precipitating coherence of the elements of the paranoid-schizoid position) ushering in the depressive position, which then instantaneously reveals yet vaster areas of hitherto unrelated elements belonging to domains of the paranoid-schizoid position which were previously unrevealed and unsuspected – a revelation that contributes to the depression peculiar to the depressive position. The *selected fact* then is an essential element in a process of discovery. The *interpretation* – employing definitory hypotheses, such as breast, which have many resemblances to, and in some respects are identical with, the selected fact – is concerned not with *discovery* so much as with *repair*. This difference, important as it is, must not obscure the fact that the definitory hypothesis employed in interpretation, and the selected fact, are in one respect identical: they must be α-elements. We shall see later the disastrous consequences that follow from an absence of α-elements.

The penis

Most of what I have said about the breast may be said about the penis in its function in the theory I am propounding. The metatheory is identical, but now that I have discussed the use of the name, 'breast', and *the breast*, it is possible to add something to what I have said about the metatheory.

The first point is that an attempt to clarify metatheory is embarrassed by the lack of philosophical and scientific equipment appropriate to the needs of psychoanalysis. I have been reduced to educing the qualities associated with (a) scientific hypothesis, (b) psychoanalytic theory of dreams, (c) Humean theory of the hypothesis, (d) the selected fact of Poincaré, to produce a hybrid to describe the scientific nature of the usage, breast. Probably the best plan is to name the class to which breast belongs, 'the class of interpretations'. I propose accordingly to call all the objects I choose for discussion in this chapter, 'interpretations'. The interpretation then is a word or phrase that must be an α-element, must be interchangeable with a visual image, and must be capable of the functions of the selected fact. To this must now be added that it has, when it comes to any attempt

to produce in psychoanalysis the counterpart of reduction of a high-level hypothesis to formulation in terms of empirically verifiable data, the resistant qualities of a scientific deductive system in which the lowest members in the hierarchy are statistical hypotheses. The psychoanalytic interpretation, by virtue of its having the characteristics of a statistical hypothesis, cannot be verified empirically in the sense in which empirical verification has hitherto been understood. This does not mean that psychoanalysis is unscientific – psychoanalysts may be; so may chemists, physicists, philosophers, logicians and others – but it does mean that the philosophy of science, together with mathematics, lags too far behind the development of psychoanalysis for the necessary concepts to be available. In the meanwhile, I propose to improvise temporary solutions of our problems by these short interjections of metatheory between the discussions of successive elements of theory.

We have discussed shortly what I now call, 'the interpretation breast'; there follows a similar discussion of 'the interpretation penis'.

This interpretation, in its visual aspects, is more elongated than the breast. The verbalization of the visual image, which is inescapable, imposes rigidity on the interpretation that, if it could be recorded for public-ation (as I am trying to do at this moment by translation into words) in a manner that preserved its qualities as they are preserved in private by the method of recording that is available to the mind through the operation of dream-work-α, would retain one of its most important qualities, namely plasticity. These two interpretations, breast and penis, are plastic; that is to say that in the mind their visual image can alter enormously and yet retain its identifiability without loss or diminution.

Splitting

'Splitting' is the name of an interpretation: the interpretation has affinities with a constant conjunction hypothesis, a statistical hypothesis, an α-element. The visual image is fleeting, as in a dream: it seems to be there, and then not there. For example, it is a mass of Y's associations of person after person, all of them on a flat plane; it flickers, and they have gone. But surely this is 'splits', or rather some thing for which 'splits' is the right name. Perhaps splits are a way of indicating

splitting, a way of producing a visual image of splitting, or an image, an ideogram. I am not convinced by this. I am struck more by the fact that these splits appear and then they are gone. In this respect there is much in the consulting room that has this dreamlike quality. That is to say that there is some aspect of the sessions that fades and then reappears quite clearly in the way that a well-remembered dream appears and then fades. There is plenty that is not like this: Y, who talks as if it were all rational and straightforward, man-to-man stuff, has a way of denying psychosis. It may be true that what needs watching is this dreamlike stuff. But if so, what has happened to the α-theory? I am lost and see no connection. Perhaps it is that under the rational, which is being used as denial, are only α-elements.

I think 'splitting' calls up the wrong visual image. What does it look like, or feel like, or sound like? What does Y do? Not splitting. X is much more like it, and comes as near as he can to applying a gridiron of splits like a chip-potato machine, so that one is left like a series of pieces ready to be fried. Splitting is done by a single wedge-like object (the penis) or by the grid-like object. This welling up of a field, or sea, or mosaic of splits presents an appearance not unlike what one would expect to see representing the paranoid-schizoid position. It may be that the patient's trouble is that the paranoid-schizoid position is indistinguishable in his mind from a terribly split object. This means that Melanie Klein is right in saying that the depressive-position depression is about all the destruction the patient has wrought. But has she regarded the splits as being parts of the whole object that has been destroyed? One aspect of this must be the problem it produces for learning when every synthesis reveals more of the unsynthesized, particularly in analysis, when every gain in self-knowledge appears to reveal how little is known. This depression is quite common, but it may be that the rational depression at discovering how little you know about yourself is deepened by the feeling that the devastation of personality is even greater than expected. The devastation is seen to be the *consequence* of curiosity, and the synthesizing aspect of the experience is lost to sight. The greedier the curiosity, the greater the amount of destruction revealed. Yet there remains the problem: why does the fragmented, uncoordinated mass of elements loom so large and thus overshadow all else? It only seems to beg the question to say it is a depressed personality: it may be nearer to say it is one that is immensely greedy to be creative.

[Undated]

It would be useful to take a leaf out of the mathematical logician's book and consider concepts such as, 'breast', 'penis', etc., as conjunctions, or the emotions as connectives, or whatever it was that was thought to be most accurate. But in fact these terms are not very suitable for psychoses because I am concerned here with something that approximates to psychoanalysis of the state of mind that in one person becomes a psychosis and in another an invention of mathematical logic. The failed mathematical logician might develop a psychosis, and the aborted psychosis might determine its experiencer to turn to mathematical logic. We may have to invent, with such assistance from the mathematical logician as we can get, a mode of abstraction for terms such as, 'penis'.

The first need is to consider what it is that we want to abstract from such a term: if it is its function, for which of its functions do we need to find an abstraction? At the same time the question obtrudes: how is the meaning of the original object, from which the abstraction is to be effected, to be retained? The answer is, by preservation of the visual image and hence the importance of the term, 'penis', for example, for this term has the merit of being able to evoke a visual image. So we must never attempt abstraction without concretization.

What is to be abstracted? Its quality as a link. Very well; call it, '*a*'. What of its meaning as a sexual symbol? Call it, '*b*'. But some people think it dirty and disgusting, and that it should not be mentioned because it is dirty and disgusting. Call it, '*c*'. But anatomists consider the term to connote a physical structure. Call it, '*d*'. The physiologists, on the other hand, consider it . . . Call it, '*e*'. And so on – almost for ever, one might think.

In these examples I have not been able to produce an abstraction without particularization. For example, '*c*' has been chosen to represent that which stands for something very particular – a person or persons being disgusted by the term, 'penis'. It is clear that something has gone wrong with this approach. Suppose we start again,

and say that '*a*' is the abstraction of 'penis'. Can we then regard '*a*' as a variable that may be given one of many values, e.g. a link, or an object of disgust, or an anatomical structure? Or we may say that the term, 'penis', is the name we give a visual image, and that the visual image is an abstraction, a variable that can be given many different values. Here we differ from the mathematical logician who makes a mark on paper that, one supposes, is not able to call up any visual image but itself; nor do we attempt a painting, sketch or photograph. We employ a word on the understanding that it is an abstract visual image. Do we differ from non-scientists in this? The statement, 'Dogs are animals', would seem to use the term, 'dog', as evocative of a visual image that, if not abstract, is at least a variable that is probably given a value by speaker and listener alike. But it is understood that though it is a variable, the degree of abstraction is limited. It is not supposed that 'dog' can be given the value of a cat or a pebble. We must assume that it is evocative of a visual image that will permit the requisite amount of freedom and yet also impose a limit. Yet both 'dog' and '*a*' call up visual images in that both are seen, and both are marks on paper. But if I *say*, '*a*' or 'dog', then '*a*' simply calls up a visual image of the letter of the alphabet, whereas 'dog' calls up a visual image of an animal.

Let us now consider this situation in which the patient says, "Blood everywhere" – he calls up a visual image in my mind, but I do not see any blood that appears to correspond in reality to the visual image he calls up. But by his behaviour I am given to understand that he expects me to do just that. On the face of it, I suppose that the evidence that is presenting itself to his senses is the same as that which presents itself to mine; if that is so, then his interpretation and mine are obviously different. (I am using the term, 'interpretation', in the way I have already explained, that is to say, as the name in metatheory for those words, or collections of words, which indicate constant conjunction of elements.) In this situation I am confronted by elements for which I can find no selected fact. I cannot, therefore, draw together certain elements in a manner that appears to give them coherence. I can direct my attention to one of two groups of phenomena: I can attempt to illuminate the facts that he, so I gather, sees and feels blood everywhere, and I don't – I may try to find a selected fact that will give coherence to the elements of this situation; or I may give attention to a quite different set of elements, namely those associated

with what seems to me to be the patient's state of mind. The two sets of elements need not be separated. For example, I may decide that the patient is mad; this selected fact will make elements in both sets cohere. But in either event I must exercise the wide-ranging activity of which Freud[1] says, "A special function was instituted which had periodically to search the outer world in order that its data might be already familiar if an urgent inner need should arise; this function was attention", and which I have replaced by *α*-function. To this I now add, since I am engaged on the specialized task of psychoanalysis, my theory of the use of myth. I therefore exercise *α*-function on the facts, my interpretations of the facts, and my knowledge – such as it is – of mythology. By this means I hope to arrive at a psychoanalytic interpretation. But at this moment I do not wish to pursue the search for a psychoanalytic interpretation; I wish to scrutinize the nature of the method I am pursuing, and to do so with a particular aspect in mind of the problem I am investigating, namely the fact that the patient has produced what I call an interpretation – blood everywhere – of some experience. I, in this very sentence, am expressing my interpretation of what I think are facts, namely the facts covered by the phrase, 'what he is doing'. Further, I am seeking an interpretation (based on the idea that what he is doing is expressing an interpretation of some experience he is having) of what this experience can be which is expressed for him by the words, 'blood everywhere', but which I do not think can possibly be expressed for me by those words. To do this I shall use my theory of *α*- and *β*-elements, and assume that the difference in view lies in the fact that I am using *α*-elements, and he is using *β*-elements.

[1]['Formulations on the Two Principles of Mental Functioning' (Freud, 1911b). *Ed.*]

[Undated]

Theories for use in the psychoanalysis of disorders of thought

The scientific principles on which this book [a preliminary outline of *Learning from Experience*] is planned I have explained elsewhere. But it may not be out of place to summarize the main points for the benefit of those to whom this form of presentation is unusual. First, a warning: the reader may feel that what is said is obscure and difficult.[1] Allowing for the intrinsic difficulties of the subject, I believe that much of what is felt to be obscure on a first reading will appear less so if the reader will not allow himself to dwell too long on his first encounter with an obscurity, but will press on till the end, when I think he will have a fair idea of the whole and will thus be in a position to return to the earlier obscurity to find it much more comprehensible. But of course I realize that ultimately the difficulties of the subject, and my limitations in exposition, will make the value of the book depend very much on the skill and patience of the reader, and the goodwill with which he repairs the deficiencies of my work. I can at least promise that he is not being called on to waste his time because I have grudged mine.

The first part of the book consists of theories. Each theory is set out on the same plan, which is essentially that of a scientific deductive system. That is to say, first there are a number of hypotheses so arranged that they follow logically from the premises and from the preceding hypotheses. Consequently each hypothesis has a preceding premise, and is itself the premise of a succeeding hypothesis.

This system is in accord with that pursued by those sciences, particularly physics and mathematics, whose success both in results

[1][This statement is of use – and is intended by Bion to be useful – to readers getting to grips with his writings; it is consistent with the recommendations offered by Freud (1912e) in helping us to bear the uncertainty and ambiguity of apprehending derivatives of the Unconscious. See also Bion's introduction to *Learning from Experience* (Volume IV). *Ed.*]

and in the pursuit of those results has been one of the outstanding features of our era. At the same time, this may not at first be apparent because psychoanalysis, in common with other biological sciences, does not as yet lend itself to the degree of abstraction that makes it possible for the physicist and the mathematician to set out their scientific deductive systems in a manner that is at once exact and brief. The employment of verbal descriptions, often lengthy, contrasts with mathematical formulation and the formulations of the mathematical logician in a way that tends to obscure the structure of these theories and, consequently, their similarity to those of the physicist and mathematician from which their form is derived.

I have followed each scientific deductive system with a discussion of the premises and an acknowledgement of the source, usually the work of a practising psychoanalyst, from which they are derived. I have added comments of my own when it has seemed to me that they would be helpful.

The second part of the book is devoted to the use of these theories in the practice of psychoanalysis. First, I discuss the problem inherent in bridging the gap between hypothesis and empirical data. This is not exhaustive, but its disadvantages are compensated for because the solutions of the problem I adumbrate are implicit in later sections of the book. It will be evident that the suggestions I make can only be provisional approaches to this problem.

An intrinsic part of this disquisition will be a detailed investigation of what is meant by, or is comprised in, the meaning of free-floating attention and counter-resistance. This is of importance not only in itself, but for the light it throws by contrast on what it is that the patient is unable to do.

From this I shall pass to that aspect of practice that consists in theory construction, which is preliminary to interpretation. This will involve the use of already existing theories, including those I put forward for consideration here. I shall make it clear that this involves, on the part of the analyst, not only a knowledge, a working knowledge, of existing theories, but the analyst's capacity for freedom of mental movement from the paranoid-schizoid to the depressive position, and the reverse. This also will assist in comprehension by contrast of one of the major difficulties of the patient.

In the third part of the book I shall attempt a description of a few clinical episodes, which I shall then use to illustrate the process of matching theory with data. I hope to make these sufficiently illuminating to enable the reader to grasp the importance of attention in determining what kinds of material are presenting in an invariably complex situation which, as invariably, is disguised by a superficial appearance of monotonous similarity to previous experiences, and a monotonous similarity of one part of the session to all other parts of the same session.

In the fourth part of the book I shall consider some of the effects of the establishment of a capacity for verbal thought, including the obtrusion of neurotic symptoms familiar in the analysis of the non-psychotic personality.

In the fifth and final part of the book I shall consider some of the implications of the analytic experience for the patient, for the patient's environment, and for the analyst.

I have advised the reader to read straight through this book, not to dwell too long on difficulties, and in this way to gain a working knowledge of the book itself. But the book will have failed for the reader if it does not become an object of study, and the reading of it an emotional experience itself. My hope is that it will be an experience leading to an increased ability on the part of the analyst to mobilize his own resources of knowledge, clinical observation, theory construction (in the sense of propaedeutic to interpretation), and so to render this work out of date and hasten the day when what is perhaps the most distressing malady a patient and family have to endure will be classed as 'curable'.

A secondary but important aim is that the form in which I have presented the material will lead to a more rational, and therefore more certainly communicable, method of expression of psychoanalytic theory than obtains at present.

[Undated]

Dispositions

A man may be disposed to envy, or to violence of emotion, or to regard truth or life highly, or to be intolerant of frustration. Whatever it is that causes him to be so disposed, I shall call his state of mind at the time he is so disposed, his 'disposition'. The propositions I use as premises are all in this sense dispositions. But, as I write this, it is brought home to me how difficult it is to verbalize with accuracy without losing meaning, or to write meaningfully without losing accuracy.

'A disposition.' Does this mean something in the psyche? Are there such things as dispositions? At once a problem is, what does one mean by 'thing'? He is disposed to be envious; he has an envious disposition; his disposition is to be envious. All these sentences mean something. It does not seem unreasonable to claim that there is such a thing as an envious disposition. Very well: then there are envious dispositions, truthful dispositions, narcissistic dispositions, violent dispositions, loving dispositions – to take instances from the premises I have chosen. Since I want to say that there *are* such things, that is to say, things in actuality, in reality, which are represented by the word, 'disposition', it is essential always to use the word in such a way that the reader will be correct in assuming that I mean what I meant on the previous occasion, that there is in reality something that is represented by the word, 'disposition'.

If this were a difficulty peculiar only to this immediate context, the point would not be worth labouring, but it is inherent in psychoanalytic work and confronts the analyst at every turn. The problem is not new to the philosopher, but the analyst's position is more difficult because he is concerned with the practice of psychoanalysis, that is to say, he has to apply his theories in an empirical setting. Even so, this might amount to no more than the difficulties confronting the scientist who has to express his theories in terms of empirically verifiable data before subjecting them to experimental test, were it not for

the fact that the experimental test of psychoanalysis and its theories differs in important respects from the experiments of the physicist whose procedures were marked for their rigour and commended on that account even by Kant. The physicist has, or used to have, his laboratory: the analytic situation that the analyst seeks to preserve is only similar because, I suspect, we attempt to establish an identity with the known which in fact is inadmissible in any but the most superficial way. The tribulations of the physicist since the quantum mechanical physicists have shown that their lowest-level hypotheses, their empirically verifiable data, are statistical hypotheses, may help the analyst to feel that the gap dividing him from the most rigorous scientific discipline of all has become less wide, but it does nothing to bring his subject nearer to being scientifically impeccable. Still less does it contribute to the elaboration of a method or, failing that, an understanding of the need for a method that will place all science, his own included, on a firmer basis. Furthermore, Heisenberg's exposition of the philosophy of quantum mechanics shows that the dependence of the physicist's observed facts on a relationship with facts that are not and can never be known has abolished the limiting walls of his laboratory, and therefore the laboratory itself, so that the physicist has difficulties with his laboratory analogous to the analyst's difficulty with his consulting room and analytic situation. But it does not help psychoanalysts to help themselves, or the physicists to know this, unless through knowing it we can make a breakthrough on the psychoanalytic front. Hence the need for investigating the nature of our own abstractions to a scientific view.

Our scientific theories and systems of hypotheses need to be expressed with great exactitude through an instrument of verbal expressions which has inherent in it defects due to its origin and the penumbra of associations carried by its verbal units, and then has to be applied to a situation – clinical psychoanalysis itself – in which conversational English (or French or German, or whatever other is the native tongue of the participants) plays a dominant part. At first sight this looks as if the attempt to produce a rigorously scientific body of theory is a labour in vain; the errors and inexactitudes that the scientist in the analyst has striven to exclude are reintroduced in the act of translation into conversational usage. The danger is real, but it can be seen in better proportion if it is realized that the working

formulations of rigorous analytic theory are being applied to just those situations and emotional perturbations from which both the perfections and imperfections of language as a means of communication originally sprang.

Looked at in this light, the problem, though severe, assumes more manageable proportions. The exactitude that is essential to the theoretical formulation is essential because the function and context of the theoretical formulation requires it, whereas the context of a psychoanalysis itself does not. The exactitude demanded in the context of the psychoanalysis relates to a different problem and needs to be a characteristic of a number of converging features, some of which are time, emotional stress as it is experienced by both participants, and an unknown emotional experience that is only known to be unknown and must be recognized as such. The richness and variety of the respects in which both parties are ignorant must, as I hope to show later, not be allowed to be ignored.

There is no question of exactitude of time in the scientific formulation which must be true independently of time. Exactitude is not related to emotional situations, but must be characteristic of an entirely unemotional statement, though the statement itself purports to represent emotion. The exactitude of the theory also relates to a standard that is neither narcissistic nor socialistic, whereas the interpretation relates to a standard that is both.

To state the matter in yet other words: I may say that the psychoanalysis displays an emotional situation, a crisis in the relationship between the patient and analyst, and the patient and himself. Furthermore, it is a crisis similar to, and perhaps identical with, the crisis in the child's life that has to be dealt with by the development of a capacity for thought on the part of the mother and infant, and a capacity for the transmission of that thought by means capable of ultimate development into methods suitable for public, i.e. social, communication. These methods of public communication are language, music, arts and mathematics. The psychoanalyst employs language in his work; it is possible that this might account for a certain prominence of verbal thought in psychoanalytic discussion. Even so, I consider it to be so important that nothing is lost by stating the problem as if it were exclusively associated with verbal thought and verbal communication, which is what I propose to do, though it

will be seen that I cannot regard it as unconnected with other forms of public communication. This same language has to be employed in private communication, i.e. in that relationship with himself that is known as the patient's thought. Looked at in this way, disorders of thought can be regarded as an expression of an elaboration of a defective method of internal and external, private and public, communication which has obstructed the development of verbal thought and has thereby left the patient with a defective tool with which to correct mistaken solutions of the emotional crisis, and mistaken solutions of the problem in tool-making that were posed by the emotional crisis for which the tools were needed. It may be as well here to see that neurosis and psychosis in individual and group are not only problems in themselves but set further problems in the necessity to produce tools adequate for their solution. To this extent the original problem repeats itself phylogenetically and individually. This paper, as part of psychoanalysis, is itself a minor attempt at the solution of the problem of elaboration of the tool.

The tool of psychoanalytic theoretical language is:

1. A means of establishing a relationship,
2. A means by which collaboration in a common task is assisted, and
3. A means by which a man establishes a relationship with himself.
4. It expresses the relationship.
5. A man's character, like the properties of a chemical substance, can only be expressed in terms that refer to the nature of the relationship that he establishes with people and things, including himself.
6. A man's senses only give information about the relatedness of one object to another. The information given by the senses is worthless except as material suitable for the formation of judgements about relatedness.
7. There is a vocabulary suitable for, and adapted to, the description of sensual information, mostly adjectival.
8. There is a vocabulary similarly adapted to defining by naming sets of sense impressions that appear to be constantly conjoined:

these are nouns, e.g. table, chair. Such terms may be regarded as having the characteristics of hypotheses: 'table' is the name given to a number of phenomena constantly conjoined with a thing-in-itself, or thing in actuality, or a realization of what, without it, would be hypothesis only. In this respect the noun must be regarded as a succinct method of stating a hypothesis that certain no longer explicitly stated qualities and a realization are related.

9. The fact that the entire vocabulary in any language is formed to serve man's preoccupation with relatedness is not observed because the relationship with which man is preoccupied is possession – to possess or to be possessed. This tends to colour the belief in, and attitude to, things in themselves – realizations.

This is seen in

10. the words used to express relatedness of the self with itself and other things or people. Terms such as, 'love', 'hate', 'know', are hypotheses expressing a constant conjunction between feelings not related to the senses, and two classes of things: (a) those expressible in, or represented by, terms that are succinct hypotheses of constant conjunction of certain sense impressions, and (b) those represented by terms that are succinct hypotheses of the constant conjunction of impressions not related to the senses.

    An example of (a) would be, 'I hate the sea'. 'Hate' is a name representing the hypothesis: I have an impression that a number of feelings that are constantly conjoined and are as constantly incompatible with certain other feelings (the constant conjunction of which I usually name, 'love') are related to a thing that is constantly conjoined with certain impressions of sight, smell, etc., and the constant conjunction of those things and smells I usually state succinctly by the word, 'sea'.

    An example of (b) would be, 'I hate depression'. The first part of this statement is as before, but 'depression' is the name of a series of feelings that are constantly conjoined but are related to no senses that I am aware of. The bias towards possession as being the essential quality of all relatedness tends to the supposition that the person hates a feeling that he has, and obscures the fact that he is hating – that is to say, he has a particular kind of relationship to a feeling (depression) that is itself the expression of a particular kind of relatedness.

What is the tool of psychoanalytic theoretical knowledge for?

The answer would seem to be that it is for precisely the same purpose as all other language, and that the only difference between psychoanalysts and others is that analysts consciously use language for the purpose for which it was intended, and others use it for precisely the same purpose but without realizing what started them off on having a language at all, or what they are employing it for. It is as if a man picked up a book but forgot, as he studied it, why he had picked it up.

One of the consequences of not knowing what the activity is for which language is being elaborated, namely the exploration of relatedness, is a preoccupation with whether it is possible ever to know anything. The difficulty arises because it is not appreciated that 'X knows Y' is the expression of a special kind of relatedness, and the answer to the question depends on whether a link can be forged which serves the purpose of relating X and Y in actuality in such a way that the factual experience is correctly represented by the statement, 'X knows Y', when that statement is freed from the possessive connotation. If 'X knows Y' is not freed, and is accordingly allowed to retain an element of 'X possesses a piece of knowledge called Y', or that 'X contains a piece of knowledge called Y', then 'X knows Y' is a statement valid in itself and meaningful, but it cannot represent anything in the world of reality, for in the world of reality there is nothing for it to represent. It is a statement suitable for expressing a theory of knowledge appropriate to a stage of development in which knowledge is felt to exist, as a concrete object is felt to exist, but it must be stripped of such primitive components before it is capable of representing an actuality, or supposed actuality, without being incompatible with other statements representing other facets of the same actuality. I maintain that if the statement is stripped of all meanings that prevent it from expressing a relationship between X and Y in a manner strictly parallel to the expression of relatedness embedded in 'X loves Y', and 'X hates Y', then not only do contradictions that make it incompatible with other hypotheses of relatedness disappear, but there is an actual situation that it represents suitably. There is one further respect in which 'knows' can be made to approximate to reality; that is by making it express an activity continuously pursued so that X is conceived of as being actively engaged in a relationship of knowing Y, in the sense in which the phrase, 'getting to know', is

sometimes employed. The point will receive full treatment later, so I shall not dwell on it more than is necessary to make the statement, 'X knows Y', capable of representing the actuality represented by the statement, 'X psychoanalyses Y'.

Before proceeding further I want to make it clear that when I say of the statement, 'X knows Y', that in so far as it carries a meaning of 'possessing a piece of knowledge' there is nothing in the world of reality for it to represent, I do not mean that it is an untrue statement; it can be perfectly true, just as a mathematical calculus can be true and yet have no known corresponding realization. Although a statement represents an empirically verifiable fact – the statement has a corresponding realization – that statement is not therefore true, and consequently not capable of protecting the personality from the mental deterioration attendant on starvation of truth. Whatever 'truth' may mean, it does not mean a quality whose existence or non-existence is established by the correspondence of a statement with a realization. Truth and absolute truth are statements of a judgement of a statement. Thus the statement that 'the sun rises' is a true statement. If I were asked whether it was absolutely true that the sun rises, I should say, "No". As a hypothesis, there is no corresponding realization that it represents. But though I know this, I also know that there is a set of phenomena that can be made to appear related, are given a relatedness, if I produce a hypothesis that the sun rises. What are related to each other by my statement are appearances; and the appearances are characteristics of my relationship with stimuli. Furthermore, they are characteristics of a particular form of relationship with the stimuli – an 'I know' relationship. But I have already said that I know that the statement, 'The sun rises', has no corresponding realization. How then can the statement, 'The sun rises', be said to be true and part of an 'I know' relationship? The answer is that the 'I know . . .' relationship is between me and a set of phenomena some of which might be, to take an example, that my friend wants to see a particular view at sunrise, that he wants my company, that he thinks I can be relied on to wake at a time suitable to fulfil his aim, and so on. With all these I have an 'I know . . .' relationship. What I am concerned with is a set of phenomena with which I have an 'I know . . .' relationship as contrasted with an 'I love . . .' or 'I hate . . .' relationship. For my purposes I need a theory that will relate these phenomena to each other. The phenomena are already selected from out of many millions that are

discarded as irrelevant (e.g. that no rain has fallen in the Gobi desert), and a further selection could be made by putting in one class all those that have been related by my theory that 'the sun rises'. As I have said, this statement is true because within a circumscribed area it has the effect of relating appearances, phenomena, with which I have an 'I know . . .' relationship. But if I am asked whether it is absolutely true, I assume that I am expected to remove the limits circumscribing my area in order to make it limitless; I assume I am to state whether this theory that 'the sun rises' will demonstrate a relatedness between all kinds of phenomena, and also a realization to which the hypothesis that 'the sun rises' corresponds. For this set of elements, facts and phenomena, the statement is not true.

Thus, 'truth' is the name I give to the quality that I attribute to any statement that is a hypothesis relating to phenomena with which I have an 'I know . . .' relationship. The function of the hypothesis itself, as I have already said, is to state a relatedness between elements that, without it, would remain discrete and therefore unable to yield the feeling of meaningfulness that is the inseparable emotional accompaniment of an observation of relatedness embodied in a hypothesis. Consistent with this usage it is correct to say that the statement, 'The sun does not rise', is untrue when it is the hypothesis which is employed in the same set of phenomena as I have used in my example, even though it can be shown to correspond with a realization and to be an accurate representation of the realization. One reason for this is that the theory is to be used for a limited number of phenomena in a context that shows clearly that the theory is to serve a purpose that is social and not, say, to illuminate an astronomical problem. It may serve as a useful introduction to later elaborations of these points to consider why anyone would resort to hypothesis perversely in the trivial social context; as it is an imaginary example, we may suppose the statement to be made as an expression of feeling, either as part of some joke, or perhaps to mislead. In either event, the relationship between phenomena and the observer is not that of 'I know . . .', but of 'I love . . .', or 'I hate . . .'. A hypothesis employed as part of an 'X knows Y' relationship is to fill a quite different function from that which is . . . [*breaks off here*]

[Undated]

I know X = relationship

'Knowledge' has no meaning unless it means that someone knows something, and this, as I hope to show, is an assertion of relationship, or of some part of a relationship.

The term, 'knowledge', I propose provisionally to employ to describe a state of mind indissolubly associated with a relationship between communicable awareness on the one hand, and the object of which the person feels thus aware of the other.

I must give some explanation of my choice of the term, 'communicable awareness': the term, 'communicable', is not synonymous with 'conscious', for a person may be conscious of something yet unable to communicate his awareness. Or he may be unconsciously aware of it and yet able to communicate his awareness to another who can interpret his communication though he himself cannot. I may be unconscious of my fear of something of which I am aware (and indeed of my awareness of it) and yet communicate my fear to another who has no difficulty in understanding from my communication that I am afraid, and of what it is that I am afraid. Obviously such communication depends for its efficacy on the capacity for receptiveness of the receiver, and therefore there can be no hard and fast way of determining the point at which awareness may be said to be communicable. But this is a difficulty that will be discussed when we come to the problem of restatement of a hypothesis in terms of empirically verifiable data. For the present I wish simply to establish my contention that the awareness must be communicable.

The instance I have given (that I might communicate my awareness of something that I fear) may serve as an introduction to the kind of relationship with an object which I claim when I say that I know it. I may say that I fear an object, but this statement does not include the statement that I know it. Indeed it may be an essential feature of my fear that I do *not* know it. But the statement that I know it may include the fact, stated or not, that I fear it. In some respects, then, to say, 'I

know X', is an inclusive statement; it implies an inclusive relationship wider than one implied by 'I love X', or 'I hate X'.

My aim is to define a common usage, which definition would obtain a large measure of support. This aim becomes more practicable if we attempt to describe that limited use of 'to know' which is implied when the speaker means that in saying, 'I know X', he is really meaning a kind of relationship with X which is to be specifically discriminated from all the other kinds of relationship signified by 'I hate X' or 'I love X', 'I see X', and so on.

In an analysis, the action of the analyst in being an analyst means two things: in so far as it is an investigation, it means 'I want to know you', but in so far as it is interpretation it means 'I know you'. This is an example of the kind of relationship I wish to use the expression, 'I know X', to describe. It is between communicable awareness and the patient.

The meaning of the word, 'know', is determined by its context. In attempting to define my use of it, I am wishing to control the context so that the word has a more rigid meaning, and thereby a meaning less liable to fluctuation. The same purpose informs the attempt to address my comments to a selected audience. I hope that if the audience is literate, the penumbra of associations it possesses will reinforce the meaning I wish to convey. Clearly this limitation is again imposed by selecting a philosophical or psychoanalytic audience.

Nevertheless the word, 'know', in the statement, 'I know X', has constantly changing meaning, and these changes in meaning remain out of the control of the person making the statement, no matter how carefully he may strive to make it exact by definition, by control of the context in which he uses it, or by selection of those to whom he addresses his observations. My point may be clarified by the exaggeration of an extreme view, namely that we cannot know the meaning at any moment of the word, 'know', unless we know all the meanings of the word at that time – and that means never. Such a view is ordinarily of no practical consequence, yet it may serve sometimes to point the way to an understanding of some of the difficulties that are of practical importance. Amongst these are those that arise because it is a problem even to achieve the relatively modest aim that the writer may and should have: to know all the meanings with which he is at any moment investing the word.

[Undated]

Kinds of relatedness

'Caused by'. But also the mathematical symbols for addition, subtraction, multiplication and division. Are these expressions of relatedness? And if so, what is their history in the development of the individual?

This and this and this and this = a table. (*addition*)

A table without legs or a top or hardness or softness = a hallucination. (*subtraction*)

A table *multiplied* by today and tomorrow and the next day and the next day = lots of tables.

But if it is the same table? And if two people have to share it, is the table *divided* by two?

[Undated]

The cause and the selected fact

The cause and the selected fact are alike in that they are both ideas that have the power of being associated with an emotional experience that at one moment gives rise to a sense of creative synthesis *and* awareness of still unsynthesized discrete objects. Every emotional experience of knowledge gained is at the same time an emotional experience of ignorance unilluminated. The sense of creative success with its accompanying elation is therefore inseparable from a sense of failure to synthesize the discrete objects, the elementary particles, which are revealed by the success.

Dominance of the life instincts carries with it the continued repetition of this experience. In extreme form, fear of this experience can lead to repudiation of the life instincts, and the reinforcement of the death instincts that are idealized and libidinized.

The fear and intolerance of the cause or selected fact ultimately contribute to increasing attacks on the individual's equipment for feeling and satisfying curiosity, and therefore contribute to the forces operating in producing senility. Senility is a process analogous to destruction of the ego and of α. It thus contributes to the shortening of physical life, just as destruction of α and the associated loss of contact with reality in infancy endanger life.

The selected fact relates to synthesis of objects felt to be contemporaneous or without any time component. The selected fact thus differs from the cause that relates to the synthesis of objects scattered in time and therefore with a time component.

The suicide of the Sphinx, and the Oedipus myth, are both verbal accounts of pictorial solutions (visual images) of the same problem: one solves it by death; the other by re-entry into the mother's womb. Both solutions are intended to evade the emotional experience of cause or selected fact, i.e. the interplay between paranoid-schizoid and depressive positions. This interplay cannot be carried out without visual imagery of the Sphinx, or of an internal parental intercourse.

If cause is transferred to epistemology, as I think it should be, what is the link between hypotheses in a scientific deductive system?

If I say destructive attacks lead to fragmentation of α, it cannot mean (according to my theory) that they 'cause' fragmentation: it must mean that the individual cannot make destructive attacks on α without thinking that α has been fragmented. If the patient makes destructive attacks on α, or what he feels to be α, then he thinks I had no umbrella in London, he took a taxi, I had pneumonia [*see* p. 180] and so on, in disjointed bits that seem to him to be objects, i.e. bits of his personality indistinguishable from things in themselves. Though cause has no realization corresponding to the concept, the patient regards cause as having an existence as a thing in itself, not independent of thought but as a part of his personality possessing independence in the sense that he cannot control it.

Such a patient, having only objects at his disposal – which, as we have seen are unserviceable for anything but projective identification – cannot feel he is able to discern a link between discrete phenomena or their counterpart in reality; such an idea is not appropriate to a state of mind in which only bizarre objects exist and can only be projected, evacuated, or internalized by a mind that is a bowel. There is therefore no possibility of his feeling that he has discerned the link that brings phenomena together, and therefore cannot have the emotional experience that the non-psychotic personality recognizes under the name of 'cause'. His experience is quite otherwise: he feels that various objects have cohered; they are felt to have done so voluntarily, and independently of his volition; yet since the objects are part of his personality, he is responsible for their voluntary and independent concatenation.

But I have said that 'cause' should be, and is, the name of the emotional experience inseparable from the interaction between paranoid-schizoid and depressive positions. The solution of this contradiction lies in the difference between the emotional experience known to the psychotic, and the emotional experience known to the non-psychotic personality, both of which experience have the name, 'cause'.

I have already adumbrated the nature of the emotional experience called 'cause', as it is experienced by the psychotic: we must now consider the nature of this experience as known to the non-psychotic part of the personality.

Disregarding for present purposes the fact that the non-psychotic

believes that cause is a phenomenon with a corresponding realization and belongs to the domain of ontology, and considering only that part of his beliefs which relates cause to the domain of epistemology – that is, as an emotional experience – we can see that he feels he has discerned a link between phenomena. For the psychotic the objects have come together in a cruel juxtaposition: for the non-psychotic the previously discrete phenomena are felt to be unchanged but related, and the emphasis is not on the objects (phenomena) but on the relatedness. The relationship is variously described, but usually as 'logical', and the effect of discerning this relatedness is felt as subjectively therapeutic. What, then, is logical relatedness as contrasted with, say, cruel juxtaposition? The psychotic view impels towards splitting and dispersal, whether under dominance of life instincts (L), or death instincts (D); under L, the objects are scattered to prevent destruction, and under D, they are the explosive result of it. The non-psychotic view impels towards further discovery and synthesis.

Differentiation of cause and selected fact

So far I have spoken of 'cause' and 'selected fact' as virtually interchangeable terms used as names for an identical emotional experience. I shall now use 'cause' exclusively for those emotional experiences in which *time* is intrinsic, whether this is explicit or implicit in the material. Time is a component in all emotional experiences; therefore the emotional experience I call 'cause' will be intrinsic to the experience described or discussed, and to any scientific deductive system which is constructed to represent it; it follows that it will be implicit in any calculus corresponding to the scientific deductive system.

The term, 'selected fact', I reserve for use in emotional experiences of thought about phenomena in which time is excluded, and in all scientific deductive systems and the corresponding calculi which are constructed to represent such phenomena.

In so far as an exercise of the logical faculty is an emotional experience, time is intrinsic; this fact will be reflected in any scientific deductive system and its associated calculus, which is constructed to represent the experience of exercising the logical faculties. But logic is not impregnated with time, although it may be concerned with it as an object of thought for which it supplies the laws. A logical

formulation, therefore, cannot be described as a cause: it will be called a selected fact. A mathematical formula is, for the same reason, also a selected fact. A logical formulation or a mathematical formula may nevertheless be called a cause, but only in so far as it has been an element in an emotional experience and is therefore represented in the appropriate scientific deductive system and its associated calculus. In the system of logic or mathematics to which it belongs it remains a selected fact and is timeless.

Mathematics and logic are unaffected by the passage of time, though time is intrinsic to the discovery of logical formulations or mathematical formulas. They 'are', independently of whether they are known, i.e. independently of whether there is an observer to observe them or not. They are therefore no part of experience or knowledge since there need be no one to experience or to know them. [*Marginal comment:* "This is running counter to my statement that maths is only a way of thinking."] This fact contributes to the comparative absence of awareness of time as a component in the problems associated with disturbances of thought, whether the disturbance is of the kind observable in an attempt to solve problems of acceleration of freely falling bodies without the discovery of the differential calculus, or of the kind observable in a psychotic patient who is incapable of articulated thought.

The elements of logic or mathematics are contemporaneous: the elements of experience are dispersed in time.

[Undated]

Suppose I want to go to Oxford Street but do not know how to find it. I may have to ask someone, or consult a map, or try to remember something that I believe would give me a clue, or . . . But it is obvious that if I stick to concrete examples of what I may have to do I shall not succeed in my immediate aim, which has nothing to do with Oxford Street. So instead of thinking of all the different things I might have to do before starting to go to Oxford Street, I shall see if I can find a short way of saying what I want you to know when I start writing of concrete examples of learning, such as consulting maps, policemen, and so forth. I have to make these concrete examples abstract; I have to abstract from the concrete the essence of my communication. But now that I have written this last sentence I am wondering whether abstract, concrete, essence, communication, are good words for stringing together in a sentence that has now perhaps become too abstract to teach the reader what I mean. My first attempt threatens to become so burdened with verbal descriptions of concrete images that the reader may feel overwhelmed by them to the detriment of his ability to learn what I mean.

Yet those visual images that I began to verbalize are only a small fraction of the many that were in my mind: the Radcliffe Camera; being lost in Turkestan with no policeman to ask and no knowledge of the language to help me frame a question about Oxford or Oxford Street; chain stores and uniformity; everyone talking the same language; a Brahminy bull helping himself to goods on a stall that I was not allowed to touch . . . I am not sure that I remember what I set out to say. But I think I know one thing that my visual images or free associations are saying, and that is something I did not mean to discuss. I was thinking of the sweets the Brahminy bull could have, but I – I was quite small at the time – could not. With an effort I can get back to the point; it is to do with learning and teaching.

If I want to go to Oxford Street and do not know how to do so, I must learn. If I want to teach something about learning, I must know how to learn and how to teach. I shall start again.

Suppose I want to go to Oxford Street but do not know. . . . There is much I need to know before I can ask the question. I begin as an individual with a place in time and space, and in the history of others. Closely related to the problem of locating Oxford Street is a vast amount of remembered experience. Some of this is mine; the rest is located in the society of my time, and I need to find it and to know *how* to find it. With regard to myself, I need to consult my store of experience; in some respects I can see how I do this. I need to know what I mean by 'Oxford Street' if I propose to get there. I have no difficulty in knowing that 'Oxford Street' is not just a noise in my head because I am able to have an image of the Radcliffe Camera, and so the noise, 'Oxford Street', becomes a sound, and the sound is now felt by me to have a meaning. The visual image of the Radcliffe Camera has therefore proved, with other associations, to be a repository of emotional experiences on which I automatically draw in order to understand a current problem with a view to solving it.

But my current problem is not how to go to Oxford Street; it is how to make public certain ideas of mine about learning and teaching. And while attempting to solve the problem of how it is to be done, I found myself wondering what I would say. It then occurred to me to answer my question by an illustrative example. That is how it seemed to me consciously, and that is how I would explain my behaviour consciously.

The other explanation that occurs to me is that the supposed illustrative examples are really α-elements filling their function as a repository of my experience, and being called upon to yield that experience so that I may the better be able to solve the problem of this communication here. In this the elements recall problems associated with solving problems by non-verbal means – the non-existent Turkestan policeman – but not only pre-verbal.

Now I can proceed with these free associations – or rather I can treat these images as free associations and attempt an analytic approach. This would depend on my regarding my immediate problem as one arising predominantly from an internal obstruction, i.e. an obstruction in my psyche, and on my believing that the method of solution was psychoanalysis. But may there not be some other way

in which these images can be utilized? In fact I have gone to sleep. Does this mean that the natural *modus operandi* is to have these images and then 'sleep on them'? Or to allow them to work as elements in unconscious waking thought when, my mental apparatus being in good order, a solution will emerge without my ever being aware of the unconscious waking thoughts that have effected it? *The Old Wives' Tale* [Arnold Bennett] certainly credits 'sleeping on' a problem with efficacy.

[Undated]

It has just come to me that the mathematician is one who is capable of α and that it has this consequence: he can see the essential characters in, say, the paranoid-schizoid and depressive positions, or the Oedipal situation, or primal scene, or any other. These situations, or complexes, are seen concretely and, at some point, in visual images. For example, Euclid's geometrical patterns can easily be visual images that are made abstract. But the mathematician is able to produce abstractions, and signs for these abstractions, and can then replace the abstraction or its sign (reversing the direction of α) with a *particular* concretization.

If my idea is right, then Euclid could say good-bye to the 'elements' (1.5, Elefuga). That is to say, the 'elements' could be worked – transformed, in his case – into an abstract visual image (the theorem) and then still further abstracted by Descartes (or rather the use of the system of co-ordinates he worked out) so as to form the whole system of projective geometry, and then abstracted still further to form the system of algebraic geometry. Now the calculus thus elaborated lies ready to use.

Leaving aside the question, for the time being, of how this process of abstraction is to take place and how α affects it, we can see that the calculus that has been produced is available for the solution of all kinds of problems which, on the face of it, are far removed from the basic facts ('elements', in this case) from which the original abstraction was effected. But it is probable that it will only serve effectually for the solution of problems in which the concrete facts, which are to be substituted for the variables of the calculus, have a value relative to each other which is similar to the values the original basic facts had relative to each of the other basic original facts. Put in other terms, a Newton explores astronomical space, elaborating his laws of motion in doing so by virtue of an already existing calculus, or calculi, which derived originally by a process of abstraction from the facts of the first space of all – the infant's space of breast, the Positions

(paranoid-schizoid and depressive), Oedipal situation, primal scene. There is, then: a basic pattern, an abstraction, calculi and reapplication of calculi.

A Newton then owes his freedom to investigate to a series of derivations from a basic pattern; but that same pattern also imposes a limitation on his freedom in that only such data tend to be regarded by him as will lend themselves to a scheme fitting in with the original basic pattern. In an extreme form this can lead to such a limitation of selectivity of observed facts that the 'discovery', e.g. of the origin of the solar system, is really not much more than a projection onto astronomical facts of a crude and very easily detected emotional problem centring, say, on the primal scene. But in another observer of the stature of Newton, the facts now drawn together by aid of the calculi already in existence can be seen not to be adequately represented by the laws of motion and their representative calculi.

Thus there is produced anew the situation, described by Poincaré, of disparate elements lacking any coherence. Confronted by this repetition of the Positions, again all depends on the individual's capacity for *α*. The new Positions can again be negotiated, depending on *α*-capacity, new visual images, new abstractions, and further calculi, and so on.

In this lies the possibility of belief in the value for scientific enquiry of the original basic patterns, and at the same time an indication of the nature of the limitations from which human intellectual exploration and enquiry is bound to suffer. We can ultimately only see in the universe that which lies within the compass of our mental equipment, and that in turn means that we can only see that which lies within the compass of our ability to solve through *α*-capacity certain basic elemental positions and patterns, such as the paranoid-schizoid and depressive positions, primal scene and Oedipal situation. All that lies outside those few elementary patterns can only be grasped by virtue of *α*-capacity which can be brought to bear on a derivation from a derivation from a derivation . . . to the *n*th.

March 1967

Reverence and awe

[*Synopsis and notes of a paper given at a joint meeting of the Los Angeles Psycho-Analytic Society and Institute, and the Southern California Psycho-Analytic Society on 20 April 1967 in the Mount Sinai Hospital Auditorium. There is no record of the actual presentation.*]

The Kleinian theory of the paranoid-schizoid position and its dynamic relationship with the depressive position can be seen to indicate a configuration that is constantly encountered in the realm of thought. I have drawn attention to the recurrence of this pattern in *Learning from Experience*. I shall indicate what I mean by two quotations, neither from psychoanalysts, which display it. The first is from a mathematician, Henri Poincaré, in *Science and Method*; the second from Eric Temple Bell in a chapter on Cause from his book, *Men of Mathematics*.

1

> If a new result is to have any value, it must unite elements long since known, but till then scattered and seemingly foreign to each other, and suddenly introduce order where the appearance of disorder reigned. Then it enables us to see at a glance each of these elements in the place it occupies in the whole. Not only is the new fact valuable on its own account, but it alone gives a value to the old facts it unites. Our mind is frail as our senses are; it would lose itself in the complexity of the world if that complexity were not harmonious; like the short-sighted, it would only see the details, and would be obliged to forget each of these details before examining the next, because it would be incapable of taking in the whole.

2

> . . . the theory of numbers, which in the seventeenth and eighteenth centuries had been a miscellaneous aggregation of disconnected special results, assumed coherence and rose to the dignity of a mathematical science on a par with algebra, analysis and geometry.

I suggest that this constantly recurring phenomenon can at the present time be very clearly seen in the development of psychoanalysis. I do not propose to go into this and the oscillations of the group from persecution to depression and back again, beyond drawing your attention to its existence; my object is to give an account of a relatively short clinical episode, which is merely a particular instance of well-known psychoanalytic theories. It may seem unfamiliar but I hope you will agree that it is a perfectly fair account of a general theory well known to psychoanalysts.

If psychoanalysts can abandon themselves to analysis in the psychoanalytic sessions, they are in a position when recollecting the experience in tranquillity to discern their experience as part of a greater whole. Once that is achieved, the way is open for the discovery of configurations revealing yet other and deeper groups of theory. But the discoverer must be prepared to find that he has started another round of group oscillations. Persecution ⇌ Depression.

My example, which I have called 'Reverence and Awe', is taken from the analysis of a patient who came to me after an experience of many years of analysis. He had no doubt at all that he had benefited greatly from his experience, and yet he was dissatisfied. I expected to find that greed played a large part in his make-up, but from what I knew of his analyst I thought it very unlikely that this point had not been adequately dealt with. It seemed probable that the explanation would have to be found elsewhere. My reason for taking the very restricted sample from his analysis with me is to draw your attention to material, the pathology of which is familiar to you already, but which I interpret in a way that may be less familiar. I hope you will satisfy yourselves that despite apparent strangeness the reality that I am representing by my interpretations is in no way novel. I draw your attention to this point because I am convinced that this happens more frequently than psychoanalysts realize, and gives rise to unnecessary confusion and controversy. In my opinion it does not indicate differences in the theoretical outlook of psychoanalysts, but is symptomatic of the stage of development that the psychoanalytic group has achieved. That stage is described by my quotation from Eric Temple Bell.

For reasons of discretion I have had to discuss this patient in such a way that he cannot recognize the material. I believe, however, that

in essentials the account does not give a misleading impression of the actual case.

I deliberately made no enquiries about this patient's previous psychoanalytic history, working on the principle that either the difficulties had been adequately dealt with and were therefore no longer relevant, or that they still remained to be dealt with, in which case they would present themselves in an entirely novel manner in accordance with the changes that had occurred within the patient. I regard this point as of great importance: information given about such incompletely dealt-with difficulties is bound to arouse expectations in the psychoanalyst, making it very difficult for him to keep an open mind. While he is waiting for the appearance of material that he has been led to expect, he fails to observe correctly the material that is actually presenting itself. The repetition of such failures must be guarded against because it undermines his observations and therefore the soundness of his interpretations.

The patient was a man of medium height, fifty-three years old, with greying hair and an alert and lively manner. He at once embarked on a torrent of free associations plentifully sprinkled with information about various psychoanalysts whom he had known. The information was mostly trivial, but I was given to understand by his manner that he had plenty more. For example, he would mention some analyst known to him and show me that he knew certain matters about his private life and difficulties. I soon gathered that he believed I knew the man and that the details he mentioned were well known to me. I regarded this communication as fiction. At the same time he was making it clear that he was not going to be fooled by me or any other analyst. After he had gone on pouring out material of this kind for some five or ten minutes, I stopped him and said he was showing me that there was very little about being an analysand that he did not know. I said that his statements bore the unmistakable stamp of being free associations and had very little resemblance to the kind of thing that might be said by any ordinary person engaging in a conversation. I said that I thought he was very anxious to prove to himself that nothing was happening, or was likely to happen, with which he was not familiar. He complimented me on the brilliance of my interpretation and indicated what a relief it was to find that I was not wedded to any rigid psychoanalytic theories. There was no apparent awareness

on his part of any irony or sarcasm in what he was saying. I did not feel called upon at this stage to make any observation on what he was saying or the manner in which he said it.

I should explain that I regard the psychoanalyst's capacity to observe and absorb as much of the analysand's material as possible as important for the following reasons:

1. It will enable him to combine what he hears with what he has already experienced from the patient to give an immediate interpretation in the circumstances of the actual session.
2. At the same time he will observe features that are not comprehensible to him but will contribute at a later stage to the comprehension of material yet to come.
3. There are still other elements of which the analyst will not even be conscious but which will build up an experiential reserve that in due course will influence his conscious views about the patient's material on a specific occasion.

Reason 1, although apparently leading to the operative interpretation, is of less consequence than 2 and 3 because the interpretation is merely setting a formal seal on work that has already been done and is therefore no longer of much consequence.

Reason 2 is of great importance because it is part of the dynamic and continuing process on which the whole viability of the analysis depends. The more the psychoanalyst is open to these impressions, the more he is prepared to participate in the evolution of the analysis.

Reason 3, although more remote, ensures the long-term vitality of the whole psychoanalytic process. In short, the nearer the psychoanalyst can come to observation of the kind I am desiderating here, the less likely he is to fall into the wastes of jargon, and the more the analysis will approximate to being a unique emotional experience recognizably related to an actual human being, and not a conglomerate of psychopathological mechanisms.

The patient, for the time being, relinquished his flow of 'free associations' and began to talk as if he was having an ordinary conversation. I gave some more interpretations, that he appeared to accept but without any comment on their 'brilliance' – which as far as I was concerned remained undimmed. But now there came into the picture

a series of reactions that showed that he thought the interpretations were correct, and I was helped to make them so by his intelligent co-operation.

I hope to make clear some of the bewildering aspects of the patient's statements. It is virtually impossible in print to give any idea of the confused outpouring of statements in sessions when he was expressing envy and admiration. It is also impossible at the time to keep track of his statements, and therefore a reproduction is only an artificial representation. Provided this is understood the following will give an idea:

"She does it on purpose to upset me. The alignment of the tea-caddy was wrong again. She has set her mind on Geoffrey going to school at X which is very expensive. Laura is very good with Clementine but Clementine was extremely upset by Margery" (his wife). "She mentioned food again and she knows very well it would upset me. The pasty that I get from my usual shop is always very good. I do not think there is any chance that Geoffrey will get into Y. The headmaster told me that if he were border-line, then they might try to push him in, but his mark is frightfully low – only about sixty. I think Z has a lower standard, but again, it is very expensive and I do not think Geoffrey would have a chance. Margery again mentioned food when she knows it is very upsetting to me."

It would be wearisome if I were to continue this description, but it will give a fair idea if I say that three or four sessions a week would be taken up with this kind of outpouring. Such sessions were in marked contrast with others in which the patient spoke with the coherence usual in ordinary conversation with someone with whom one is on confidential terms.

The problem for the analyst is what to do with material of this kind. It is necessary to draw the patient's attention to it and, if possible, to get him to compare it with the way he talks on the other occasions. I do this in order to get the patient to see that there is a problem, without necessarily suggesting what the problem is. I find it necessary to have some basis for agreement on what the material is that requires interpretation. This, however, is not easy to do because the nature of the material, its characteristics and content, are not clear for some time. For example, if the analysand is expecting the analyst to interpret it, it means that he thinks the analyst must be well-nigh omniscient to understand such a flood of material and what

it is supposed to convey. The interpretation that the patient expects the analyst to be omniscient is one that I want to stress. There were, however, many others drawing attention to the fact that he spoke as if every item he mentioned was equal in importance with every other item. I had, in fact, to spend some time on this, basing my interpretations on the theory that his conversation to me had been subjected to splitting attacks that left the conversational link in a state of fragmentation. Interpretations of this kind did something to slow down the flow but did not noticeably decrease the number of sessions in which I had to cope with it. I spent several months drawing attention to the extent to which splitting was taking place. I pointed out that sometimes I was fragmented as if I were a woman or a breast, the fragments represented by the names of various women. Sometimes I showed him that he was not tolerating the problem of his boy's education which he had to solve, and was reacting by splitting that up into bits. Very often each bit represented a problem that could be solved, but the problem as a whole was not solved.

On occasions when I could make this clear he sometimes reacted by going into a state of depression, blaming me for making things difficult; on other occasions he reverted to my 'brilliance', that is, my god-like qualities or, alternatively, my devilish 'dazzling' of him so that he could not see the point.

Many sessions passed carrying their individual characteristics so that on the face of it one could easily stress the unique quality of each session. Indeed I believe that it is very important that the analyst should retain his freshness of outlook so that he never falls into the mistake of treating any session as if it were the repetition of a previous session. Even in instances where it appears to be almost indistinguishable, the problem for the analyst is how to retain an over-all knowledge of the human being and his psychopathology so that he would be able to deal with the greatest diversity of human beings while at the same time not losing sight of the fact that the personality with whom he is dealing is unique. This is so easily said that one feels it is almost a banality when put forward to a psychoanalytic society – as I am doing – but in the reality of a psychoanalytic session it is very easy to lose sight of this simple basic principle and begin to give interpretations in terms so near to being statements of basic psychoanalytic theory that they lose meaning for the patient. Conversely, it is possible for the analyst to react against the feeling of being confronted

with a unique and therefore unknown situation. Throughout these many sessions to which I have been referring, despite all their diversity to which I hope I was able to give due weight, it was possible to see the resemblance that they bore to each other as approximating to the Kleinian theory of progress from paranoid-schizoid position to depressive position.

I have found it important to regard every session, no matter how familiar the material may seem to be, as if one were scrutinizing the elements in a kaleidoscope before they shake into a definable pattern. The temptation is always to terminate prematurely the stage of uncertainty and doubt about what the patient is saying.

The most likely way for an analyst to do this is by giving an interpretation before the moment is ripe for the pattern to emerge; the analyst's armoury of psychoanalytic theory and experience is easily sufficient to supply him with plausible interpretations for this purpose. This is familiar to us all as a manifestation of counter-transference, but I want to stress the closeness with which the course I am advocating approximates to the feelings of persecution proper to the paranoid-schizoid position. It may be argued that an analyst should be so well analysed that he does not suffer from feelings of persecution, but I am not concerned with what *should be* the case but rather with what *is* the case. I certainly cannot claim for myself – who have been analysed by Melanie Klein – that I am incapable of experiencing feelings of persecution; in our present state of progress I think any analyst would be rash to think that he was. Since these feelings are very painful, naturally the analyst is anxious to terminate them prematurely in the way I have indicated. I suggest that for a correct interpretation it is necessary for the analyst to go through the phase of 'persecution' even if, as we hope, it is in a modified form, without giving an interpretation. Similarly, he must pass through the depression before he is ready to give an interpretation. Again, he should not give an interpretation while experiencing depression; the change from paranoid-schizoid to depressive position must be complete before he gives his interpretation.

Conversely, while listening to the patient the analyst should dwell on those aspects of the patient's communication which come nearest to arousing feelings corresponding to persecution and depression. In my experience this gives as good a check on the soundness of one's interpretative validity as anything I know. On the whole I am more

satisfied with my work if I feel that I have been through these emotional experiences than I do if the session has been more agreeable. I am fortified in this belief by the conviction that has been borne in on me by the analysis of psychotic or borderline patients. I do not think such a patient will ever accept an interpretation, however correct, unless he feels that the analyst has passed through this emotional crisis as a part of the act of giving the interpretation.

There were many fascinating aspects of this analysis including problems associated with the mention of number, as in the instance of his boy's obtaining sixty marks. It was not, I think, central to his psychopathology but was nevertheless very important.

He constantly reverted to feelings of admiration, which were not only clear in the transference but cropped up again and again in situations outside analysis altogether. Many times I had to give interpretations showing him that he was virtually worshipping 'God', although he had repeatedly said that he was not religious and had no belief in God. I pointed out that his reactions to the 'God' in whom he appeared emotionally to believe were hostile because He could not stand up to intellectual scrutiny. His reactions reminded me very much of the savage who is supposed to beat his gods if they do not grant his wishes. He seemed finally to accept that he felt an intense need for someone or something for which he could entertain feelings of reverence and awe. His resentment was related to his inability to feel this in any particular instance.

The problem of the patient's continuing dissatisfaction may be a function of his age. This would, however, apply to him at whatever age he was being analysed. This brings me to my point that at this stage of the history of psychoanalysis emphasis requires to be placed not so much on psychoanalytic discovery, but on the correct observation and interpretation of clinical material while it is unfolding in the analysis. There is a great difference between idealization of a parent because the child is in despair, and idealization because the child is in search of an outlet for feelings of reverence and awe. In the latter instance the problem centres on frustration and the inability to tolerate frustration of a fundamental part of a particular patient's makeup. This is likely to happen if the patient is capable of love and admiration to an outstanding degree; in the former instance the patient may have no particular capacity for affection but a great greed to be its recipient. The answer to the question – which is it? – will not

be found in any textbook but only in the process of psychoanalysis itself. I do not in any way decry the need for a thorough grasp of the major analytic theories, but I think that anyone who has experienced an analysis as part of his or her own training and development is likely to have no difficulty in achieving that. I would sound a note of caution by reminding you of Freud's words: "Once again I owe the chance of making a discovery to my not being well read" ('On the History of the Psycho-Analytic Movement' [1914d]).

[1968][1]

[*'Notes on Memory and Desire' (see Volume VI) was published in* The Psychoanalytic Forum *(Autumn 1967). These notes on the same topic were probably written in 1968 together with comments*[2] *and criticisms.*]

Introduction

Not a scientific paper but a super-scientific paper, i.e. a psychoanalytic paper dependent on advanced, psychoanalytic methodology. It is *not* sub-scientific.

The practising analyst, seeing patients tomorrow or the day after, is an essential, intrinsic part of the understanding of this address, though not in the least bit necessary for understanding the words and syntax.

Memory

Includes:

(a) Remembering and forgetting.

(b) Freud's notation (['Remembering, Repeating and Working-Through'], 1914g, p. 147 et seq.), 'A Note upon the Mystic Writing Pad' (1925a, p. 227), and *Civilization and Its Discontents* ([1930a], p. 71).

(c) Elements that can be categorized in accordance with the Grid – all of which are transformations.

(d) Possessiveness, ♀, Past, Desirability.

---

[1][Undated at the time by Bion; the first entry, on memory, was written in Los Angeles in 1968. *Ed.*]

[2][Bion was exasperated by what he felt was wilful misunderstanding of his ideas, though his responses gave no sign of it. *F.B.*]

Desire

Not mentioned specifically by Freud but other terms, such as 'wish', obviously describe facets of the constant conjunction I bind by the term, 'desire'. Examples: holiday, cure of patient, end of day's work – all have the same configuration.

Aspects of Memory and Desire

1. Background of sensuous experience: pleasure ↔ pain.
2. The dominance of the visual image. This is related to *inaccessibility* – peculiar to objects of memory and desire. Freud's remark, "It has only one justification. It shows us how far we are from mastering the characteristics of mental life by representing them in pictorial terms" (Freud, *Civilization and Its Discontents,* p. 71). The sense of sight seems to bring objects into reach when not within scope of other senses.

   Memory – the object is past, internal and possessed.

   Desire – the object is future, external and coveted.

Scope of discussion

Not psycho-pathological, not primarily as features of the patient, but as functions of the analyst.

Certain commonly accepted views

1. Need for a 'record' (Notation, Grid Cat. 3 [*see* p. vii, this volume]).
2. Object of analysis.

   Neither has relevance to the practice of psychoanalysis.

   Both obstruct participation in the analytic experience.

As aspects of the analyst's work

Memory and Desire should be banished because:

1. The mind becomes saturated by sensuous and pleasure–pain elements; both are misleading (false, Cat. 2)
2. Analytic objects cannot be appreciated by the senses – no shape, smell, touch, sight etc.

Therefore appreciation of O is hindered and K → O inhibited.

Consequences for the analyst

1. Increase of anxiety because there is no barrier against fears of acknowledged dangers.
2. No barrier against guilt because of no known substitute for acknowledged and conventional therapeutic aims.
3. Isolation from group basic assumptions.

Consequences for the work

1. Increased reality of phenomena, and therefore of objects that are to be interpreted.
2. Changed order of appearance of analytic phenomena in the analysis.
3. Increased awareness of the unique nature of every psychoanalytic experience and of psychoanalysis itself.
4. Clear emergence of O.
5. An experience common to all practising analysts becomes evident because of invariants; their *accidental* disagreement is diminished, and therefore communication is increased.

Consequences for the analysand

Inefficiency of his sensuous (including pictorial) representations of his mind is made clear by the less obstructed view of what he displays.

Psychotic's attacks on linking

1. He stimulates Memory.
2. He stimulates Desire.

[Undated – 1968]

Notes on ritual and magic

I define 'magic' as a resort to control the physical environment. I reserve 'ritual' to define that aspect of magic which is concerned to control the spiritual world.

I shall be concerned mostly with the discussion of ritual, but while I wish to preserve scientific rigour in discussion, I do not wish to give the impression that the rigidity imparted by the limitations of rigorous discussion has any counterpart in the nebulous domain that is the object of this discussion.

I can indicate the difficulty by reminding you that what a scientist today might regard as the physical environment at some period in history appears quite consciously to have included spirits, good and bad, and to the observation of a psychoanalyst may still – at least unconsciously – include good and bad spirits. Indeed, we assume, without usually recognizing that it is an assumption, that there is such a thing as a psyche that can be scientifically studied, that is studied with no allegiance to anything other than the truth. As psychoanalysts we are aware that such a claim for our investigations would be rash indeed, except as an assumption to be investigated.

Investigation was founded on the belief in one underlying principle of magic: astrology and alchemy. Astrology is applied astronomy based on observation and mathematical calculations. Alchemy is experimental chemistry. Investigation suffered from inaccurate observation, erroneous assumptions and false conclusions.

The belief in a universal spirit or principle animating the world has been and is powerful – a psychoanalytic fact.

Ritual and psychoanalysis

Ritual or ceremonial magic is aimed at the control of the spirit world by various means, from short spells and charms to lengthy and highly elaborate ceremonies including prayers and invocations.

The gap between theories of psychoanalysis on one side and invocation and prayer on the other is narrow. Sometimes it becomes narrower; sometimes it widens. Similarly, the gap between inaccurate observation, erroneous assumptions and false conclusions on the one hand, and scientific method on the other, cannot at present be determined through inability to discriminate.

The subject matter of psychoanalysis and ritual is reified; it then becomes subject to magic; ritual becomes scientific method; scientific method reciprocally becomes ritual.

Objects transformed and transferred to the objective domain come under the Rules of

Magic	→	Astrology Alchemy	→	Astronomy Chemistry	→	Island Universe Nuclear Physics

and then, transferred back to the domain of the psyche, they again come under the sway of ritual, the ritual being thinly reminiscent of scientific method, and scientific method often betraying a curious and disquieting resemblance to ritual.

[Undated – 1968]

Drugs are substitutes employed by those who cannot wait.

The substitute is that which cannot satisfy without destroying the capacity for discrimination of the real from the false.

Whatever is falsely employed as a substitute for the real, is transformed thereby into a poison for the mind.

The substitution of that which is peripheral to action instead of that which is central must cause imbalance.

Imbalance is betrayed by the resort of the helpless to an assumption of omnipotence.

Immaturity, confusion, helplessness and impotence are replaced, in those who are intolerant of frustration, by prematurity, order, omnipotence and power.

That which should be a prelude to action is replaced by action; action is replaced by what should have preceded it.

Hubris is the sin of Oedipus, the planners of the Tower of Babel, Adam and Eve, the animal that uses action as a substitute for thought, and thought as a substitute for action (not a prelude to it).

Craving for fulfilment, unlike pursuit of fulfilment, announces the existence of a vacancy (minus).

Areas of turbulence centre on a messianic idea.

The 'knot' resembles a 'vacancy', and both resemble the turbulence of the 'messianic idea'.

The knot excites curiosity.

The vacancy excites greed, substitutes, prematurity, memory and desire.

The messianic idea excites fear of disruption of ♀ and attracts destructive, restrictive forces.

The messianic idea stimulates growth and maturation.

Turbulence may signify maturation.

'Vacancy' consists of greed, envy, hate, destruction, paranoia.

* * *

'Fears' are as opaque as 'hopes'. Is 'hope' different from desire? Yes; like knots; it is desire + time.

Or,

Desire + Frustration = Hopes ↔ Fears.

[Undated – 1969]

The positive and negative therapeutic reactions are in essence the same; they are therapeutic reactions intended to take attention away from psychoanalysis. Like the insistence on 'cure' as an objective for taking up analysis, they are objectives for continuing or stopping; they are 'covers', rationalizations, 'reasons' operating in a role as slave to . . . what? The passions? Or some unknown such as hatred of doubt?

When a small attendance at a meeting is deplored, it is explained that had the complainant been in charge, how much better the result would have been; when he is one of the absentees, how good his reason for absence was. These are 'therapeutic' explanations; they heal the traumata of decision. But decision is an essential of 'achievement' or the transformation of thought into action – be it thought as a substitute for, or a prelude to, action.

* * *

Murderous, sadistic, 'malign' hate seems to be devoid of insight and to provoke a corresponding lack of insight – or unwillingness to use it – in myself; a 'damned-if-I'll-give-an-interpretation' feeling. Why should I give him an interpretation without being given what I call 'evidence'?

* * *

I feel a deep lethargy. I cannot see my way, and when I cannot see my way I feel no disposition to act as if I could, or in a way that would give substance to a reassuring phantasy that I could. *I do not know*. Now does anyone else. It is absurdly simple really – unless one wants to complicate it. When there is nothing to do – don't do it!

* * *

There is one luxury that should be sacrificed: that of talking about, or even thinking about – except in the strictest privacy – one's anxieties, sacrifices, austerities, or what it may cost one to lead the life one has chosen.

> Shape nothing, lips; be lovely dumb:
> It is the shut, the curfew sent
> From there where all surrenders come
> Which only make you eloquent.
>
> Gerard Manley Hopkins, 'The Habit of Perfection'

[Undated – 1969]

Much psychoanalytic 'controversy' is not controversy at all. If listened to for any prolonged period, say a year, but preferably two or three, a pattern begins to emerge, so much so that I can write a chairman's address suitable, with the alteration of a phrase or two, for practically any paper by anyone at any time. Thus:

"Ladies and Gentlemen, we have been listening to a very interesting and stimulating paper. I have had the great advantage of being able to read it in advance, and though I cannot say I agree with everything Dr X says" (chiefly because I haven't the faintest idea what he thinks he is talking about, and I am damned sure he hasn't either), "I found his presentation extremely – er – stimulating. There are many points that I would like to discuss with him if we had time" (thank God we haven't), "but I know there are many here who are anxious to speak" (in particular our resident ex-officio permanent bores whom no one has succeeded in silencing yet), "so I must not take up too much of our time. There is, however, just one point on which I would like to hear Dr X's views if he can spare the time." (At this point I prepare to give one of the favourite bees which reside in my own bonnet its periodical airing. It does not matter in the least how irrelevant it may be, or how unlikely Dr X is to have any views whatever on the subject, or how improbable that I would want to hear them if he had – the time has come and out it goes.) "It has often occurred to me" (and only the poor devils in my Society know how often that is) "that . . . etc. . . . etc."

[Undated – 1969]

The failure of a function should excite suspicion. It may be due to a natural lack; or it may be a Category 2 element [*see* The Grid, p. vii this volume]. What is that? The maintenance of a theory known to be false in order either to keep another out, or because there is no better. Is this a field on which a pattern can be traced?

The capacity of the mind depends on the capacity of the unconscious – Negative Capability. Inability to tolerate empty space limits the amount of space available. Curiosity should be part of the dependent group, but it can share fight–flight qualities [*see* Bion, *Experiences in Groups*, Volume IV] when the wish is to avoid impending discovery (Category 2). Is any impulse one way only? No. What then are the poles? Are there poles, or is there some better scheme?

* * *

The paranoid-schizoid and depressive positions are related to a part of the domain of thought, that part of it in which there exist thinkers corresponding to the thoughts awaiting someone or something to think them. The thinkers might be likened to objects sensitive to certain wave-lengths of thought, as the eye or radio telescope is sensitive to a particular range of electromagnetic waves. Such thinkers can be impinged upon by thoughts that are too powerful in relation to the sensitivity of the receiving apparatus. Or they may be unmatched by a reciprocating thinker.

The human being, despite similarities to other human beings, may not, through over- or under-sensitivity, have an apparatus adequate to thinking the thoughts. He becomes aware of these thoughts usually through the medium of what is ordinarily known to him as religious awe, and is variously expressed as incarnation, evolution of godhead, platonic forms, Krishna, mystic experience, inspiration, and the like. Thus the source of emission of the received or evolved thoughts is felt as external, God-given, derived from a particular person or occasion, phrase, book, painting, awareness of a constant

conjunction. The fate of the thought and the thinker is to follow one of the paths I have indicated as peculiar to ♀♂, or some variation. In some circumstances the impact is incandescent, growth-producing, and then the individual thinker becomes an emitter or intermittent. A chain reaction is set up, as I have already described it in terms of the messianic thought, mystic, etc. The problem is whether one is to regard this model, ♀♂ [*see* Bion, *Attention and Interpretation*, Volume VI, p. 42], as a model for a configuration that underlies certain groups of particular instances, or is it simply a way of regarding meaningless, incoherent, unrelated phenomena, and making them appear to have coherence and a meaningful pattern? Does it in fact matter which it is? Do facts arrange themselves in this pattern, or is it a peculiarity in the individual that he finds it necessary to discern this or similar patterns in the facts he observes? The craving for validation may then be a wish to localize the emitter in God, universe, person, conscious and unconscious, by instruments that are micro- or macro-scopic and appear to confer authoritatively the guerdon of truth.

2 March 1969

Reading notes again, I feel exasperated by their futility, but I am at least 'exasperated' by them. They must therefore have something to them, or they could not exasperate. 'Exasperated' – feeling of anxiety of 'theft' analysis while leaving me open to accusations of plagiarism, etc. This is persecution by the feeling that one's reward in analysis is not success or money or admiration; in short, that there are no rewards corresponding to one's preconceptions. The exasperation is at the 'note'; consciously, at what it contains. Interpretations occur to me, but for all I know I gave them at the time and I feel no more certain either way. Perhaps the point is that the note has a value, but I have no idea what. Or is it the paranoid-schizoid reaction that I have already described? Ps ⇌ D.

21 March 1969

There are certain 'uses' of things in themselves that could be analogous to 'uses' of modes of expression; they might form the basis of, or one axis of, a new Grid. Thus: money may be used to measure the status of a man or a woman, as in wergild, bride-purchase, religion. It can then be transferred to measure exchange values (commerce). It can then be debased in the sense of both change of base and change of value, i.e. to give substance to a fiction. For example:

A. Analyst fee: low ↔ high; to correspond to psychoanalytic value of the psychoanalyst, i.e. a measure of value.

B. Analyst fee: low ↔ high; to cloak and hide the value of the man or woman 'psychoanalyst'. The monetary value is de-based as the communicative value of speech, the 'currency of words', becomes debased.

In A, the money derives its value from the person to whom it is assigned, accredited, paid. In B, the person derives his 'value' from the possession of money that, already having value from its origin, is used to cloak his worth.

[Undated – 1969]

Determination of direction in a group

Suppose the group consists of twelve people, 1–12. No.1 and No.4 appear to be in disagreement. No.1 appears to be 'reactionary'; No.4 appears to be 'progressive'.

Question: to whom or what is No.1 reacting? No.4 denies that it is a reaction against him. But it appears that No.1 is reacting against No.4's personality. Is this another plane? On what plane is the study taking place? All planes? If not, which?

Definitions wanted

1. Void, Infinite: formless.
2. Drift: movement that is incoherent, patternless, unregulated.
3. Streaming: movement that appears coherent or regulated. Both Drift and Streaming require a point from which observation is made.

Since a moment's thought shows a point to be inadequate, we are led to the definition,

4. Base: the distance between two observers separated in
5. Space: for example, one at No.1's position in the room; the other at No.4's.
6. Time: for example, one in the present; one in time past; and one in time to come (= future).

   Streaming requires direction, and therefore a method of notation or signification of apparent origin and apparent destination. Thus,

7. Radiant: may serve as the direction from which movement seems to radiate. Its association with light or heat may also be useful.

The study is of what I call, provisionally, the mental phenomena of the group as observed by me. It will therefore be coloured by my point of view. Impressions received or radiated by me may themselves be regarded as radiants in so far as their origin appears to lie in me or my direction. These I regard as having a common vertex. I propose to regard the twelve members of the group as each representing or marking a vertex. These vertices, for reasons that will appear later, are not to be regarded as necessarily identical with the group individual members. The next terms, therefore, are

8. Vertex, and
9. Obscurity: can be regarded as analogous to a low-pressure area (Radiant being analogous to a high-pressure area).

Finally, I shall use the terms,

10. Thought: for which a thinker is not epistemologically necessary, and
11. Lie: for which a thinker is logically and epistemologically necessary.

It may at first appear strange to postulate thought without a thinker, but the convenience of doing so is considerable and will become more apparent later.

With these few terms as a preliminary and provisional equipment, we may commence the investigation.

No.1, who is a man of capacity, has made himself well known to the group through his constant attendance and the frequency of his intervention in discussion. From what he has said, it is clear to all that he holds a position of responsibility in his firm, is accustomed to being listened to with respect, and does not like – though he tolerates – a subordinate position. He now speaks: "I feel that it does not really matter what Dr Bion says; everybody listens to him and behaves as if his authority precludes discussion. When I speak, I am made to feel I don't know what I am talking about."

No.4 "Oh, I don't agree at all. On the contrary, I think we pay a great deal of attention to what you say. After all, Dr Bion is the doctor . . ."

No.1 "There you go again. 'Dr Bion is the doctor.' We all know that, but what about it? I know other doctors. My doctor, whom I may say I like very much and who is a very good man, often tells me things I don't agree with."

No.4 "But you listen to what he says about medicine?"

No.1 "Not always. As a matter of fact, I have poured his medicine down the sink before now."

[*Breaks off here. No continuation.*]

August 1969

What I do, or think I do, is to draw attention to certain patterns that I observe in the behaviour of my patients while they are with me in the consulting room. These patterns appear to me to be discernible and, sooner or later, describable in language which I can formulate and which, sooner or later, the analysand can understand. For this they must be able to learn my mode of communication – however defective. And I must be able to make a formulation which the analysand, granted that the evidence available in the analytic room can also be used to contribute to his comprehension, can understand if he will permit my formulation and his experience to reinforce each other.

To sum up: I must interpret while the evidence that I am interpreting is available to the analysand's and my scrutiny, and at no other time. These aims appear to be within the capacity of certain kinds of patient. It is supposed by me that the successful achievement of this aim is worth the patient's while. Why?

* * *

Anxiety arises because one knows that analysands come with an idea of cure, and one knows it is almost certain that they will not get, and cannot get, what they call 'cure'. Almost – but not quite. But even supposing one can lead them to something better – a very large supposition – even that is far from certain. What then? Is it possible simply to say, "Try it"? Much analysis, and even more psychotherapy, is ludicrously omnipotent and optimistic.

March 1970

Today I saw very clearly the absolute un-necessity for a session to be anything but a session in its own right. 'Progress' could then mean that instead of presenting one fact in six months, the patient comes to present six facts in one session. In short, he becomes a multi-dimensional personality – a three-dimensional physical identity, and a multi-dimensional psychic identity.

May 1970

As electromagnetic waves can be employed conceptually as a part of a theory embracing an enormous range of physical phenomena, so I wish to employ the concept of α-elements to embrace an enormous range of mental phenomena.

β-space

I shall suppose a mental multi-dimensional space of unthought and unthinkable extent and characteristics. Within this I shall suppose there to be a domain of thoughts that have no thinker. Separated from each other in time, space and style, in a manner that I can formulate only by using analogies taken from astronomy, is the domain of thoughts that have a thinker. This domain is characterized by constellations of α-elements. These constellations compose universes of discourse that are characterized by containing and being contained by terms such as, 'void', 'formless infinite', 'god', 'infinity'. This sphere I shall name by borrowing the term, 'noösphere' from Teilhard de Chardin [*The Phenomenon of Man,* 1955], but as I wish to avoid too great a penumbra of associations, particularly those activated by the term, 'sphere', I shall employ a sign that is as devoid of meaning as I can make it (compatible with retention of its capacity for communicability), Σ (sigma).

α-space

The objects of α-space I shall suppose to be real, with their own reality, both infra-real and ultra-real. Perceptible to ordinary thought are objects usually confused with and regarded as indistinguishable from objects of sense, namely certain active constellations of thought that

are associated with the discipline of biology and spoken of in those terms.

The classic psychoanalytic view supposed the mind or personality to be identical with the physical identity of a person. The object of my proposal is to do away with such a limitation and to regard the relationship between body and mind (or personality, or psyche) as one that is subject to investigation.

Thus, a nation is said to have a 'character', but the Σ associated with a nation is *not* identical with the σ (soma), though as a psychological aid in communication it may be convenient to speak of the nation's 'mood' as such-and-such. I should hope to approach a more rigorous formulation by saying, Σ (national: Persian), or Σ (individual: John Smith), or Σ (war: Ruritania/Rumtiphoo/Titipu). Similarly with various relationships somatically considered between individuals; and then extra-psychic and endo-psychic, still somatically described as an aid to comprehension of Σ constellations.

In mathematical terms one may provisionally suggest a linear formulation, a scale, which can be supposed to represent the 'mind' (psyche) as an instrument of investigation.

$$10^1\ 10^2\ 10^3\ \ldots\ 10^{n-1}\ 10^n$$

$$10\ 10^{-1}\ 10^{-2}\ \ldots\ 10^{-(n-1)}\ 10^{-n}$$

In the domain of physics a similar linear representation can be offered for the province of electromagnetic waves ranging, say, from angstrom units to metres. Between 10^{-3} and 10^{-5} would lie the visible region. Similarly, somewhere on the Σ scale would lie the sense-able (think-able?) range. That is to say, there would be Σ phenomena which by definition are matched by corresponding receptor organs.

The aspects of Σ I wish to discuss present special difficulties because there is no apparatus available for their formulations, so I have to employ the inadequate written word. What follows will therefore have to be couched in terms that are adapted for use in a more primitive mode of communication. The formulations I employ must be regarded as Grid category C [*see* p. vii], no matter how much they may appear to be elements of a sophisticated formulation.

I am supposing that there is a psychoanalytic domain with its own reality – unquestionable, constant, subject to change only in accordance with its own rules even if those rules are not known. These

realities are 'intuitable' if the proper apparatus is available in the condition proper to its functioning. Equally, there are certain minimum conditions necessary for its exercise. Approximately, in C-category terms, this activity depends on the presence of a personality, an operating intuition, a minimum degree of intuitive capacity and intuitive health. The conditions in which the intuition operates (intuits) are pellucid and opaque. I have already indicated that from the intuitor's vertex opacities can be distinguished sufficiently to be given names, however primitive and defective the ascriptions may be. These are: memory, desire, understanding. All are opacities obstructing 'intuition'. I have therefore stated that the psychoanalyst should exercise his intuition in such a way that it is not damaged by the intrusion of memory, desire and understanding.

Such freedom from opacity cannot be achieved during the psychoanalysis if the intuition has already been damaged by indiscipline at any time. The more nearly the psychoanalyst can approximate to freedom from these – and no doubt other 'opacities' as yet unidentifiable – the more confidently can he discount the origin of his observations as due to the 'personal equation'. This is well known and has been recognized as one of the motives for undergoing a psychoanalysis. What has not been recognized is the ephemeral nature of such psychoanalytic achievements and the need for the establishment of freedom from memory, desire and understanding as a permanent, durable and continuous discipline.

Suppose the psychoanalyst has been able to achieve a state in which he is the kind of 'person' capable of (psychoanalytic) intuition; suppose further that he is capable of maintaining such a state. Then, and only then, is he in a position to have certain experiences that I shall attempt to formulate.

The uniformity of Σ can be intuited as displaying areas of disturbance, 'turbulence', 'opaque' areas contrasting with areas of 'pellucidity'. The visible spectrum with its Fraunhofer lines can itself be used as a model (though a very crude one) for purposes of exposition, provided that its crudity is recognized and that the damaging effect of understanding on intuition is borne in mind.

These areas of turbulence indicate a constellation that may be ephemeral or may display a certain durability. The durability is significant and calls for appreciation of its domain: it may be significant of Σ, or of Σ (nation: Ruritania), or Σ (era: Christian), or Σ (individual:

John Smith). There are certain Σ areas that are relatively stable to a point where the fact that one is in contact with an individual (sense-able, and therefore denoted by me as σ, indicating somatic) becomes peculiarly seductive and therefore conducive to the misleading conclusion that Σ (individual: John Smith) is identical with σ (John Smith). But psychoanalytic scrutiny convinces one that Σ is the significant fact, and σ important only in so far as it is receptive or emittive of Σ. To put it another way: Σ is covering a range of 'wave lengths' belonging to the psychotic range. This area is characterized by extremely 'short waves', lack of range, and therefore lack of discrimination – what a musician could describe as inability to 'hear', or adjust to what is said in such a way that the statement made cannot be 'heard' unless it is exactly and precisely attuned to the receptor. The same can be said of what is seen: there is something in the range of colour perception analogous to perfect pitch in music. There is no response to a statement unless it is precisely and exactly addressed to the receptor; there appears to be no way in which emitter and receptor can be adjusted to each other if some degree of correction is required – a 'miss' is absolute, 'as good as a mile'.

In the domain of 'perfect pitch', the patient may be glad to be told indignantly, "You know perfectly well what I mean!" as a cover for his own suspicion that he knows nothing of the kind. He may even welcome the inherent implication that he is like everyone else in order to escape from an 'inescapable' sense of isolation and loneliness. Such a patient will welcome the attention of the psychoanalyst as an assurance that he is believed by someone to be comprehensible. Entire languages are learned to give substance to a belief that he is like everyone else, and to foster that belief in himself or others. He will welcome the idea that he hears what others hear when an orchestra is playing. He resists 'millions of interpretations' of phrases, music or colours. He can see 'millions of colours' where the psychoanalyst can only see 'white light'. He conceals as best he can that to others he appears, or would appear, 'tone deaf' or 'colour blind'. The analyst is predominantly important because the patient cherishes the belief that the analyst 'understands' him.

February 1971

The psychotic personality needs to have his *awareness* of sensuous experience brought home. The trouble may be the obtrusive and non-verbal nature of the experience; say, the buzzing of a fly. This is to be brought home together with the post-verbal awareness of the experience of the buzzing of the fly; for example, "You are feeling I am annoyed by the noise you can hear". If I said, ". . . by the buzzing of the fly", it would not be accurate because the patient does not know what I am annoyed at. 'Unconscious' and 'conscious' do not meet the problem. 'Unconscious' could sometimes be replaced by 'obvious but unobserved'.

* * *

Fear and hatred = powerfully obtrusive feelings; they are therefore liable to draw attention to the 'unknown self' → premature and precocious 'solution' to obviate feelings of hatred and fear of the hatred and fear. Abolition of feelings → hatred of sense of unreality.

The messianic idea is an unknown idea; it is hated and feared. It is dealt with by projection, materialization. It is, as a result, not an idea but something less frightening, a person or thing. Persons, physically, can be put a stop to, either by idealization (and proved to be real) or by realization (and proved not to be ideal).

Thus a series of events begins to cohere. For example, Aristarchus conceives of the possibility that the earth goes round the sun. There are no instruments by which the idea can be further elaborated. In the course of centuries the idea again begins to form, and this time instruments can be fashioned – for example, by Galileo.

The established order is disturbed, including the established web of thought – the racial web of thought, including profound 'religious' beliefs such as that associated with sun worship. The belief in the sun as God is quite rational; if you must have a god, it is not a bad god to have. Therefore Galileo tends to menace the

existing web of thought, both scientific and religious – in so far as scientific thought can be regarded as relatively conscious, superficial, rational; and religious thought as relatively unconscious, profound, irrational, but still operative. The more it is in fact *not* extinct, the more it is capable of instigating emotional reactions in the noösphere [*see* pp. 241–242, 301]. Curiosity, which might stimulate discovery of the unknown, stimulates the need for a defensive termination of the unknown messianic idea, or person, or movement. It may be overwhelmed; if so, no problem. Or it may destroy the establishment, including the established work of the noösphere – which I now prefer to regard more as 'no-amorph'. But in some respects it is convenient to regard it as possessing limits and therefore approximating to a sphere – the noösphere. The two names must not therefore be regarded as two conflicting theories to which there correspond two conflicting realities, but two conflicting representations of the same reality. In the realm of physics a similar conflict appears in wave and quantum mechanics of light.

For the most part, discoveries do not have great resonating force. For example, the advances in the physical sciences, quantum mechanics, astronomy, relativity, have so far not had much percussive force on the domain of thought – in which I include thoughts for which there is as yet no thinker. The landing on the moon, however, may be one of these percussive events: it is significant that one reaction – in the USA at least – has been that the nation cannot 'afford' the space programme, though it has partially broken out again, probably because international rivalry – a very powerful emotional force – has not been so far controlled by the emotional force hitherto more disguised than displayed or illuminated by the term, 'economics'.

It seems reasonable to suppose that our somewhat insignificant speciality, psychoanalysis, has already exhausted its impetus and is ready to disappear into limbo, either because it is a burden too great for us, as we are, to carry, or because it is one more exploration destined to display a blind alley, or because it arouses or will arouse fear of the unknown to a point where the protective mechanisms of the noösphere compel it to destroy the invading ideas for fear that they will cause a catastrophe in which the noösphere disintegrates into the no-amorph. This catastrophic change could be brought about by advances in astronomy, physics, religion, or

indeed any domain for which there may as yet be no name. The principles of psychic growth are not known. It is significant that even Newton, Leibniz, Descartes were not able to formulate such principles in the sphere of mathematics, though the differential calculus was such an attempt.

[1971]

"We had sex." A curious expression that is not known to me. I suppose I 'had sex' from an early stage of my life. The earliest and most primitive meaning is a sensuous one; the primitive is, by my definition, based on a background of experience gained through the senses of smell, sight, hearing, touch and taste.

According to E. D. Adrian (*The Physical Background of Perception*, 1947), the earliest senses are light rays and sound vibrations, "for these show what is happening at a distance", and "intelligent behaviour is guided by them far more than by what is touching our skin" (also hair, particularly vibrissae around the snout when the eyes are defective).

Other senses, according to him, are not concerned with general policy, but "with what we are going to do next". This involves information about "the body surface" and also tensions in muscles, temperature gradients, movements of viscera and concentrations of various substances in blood. There are "many varieties of receptor apparatus – each sensitive to particular factors in the environment."

The developmental scale would suggest that the earlier epistemological experiences are concerned with the sense of touch. Sensuous pleasure and pain would be external contact between skin and womb; internal, between ectoderm and mesoderm and endoderm. Chemical substances in blood – poisons – would also be in contact and might contribute to a sense of being peripatetic. The contact would be extended by the sense of smell (located in the vibrissae?) and the sense of sight.

Broadly, the sense of touch would be related to 'what to do', the realm of transformation into action. Most of this operates autonomously without the intervention of the mind, or is transferred through education to the autonomic; for example, from desire for mobility to 'walking'.

The distant receptors – sight, smell, vibrissae, intuition – are associated with 'distant' perceptors – wisdom, intelligence.

The short-range receptors – skin, genitalia – are associated with action (bowel sense, bladder sense).

The distant transmitters: eyes, smell (primitive?), phonation.

The two parallel lines of a railway track are seen to meet at a point, *P*. In sensuous visual reality this is the case; in tactile experimental reality they do not meet; in olfactory reality they do not meet. The olfactory sense, though a distant receptor (according to Adrian) seems ineffective if called upon to contribute information on this particular problem. The tactile senses have to augment their short range by some other source – like sight? And sight has to augment its contribution by – touch?

* * *

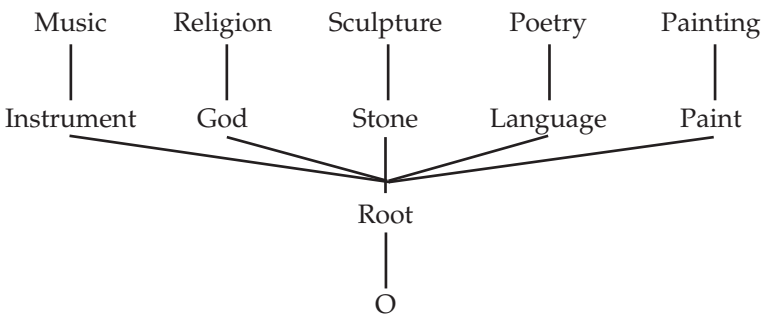
Thoughts do not have to be 'used'. Their sexual value is enhanced, if not transformed, because there is no impairment of their ideal 'reality'. Conversely, their reality transformation is impaired if transformation is not effected.

The thoughts can be 'formulated' and then used either as a prelude to, or a substitute for, action. In this respect thoughts resemble money – they can be stored or exchanged.

The crux lies in the fact that certain *decisions* appear to effect *irreversible* changes. Decisions are a kind of thought: their value is effected by their real or apparent irreversibility.

10 July 1971

> My subject is poetry, not language. Yet the roots of poetry are in language.
>
> Ernest Fenollosa, *The Chinese Written Character as a Medium for Poetry*, p. 10



What is important? The root? The flower? The germ? The conflict? The durability?

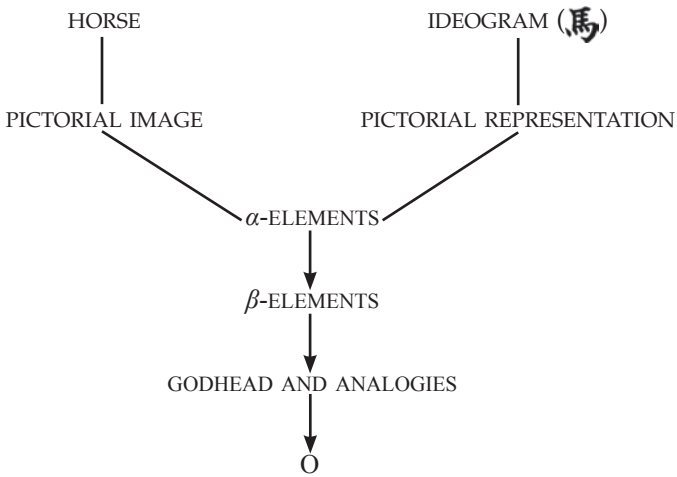
14 July 1971

The English grammatical formulation of psychoanalytic theories is one that employs a form in which succession plays the important role. 'Dog bites man' does not mean the same as 'man bites dog', and this gives a strong prejudicial colouration to all formulations in favour of the idea of events necessarily taking place successively – in the narrative formulation each event follows in a temporal order a preceding event, which follows another. In consequence it is supposed that mental events are similarly disposed in time – dreams, for example. But there is no real discussion of the importance attributed to ordered thinking that has any significance in the realms *not* of human thinking. The Kleinian paranoid-schizoid and depressive theories postulate another and quite different possibility.

15 July 1971

'Man bites dog' does not mean the same as 'dog bites man'. The introduction of succession – temporal and spatial order – is an essential quality which alters the meaning of the unaltered words: bite/dog/man. The ideogram for 'horse', 馬, and the alphabetic, 'horse', have a historic similarity because both assume, 'understand', and therefore leave out a precedent phrase or phrases between 'horse and ideogram' and the 'visual image'. There is similarly something between 'visual image' and 'thing-in-itself' – what I have called by the meaningless term, 'α-element'.

A pictorial schematic formulation:



The scheme can now be considered as providing an analogue for similar schemes in which the sense of sight is replaced by taste, touch, smell, sound, etc., from infra-sensual to ultra-sensual. Psychoanalytically it means postulating a psychoanalytic domain. I would borrow for my own purposes the term invented by Teilhard de Chardin,

the 'noösphere', supposing it to be included in a 'psycho-sphere'. Analogous to the supposition of a definitory hypothesis of 'thoughts without a thinker', the psycho-sphere would be without a noösphere [*see also* pp. 241–242].

To recapitulate: returning to the discussion of dreams related to visual images, I consider that dreams would need to be thought of as belonging to a far more widely extended C category [*see* p. vii], much more extended than one enclosing only visual or any other sensuous images, though in 'practical' psychoanalysis only elements within the sensuous range would, by definition, be experienced. Sooner or later, the investigation would have to be extended to infra- and ultra-sensuous areas first, then from noösphere to psycho-sphere.

July 1971

Predictive psychoanalysis and predictive psychopathology

A Fable for Our Time

In the year 30070 a revolutionary discovery took place. It is from that event, and in honour of it, that our present time-scale originates. It is difficult at this time – 300 n-years later – to be sure of the events; even something as simple as the fabular meaning of n.y. tends to be obscured in the minds of the vulgar by still older fables and associated locutions. The present writer has met with lower orders who believe the letters to stand for 'new years' or 'nuclear years', under the impression that our time-scale derives from a supposed atomic disaster occurring in year 1 of our era. In so far as it is possible to reconstitute the past from the scanty remains, something resembling the following account took place.

A man, whose name is lost but who must have been a genius of outstanding proportions for that age, made a discovery of an exceedingly simple kind. In those days there still existed a rudimentary science called, 'psychoanalysis'. The term was made up of two parts: 'psyche', referring to an undeveloped mind or personality which was believed to have given rise to the so-called 'psyche'; and 'anal', derived from an anatomical structure, notably that part of it concerned with the evacuation of the waste products from 'eating' – a habit very similar to that which can be observed in the 'domesticated' forms that we have derived from them. As far as we can now tell – or even conjecture from certain archaic vestigial survivals of our domestic forms – the psychoanalysts, for so I shall call them for short, connected their excretions – quite correctly – with what they 'ate', and developed elaborate rituals as part of the religion of cleanliness, which were supposed to placate, or render harmless, the remains of what they had devoured. If the destructive rituals failed, as was supposed to have happened on those

occasions when disease wiped out a few thousands of them, redoubled efforts were made to increase the efficiency of the cleansing rituals by sometimes using various difficult-to-obtain metals in the form of representations of the excretions. This ritualistic manufacture completed, the product was called Money and was set up for worship.

For a time the new religion flourished – reinforced and improved by the psychoanalysts – but greed led some elements to substitute inferior substances like paper for the hard-to-obtain metals such as gold. This development – associated in mythology with names such as Lord Jesus (nicknamed, The Christ), Lord Keynes, and even some dissident psychoanalysts such as Lenin and his associated 'Communists' – led to the undermining of the religion of Money, which was finally devalued. This anti-religious attitude did great harm to the hierarchy and certain areas like Russia, America, China and Africa. Groups found themselves virtually without authority which had formerly been provided by the hierarchy whose skilful manipulation of a mental characteristic of these creatures, called 'idealization', had led to their being regarded with reverence; it was an attribute of their personalities which approximated them to the deities in whom they could see and admire themselves.

These creatures, remote ancestors of the animals we use as new material for certain parts of our machinery, used this 'science' as a means for investigating the past of each single individual and, later, the past of the groups or hordes in which these creatures moved. This whole 'science' was believed to be superior to the earlier activity known as 'religion'.

About religion we have been able to discover little, partly because the study excites scant interest amongst us, partly because the remoteness of the past is such that it is doubtful whether the investigation could be carried out without an enormous and unrewarding expenditure of even our resources. It is known, however, that the practice of religion was regulated by a special hierarchy. This organization was taken over, elaborated, but otherwise hardly changed, by the new religion, which was called a science. Ritual, an essential feature of the religious observances, was likewise taken over, and even now evidence is being discovered showing how elaborate these rituals were, and how much time and money were

devoted to their proliferation. The new religion had to establish its superiority to the old, and exhaustive steps were taken to stamp out all evidence of the past. Even the rituals had to be disguised; the word, 'ritual', was replaced by the term, 'scientific'. In those times it was the habit of the hierarchy to hunt out and destroy all evidence of potential growth. In this it must not be supposed that they were without ingenuity and even a kind of rudimentary foresight. 'Brain-washing' was, for example, immensely improved and brought to a very considerable and meritorious degree of efficiency. The expression derived from the same sources from which Money had sprung – namely, the anus.

Up to this point all seemed to be going well; the new religion had triumphed and was established as the 'science of psychoanalysis', with its hierarchy firmly in control and its ritual 'scientific method' codified and recognized as the hallmark of the New Era.

Again we are hampered by a period of obscurity and ambiguous evidence. As far as the remains that have come down to us can be pieced together, the rules of psychoanalytic investigation – which were rigidly enforced so that there could be no breach in the solid foundation of what was already known and described as 'history' – began to be assailed by ominous and inexplicable attacks. One trouble-maker, called Smith, seems to have caused the authorities much difficulty. (Smith was a common name, usually associated with welding.) The evidence is scanty but enough for us to assume with plausibility the existence of an Ur Smith.

By legendary repute at about the time now known as 1 NY, one of the priesthood, of eccentric manner and history, was interrogating an individual supposedly even more eccentric than himself. The records, such as they are, indicate that at this period one of the obligatory rituals was supposed to separate the psychotic from the non-psychotic personalities, the whites from the blacks, the candidates for the Establishment from the candidates for the Loony Bin. This ritual, known as Selection, was attended by much anxiety, and it was obligatory for representatives of the various factions to be present to force their candidates onto the Establishment and so save them from being placed in the Loony Bin, or Not Yet category. As the officials and candidates were virtually indistinguishable from each other, almost everything depended on the numbers that could

be mobilized in support of, or against, the course to be prescribed for the given candidate.

Apparently, in the instance that has now become the pictorial symbol for the year 1 of our era, NY, Ur Smith's candidate and not reached the day for selection and would, in the ordinary course, have been destined almost certainly for the Bin.

To understand what follows, it is necessary to explain the incredible barbarity of the customs of those times. See-ers, in common with all others, were subjected to a period of what was known as 'prolonged and deep analysis' by one or more of the priesthood employing one or more of the 'methods of scientific investigation' (rituals). These investigations were confined to elucidating 'the facts'. This was a device introduced by the priesthood to exclude any possible risk of controversy, doubt, or exercise of judgement, by limiting the material on which the pronouncement of fitness was to be made to those facts that were deemed to be known for certain. Since, by definition, the material consisted of facts that were known to have happened already, it was an article of dogma that, the foundations being solid and the brains of the judges as undisturbed by doubt or anxiety as they were solid, the outcome would of necessity be scientifically unassailable. To the great admiration and comfort of the hierarchy, a professor of statistics who had previously become one of their number pointed out, at a meeting called to discuss selection, that the method of counting the numbers supporting or opposing the candidate was by a happy chance both democratic and scientific because the introduction of numbers at last introduced 'mathematics', and therefore 'science', into the constitution of the Society. We need dwell no longer on these reconstructions of legend, but move on to firmer – though still legendary – foundations by considering 'Smith'.

He claimed to keep an open mind, meaning that he was open to entertain ideas that were new to him. He seems to have been unaware that such a claim was tantamount to an admission of instability and a lack of rigid frame so necessary for disciplined thinking. It is indeed extraordinary how he had escaped from being 'treated' by the more sturdy and reliable members of the establishment.

His candidate, a woman, thought she was 'the Virgin and the Duke of Wellington'. It was some time before he realized that she

was not referring to the titular heads of one of the many groups of the period, but that she was describing certain voices or people that were interfering with her mind. He continued to listen – his one great weakness – and for a long time sheltered her from the authorities to whom he knew he was legally bound to deliver her. Indeed he was in great danger both for harbouring a person who, in the quaint terminology of the time, was a menace to herself and others, and because he himself had begun to investigate her behaviour on the supposition that the present, future, and unknown were what required scrutiny rather than the past, the known. He also believed that there were thoughts that had no thinker. Had this come out, there is no doubt that he and his woman candidate would have been classed together, and would have had their brains scientifically and humanely destroyed.

Through years of danger Smith managed to carry on his investigation to a point where it was clear that his candidate was really a new type of immature animal and was not suffering from some malformation of character.

There was known to him an ancient legend of a dictator earlier in world history who had decreed the massacre of what were known as 'The Innocents'. He suddenly suspected that this was an earlier instance of what he was now witnessing – the early embryonic stages of a personality rightly and instinctively, though clumsily, recognized as a menace to the existing order. He realized that he would be a victim of his curiosity either through being disposed of by the group hierarchy for disregarding the rules and well-tried procedures of science, or by being executed by the woman as soon as she had developed sufficiently to know how to rid herself of him. She was developing fast, and had already reached a stage where she openly declared her intention to strangle him at the first opportunity. She often expressed her contempt for ancient legend and all the characters in it, professing her determination to dispose of Smith and all other such mentally ill-formed and monstrous personalities, reserving her scorn particularly for such characteristics as the passionate feelings of love or hate that she considered to be peculiar to the human animal. Her attitude to her genital parents was one of ruthless and icy scorn. They feared her as if aware that she regarded them simply as a matter for calculating assessment.

Smith appears to have been able to tolerate these threats, though fully aware of the conventional view that he risked being murdered or held responsible for murder committed by her. He ignored the warnings that poured in on him both from his own perceptions of danger, and from the lessons of his training . . . .

[Undated]

In arithmetic the statement, 2 + 3 = 5, expresses a relationship between specific numbers.

The statement, 'Two apples and three plums = five fruit', expresses a relationship between specific objects in a specific emotional field – a 'cultural' field in which it is agreed that apples and plums are accepted as possessing sufficient 'fruitiness' to qualify as 'fruit'.

In algebra the statement that $a + b = b + a$, will apply to any numbers. Any number, 'a', and any number, 'b', will together make the same result as '$b + a$'.

In this way the number may be seen to proceed from:

. . + *xxx* = *sssss* ⟶ 2 + 3 = 5 (any objects) ⟶ $(a + b) = (b + a)$.

But is this reversible?

Father + Mother + Infant = Oedipus complex (any F + M + I)

* * *

Which is the '*idée mère*'? *Idée mère* ↔ Messianic idea ↔ Any idea. Who owns it? Judgement of Solomon: whoever is to preserve the survival and development ⟶ growth (non-cancerous) of idea = the Owner.

September 1971

It is often said that faults are more easily seen in others than in one's self. Indeed, this would seem to be the main justification for employing someone other than one's self to be the analyst to whom one goes. The disadvantages of the arrangement become clear when the observer, psychoanalyst, sees faults that are his own in place of the defects of the analysand who supposedly has come to have *his* defects exposed, demonstrated (and dealt with?).

* * *

The relationship between myself and my colleagues here in Los Angeles could be accurately described as almost entirely unsuccessful. They are puzzled by, and cannot understand me – but have some respect for what they cannot understand. There is, if I am not mistaken, more fear than understanding or sympathy for my thoughts, personality or ideas. There is no question of the situation – the emotional situation – being any better anywhere else. I could say much the same for England. "The old order changeth, yielding place to new . . . ."

* * *

"Is this a dagger that I see before me, the handle towards my hand?" Suppose that on further examination it appears not to be, then the system of verbal expression, even the system of sensible experience, needs extension. It cannot deal with the domain of non-existent reality, of thoughts without realization (like Euclidean geometry with spatial realization), of sight available or accessible only to the blind, of thought without content. It took time for Balaam to achieve the standards of thought of his ass.

Who saw the dagger before him, the handle towards his hand? Shakespeare? Where was it? Where is it now? The words in print bear

no visual resemblance to a dagger. Nor do the sounds, if the words are transformed into spoken speech. Suppose a very good musician reads a musical score: does he become hallucinated? Does he suffer from auditory hallucinations?

1971

Psychiatry at a time of crisis, II

Part I was delivered to the British Psychological Society in 1947.[1] I do not remember what I said, and I do not suppose that anyone has even heard of it; so everyone, including myself, can be said to start more or less fair. Even with regard to language there are similar advantages and disadvantages because I propose to use English – my English – which you do not know, and you use your English, which I don't know. There are similarities however; so there is liable to be a prejudice on both sides that when you use, or I use, what appears to be the same word, our different memories will lead both parties to think they understand each other. In this respect both parties suffer from memory; and since you probably want to understand, and I want to make myself understood, both parties also suffer from desire. I propose, therefore, to make the best of a bad job by illustrating what I want to communicate, and to do this by using your presence and mine as a source of illustrations of what I wish to communicate.

What has been called, 'a scientific meeting', I propose to call, 'a group'. I consider that the group is composed of an aggregation of 'individuals'. These two statements are what I shall call 'definitory hypotheses'. About these two definitory hypotheses there can be no argument; they are merely definitions. Anyone is free to use other terms.

The title I have chosen has undertones and overtones. I was there when I gave the first paper, but others who were not there are now participating in an experience that goes back to something of which they cannot be aware because they were not there; they are entering into an experience that is, so to speak, the 'second chapter'.

To illustrate this in group terms, I am going to use a verbal formulation of a visual imagination. For this I use archaeology, about

[1][See Volume IV, p. 41. *Ed.*]

which I know virtually nothing. The visual image, in contrast to the definitory hypothesis, may be regarded as a preconception or prejudice, and *is* – again unlike the definitory hypothesis – open to argument. Here are the two 'visual images' . . .

[*Breaks off here*.][1]

[1][Bion's *Cogitations* included at this point his paper "Psychiatry at a Time of Crisis", which was originally published in 1948 . Since it appears chronologically in Volume IV, it is not repeated here. *Ed.*]

1971

The supreme importance of transference lies in its use in the practice of psychoanalysis. It is available for observation by analysands and analysts. In this respect it is unique – that is its strength and its weakness; its strength, because the two people have a 'fact' available to both and therefore open for discussion by both; its weakness, because it is ineffable and cannot be discussed by anyone else. The failure to recognize this simple fact has led to confusion.

* * *

The ideogram evokes free association; the alphabet does not. What of the Miltonic spelling? Its emphatic intonation? And ideogrammatic impulsiveness in geometry? Is it related to the visual image as algebra is not? But Arabic numerals are not more related to the ideogram than algebraic. The first few Roman numerals are nearer to ideogrammatic, visual tallies than are Arabic numerals.

* * *

'Unconscioused' = *unbewusst*. Oh, for a similar word for 'projective identification'; 'identijected', as contrasted with 'unconscioused'.

* * *

The matter of ownership crops up with territory; it certainly causes trouble in the realm of ideas. Why? Does anyone claim ownership of a lie? Of course not, because as the question is formulated the lie is worthless – it represents worthless property. [*Added as a footnote*: 'But what about Judith and Holofernes? That lie, deception, was valuable.'] [*see* The Book of Judith from *The Apocrypha*.] Worth is that which enhances the value of the person to his community; it must be distinguished from apparent or reputed worth. In the domain of

thought, values are contingent. An attempt is made to differentiate contingent values from absolute values by assuming that absolute values are those that are deemed to be so 'in the eyes of God'. What does that mean?

[November/December 1973]

[*Transcribed from a tape recording.*]

The murderous stranglehold – transformation into many varieties including the schizophrenic patient who covers himself completely with blankets and just peers at the analyst through one small hole with one eye only. One feels that there is a method by which the port of entry is felt to be so tiny that whatever can come into it gets tremendously compressed to a point where virtually it has had all the life squeezed out of it. It sounds like a vagina that might be a kind of penis, but a penis that has a very small opening and a very small point of egress, with these compressing and concentrating effects which finally compress and squeeze the life out of the thing itself.

There might equally be expansion in the opposite direction. But the real thing is this entry and egress, with this very narrow sort of port-like entering into a penis, or a vagina that is far too small to be able to take anything in and far too small to be able to let anything out. I am sure this theme needs to be followed up in its many applications.

I might write a book that could be drawn up in terms of the Grid, either by a special index arranged in the Grid order of the primitive nature of the thing – not to do with thought at all, the elements – through to the things that are various transformations of visual imagery, and so on. I must consider this more deeply according to the two axes, co-ordinates – the vertical and horizontal components.

* * *

It seems to me that it isn't simply a question of the concentration that is produced by the very strangling vagina or mouth, and the very explosive penis or breast or object that is put in. In other words, the conflict is between the container and the contained thing in which they both seem to be on very destructive terms, where either the container gets split apart, or the object that is put into the container gets

destroyed. This seems to be a theme that occurs over and over again; whether it is a question of my coming to the United States, or my coming to the Society, or my being excluded from the Society, there seems to be this question of the relationship of the Kleinian person, or the Kleinian theory, or the Kleinian analyst, with the existing Society or the container into which the thought or idea is put. Then there is this destructive relationship into which one or the other – the container or the contained object – is sure to be destroyed; there appears to be no way in which the relationship between the two is creative or constructive, or leads to any good outcome.

Even in this note itself one could say that the thing is repeated in the same form: I am trying to put into terms of a verbal communication some idea that is felt to be too vast. Either the speech, formulation, grammar is destroyed, or the vocabulary and grammar get the upper hand – in which case the idea is destroyed.

There must be something primitive and fundamental about this, something very difficult to describe without the destructive consequences that follow from the nature of the relationship between these two objects. Even if the container and the contained object are destroyed, these fragments are felt likely to come together in a very destructive and hostile manner. This would seem both to link up the idea of the part objects, the extreme fragmentation, and to be a continuation of a theme of the relationship between the two. If the theme is expanded in the way it is in analysis (as done by me) into a prolonged sort of interpretation, then it is felt to be something that destroys the patient's capacity to take in the idea. On the other hand, if one tries to concentrate it down, one gets to the state of simply describing the two pictorially, hieroglyphically, in a C-category way, which is then so concentrated that it becomes virtually incomprehensible. It is like a mathematical formula that is absurdly simple, but at the same time is so concentrated that it requires the whole of mathematics to understand it – like the theories in which Einstein enshrines his theory of relativity. Indeed, I think that the significance of it may lie in the fact that it is the theory of *relativity*; it is the *relationships* that are felt to be so difficult to concentrate, or even to expand.

* * *

I am inclined to think that I would have to use the Grid itself at some point in this book [*The Dream*, Book I of *A Memoir of the Future*] as a

method of formulating or re-forming or showing the relationships of one aspect of it to another, with a kind of arrangement by which all these relationships were shown in a form that was different from that of the narrative of the book itself. It would display the way in which the logical or rational connections of one part with another could be formulated – although, of course, rational formulation is not necessarily an adequate formulation for something that is not really rational at all.

* * *

I can see that this is compatible with a culture in which it is assumed as a matter of course that you do not believe what you are told by anybody. It is difficult to see how they ever manage to get anything done in which you would have to know the truth. It does seem to me to be almost a cultural matter; you simply assume that the person who is speaking is speaking an untruth, or at any rate is being dishonest in the sense of making a communication that is primarily for its own purposes, not for the communication of a true statement to some other person. It throws an entirely new light on the problems of psychoanalysis and the fact that nobody is likely to believe that one is trying to tell them something that it is worth their while to hear.

[August 1975]

[*The following eight entries were recorded or written in France.*]

Suppose I want to have a method of measuring or of mathematical manipulation that would be appropriate to the world of emotion to which I am accustomed: I hear a baby crying; I am filled with sorrow for the poor little thing, and possibly for the parent who is concerned to look after it. Supposing, then, that I hear two babies crying – then I might be even more upset. Supposing, however, that I hear, say, fifty of them crying and wailing in the same way; instead of being fifty times as compassionate, I find that I am becoming amused at the racket that is going on. Why is it that such a thing should take place? And how should I express this mathematically? I could say that I ought to be – as far as any mathematical system known to me is concerned – fifty times as upset or depressed. But in this instance the quantity has effected an emotional change, so the emotions that I am wanting to deal with, to measure, to speak about, to cope with, have altered in quality when I would expect them to alter in quantity.

Is there some form of mathematics that would give me the appropriate answer or solution of a problem to which I want to apply it in emotional terms? I am not simply talking about the number of babies, or the number of people, but a situation in which I require a kind of mathematics that not only shows or expresses a change in quantity, but also a change in quantity inseparable from a change in quality.

In the instance I am giving I could pose the problem like this: there is myself, one of me; and there is one baby. Is it 1 × 1 = depression? Or 1 × 2 = depression × 2? Or is it 1 baby + depressed person = 2 depressed people? Or is it 1 + 2 = 3 depressed people? What happens when it ought to be 1 + 50, or 1 × 50? What should be appropriate manipulation be? What should one do with the mathematical symbols in the nature of bringing them together, or perhaps, for that matter, or bringing them apart? 1 separated from 1? Or 1 separated from 50? In other words, could there be a form of intuitionist mathematics

that would come much nearer to giving me answers representing the state of affairs with which I might be dealing? Would the mathematical answer seem to bear a resemblance to the emotional experience with which I am familiar?

[August 1975]

"You said an earful."

"How could you say with your ear? I thought it was with your mouth."

"No – 'You said a mouthful' means saying something important. It is a common term not intended to be formal or precise."

"Ah – so you would not use it if you wanted to hit the eye –?"

"I wouldn't hit a bull of any kind."

"No, no! The eye-bull."

"Oh, you mean the eye-ball. I should not . . . You mean the 'Power of the human eye'."

"No, no! You haven't hit the eye-bull."

"No, I haven't, because I don't want to be rammed up the arse by an irate bull."

"Ah, yes – Arse and Craft. In my country everyone say how beautiful the craft and arse of England are."

"Ah!"

"Ah? Ah? What means that? Please?"

[August 1975]

Psychoanalysis tells you nothing; it is an instrument, like the blind man's stick, that extends the power to gather information. The analyst uses it to gather a *selected* kind of information: the analysand uses it to gather material that he can use (1) for purposes of imitation, (2) to learn the analyst's philosophy, (3) to learn how to conduct his life in a socially acceptable manner, and (4) to become acquainted with his Self.

Although it is true that it is not his intention to satisfy (1), (2) and (3), or any desire other than (4), it is impossible to make any statement that gratifies only (4) because of the lack of precision of spontaneous English speech. The analyst can try not to pollute his interpretation on the one hand, or to speak as if he were a living computer, stranger to human heartedness, or the life that the rest of our human companions are familiar with as members of our universe.

Certain words and phrases appear to be necessary for the communication of 'happenings' recurring in that part of human experience with which I am most familiar, and which happens also to be that part of my life that is my profession – what, for lack of power to describe adequately, I call 'mental suffering'. This touches on happenings about which the analyst can do nothing, and the thoughts and feelings that the patient has about them. The distinction is important, but it is one that cannot easily be delimited and isolated for examination without the inclusion of thoughts that are properly subject to discussion in their own right.

We have to use words and phrases, combinations of words, for the purpose of communication between the Origin and the Receptor (observer, psychoanalyst). We may assume that what the psychoanalyst says about the analysand is likely to be true of the psychoanalyst himself. But for purposes of psychoanalysis it is simpler to write this as an exposition from the point of view (vertex) of the observer.

August 1975

There is a scarcity of time; a scarcity of knowledge; scarcity of ability. Therefore choice becomes of fundamental importance – choice of time, theories, and facts observed.

Memoirs of the future

Wisdom borrowed – future wisdom after the event. Prophecy wise after the event.

Prophecy without foresight. Prophetic hindsight.

Prophetic Backsight. Regrets to come by Forthright Forethought.

Insight by Backsight.

* * *

Freud, in *Inhibitions, Symptoms and Anxiety* ([1926d (1925)], p. 138), is curiously one-sided. Surely emotional experience is common to foetus, mother and father, but emotions *and* ideas may be compatible or incompatible. [*See opposite page for Bion's annotations in the 1949 edition, The International Psycho-Analytical Library, No. 28, p. 108*.]

end to the dangerous situation which is reminiscent of birth, the nature of the danger it fears is displaced from the economic situation on to the condition which determined that situation, viz. the loss of object. It is the absence of the mother that is now the danger; and as soon as that danger arises the small child gives the signal of anxiety, before the dreaded economic situation has set in. This change constitutes a first important step forward in the provision made by the child for its self-preservation, and at the same time represents a transition from the automatic and involuntary new-creation of anxiety to the intentional reproduction of anxiety as a signal of danger.

In these two aspects, as an automatic phenomenon and as a rescue-signal, anxiety is seen to be a product of the infant's mental helplessness which is a natural counterpart of its biological helplessness. The striking co-incidence by which the anxiety of the new-born baby and the anxiety of the infant in arms both depend upon a separation from the mother does not need to be explained on psychological lines. It can be accounted for simply enough from a biological point of view; for, just as

[August 1976]

"What can I do for you?"

"That", he said, "is what I came to find out".

"Yes, but how do you think I can help?"

"But, doctor, how should I know? That is what I came to you to find out."

"Yes, but what is troubling you? Presumably you wanted to see me for something of which you are complaining."

"No, not at all. I have nothing to complain of. We are very lucky."

"You must have wanted to come for some . . ."

"Oh, I see – my wife sent me."

"Ah, I see."

(But do I? So far the only thing that is clear is that I am no wiser than I was when a brief note from his doctor asked me to see this patient – the husband of a woman whom he had originally treated for pneumonia. "More your line than mine", he said.)

"Your doctor must have thought you needed my help. Why was that?"

"How should I know? Didn't he tell you in his note?"

"I think he expected you to tell me yourself. So far, you know, you have told me nothing."

(A blunder – I knew it before I had completed my sentence. I sat back and waited. He returned my gaze with untroubled expression and waited to hear more. In the meantime I thought we could not simply continue to sit in silence, but I could think of no alternative. As time passed I felt a change was taking place and that the

meeting was deteriorating into a contest of wills. What is a 'will'? Does Freud say? Or Melanie Klein? Abraham? Ferenczi perhaps?)

"Would you rather I went away, doctor?"

"By all means, if you do not wish to stay, or . . ."

(I left the sentence unfinished.)

"Or what, doctor?"

(I was aware of growing anger. I knew that the overt expression of feelings of any kind stimulates – 'irritates', in the sense that the physiologist would use the term in describing an experiment with a nerve-muscle preparation – a personality, whether one's own or that of another self. Since strong emotions undermine the capacity to think clearly, it would seem logical to suppose that a doctor, a psychiatrist, a psychoanalyst, should achieve and retain a capacity for clear thinking, and help the analysand to achieve and maintain a similar atmosphere of calm deliberation.)

How? My ability to do so is tested every moment of my life, not only in the course of professional duty but in the day-to-day frustrations and happenings. I am still as far away from achieving success in this endeavour as I ever was. I do not think I and my analysands are exceptional in this. What *is* exceptional is that the attempt is now being made to develop such a capacity through psychoanalysis.

[August 1978]

When the patient said he dreamed he was being swept down the river to the weir – "I tell you, I never woke up so fast in my life" – what, according to me, was he talking about? In so far as I know, I was in the state of mind in which I am wide awake. Is that 'wide' enough? Or is it a state of mind that is too narrow – like "to–fro tender trambeams" truckling "at the eye"? [Gerard Manley Hopkins, 'The Candle Indoors'.] Or too 'wide' awake, too conscious, too rational?

"By that window" [*idem*] what sights did the patient see that made him 'wake up' so fast that he could not be swept down the stream? Was it the danger of becoming, like me, too wide awake? Or, like me, too fast asleep – in fact, the sleep of death? Or in the state of mind or 'sleep' of psychoanalysis?

"There plant eyes, all mist from thence purge and disperse, that I might see and tell of things invisible to mortal sight". [Milton, *Paradise Lost*, Book III.] But the price appears to be the loss of 'mortal' sight. It cannot, however, be bought by 'losing' mortal sight; to be blind, unconscious, unaware of the world visible and audible, when you are in the 'yin' state of mind, is not the solution. One must dare to be aware – consciously – of the universe that is apparent in the state of mind in which one is asleep *and* the state of mind appropriate to 'awake', Yin and Yang [Chinese concept of the negative, material, and the positive, metaphysical together constituting the Cosmos]. Therefore merely being able to concourse musically, balletically, athletically, is not enough; it must be an intercourse – a means of communication 'inter', between two states of mind. Socrates described himself as a mental midwife; perhaps the psychoanalyst is a midwife between two states of mind of the analysand; for example, Maths + Art of Fugue, Cézanne + La Montagne Sainte-Victoire. The psychoanalytic experience consists in being able to know what it *means* when the physical quality says the age is twenty-five; what the man *means* when he says verbally that he is forty-two; and what it *means* when closer view shows lines in the skin of the face that would signify age sixty-two.

Where is that conflict? Between me and myself? Or between him and his knowledge of vital statistics? Between him and his vertex of vital statistics? Or between his youth and his age? Is it his youthfulness, vigour and energy (Schopenhauer) trying to break through? Up? Out? Down? The same question with his wrinkles.

In practice (contrasted with theory, or even memory or desire) is it possible to improve one's observation, or to make a change by refining one's vocabulary – one's '*outils*' for the '*atelier*'? For example, if you talk English, it is imperative to know *what* English you talk and *how* you talk it. If you are a potter, you may be the kind that requires a potter's wheel. What kind? It must be the *best* kind; it will not make you into a potter, but if you are a potter it will help you to make good pottery. If you are a good cook you need a kitchen and an oven. But lying in a bath and thinking of making buns will not produce bath buns. An analyst who has an office and a technique that enables him to produce good imitations of a psychoanalytic interpretation produces artificial interpretations, *representations* of a human being, not a human being.

I was never able to be a soldier – only an artificial representation of a brave man. I could see the spire of Sequehart church 'pointing to the sky' like non-conformist banners pointing up the broad Congregational Way to Heaven – plastic and plausible, and a diversion from The Way (Tao). One cannot in a crisis fall back on Truth. Artificial representations of truth form an insecure foundation for initiation; absolute initiation – advance or retreat – has a minimum necessary condition: sincerity.

8 August 1978

[Transcription of a tape recording.]

"The faces of old ghosts look in upon the battle", Tennyson said about that last strange battle in which Arthur took part before he travelled on his journey to the Vale of Avalon. ['The Passing of Arthur', Tennyson, *Idylls of the King*.]

Once more the world has reached the same kind of place in its journey round the sun which it occupied in the battle of Amiens (8 August 1918), which was said by Ludendorff to mark a black day for the German army. The ghosts look in from the battle again; Asser, Cartwright, and Sergeant O'Toole, the poor fellow who complained that he was only an orphan, with his protuberant ears, his red flushed face, his feelings of depression and anxiety, and his confiding to me that this battle on which he was about to embark together with the rest of the tank crew (I was not one of the crew as I was now commanding the tank section and was the second-in-command of the company) would be his last. He was, of course, quite correct; very soon after the battle started, Cartwright's tank received a direct hit, and the entire crew were killed. When I came across it, the bodies were charred and blackened, and poured out of the door of the tank as if they were the entrails of some mysterious beast of a primitive kind which had simply perished then and there in the conflagration, which must have been set off by the direct hit.

This experience is similar to others I have had in the past, but the similarity refers only to the known facts, not to the unknown. In this respect there are new experiences – unlike any Eighth of August of the past – not least when Francesca and I visited the Shelley and Keats museum in Rome. We both found it an extremely profound and moving occasion, as if we were indeed participating in an experience in which Shelley was still alive. I remember noticing, and being tremendously impressed by, his description of Keats as a greater man than he, a dangerous rival who would be sure to excel him. But he

said so without any of the hatred and envy that would have made it impossible for him to express the convictions to which he wished to draw the attention of his contemporaries and those who followed after him. So much generosity triumphed over hatred and rivalry and envy. These poets and artists have their methods of recording their awareness of some sort of influence, stimuli that come from without, the unknown that is so terrifying and stimulates such powerful feelings that they cannot be described in ordinary terms. They have to be considered to be perceivable only in so far as the human being has thalamic organs and thalamic experiences, and as if the human mind itself, described in physical terms, were a central nervous system that has only developed as far as the thalamus, thus leaving no real synaptic communication between the thalamus and the subsequent development of the mind, the neopallium, or whatever the appropriate term for it should be. We need to invent some form of articulate speech that could approximate to describing these realities, the phenomena that I cannot possibly describe.

Francesca showed me the letter, which I would not have noticed otherwise, written to Byron by Allegra, his daughter, from the nursery foundation run by a Catholic school – a most pathetic, touching and moving letter which apparently Byron never replied to. One could say that Byron, although appreciating the genius of Keats, could not possibly express the feelings of admiration and affection in the way that they were expressed by Shelley. Byron's *Don Juan* was no *Lament for Adonais* ['Elegy on the Death of John Keats'], which could only be written by Shelley. Similarly, one could say that *Don Juan* could only be written by Byron.

Shelley began his preface to *Adonais* with the 'Epitaph for Bion' (c. 100 BC) by Moschus:

> A poison came, Bion, to thy lips, thou sawest the poison. How did it run on to thy lips and not be sweetened? And what mortal was so savage either to mix the poison for thee or to give it thee as thou didst speak? He was immune to song.

'*Nisi dominus frustra*'. [Psalm 127, i: 'Except the Lord build the house, they labour in vain that build it'.] It is a simple abbreviation, and yet it is extraordinarily significant of the way in which certain words are left out. In much the same way letters are left out of the word, 'Yaveh',

because nothing else could possibly do any sort of justice to the fact that 'Yaveh' was a way of talking about a force, a power that cannot be described in articulate speech such as is appropriate when talking about omnipotence, or omniscience, or the ordinary formulations of religion – none of them adequate ways of describing the matters to which attention is to be drawn by the communication.

* * *

The people of this district [the Dordogne, France] speak of a '*crise de foie*'. It seems to me that this would be quite appropriate if it were spelt '*crise de foi*', or, '*crise deux fois*'. There is no need to suppose that the language being spoken, the appropriate language, is an articulate one rather than, say, a language that is a transition from paranoid-schizoid to depressive, from part objects to whole objects. Milton could have been talking more than one language: the articulate language, or even the poetic language, of a rational and superficial kind, as opposed to one that might be said to be much more primitive and much more like that of part objects; or objects that are not thought at all, namely the language of action before there is any discovery of an attitude that can be taken, or a technique that can be employed, between the awareness of an impulse and its translation into language. Freud described it as a state in which thought itself could be introduced as a phase leading to a pause between the impulse and the putting of that impulse into action.

One of the weaknesses of articulate speech is shown in the use of a term like 'omnipotence' to describe a situation that in fact cannot be described at all accurately with a language that is of one kind only. 'Omnipotence' must always also mean 'helplessness'; there can be no single word that describes one thing without also describing its reciprocal.

Palinurus was put to sleep by the god disguised as Somnus, and hurled into the depths of the ocean. Jesus showed that he felt betrayed when he found that God did not protect him from the murderous death that he suffered on the Cross. "Why hast thou forsaken me?" (Another possibility might be that he had a mistakenly optimistic view of the god with whom he thought he was dealing.) It is not possible to talk about 'god' unless one assumes that it also means 'devil'. The error has a very long history: in the *Bhagavad Gita*, Arjuna is rebuked for assuming that he is able to measure the morals or the

omnipotence or the mental outlook of the god by human standards; Job is reproved for having considered that he can measure Leviathan by the methods that are available for measuring ordinary human beings. Many mystics have been able to describe a situation in which it is believed that there really is a power, a force that cannot be measured or weighted or assessed by the mere human being with the mere human mind. This seems to me to be a profound assumption which has hitherto been almost completely ignored, and yet people talk about 'omnipotence' as if they knew what it meant and as if it had a simple connotation. Martin Buber came much closer to recognizing the realities of the situation when human speech is resorted to. [*I and Thou*: "The attitude of man is twofold in accordance with the two basic words he can speak. The basic words are not single words but word pairs. One basic word is the word pair I–You. . . . This is different from the basic word I–It."] When one talks about 'I–You', the significant thing is not the two objects related, but the *relationship* – that is, an open-ended reality in which there is no termination (in the sense that this is understood by ordinary human beings). The language of ordinary human beings is only appropriate to the rational, can only describe the rational, can only make statements in terms of rationality.

* * *

Sexual maturity is achieved very early and is frequently used as a barrier, a defence against the terrifying unknown which cannot be described in physical, sensuous terms – or if it is, it is much more likely to mislead than to illuminate. The 'thing itself' is a different problem altogether. A term like 'love' cannot describe something even as well as the term, 'the love of God' – that at least makes an attempt to introduce an element that shows that it is not a discussion about something that is so simple as physical love known to the human animal. A lioness nuzzles and shows every sign of feelings of love and affection – if interpreted in human terms – for prey it has destroyed; but it is murderous love, the love that destroys the loved object. Such visual images may be used to talk about love, even what we imagine to be mature love, but there is some other love that is mature from an absolute standard. This other love, vaguely adumbrated, vaguely foreshadowed in human speech, is of an entirely different character; it is not simply a quantitative difference in the kind of love one animal has for another or which the baby has for the breast. It is the further

extension to 'absolute love', which cannot be described in the terms of sensuous reality or experience. For that there has to be a language of infra-sensuous and ultra-sensuous, something that lies outside the spectrum of sensuous experience and articulate language. It may be approximated to by methods of communication that are not purely sensuous; the artist who paints a little street in Delft can see and communicate a reality to the observer who then sees something that is quite different from any brick wall or little house that he has ever known or seen in his life. Even in science, Heisenberg's description of the Uncertainty Principle shows that already a crisis has arisen – a '*crise de foi*'.

* * *

This crisis of 'I and You', or 'We and They', can indeed be one of very great proportions, partly because there is no language with which it can be expressed. I could try to put it this way: the fundamental reality is 'infinity', the unknown, the situation for which there is no language – not even that borrowed from the artist or the religious – which gets anywhere near to describing it. Nor can it be assumed that there is a relationship between Smith and Jones, because 'Smith and Jones' is a language that is used to describe a physical reality in which there are *physical* boundaries, but not a *mental* reality; we do not know where the mental boundaries are, nor do we know where the impulses commence.

* * *

I think it may be erroneous to assume that because there is a past that seems to bear a certain resemblance to the present, the present therefore bears a resemblance to the future, which can be described in terms of the past. I can perfectly well see that there may be a crisis of development in which the human being is absolutely terrified by the fact that the future is unknown, cannot be known by himself at the present time, and may only be known to certain people, described in terms of 'genius' or 'mystic', who have a peculiar relationship with reality. It is possible that the human being is indeed doomed to extinction because he is incapable of further development; some quite different species may be required to go on from the point that has been reached so far by the human animal, in the way that the saurians were replaced by the mammalians. However feeble embryonic mammals may have been, they were nevertheless superior to the saurians.

[April 1979]

[Transcription of a tape recording.]

. . . under the domination of what I call the 'vogue', by which I mean something that is extremely powerful, not merely the passing fashion which happens to change from hour to hour, day to day, month to month. I mean something that persists and that is part and parcel of the permanent equipment of the human being. I think there is the same dominating force that dictates the form taken by thought itself, whether that thought be historical or musical – after all, the Lydian airs of the Greeks would not be particularly appealing to us, any more than the Art of Fugue would be appealing to the Greeks, or would even be understood by them. I think there are also vogues in religion. Freud talks about 'the future of an illusion' as if he thought that religion itself was an illusion; it may be, but I think it is a *basic* illusion [*see* p. 349 for Bion's annotation to his copy of *The Future of an Illusion*]. Any particular religion changes with the prevalent fashion, but the fundamental thing, religion itself, does not. It is a very powerful force, as can be seen by the evidence of what would appear to be a sign or symptom of the thought of a period dug up by the archaeologists who excavated the Death Pit at Ur. Apparently, when the ruling authority died, the court also died with him; they were all buried in the same pit and took the same dose of whatever drug was used before they were buried alive. That itself would seem to suggest that the religious force is a very powerful one, whether it is located in God, or the people, or the priesthood, or the court authorities. That can alter; perhaps a few thousand years hence the archaeologists may excavate signs of the state of mind that existed in Guyana in 1978 [over 900 followers of the Rev. Jim Jones, leader of the People's Temple, died on 18 November 1978 in a mass suicide ritual]. Of course, the recording now is so ephemeral – it is not in tablets of stone but on paper, and the bodies are removed from the original site. So the evidence may be less, or different. We do not know what record could exist in the

future history of the world of this latest manifestation of religion – not the Jewish, or the Christian, or the Buddhist, but Religion.

* * *

Philosophical discussion in Edessa became suppressed and then disappeared, but re-emerged in a peculiar way because the Christian religion was carried to Damascus in terms of the Greek language. The Greek method of communication survived, and as a result there also survived with it the Greek way of thought; then, via Syria and Damascus, it came back to Greece. So once more the philosophy of Greece, of Plato, re-emerged when Constantinople fell; the thought that was locked up in Constantinople was then able to reassert itself with formidable consequences, which we call the Renaissance – the renaissance of culture in the western world. It is a very peculiar history – that philosophical thought should be suppressed or destroyed, go, as it were, 'underground', get lost to sight, and then re-emerge in these strange ways via the Arab culture, suppressed by the Turks, locked up in Constantinople, and then again released by the fall of the Byzantine Empire.

It is difficult to see what the trouble was when, according to Plato, Socrates – who had described himself in the *Theaetetus* as being a midwife (if Plato is to be relied on) – was condemned to death for having corrupted the youth. But so it was. In more recent times there seems to be a kind of dissatisfaction with the familiar philosophical views as being inadequate for the purposes for which they are needed. There were rumours during my time at Oxford about a thing called 'psychoanalysis' and somebody called Freud. I knew nothing about it, nor was much known about it at the university.

I made some enquiries but was persuaded that it wasn't really very much good – there were a lot of foreigners and Jews mixed up with it, so it was better not to get involved.

However, when I was fortunate enough to come across John Rickman, I decided to launch out onto an analysis with him.

That I found to be extremely illuminating; to my surprise, psychoanalysis seemed to have a distinct relationship to what I thought was common sense. Then, alas, came the threat of war, and I found my analytic experience terminated.

After the war, Rickman did not feel that it was possible to continue with me because we had had plenty of experience together during

the war. However, I took the plunge and went to see Melanie Klein. I found that what she said, while seeming very often to be rather extraordinary stuff, had a kind of common sense about it – not altogether what I would have regarded as obvious or clear to me, but on the other hand not divorced from what I knew about myself or other people, or even about my war experience.

In due course I found myself officially qualified by the British Psychoanalytical Society and gradually more and more involved in matters I was unfamiliar with – including those that I was not at all qualified to cope with, such as the President of the British Psychoanalytical Society. I never felt that I had been trained to fill such a prestigious position.

I had a good deal of opportunity for hearing about my various failings and defects, and also those of psychoanalysis, from my patients. Much the same sort of thing happened when I transferred my activities – for a short space of time, I thought, perhaps five years – to the United States. It took a long time to get used once again to the fact that nobody had ever heard of me, except one or two people who seemed to feel for some reason that they wanted further assistance. At the same time there were attributed to me qualities or abilities that seemed to be very wide of the mark; if I had had the qualifications or the addiction, I could have found myself thrust into the role of a sort of messiah or deity. All this ran parallel with its being made crystal clear to me that I was a mere human being, that psychoanalysis was, after all, only a form of verbal communication, and that there were limits to what could be done by it – especially as one was dependent on having somebody who would listen to what one had to say. So, what with having to say something, and also having to have somebody there who would listen to what I said, it was clear that the position that was being thrust upon me, or that I was being invited to take, was one not at all within my compass or capacity.

Comparing my own personal experience with the history of psychoanalysis, and even the history of human thought that I have tried to sketch out roughly, it does seem to be rather ridiculous that one finds oneself in a position of being supposed to be in that line of succession, instead of just one of the units in it. It is still more ridiculous that one is expected to participate in a sort of competition for precedence as to who is top. Top of what? Where does it come in this history? Where does psychoanalysis itself come? What is the dispute

about? What is this dispute in which one is supposed to be interested? I am always hearing – as I have always done – that I am a Kleinian, that I am crazy. Is it possible to be interested in that sort of dispute? I find it very difficult to see how this could possibly be relevant against the background of the struggle of the human being to emerge from barbarism and a purely animal existence, to something one could call a civilized society.

One of the reasons why I am talking like this here is because I think it might be useful if we were to remind ourselves of the scale of the thing in which we are engaged, and whereabouts a little niche could be occupied by ourselves.

[Bion's copy of *The Future of an Illusion* (1927c) is heavily annotated. The following passage is written at the end of Chapter II, p. 14.]

> "Reading this chapter seems to show the extent to which the advance of psychoanalysis renders its own formulation obsolete. Freud has for the foundation of his discussion, as its realization, his own conjectures on the nature of the civilization. He then has theories about the conjectures. Because the conjectures are those of a man of genius, they command attention. But there is no recognition of the status of the conjectures or of the status of theories about conjectures. In psychoanalysis it is assumed that a theory is false if it does not seem to minister to the 'good' of the majority of mankind. And it is a commonplace idea of good. The whole idea of 'cure', of therapeutic activity, remains unscrutinized. It is largely determined by the expectations of the patient though this is questioned in good analysis (as I know it). But in nuclear physics a theory is considered to be good if it aids the construction of a bomb that destroys Hiroshima. Too much of the thinking about psychoanalysis precludes the possibility of regarding as good a theory that would destroy the individual or the group. Yet there will never be a scientific scrutiny of analytic theories until it includes critical appraisal of a theory that by its very soundness could lead to a destruction of mental stability, e.g. a theory that increased memory and desire to a point where they rendered sanity impossible."

long since,[1] art offers substitutive satisfactions for the oldest and still most deeply felt cultural renunciations, and for that reason it serves as nothing else does to reconcile a man to the sacrifices he has made on behalf of civilization. On the other hand, the creations of art heighten his feelings of identification, of which every cultural unit stands in so much need, by providing an occasion for sharing highly valued emotional experiences. And when those creations picture the achievements of his particular culture and bring to his mind its ideals in an impressive manner, they also minister to his narcissistic satisfaction.

But also escape from brute potentia.

No mention has yet been made of what is perhaps the most important item in the psychical inventory of a civilization. This consists in its religious ideas in the widest sense—in other words (which will be justified later) in its illusions.

[1] [Cf., for instance, 'Creative Writers and Day-Dreaming' (1908e).]

Reading this chapter seems to show the extent to which the advance of psycho-analysis renders its own formulations obsolete. Freud has for the foundation of his discussion, as its realization, his own conjectures on the nature of the civilization. He then has theories about the conjectures. Because the conjectures are those of a man of genius they command attention. But there is no recognition of the status of the conjectures or of the status of theories about conjectures. In psycho-analysis it is assumed that a theory is false if it does not seem to minister to the "good" of the majority of mankind. And it is a commonplace idea of good. The whole idea of "cure," of therapeutic activity, remains unscrutinized. It is largely determined by the expectations of the patient though this is questioned in good analysis (as I know it). But in nuclear physics a theory is considered to be good if it aids the construction of a bomb that destroys Hiroshima. Too much of the thinking about psycho-analysis precludes the possibility of regarding as good a theory that would destroy the individual or the group. Yet there will never be a scientific scrutiny of analytic theories until it includes critical appraisal of a theory that by its very soundness would lead to a destruction of mental stability, e.g. a theory that increased memory and desire to a point where they rendered sanity impossible.

APPENDIX: REVIEW OF COGITATIONS 1992

André Green

'Review of *Cogitations*', by André Green, was published in 1992 in the *International Journal of Psycho-Analysis, 73*: 585–589. I am indebted to Professor Green for his generosity in giving permission for the inclusion of his full and detailed review.

Review of *Cogitations*

André Green

Cogitations is the name given by Bion to his thoughts transferred to paper. These reflections had been left behind in Bion's filing cabinets, and, unearthed by his wife Francesca, are now available for us to read. It is all very well to desist from publishing what is deemed unworthy of publication, but it must be admitted that Bion's sketches and cast-offs are much more valuable than the common run of material that finds its way into print. These day-to-day jottings are like a breath of fresh air from the open sea.

Compared with Bion's published works, the Cogitations are thrilling to read and often less difficult to assimilate, because the author's formulations are less condensed and because he makes us witnesses to the process of the unfolding of his thought. We literally follow him.

The psychoanalytic diary draws its material from two sources: clinical experience and reading. As for psychoanalysis, only the essentials are to be found: Freud (and then only certain works – *The Interpretation of Dreams,* 'Formulations on the Two Principles of Mental Functioning'); Melanie Klein (although no title other than *Envy and Gratitude* is mentioned, but only basic concepts); Winnicott (quoted once, on p. 161).

By contrast, we are struck by the wealth, variety and depth of Bion's philosophical reading, which covers epistemology as well as other aspects of philosophy. His avowed preferences on 10 January, 1959 (p. 27) are Kant, Whewell, Mill, Peirce, Poincaré, Russell and Popper (already!). Others, forgotten on that day, must be added: Braithwaite, Prichard, Hume and Descartes. Those he 'summons up' are principally logicians and philosophers of science, and he makes particular mention of mathematics (a point in common – there are fewer than was to be claimed – with Lacan).

Looking at this programme, I can think of many colleagues who would openly express their distrust of such a reader (if he were not Bion) and accuse him of no less a crime than 'intellectualization' – a charge that may be said to condone intellectual sloth. These cogitations have a theme: the relations between psychoanalysis and science. Bion looks at the problem from two points of view: that of the scientific methodology of psychoanalysis and that of psychoanalysis of the scientific methodology.

The writing of this diary is variable in form. Sometimes there are long developments, tantamount to papers which one is sorry were not published earlier, as they would have greatly assisted our understanding of the author's ideas; sometimes short paragraphs succeeding each other with rigorous logic; and sometimes brief notes which pursue ideas already expressed, as if intended to confirm the intuition already set down.

The clinical examples are for the most part short: a session (exceptionally), a sequence (more frequently), a sentence (quite often) as a starting point of reflection. They take the author back to the cradle of experience and give us an opportunity to admire Bion's interpretive inventiveness: he never allows himself simply to paraphrase what the patient says, as the Kleinians so often do. But the criteria of the interpretation are very different from Freud's, without for that matter conforming to the Kleinian canon. They are inimitably Bionian. "More than one patient has said my technique is not Kleinian. I think there is substance in this" (p. 161).[1]

Many of the notes are unfortunately marked 'undated'. Francesca Bion has carefully restored a credible order and her efforts can be trusted. All the same, the reviewer's task is not an easy one.

As we know, Bion began his career as a group therapist just after the Second World War. Later he was to devote himself entirely to individual analysis, but it would be wrong to assume that the group dimension had been abandoned. One thought constantly recurs in these notes: the opposition between narcissism (or ego-ism) and social-ism – that is, the participation of the individual in a group.

---

[1][This is modified by Bion's final two sentences in that note. 'Bionian' is a term that Bion would have objected to, and it perhaps makes as little sense as the term 'Segalian'. *Ed*.]

As Aristotle said, man is a zoon-politikon or political animal. Such a qualification implies the frustration of all instincts.

The reduction of this idea to its essentials links up with Bion's concerns about common sense: (a) the sharing of the experience of reality as commonly perceived; (b) the important step taken in communication (the expression includes the element 'common'), in the sense common to both partners in the psychoanalytic session; and finally (c) in the elaboration of a sense common to all the other senses in the analysand. This commonality emerges after an experience of unification which Bion compares to the passage from the paranoid-schizoid position to the depressive position. The author manages to combine the Kleinian theory with Poincaré's methodological hypothesis that it is the discovery of the selected fact that allows us to make sense of scattered, uncoordinated elements in the putting together of a meaningful coherence.

One of the most enriching parts of these Cogitations must surely be Bion's conception of the dream work. We find here the germ of what the author was later to call the capacity for reverie. What this means is that the dream work constitutes only a small part of this type of activity as found in the dreamer – that this work is a continuous process which also goes on during daytime activity, but remains unobservable (other than in conscious fantasy) except through its lack in the psychotic. The capacity for reverie is merely the visible aspect of a largely unconscious form of thought.

Functioning of this kind is synonymous with an activity of storing away (making latent, as some would say) – that is, of saving up for future elaboration, an essential stage in which will be naming. Without naming, without subsequent verbalization, the patient is confronted with unspeakable, nameless anxieties. For Bion, dreams are not equivalent to hallucinations as they were for Freud. Hallucination was for him an evacuative activity, the opposite of the dream work, which was a 'garnering' activity.

I have been surprised to note how sensitive Bion is to what I myself have called the work of the negative. The night after reading a passage of Quine on the negative, he dreamed of a negro. And his conclusion is that neg is here common to negative and negro. He concludes from his chain of associations that the negro is an ideogram capable of containing the entire chain of associations produced

(negro: negative, native, dative, ablative . . .). In this connexion Bion, like Freud, attributes cardinal importance to the visual function as the psychical matrix of elaboration.

We can already deduce the significance of the α-function, which appears on 5 August 1959 and is defined on that date: "α is concerned with, and is identical with, unconscious waking thinking designed, as part of the reality principle, to aid the task of real, as opposed to pathological, modification of frustration" (p. 58). Bion considers such work to be logical. The psychotic's attack on the α-function is reflected not in differences from the associations that neurotics or normal subjects would have but in the absence of associative productions – what might be called an absence of psychic generativity. This is reminiscent of the psychosomatic ideas of Marty, involving the discovery of an irregular functioning of the preconscious, which has become impermeable to the derivatives of the unconscious.

According to Bion, this impossibility of producing associations is because evacuation shortens the life – along the lines, I would suggest, of the 'shelf life' of a therapeutic drug – of psychical phenomena in the organism, thus affecting the storage and memory of mental phenomena. However, these phenomena are underlain by the emotional experience which constitutes the raw material that is the foundation for mental elaboration. The series could thus be summarized as follows: emotional experience – visual image (ideogram) – α-function – dream work.

To generate elaboration, it is not sufficient that evacuation does not occur; the visual image may, instead of unfolding in its associations, remain captive and give rise to an hallucination having the aim not of containing but of encircling the experience in order to neutralize it.

A murderous superego may become involved when some unconscious content becomes conscious, as if these transformations were equivalent to a loss and even to a death. One of the interesting aspects of Bion's thought is the constant linking of an intrapsychic with an intersubjective point of view. The transition Ps $\rightleftharpoons$ D (which is intrapsychic) has its counterpart in the (intersubjective) patient-analyst relationship involving the logic of a couple rather than of a single individual (26 September 1959, p. 80). It is impressive to see how Bion can move so easily from this living, concrete, human base to its mathematical equivalents, which could not be more abstract.

But why a murderous superego? Bion's argument on this point is paradoxical. A unified superego becomes conscious of what escapes it by way of reunification – of which it is itself the product. In other words, knowing is not only to grasp what was not known before knowledge supervened but also to become conscious of the extent of our ignorance and to accept it; conversely, in some cases a murderous rage destroys what has already been acquired. It is evident that, from then on, psychoanalysis develops from the twin aspects of affect (fantasy) and cognition.

It was in October 1959 that Bion had the intuition of the theoretical importance of frustration. Before him, frustration had been used simplifyingly, almost behaviouristically. Bion, however, must take the credit for the cardinal distinction between frustration evasion and frustration modification. In other words, the important point is to discern the means whereby the frustration is not acknowledged, accepted or transformed by the psyche, which can only evacuate it and evade it; alternatively, frustration may give rise to a modification of the psyche, which may in turn modify the conditions created by the frustration. Bion made this distinction the foundation of his system.

This positive modification must presumably be linked to the α-function. It is a fundamental mechanism postulated to explain hypotheses that may be capable of translation into verifiable data. It is therefore a postulate, which may also not be linked to any verifiable empirical reality (p. 95). The link between the α-function and visual images should be emphasized. Bion is plainly thinking of dreams; in other words, visual images for him are fundamental thing-presentations. The images of things may either open the way to thoughts or ideas, or regressively become 'things in themselves' – a term which it would be unwise to connect directly with Kant in spite of appearances, but which should rather be conceived as pre-representative. All the same, such a structure may find itself prevented from ever achieving representation.

An important difference between Freud's and Bion's positions is that for Freud representation is first and foremost the representation of a wish, as man has no disposition impelling him to seek truth. For Bion, on the other hand, the need for truth is just as essential to the psyche as food is to the body. This position, which is liable to the charge of being a religious one, may be criticized; after all, we know

that Bion was not indifferent to religion. However, this hardly ever caused him to underestimate the role of disavowal.

One way in which the analyst may become aware of the destructiveness of the patient's communications – more properly, of their sterility – may be through his difficulty in remembering the material of a session; this experience is common to all analysts who work with difficult cases. The effort of understanding and binding in the session is so intense that it is deployed at the expense of recording and storage, functions to which no difficulty attaches when the understanding of what is communicated by the analysand does not absorb too much of the analyst's energy and 'makes sense' more or less appropriately.

Again, this expenditure and consumption of energy by the analyst occurs in the work of binding and association which the patient himself is unable to undertake or absolves himself from undertaking. This takes place spontaneously in the neurotic, because in neurosis the synthesis of the elements produced is in effect automatic. It therefore depends less on the analyst's associations.

The result of this synthesis (which is the work of the α-function) manifests itself in two ways: (1) by a logical (mathematical) construction, and (2) by a dream. One of the most original aspects of the Cogitations is the drawing of a parallel between logical and dream structures. Just as a mathematical formula gives rise to developments, so a dream engenders associations. This finding can be further extended to the relation between narciss-ism and social-ism, secrecy and public-ation. Unlike other Kleinians, Bion never loses sight of reality – and still less of truth.

There are occasional Platonic accents in the Cogitations, for instance, when we read that generalizations and 'idealizations' (in the dual sense of products of ideas and ideals) may be one and the same thing. This pair is echoed by another couple, realization and particularization. Bion was well aware that the principal analytic *aporia* was to give a verbal response to non-verbal objects. The consequence of the struggle between the life and death instincts (Bion does not use these terms but speaks of living and dead objects) is that when the forces of death predominate, animism (or the animistic view) cannot develop. Death is in the soul.

The first intuitions about attacks on linking can be found in February, 1960. In fact, the formation of the dream and its associations is

evidence for the existence of an *α*-function. Bion is the only Kleinian for whom the model of the dream is more important than the model of the baby. Such an option presumably reflects the renunciation of the empiricist or pragmatic position so often embraced by the protagonists of a psychoanalytic constructivism based on a naïve conception of development. For instance, in Bion a reference to the breast is not a direct reference to an organ or even to a person, but is an hypothesis that is bound up with mental phenomena (p. 240). However, some embarrassment is evident in his reflections on the penis (p. 243).

Bion's conception of the relations between psychoanalysis and science, at a time when these matters are acutely topical, is interesting in that it constitutes a total reversal of the usual approach to these relations. Instead of wishing for a psychoanalysis carried along in the wake of science, seeking validation procedures agreeable to scientists, Bion, on the contrary, maintains for example that what a community deems to be 'scientific' dictates which fantasies are to be externalized in the prevalent cosmology and which are to achieve some other outlet (p. 150). The deductive scientific system is that defined by its place in the hierarchy of thought processes; it is at one and the same time the topmost level of a particular system and the basis whereby lower-level systems (in terms of generalization) can be used.

We thus gain an extremely precise impression of the *raisons d'être* of many of Bion's concepts: phenomena, things in themselves, the object, language, affect, integration, etc. Here are the foundations of nothing less than a treatise; we can only speculate on the reasons why Bion refused to publish it during his lifetime, but are happy to be able to read it now (between pages 147 and 160). These details are all the more useful in that Bion, more generally, stresses the weakness of our methods of communication – this being true not only of communication among analysts but also of analyst-analysand communication. Mathematics and music are exceptions to this rule. Perhaps it is relevant that both use words only secondarily.

However, the most extreme case in which this failure occurs is the analytic relationship with psychotics – so much so that it may be felt that any communication that has taken place is understood by the non-psychotic part of the personality (of the psychotic). Here the role of representability must be underlined. Again there is a reference to dreams: the representable is the foundation of the *α*-function, which leads to the dominance of the reality principle, whereas the

β-elements remain under the sway of the pleasure-unpleasure principle. Rather than regarding the relations between the *α*-function and reality as a progressive pragmatic learning process, Bion holds that, since the *α*-function is the substrate for idealization, such an evolution is possible.

Here we have the author's first intuitions about what was to be called the K factor (K for knowledge). K and –K are the two facets of the same phenomenon. Knowledge is both stimulated and prohibited. The myths of the Fall and of Oedipus bear witness to this. Bion gives us an interesting discussion of the myth as 'common nonsense'. He brilliantly compares myth and manifest dream content. Boldly extrapolating, he extends the comparison to mathematical formulations of algebraic calculi, in that each formation in its own way performs an identical function. At the root of each solution lies a common phenomenon: emotional experience. Myths are perhaps to the psychoanalyst what mathematics is to the scientist.

This again confronts us with the problem of causality. Bion takes his stand against the inductive approach, in favour of deduction, in which the element of time is essential to the cause-effect relationship. Bion's rejection of the empirical modes of thought which are common coin in contemporary theory can hardly be over-emphasized. Another cornerstone of his theoretical approach is the reference to the social dimension, itself connected with language. Structural interpretation of the Kleinian 'positions' makes it possible to extricate Melanie Klein's thought from its 'infantilism' (p. 193). Bion's acceptance of Melanie Klein's postulates is not accompanied by any underestimation of the Oedipus complex, as it often is in Klein's successors. Bion is surely the only Kleinian author who has striven to unify the ideas of the founder of psychoanalysis with those of his most noteworthy mutant.

The importance of the controversies in psychoanalytic circles on the validity of psychoanalytic reconstructions is well known. Criticism of Freud's reference to a 'material truth' has induced the post-Freudians to embrace an exceedingly debatable scepticism – in favour of a theory of 'narrativity' and a hermeneutics which have abandoned any claim to insist on a truth of any kind. Bion offers a solution to this problem by defending the status of an approximation to the truth. Using this proposition, we can at one and the same time avoid

deluding ourselves about the value of our speculations and avoid having on that account to forgo an essential reference of the Freudian approach.

This diary also contains Bion's first intuitions about attacks on the analyst's *α*-function, a particular case of the problem of attacks on linking. This very popular concept clearly and precisely takes up Freud's final ideas on the relations between binding and unbinding as an expression of the mode of functioning of the life and death instincts.

Unbinding is the result of frustration – more precisely, of the tendency to evade frustration instead of modifying it, the tendency that was to be the cornerstone of Bion's theory. The plan and objectives of what appears in schematized form in *Learning from Experience* are here formulated with extreme clarity (p. 249). The work of Cogitations takes the form – extremely rare in psychoanalysis – of a metatheory. No author who has reflected at all upon theory will be able to escape the force of these pages.

The foundations of Bion's theory can be formulated in different ways. I would choose the following according to their author: the paranoid-schizoid and depressive positions, the primal scene and the oedipal situation – together constituting a successful synthesis of Melanie Klein and Freud. It is this fourfold structure which underlies the material of the *α*-function. In the final part of *Cogitations*, considerable space is devoted to Bion's recommendation that the analyst should be without memory or desire – a recommendation which has had large repercussions.

There may perhaps have been misapprehensions as to the meaning to be given to this precept, which, one feels, carries the risk of turning analysis into something like a mystical technique. I understand Bion's concern to give priority in the material to what is connected with the unknown. However, it seems to me in part contradictory to refer to the relations of causality and temporality and at the same time to advocate such a 'forgetting' of the past material.

When I once discussed this with him, he replied, again referring to Freud, by pointing out how the latter claimed to 'blind himself' – deliberately – when the material seemed to him to be obscure or indecipherable. In my view, this rider changes everything, because it is a technique for emerging from an impasse and not a rule of

ordinary behaviour. However, with psychotics, it is true that analysts are often driven to the verge of mental confusion. But one should be careful before generalizing the advice.

The same detachment is observed in Bion's positions on the therapeutic reaction (both positive and negative), in that it is always bound to divert attention from psychoanalysis proper. Such a position is unusual among English-speaking analysts, with their concern for helping the patient. On rereading his own notes, Bion claims to be exasperated by their futility (p. 294): is this false modesty or an uncommon superego demand? The latter is surely the case, as guilt feelings arise, whereby he feels open to accusations of plagiarism, of theft from his patients, and so on. This demand is an elevated one indeed: to achieve a theory of thought. Thoughts await their thinker. What would thoughts which did not need a thinker be? And only the liar needs a thought.

One particular cogitation is to my mind formidable. In February 1971, Bion notes that psychoanalysis might have exhausted its impetus and be ready to disappear into limbo, either because it is a burden too great for us to carry or perhaps because it is a blind alley, or else because it arouses fear of the unknown to a point where the protective mechanisms of the noösphere compel it to destroy the new ideas for fear that they will cause a catastrophe in which the noösphere disintegrates into the amorphous. Considering current developments in psychoanalytic thought itself, perhaps having the aim of protecting analysts themselves, this is not an unrealistic fear.

In July 1971, Bion gave free rein to his inclinations as an author of fiction, which were to develop subsequently, and wrote a 'fable for our time (30070)'.[1] Here, the author demonstrates both his great depth and his sense of humour, which relativizes the most dismal thoughts. However, disillusioned, he describes his relationship with his Los Angeles colleagues as almost entirely unsuccessful (p. 321). What is more, he claims that he could say much the same for England.

The thinker disturbs: he arouses fear, on account of his ideas as much as of his personality. Pessimism pervades this diary, as witness

[1][See *Cogitations*, July 1971 (Volume XI, p. 314). Green is referring to Bion beginning to write what was to become the first part (*The Dream*) of his *Memoir of the Future* – see Volume XII. *Ed.*]

the feeling that barbarism is gaining ground in modern times with the development of technology. Science is also affected by this trend. The final pages of the diary show us a Bion who is a reader of Freud. He is a critical reader, to be sure, but what reading of Freud worthy of the man could, today, not be critical?

Bion the man is not absent from these Cogitations. On 8 August 1978, he recalls the events of 60 years ago to the day, at the battle of Amiens, in which he took part during the First World War, a few months before the armistice, when all his men were killed.

Bion has an astonishing ability to grasp the common factor in very different situations: for instance, the relationship of the baby to its mother, of the analysand to his analyst, and of the believer to God. Relationship is a key term in the thought of Cogitations, not in the trivializing sense of object relationship, but in that of the concept of relationship, to which too little thought has been devoted in psychoanalysis. The religious aspects of Bion's thought have been distrusted. However, his direct references to religion are discreet and he is always very concerned to place it in perspective with the other vertices considered by him. Does this mean that he was preoccupied with his own imminent death? There is not the slightest allusion to this subject in the Cogitations, assuming that they have been published in full.

These notes end on a leitmotiv which has been formulated more or less explicitly throughout the book: Bion's concern to place psychoanalysis in the context of the human struggle to emerge from a purely animal or barbaric existence to a state that could be called civilized (p. 348) – and without illusions. After all, our conception of the good, or of the 'good theory', precludes the idea that it might destroy the individual and the group (April 1979).

The Cogitations break off at this point.

The reader of this review will, I am sure, feel that I am much too approving of their content and not critical enough of their author. In my opinion, the opposite charge should be levelled at me. I do not consider that I have succeeded in conveying the exceptional wealth of these private notes, in giving an impression of their importance to psychoanalytic thought. My agreement with Bion no doubt has to do with the fact that I, for my part, have arrived at certain conclusions very similar to his, independently of my reading of his work. I knew Bion personally, after discovering him through his books, and

remained in contact with him uninterruptedly until his death, and this is bound to give my reading the quality of an emotional experience, which might be said to lack objectivity.

What makes me respond so positively to this reading is the comparison it compels me to undertake with the current average state of psychoanalytic theory as revealed in publications and international congresses. In the last years of his life, Bion, it will be found, published hardly anything in the official psychoanalytic journals and was never approached by the IPA Congress Programme Committees. Is this coincidence? We owe a debt of gratitude to Francesca Bion for allowing us to read this exceptional document.

All psychoanalysts agree that Freud was a genius, but after him, opinions differ as to who else might deserve this description. I for my part believe that Bion might seriously be considered for it. I definitely incline to this view. As it happens, I read the *Cogitations* at the same time as the extraordinary volume on the *Freud–Klein Controversies 1941–45* (King & Steiner, 1991), which tellingly conveys the scientific situation of the British Psychoanalytical Society during those years. Compared with those exciting discussions, *Cogitations* feels like the expression of the thought of a different age. Where are we today, ten years after Bion's death?

A MEMOIR OF THE FUTURE 1
Book One: The Dream 11

A MEMOIR OF THE FUTURE

1975

A Memoir of the Future was first published in 1991 by Karnac Books, London. It consisted of revised and corrected versions of three previously published books – *The Dream*, *The Past Presented*, and *The Dawn of Oblivion* – together with a revised and expanded version of *A Key to A Memoir of the Future* (1981).

The Dream was first published in 1975 by Imago Editora, Rio de Janeiro.

EDITOR'S INTRODUCTION

A figurative and free-ranging psychoanalytic novel was not something Bion would have felt free to write and – more to the point – to publish had he and his wife, Francesca, not moved to Los Angeles, which they did in 1968. Once there, Bion set about adjusting to the new culture, establishing links with the analysts who had invited him, and setting up an analytic practice. He also began work on a book, which he called *The Dream*, published in 1975. Two years later he added *The Past Presented,* and in 1979 – with the addition of *The Dawn of Oblivion* – the novel had become a trilogy. In 1991, at the instigation of Francesca Bion, the three were finally published in one volume, with corrections, together with an enlarged version of *A Key to A Memoir of the Future*, which had first been published in 1981. Francesca Bion has described the *Memoir* as

> a fictionalised, dramatised presentation of a lifetime's experiences, filled with a crowd of character; voicing the many facets of his own personality and thought; at the same time we recognise ourselves among the *dramatis personae*. [see Volume XV, p. 101]

Bion's *Memoir of the Future* is a work that makes use of the form of a novel in order to explore the meanings of analytic and philosophical concepts, without his writing being constrained by having to 'make sense' in conventional terms. Bion seems to have felt an urgent need to do this: to liberate himself from the constricting container–contained effects of the 'psychoanalytic establishment' in order to distribute the elements of his thought in fresh patterns and configurations. These patterns are capable of triggering the reader's own alpha-function (as is true of the more formal writing in *Learning from Experience*) in ways that may be of use to the clinician.

The work has relevance to Bion's concept of group mentality as an aspect of the individual personality; In *A Memoir of the Future* one can see how shifts in ego-functioning are reflected in the positions taken by the different characters in the 'story'. Lia Pistiner de Cortiñas (2010) has written concerning this:

> To transform criticism, feelings of guilt, reproofs, inhibitions into characters that are able to begin a dialogue with each other and with those that are criticized, has been in my experience a very useful instrument. It helps the patient develop more of an ego-related capacity to observe these conflicts instead of being crushed by them. The usurpation of ego functions[1] by a precocious development of a primitive Super-ego is also linked to the primitive group functioning. Personification with its characteristics of fiction and dramatic play, help to develop a separate mind that is able to think the primitive group functioning instead of transforming it into action. This 'group mentality' is present in every human being even if isolated, because it is inherent to our condition of being a herd animal. [p. 126]

A Memoir of the Future has not been without its eminent critics. There is no doubt that, in contrast with the work of the 1960s, Bion's writing in this work is undisciplined, and intentionally so. Edna O'Shaughnessy, an analyst who has a deep understanding of Bion's work and who has integrated many of his key concepts into her clinical approach, felt that it might have reflected a reduction in the discipline of his thinking in relation to that piece of writing, and also in connection with his concept of 'O'. She wrote, "By 'less disciplined', I mean mixing and blurring categories of discourse, embracing contradictions, and sliding between ideas rather than linking them" (2005, p. 1524).

Waddell (2010) views this last work by Bion as a continuation of his clinical thinking using allusive literary structure. She sees it as "a great autobiographical account of an interior story" of the self's development and the becoming of a psychoanalyst, drawing upon a lifetime of analytic reflection. For Waddell, the mode of writing in *A Memoir of the Future* is not wilfully obscure but represents an attempt to express in a literary way something of the elusive nature and functioning of the world of psychic reality. This view concurs with that of Meg Harris Williams (1983), who wrote that Bion made the investigation of himself

---

[1]For example, Bion has a 'character' called 'Container' in *A Memoir of the Future*, who says at one point, 'It distends me'.

as a person and a psychoanalyst inseparable from a search for an appropriate artistic form, given the inescapable fact that 'the thing itself is altered by being observed'.

Harris Williams describes the progress of Bion's search – using the relationships of *A Memoir of the Future* – for an underlying pattern, first in the sense he used in studying 'catastrophic change' in the personality[1] and, second, in the sense of a search for appropriate artistic form. As she puts it,

> Bion's 'internal voices' (including P.A. – Psychoanalyst) struggle towards 'disciplined debate' as they experience past and future catastrophes in the present. The internal 'Group' gradually achieve coherent genre as they increase in selfawareness and in resilience to catastrophic change. By Book 3, their history becomes recountable in the terms of a single lifecycle, from prebirth to approaching death. Key points of catastrophic change are represented by birth itself, by the transition from latency to adolescence, from adolescence to adulthood, and by death. The approaching catastrophe of the future, unknown although imaged by death, becomes containable artistically – casting its 'shadow before'; and catastrophic anxiety no longer fragments the Group. Their original chaotic 'Dream' undergoes successive transformations – part revealing, part constructing a 'pattern' – until it comes to metaphorically express the process of thinking itself, equipped to face the birth of an 'idea'. [Williams, 1983/2010, p. 381]

Bion's elder daughter, Parthenope Bion Talamo, was impelled – through translating *A Memoir of the Future* into Italian – to appreciate the clinical relevance of this emotionally interactive text, describing it as a "a veritable mine of clinical insights" (Bion Talamo, 1997). The drawbacks to such an appreciation, she felt, were (a) the amount of patience and hard, mental 'spade-work' required to harvest the insights; (b) the necessity for practical experience of analysis if the reader is to detect the underlying patterns of what, on the surface, is a rambling novel; and (c) the emotional disturbance evoked in the reader as a result of becoming open to his or her own deeper associations to the text, to his or her own 'α-function'. She considered *A Memoir of the Future* to be something of an exercise in dreamwork-alpha – to use Bion's own phrase. This point is so crucial to understanding why Bion wrote such a peculiar book, that

[1]Following Poincaré, with his concept of the 'selected fact'.

I will quote Parthenope's conclusion in full regarding the relevance of *α*-function to *A Memoir of the Future*. Referring to an undated 1960 note in *Cogitations*, Parthenope writes:

> What Bion says, very briefly, is that dreamwork-*α* is a process of mental assimilation and growth; the individual has an emotional experience which then has to be clothed with a visual image (or, more generally, a sensorial one) for it to be available as a building block for thoughts. The visual image – he gives the example of Cromer Church in Norfolk – lends flesh to an emotion so that the latter can be 'thought'. At the same time, however, the image is not saturated; that is – in Freudian terms – it can undergo further development, through both a future *Nachträglichkeit*, and further accretions of emotions.
>
> The *α*-elements, which are the resulting product of dreamwork-*α*, can be stored; one of their functions is, in fact, that of storing emotional experience in a communicable form.
>
> The evocative writing of *A Memoir of the Future* does indeed call up the *α*-elements of the reader – sometimes with a vengeance – and this is one of the reasons why reading the book can be a painful process.

Finally, another insight into *A Memoir of the Future* by Parthenope is that the principal metaphor of the book, and that of the mind, is *dramaturgical* – feelings and ideas that have been split off or subject to repression are, in the book, represented as rebounding from 'behind the wings'.

The book has something in common with *Learning from Experience*. In both, the reader is made to realize that he or she is being impelled to make use of his own mind, and his whole life's experience. Parthenope Bion Talamo reminds us that this fact parallels the situation in analysis itself.

A Memoir of the Future was dedicated by Bion as follows:

> "To my wife and to Parthenope, Julian and Nicola".

It is published here across three volumes of *The Complete Works of Bion*, with a 'Key' that Francesca Bion and I have further expanded – and this is in spite of the fact that Bion himself would, we are sure, have resisted such a piece of editorial apparatus.

A MEMOIR OF THE FUTURE

INTRODUCTION . . .
PRELUDE . . .
OVERTURE & BEGINNERS . . .
ONE, TWO, . . .

Within this book there are changes of meaning that are obvious, communicated and interpretable according to the rules of grammar and articulate speech. There are changes of rhythm that are not so obvious, but if detected they are similarly communicated and interpretable. The rules to which they conform may be more difficult to detect, as would the key of a musical composition written without the statement of the key signature. There are changes detectable only by those willing to make the effort. If no existing human mode of thinking provides a model, an approximation could be found in astronomical space. There may be modes of thinking to which no known realization has so far been found to approximate. Hallucinosis, hypochondriasis and other mental 'diseases' may have a logic, a grammar and a corresponding realization, none of which has so far been discovered. They may be difficult to discover because they are obscured by a 'memory', or a 'desire', or an 'understanding' to which they are supposed – wrongly – to approximate. Unless the obscurity can be circumvented or penetrated it will remain unobserved, as the galactic centre or the origin of the universe remains unobserved.

Book One:
The Dream

Q Can you give me an idea what this is about?

A Psychoanalysis, I believe.

Q Are you sure? It looks a queer affair.

A It is a queer affair – like psychoanalysis. You'd have to read it.

Q How much does it cost?

A It says it on the book. You would have to read it as well though.

Q Of course. But I don't think I can afford the time or money.

A Nor do I.

Q But haven't you read it?

A Yes, in a way.

Q You're a queer salesman. I'm only wanting to know . . .

A I'm not the salesman. I only wrote it.

Q Oh, I beg your pardon! I quite thought . . .

A I'm flattered, but I'm only the author.

Q May I have your autograph?

A No.

Q Oh.

PRO-LOGUE

I am tired. It is quite bad enough having a full day's schedule without having a full night's programme too. I do not remember what happened anyway. Something about reversed perspective. I was writing something about it. The advantage of falling back on borrowing a mathematical term like 'vertex' is that it can make it possible to talk to lunatics who are thrown into confusion if you say things like, 'from the point of view of smell'. It is very exasperating to find a man who interrupts by saying, 'My eyes don't smell', or, 'My smell can't see any view'. My exasperation doesn't help either. Now I remember a bit of a dream about violence and murder. Something about Albert and Victoria, I think. Suppose these vertices are separate and distinct, the two vertices could contribute to a harmonization rather like binocular vision. Suppose I used my alimentary canal as a sort of telescope. I could get down to the arse and look up at the mouth full of teeth and tonsils and tongue. Or rush up to the top end of the alimentary canal and watch what my arse-hole was up to. Rather amusing really. It depends what my digestive tract felt about having me scampering up and down the gut all night. Perhaps that is what gave me such a bad night. Alice didn't think much of it obviously. But what was *she* up to then? Must remember to ask her. She seemed to think it was my fault.

Suppose the vertices were separate and coincident. This would do if one of the points which was separate and distinct rushed down the arc to meet the other; but, judging by what it felt like last night, it was more like sound travelling in bent tubes. As a matter of fact, that would only be true in a relatively gentlemanlike Oxonian manner. At night – last night – they weren't at all respectable; much more like farts and gerks rushing up and down alimentary canals.

Whether it is respectable or amusing would depend on which vertex, or who or what it was at the vertex. But here and now I know nothing about that. If I were there, with the companion to whom I wish to communicate, I could appeal to him to see the evidence I cannot formulate, but on which I wish to build my structure. It is the overriding advantage of the *practice* of psychoanalysis over anything more abstract. It is also a fact which, to me, makes any puzzlement at the disagreements between two participants, say, in a scientific meeting or supervision, different in kind from the disagreement between the two participants in a psychoanalysis (as I understand that occurrence in a relationship which I define as psychoanalysis). Anyone can employ another definition, but no one can honestly maintain that I speak without practice as that term is understood by other practitioners.

I claim (the claim itself being definitory) that this is a fictitious account of psychoanalysis including an artificially constructed dream; definitory status is also claimed for the constructions of wakefulness, scientific alertness and scientific theory. The definitory hypothesis is intended to be taken and applied in all seriousness in the practice of psychoanalysis by those who wish to confront what they believe to be 'facts', as near to noumena as the human animal is likely to get.

This may be 'never'; with Kant, I hold that the thing-in-itself is unknowable. Falstaff, a known artefact, is more 'real' in Shakespeare's verbal formulation than countless millions of people who are dim, invisible, lifeless, unreal, whose births, deaths – alas, even marriages – we are called upon to believe in, though certification of their existence is vouched for by the said official certification. 'You are a fabulous monster', said the dove to the serpent Alice. Many people are so lifeless that I could stare in silent admission that I did not believe the evidence of my senses. Nor do I believe that 'science' – smoke drums, statistics and other apparatus usually assumed to belong to the domain of science – would ever bring them to life or breathe life into them.

At one end of the spectrum I could be convinced by 'scientific' evidence that these people exist; at the other end there are fictitious characters who could be said with certainty *not* to exist. (In terms of logic this situation is what is often described as a 'paradox'.) The 'softly breathing bronzes' of whom Virgil speaks in his tribute to Marcellus can be described as a poetic formulation of a visual image. The same

is true of the heroes rescued from the black night that engulfed the many brave men before Homer immortalized Agamemnon; or the sculptures conjured from the marble by Michelangelo or Praxiteles. They can be re-buried. Confronted by a work of art, there are 'clever men' who can see that it is genuine and worth a lot of money, but they may *not* see what the artist has revealed.

To turn to psychoanalysis: the erudite can see that a description is by Freud, or Melanie Klein, but remain blind to the thing described. Freud said infants were sexual; this was denied or reburied. This fate could have befallen the whole of psychoanalysis had there been no one to confer, as Horace said of Homer, immortality.

If psychoanalytic intuition does not provide a stamping ground for wild asses, where is a zoo to be found to preserve the species? Conversely, if the environment is tolerant, what is to happen to the 'great hunters' who lie unrevealed or reburied?

1

'O dear, oh dear', said Alice rubbing her eyes and pushing away the shower of leaves which had awoken her. 'I had such a queer dream that I was the Empress of India. Rosemary! Now where has that tiresome girl gone? I had quite forgotten I had dismissed her! For such impudence too. Ah, here she is – with her suitcase packed I am glad to see.' Alice sounded quite severe as her maid came into the room, with her shawl and bonnet, ready to leave. She was deferential, almost obsequious, Alice was glad to note. 'You called me, Ma'am?' 'Before you go – there is still half an hour before the last train so you have plenty of time just gather up these leaves which have blown in through the window you so carelessly left open.' The maid put down her case and shawl before falling on her knees to gather up the mess. She was attractive, Alice had to admit; indeed her attractiveness had been 'the last straw', for she had appealed so strongly to Roland, Alice's husband, that his wayward glances lingered, in Alice's opinion, a shade too long upon her features. Misgivings that she had been unfair awoke at the sight of the slim kneeling figure gathering up the leaves. They were stifled; 'her behaviour to poor Tom was really quite intolerable'.

'I've cleared it all, Ma'am', she said at last, 'can I go now?' Alice was almost ready to let her go when Rosemary added, 'It is almost time now and they do say it is the last train'. Alice, herself famous for her beauty, allowed the compassion in her expression to relax into its customary insolence. 'Let me look at what you have gathered', she said, taking the leaves from Rosemary's nervous hands. She was aware that the leaves which she was scrutinizing with deliberate slowness were the pages of a dismembered Bible.

'Oh please, Ma'am, may I go now?' she broke in, 'or I shall miss the train and they do say it will be the last before the enemy come. I want to go – please!' she begged. 'With Tom?' 'Yes, Ma'am – and please won't you and Roland leave too? I'm sure it won't be safe when the enemy soldiers come.'

Alice drew herself up haughtily. 'I am sure that *Mister* Roland will be quite safe with me.' 'Oh, Ma'am, I didn't mean that – really I didn't – please can I go now?' 'We shall not run away. These are civilized enemies . . .'. But Rosemary, unable to stand it any more, had picked up her traps and run. Alice, realizing she was alone, was reading the words on a torn scrap. 'And the Satyr shall cry to his fellow.' That was all.

For a time she sat brooding in silence. Night was falling; she could hear carts lumbering westwards; men and women; animals. She was brave; she prided herself on not being afraid like her maid. What could be expected of Rosemary? 'Tell Mister Roland to come . . .'. but Rosemary had gone; with Tom.

2

Tom was a powerful lout who worked about the farm attached to the main building. He was an excellent servant and reliable in work which required strength but no initiative or intelligence. His grin was a feature of the homestead. Roland had sometimes spoken of his cruelty, but Alice did not think it amounted to much more than the thoughtlessness of a good-humoured but otherwise likeable person. It was exasperating when Rosemary complained that she had been assaulted by him. Roland was unwilling to dismiss him. He was too valuable a worker, he said; besides, who knew what Rosemary had been up to? She was no saint – always making eyes at all and sundry. 'Well, you ought to know', said Alice with meaning that made Roland colour angrily. 'Don't be ridiculous, Alice. You're jealous. She's pretty in a servant-girlish sort of way and she may have made eyes at Tom I admit – very probable in fact; but I don't want to lose a good workman.' So it fell to Alice to see her lady's maid as the culprit. This she was willing to do, for she was jealous and her jealousy was not appeased by her own very good looks. After thinking the matter over she called Rosemary to see her privately.

'I am very worried by what you told me yesterday, Rosemary. The master says Tom is a good worker and he is certain – he told me positively – that he would not do anything bad. Are you sure you didn't lead him on?' The girl coloured indignantly. 'Oh *no*, Ma'am – I would never do such a thing. I was passing by the dairy and he called me to tell me something – I went into the barn where he was standing and . . .' Alice dropped her eyes but listened with attention to a sordid story of near rape and not so distant seduction. Rosemary was angry – and frightened. Alice paused; then went on thoughtfully, 'You have to be careful. You are a girl that men find pretty and it would be

awkward if you had a baby. Especially by Tom because I know my husband, *Mister* Roland, wouldn't like that.' Alice's face, despite its beauty, was hard as she watched her maid to detect a reaction to her words. Rosemary's eyes had become hard and bright. Alice went on, 'Have you any followers, Rosemary? You can tell me without fear. I only want to help you.' 'No, Miss, except . . .' 'Yes? Except?' 'Only Tom, Miss.' Alice relaxed. 'Yes, I think he is a nice boy. And God-fearing. It will help you if . . .' 'I know he's in love with me, Ma'am . . .'. Rosemary's eyes did not relax their hard, animal stare, '. . . if you have a man's love to fall back on'. 'Oh, I have indeed, Miss . . . Ma'am, I mean.' Alice dismissed her after some more minutes of near conversation; she had wondered if she could dare to mention how great a support it had always been to her that she could fall back on the security of Roland's love. It was only after she had told Rosemary she could go that she began to suspect that her assumption of her maid's need for warning, maternal love was misplaced. Her small sarcasm at Roland's susceptibility to a pretty face began to harden, to remain undigested. Envy lay waiting, single-celled, to become malignant.

All night long the noise of traffic rolled; distant gunfire occasionally flickered, like summer lightning, noiselessly in the clouds. Alice composed herself to sleep in her chair, judging that anything more elaborate would scarcely be appropriate to the reception of the enemy forces when they arrived. Roland, having seen that the rituals about the farm had been ceremonially accomplished, drew a chair up next to Alice and set himself to ignore the rolling of the tumbrils. As dawn revealed the shapes of the furniture, Alice awoke to the strange familiarity of things familiar to her since babyhood; even her feelings seemed like old friends, made strange by their inappropriateness to the arrival of a conquering army. She rehearsed each step with a sleepless, unkempt Roland. 'Of course I shall not hide anything. "Here are the keys to all the locks on these premises. I think you will find everything correct." Then I shall retire.' Roland agreed that this would be the most dignified course. 'I don't think you are really putting your mind to it, dear', said Alice solicitously. 'When do you think they will arrive?' He examined his fingers meticulously. 'They are not like invited guests you know. They have not told me when the party is due to start.' She was vexed and felt the occasion was too serious for sarcasms.

3

Gunfire died away: the enemy did not come; preparations for his reception languished, first misted over by Alice's vivid but diminishing anxiety, finally swallowed by the background of her boring life with Roland, the routine of the farm. Alice noticed with surprise that she was bored when something made her tax Roland with lack of interest. He flushed guiltily – itself a novel change in the level uniformity of the ardours of their passion. He tried to restore the familiarity of love. Alice was not reassured as his protestations and denials formed into a hard, smooth coat of love which fitted like a strait-jacket.

She purred furiously till her rage turned to clanging heartbeats beating the murder out of her. 'I will be good . . . no hate or bitterness in my . . . write it out, fifty times . . .'

There was a disturbance in the yard, hurried footsteps and a woman's voice crying furiously, 'Let go! Let me go!' A man swore in pain. 'You bloody bitch . . . !'And then steps running up to the room where Alice and Roland waited in sudden fear to see – what next?

It was typical of these times: an eternity of boredom displaced without warning by flaming dread. Alice and Roland waited with ashen faces and staring, questioning eyes. The pounding footsteps fused with their pounding hearts – battered from without and within. The door crashed open and a woman half fell into the room.

She was gorgeously dressed in a quilted, crimson gown. With open mouth she looked from Alice to Roland, stammering with fear. 'Oh, Miss! I'm sorry, Miss. I couldn't help it, Miss! You sent me away before! I couldn't . . . the last train couldn't go. They stopped it and turned us off.'

A car in the yard started up and drove away, the sound of its engine fading into the distance. Then silence flowed back into the room where the three had stopped to listen. Alice recovered her voice first. 'Rosemary! What are you doing here?' Roland relaxed as if resigning further part in the talk. He noticed that Rosemary was naked but for the gown and ill-fitting shoes. Roland excused himself. 'Must see to the cows; bye-bye', and he bowed himself out of the scene.

The two women faced each other, Alice's restrained, good taste contrasting drably with the tattered splendour of her maid's finery. Alice was tense; Rosemary stared as if unable to comprehend her mistress's incomprehension. 'You can't send me away! They will catch me, like they did before, before I got to the train.' 'You must go! – at once!'

'I can't. I won't! How can you be so cruel?' Alice stretched out her hand as if to compel her towards the door. The movement released something in Rosemary who at once held Alice's hand and bathed it in kisses. Alice was angry, frightened, tense. 'Go! Go! you fool! Can't you see? You put us all in danger!'

'I won't! I'm frightened!'

'Fool! There's nothing to be frightened of.' As she said it she was aware of the fear in her own voice. 'Let me go!' Alice struggled to free herself. Rosemary was startled by her own success. 'Oh, Miss! Forgive me. I'm sorry, really I am', but she did not let her advantage go. Alice, weakened by the months of anxiety since the day the invasion had become inevitable, was no match for her maid. Rosemary knew something of that bright world outside. Alice and Roland existed in a cocoon of fear that gripped them like steel; Alice did not know the world of which Rosemary had had a glimpse.

Alice struggled furiously to free her hands, both now gripped by her maid. 'Please forgive me!' Frightened and humiliated, 'Let go! How dare you!' Her maid stared uneasily into Alice's frightened face. It was fear now . . . not anger. Rosemary's flood of apology and prayers for forgiveness did not cease. Nor did she loosen her grip. 'Let go!' Alice could hardly hide that she was near to tears. Her background of wealthy home, conventional schooling and religion did not provide her with the dam to hold back her fear.

She was standing very near to the bed behind her. In her anxiety Rosemary had pressed her mistress ever nearer to it and a last

struggle to release her wrists led Alice to pull Rosemary to her. Both girls fell over onto the bed, Rosemary uppermost. Rosemary's anxiety and guilt were overcome by lusty strength; Alice's weakness inflamed her passion.

The physical contact, her body against the young girl beneath her, caused Rosemary to stare intently into the tear-soiled face. All guilt and subordination gone, she pressed Alice's head back, exposing her throat. She forced the eyelids apart and peered into her eyes. Then she laughed – no trace of shyness now but frank curiosity. 'Why – they are blue! Such a pretty blue too! Not dark and brown like mine.' Alice was indeed a pretty and intelligent blonde, contrasting with her maid's dark colouring. The convention of the superiority of wealth combined with Alice's striking looks served to dim the power of real beauty. Alice's advantages were in eclipse. It was Rosemary who was flushed, the physically dominant, privileged girl.

Both girls were ignorant of sensuous pleasure. For Rosemary, the vital force coursing through arteries, battering her heart and temples, brought thoughts from a reservoir unknown to her. As she gazed she knew triumph. When Alice at last brought herself to meet her maid's stare, the past had gone as if it had never been. Not only had her situation changed, she had herself become the home of feelings that might have belonged to someone else, they were so strange.

Rosemary adjusted her position. The slum child, robust and dominant, luxuriated in the physical mastery. 'They are the same as we are; just as bad if we teach them what we know.' The response from her mistress was unmistakable. Alice had for so many years been starved of passionate life that she was vulnerable to her maid's manipulations. As soon as she had elicited the proof she wanted, Rosemary tossed the hair back from her eyes, sat up and rested on the edge of the bed. Alice also rose, but it was a new Alice, rosy, submissive. 'What does madam wish now?' Rosemary half turned, but without looking directly at her 'servant' held out her hand. 'The nail file, please, Alice.' 'Will that be all, Ma'am?' 'All for the present; get on with tidying the room till I want you.' Alice flushed with pleasure, but this time she was angry and resentful too. When Rosemary looked at Alice she too was aware that Alice's new-found beauty reflected a complex emotion. She might have said something if she had not at that moment seen a face in the mirror beyond Alice's

shoulder. She spun round startled. Rosemary's sudden movement made Alice follow her gaze; it was only Roland.

'Roland! What are you doing here?' It was Rosemary who had recovered first. 'I see', said Alice icily, 'you have met before'. 'Oh, rather!' babbled Roland. 'What an utter damned fool', Alice thought bitterly, 'that husband of mine is. Can he really ever have imagined that I didn't know what those two beauties were up to?' In one respect she was herself surprised. Rosemary recovered, to settle into that very same state of mind which Alice half expected her to deny with confusion. 'My lipstick, Alice', she said with calm authority. Unprepared for this, Alice obeyed and placed it – her special lipstick – in her maid's hand. 'Well, Roland, what have you been up to?'

It was Roland's turn to be at a loss. Rosemary was not acting a part; it was clear that there was something genuine about her hatred and contempt for both husband and wife. Without looking at either she continued her make-up in leisurely style.

Suddenly Alice lost self-control and slapped the manicure set, a present from her father, out of her maid's hand. Rosemary stood up, pale and tense. 'All right, you bloody bitch, I'll make you pay for this. This is not capitalist England now, you know!' For a moment Roland thought he understood it all. 'You fool!' he said to his wife. 'God knows what you have done with your tantrums!' For an instant Alice was abashed. Her sudden rage had taken her by surprise and now she was flooded with a feeling of intense remorse and menace.

'Come, Roland dear' – it was Rosemary speaking – 'I am sure you have had a very trying day. Come to your lovey's arms.' She glared at Alice whose turn it was to be pale and frightened. 'I'm sure Alice won't mind will you? Don't bother about the manicure set – forgive and forget I say! Come, Roland', and she opened her arms in a wide embrace.

For all his hatred, Roland was not prepared for this. He hesitated, scared also by the cold contempt in his wife's eyes. 'Darling!' – it was Rosemary's mocking invitation, but she had overdone it. Roland made a response of disapproval as if the episode were some improbable joke. Were it not for the tense faces of the women and the reality of their hate for each other and the man, the participants could have been an hallucination.

A car was drawing up outside. Rosemary, nearest the window, looked out. A man in a dark suit, athletic, with a slight tendency to

corpulence, was carefully closing the car door. The tension, made worse by the banality of the scene, rose to higher pitch. Rosemary had lost her arrogant assurance and turned dead white. 'Who is the Duke?' whispered Roland. 'Shut up, you bloody fool!' The man had heard something from the window at which they stood; he turned his face up to the three and froze; the stare bound them together, as it were, in perpetuity. He stared with a calm deliberation which contrasted eerily with the horror with which they looked at him. Rosemary had beads of sweat on her now sallow face. Alice could not understand.

Another man, who had been hidden by a buttress of the farm building, joined the first. 'English?' The first nodded and lost interest in them. The group at the window took advantage of the disinterest to move out of sight.

Roland scoffed, 'Whatever is the matter with you two?' Alice had no interest in Roland's futilities; her lips were pursed and bloodless, her eyes angry. 'Oh come on! What have I done?' He appealed first to one and then the other. Alice moved away. Rosemary, appealed to directly, responded as if to continue the hostile banter in which she had been interrupted. Her finery accentuated the fact of being a drab slut. Desires to humiliate his wife with her maid gave Roland's features a fleeting vivacity, but could not withstand the reality. 'I don't know what's happened to you', he said truthfully. Rosemary came to life. 'Nothing! Why, darling?' She had assumed a well-drilled representation of sexual life.

Alice, watching as she realized she was supposed to be, had none of the 'appropriate' feelings of rage and humiliation. Menace overwhelmed her. Through the growing darkness two figures detached themselves from the background of the passage beyond the door. Their entry, though quiet, was not disguised and startled the 'sexual pair'.

Neither man seemed aware that anyone other than themselves was present. They walked to the cupboards in which Alice and Roland kept their clothes and piled them on the floor, drawing up lists of all items. 'Very methodical', said Roland aloud, making no attempt to disguise his sarcasm. 'May I ask what you think you are doing?' The man whom they had first seen getting out of the car stretched himself upright. He appeared to be the senior. 'We are collecting and

checking the personal effects of Mr and Mrs Trubshaw, deceased.' 'There was a maid-servant and man about the house too', said the second man; both referred to some official-looking paper. 'But we are not deceased – yet', said Roland with some asperity. 'Yet?' said the stranger. 'Must be some mistake.' 'Indeed there must!' 'I don't think it concerns us. That's the liquidation department I expect. We are only collecting up their effects.' '*Their* effects!' Alice broke in indignantly, 'But it's *our* effects'. 'Are you Mr and Mrs Trubshaw? Who's this? You Miss Slocombe, the maid? Have you seen . . .', he consulted his paper . . . 'Mr Jeremy? He's the man isn't he? It's nothing to do with us, but contact the liquidation people; they may have made a mistake.' 'But do you mean', said Alice flushing angrily, 'you take these things away?' 'That is all we have to do.' 'Do you give us a receipt?'

The man seemed almost shocked. 'Whatever for? As soon as it's all been checked and found correct *they* give *us* a receipt.' 'Who's "they"?' 'Just the department. It's nothing to do with us. It's only because they sent us before the people who should have collected you I expect. It doesn't matter you know.' 'But these are *our* things! This is *our* farm.' It was his turn to look surprised. 'I don't think so; it would be most unusual. Are you alive? Our list says you are deceased. Since the completion of the conquest the usual regulations come into operation.' 'What are they? We have not been told anything!' 'Well no, I don't expect so. Our people would know, but I don't imagine they would bother about what order they collect in – people or things, it's all the same to them.'

The investigation and removal continued impersonally and coldly; it was frightening in its thoroughness. Roland wanted to bluster, but the civil, patient indifference to his presence was intimidating. All Alice's belongings were neatly ticketed, parcelled, labelled – though she could not see the labels – and removed.

'You have left me none of my clothes!' she expostulated. The man understood only imperfectly. 'I have nothing but these things I stand up in!' He came over as if to reply, but all he did was check her dress cursorily, saying, 'That will do for now. You'll be told about your clothes allowance tomorrow.' He walked off before she could recover from her indignation. 'Well I'll be damned!' said Roland, following the retreating figures with his eyes. Alice turned away from him; overcome with sudden fear, she burst into tears. She felt, had felt for

a long time, completely alone. She slapped away a kindly but clumsy attempt to caress her.

That night Rosemary got into bed with Roland and, laughing, pushed Alice out to fend for herself. Proud and humiliated, she went upstairs to Rosemary's bed; she could not bear to share the room with 'those two'.

4

The night of Rosemary's sexual triumph was busily spent in luxuriating in her mistress's bed, her husband and her husband's downfall; she was conscious of the pleasure she felt at his weakness in succumbing to her seductions. It was his marriage and home, as well as Alice's, that she was destroying. The degradation of her class, of her beauty, was being avenged; that night she knew what it was to be the initiator. The feelings obscured the anxiety which had been her constant companion for months during which the successful invasion, its details unknown, had swept over her homeland. 'Her homeland . . .' – the phrase aroused her scorn. It was not *her* homeland; it was the homeland of the rich, the powerful, the dull, the respectable, the cheats, the hypocrites. How smug Alice had been when questioning her – damn her bloody impertinence! – about her 'followers', her 'lovers'! Rosemary remembered her fears (groundless, as it turned out) that she had been made pregnant by the powerful but dim-witted man-of-all-work, Tom. 'You must have encouraged him', Alice said. 'Tom has always been a good worker; certainly I have never known him to be anything but respectful.' Rosemary had dabbed her tear-stained face and stolen a surreptitious glance as she stood, submissively, before her mistress. 'Yes, Miss – I mean, no, Miss', she said demurely. Neither would have admitted sarcasm or ironical denial. Both were unaware that the scene in which they were actors was anything but real, so well had they learned their parts; the past was unknown, the present unobserved; the 'future' was in fact at hand this very night, as Rosemary played sensuously with Roland in Alice's bed.

She had again been 'encouraging' Tom. She and Roland were taken by surprise nevertheless. 'What's that?' said Roland sitting up

with a start. 'It frightened me too', said Rosemary as she soothed him back into her arms, but she was laughing too. A muffled scream had been followed by sounds of physical struggle. 'What was it?' said Roland, partially reassured, allowing himself to sink back. 'Let's listen to them, the rascals', said Rosemary in a dreamy, reminiscent voice. 'Who is upstairs? Who's in your room?' 'Nothing, nothing – go to sleep, my pet. Or you can stay awake and listen to them if you like. It's nothing. Only Tom and Alice having a bit of fun.' Thoroughly awake, horror-struck, Roland scrambled out of bed and began hurriedly to throw on his clothes as he groped for them in the dark. 'Don't be a fool!' Rosemary was alarmed now. 'Come back into bed!' she ordered in peremptory tones. Bewildered, unable to see where he was going, Roland at last returned, shivering, to bed. 'What's the matter with you?' she scolded as she stimulated him. 'Can't they have a bit of fun as well as us? I bet she encouraged him!' 'She wouldn't do such a thing. Who told you that story?' Roland could not see her face, but he could feel her laughing mockingly. It did not seem – or was it? – to be unkind.

The sounds from the floor above were unmistakable. Powerful feelings flooded Roland's mind, but did not include sexual passion for Rosemary. She was frightened to realize that her stimulation, usually unfailing, did not draw him to her or seduce him from fear. Both listened to the struggle. Alice's protests gradually became muffled and finally ceased altogether.

'He's murdered her! Are you sure it was Tom?' 'Of course it was.' He was not reassured; but he had sown doubt. Rosemary knew she was lying. She had encouraged the farm lout to believe that Alice would be expecting him in her, Rosemary's room. She had been an idiot to blurt out that she 'knew' anything. Besides, she did not know; even if it were Tom, who knew what form his rage would take if he felt Alice was fooling him? Or even if her resistance served to inflame him further? There were such things as murders of passion.

They listened. The quiet had turned to silence. The silence had become absolute. Rosemary was furious to find that her plans for the use of the night had so miscarried that dawn already lit the curtainless windows. The pair listened and watched; the growing light promised a rare day; promised, but did not fulfil. The window, framed in light, revealed lack of curtains and the room bare of its treasures. Once Rosemary had coveted them; now she was the owner.

But no magnificat dispelled, or even obscured, the dread which grew with the dawn.

'I'm going upstairs', said Roland desperately. She did not restrain him, but instead joined him at the mean attic door. For a while they stood silently and gazed at the dirty and disordered bed. 'Look peaceful, don't they?'

The phrase lit up the scene of his mother lying in her coffin 'like undertaker's confectionery', he thought as he had surveyed the ghoulish artistry of funeral craftsmanship. 'Looks peaceful, don't she?'

Once, how beautiful the dawn over the English farm and field would have seemed. What might it not have promised? 'Like two kids aren't they? Come on, we can't do anything here', and Rosemary drew her arm through Roland's to go. It was too late.

5

Alice, taking refuge in her maid's room, was desperate with rage and fear. She did not get into the sluttish bed, but composed herself for sleep in the wicker chair, the only comfortable chair in the room. She had been left with scant clothing; it was too dark to read even the trash she would be likely to find. Unable to ignore the cold or prevent her shivering from making the chair creak so loudly that it woke her, she escaped into thought till fact and nightmare were indistinguishable from hallucination.

These experiences became so terrifying that she was sure a man was in the room. She struggled to retain some vestige of hold on fact. When she sought to cover herself with the bedclothes she had scorned, the comfort conspired to make her feel she was in the arms of a man. Then, angry at her resistance, he threatened to bash her. She struggled against the suffocation of the bedclothes which were rammed over her head. She bit at the loathsome terms of endearment which reproached her with being mean. She was convinced it was Tom until the threats became so violent that she knew it could not be anyone so benign as the lout who was docile and contrite when she had reproved him and threatened him with instant dismissal. Even the memory turned bad and became one in which he accused her furiously of going back on the message which she had sent him by Rosemary. She was overpowered, she could not resist the assault. 'Aah . . . I can feel the love-light in your eyes. I know! I know!' he said triumphantly. Too weak, she swooned away.

'Get up, you slut!' The order was uttered harshly. 'I can't', she managed to say. It was daylight. It was the man. 'This your boyfriend?' He did not wait for an answer but turned to some subordinates. 'Take the two women to the truck', he ordered, with no attempt

to disguise his contempt and indifference. 'And these two', indicating the men, 'I've done with them. Block B – in the yard.' Tom and Roland were hustled out.

For weeks Roland had been the object of sporadic and casual inquiry; the procedure had been both searching and thorough. The man who appeared to hold some authority had on one occasion made him so angry by the searching inquiry about the livestock on the farm that he asked him 'who the hell' he thought he was and turned sulky. The man did not answer or take offence – he dropped his questioning. The next day another took up the interrogation. After a day in which he had been approached by three different men, Roland voiced suspicions. 'There are a hell of a lot of Nosey Parkers around here, I must say', and told Alice why he thought so. Her indifference led him to forget his annoyance before it grew into suspicion. It did not occur to him that his complaint might indeed be a scientifically accurate observation.

Both Alice and Roland were jumpy in a way to which they were not accustomed. Their lives proceeded as they had before the invasion; they were master and wife, joined in a drab, conventional, comfortably-off fidelity. It slithered into an equally drab, conventional infidelity. Then the anxiety and dread of the approaching disaster turned to anticlimactic newslessness. One day Roland saw a number of foreign soldiers in the marketplace at Puckeridge. They looked casually at him; he dared not question them. He realized he was cowed, but did not know why. He hoped Alice would not ask why he had not found out the news – he would not be able to tell her. There *was* no news. Roland belonged to a class which assumed that if there was news he would be told it as a matter of course. Disdain had been cultivated sedulously till it was second nature to hide his poverty beneath a cover of profundity modestly concealed. Uneasy lest others would face the truth of which he was dimly aware, he swaggered and blustered and hoped no one could see his fear. Alice, likewise, was afraid lest the married unit disguise would fail to convince. The life from which Rosemary came was a better preparation for ability to recognize poverty of any kind. The opportunity for observing 'married love' from the vantage of the maid and whore provided binocular vision; with this she could now view love and war. Whether she had the ability to understand the observations which she made was not clear. Like Alice, like Roland, she was cowed, but the emotion differed

for the blend differed. The victorious troops who wandered so freely about the country, the farm, the house itself, knew fear; that, likewise, had a quality which Roland knew was different from his. He had first realized this when the man whose easy insolence he was resenting sprang up to address a stranger who had joined their conversation.

When Roland and Rosemary had been confronted by the man, his unceremonious treatment frightened, but did not surprise them. Alice was suffering from an assault which she had known only as something that happened amongst the 'lower orders'. Roland had once seen a pregnant child stare at him with feral eyes and disappear suddenly, smoothly and silently as if magicked away. Such things did not happen in the world inhabited by English women. Alice had gone before he could tell her of his horror. Just as well perhaps; he had not prepared his speech. Not even clichés would come to help him bluster.

Out in the yard, he and Tom were told to wait. The memory of the pregnant child triggered off feelings which were unfamiliar to Roland. His heart beating fast, aware of great danger, he raced to the corner of the building and dropped to a slow walk. The man, talking to a subordinate on the other side of the yard, would turn in his direction in another moment. Roland slid round the corner unobserved. Where was he going? To Munden, if he could. It was three quarters of an hour's walk and he would have to cross the Puckeridge road. He thought he would be safe till then. By fields and a lane which he knew better than any stranger, it took him an hour to get to the main Puckeridge road. There he had to hide sharply to avoid being seen by approaching transport. Then silence – but for the larks in the blue sky. It was strange to be a fugitive in such a peaceful scene which he knew so well. If he were caught he would be shot – his running away made that certain. He was flying to save his life; why had he not saved Alice? Damn Alice. He did not love the bloody woman, never had, though she was still very pretty. Her looks had become hard as she had soured as they remained childless. Well, maybe she would bear a 'defective' by Tom.

When the Munden farm came in sight he realized he had no idea why he had come. Who was in occupation? What was he to do? England was a prison; it had been 'pacified' – like hell it had! How the larks sang! He had not heard them like that before. He crouched

behind the pigeon cote where he commanded a good view of the homestead and stared at its door as if willing someone to come out.

Suddenly he thought he heard his name whispered from behind. He listened; it was a beautiful day, so still that all he could hear were the larks and a convoy on the main road. He began to relax. He was hearing, as if for the first time, country sounds in his own land. The voice came again, this time more urgent. Keeping his head down, he replied, 'Robin'.

6

Alice jolted in the back of the truck. She was battered, mentally and physically, from her night's experience; more undramatically, from her life since marriage. Near to tears of fatigue, she was unable to tolerate the sight of Rosemary in her ridiculous finery; it seemed impossible that any man could be attracted by such a slut. It was not her get-up that was sluttish; it was not her body; it was her self. Yet she had a tautness of mind which could not be said of herself or Roland.

The truck stopped. 'Get out!' They scrambled out and Alice saw she was at Braughing House, which had belonged to some friends by whom they were occasionally bored. The fabric was intact, but their solid and handsome furniture had, like themselves, been taken away. The women were shoved into the hall. 'Stand there! From now on you are under orders. You will obey instantly. And keep your bloody mouths shut!' He left them and disappeared into an inner room: they could hear men's voices.

It was cold. It must have been half an hour, during which they stood and shivered, before he reappeared. He gave them both rough, blue cotton dressing gowns. 'Take your clothes off and put these on. Come on . . . hurry!' he said angrily as they hesitated, expecting him to withdraw. 'But . . . started Alice. He slapped her hard across the mouth, making it bleed. 'Didn't I tell you to keep your mouth shut?' He collected their clothes and walked off.

As they stood, starved, naked and trembling, despair came near to breaking the resistance of the two girls. 'I'm dreadfully sorry, Miss.' Alice noted with surprise that Rosemary was expressing real compassion. 'I know them. You don't. They are all the same.' 'You know them, Rosemary? How? Have you seen these men before?' 'Oh no, Miss. Though', she added with a meaning nod towards the door off

the main hall, 'I've seen that fat rascal before. And lots more like him.' She addressed the interloper directly. 'Come on, Fatty, want a peep? Can't you get a cock stand with your girlfriend?' The man quickly withdrew. 'There! You see, Miss?' she said in triumph, 'they are all the same if you talk the right language – and, begging your pardon, Miss, but I don't mean English – they know fast enough, I can tell you.'

Alice was not listening. Her attention had become wayward; since the outbreak of war she had noticed a deterioration which she supposed must have gone on longer than she knew. Interested in what her maid said, disposed to question her further, she could not sustain her train of thought. She knew this hall; with an effort she could visualize what had been its appearance when she dined here. Its drab, unfurnished condition established it as if a photographic slide had replaced the scene she knew. Where had the Calverts gone? Where had they been taken? It was easier to believe that the inhabitants of the island had been wiped out and replaced than that there had been any form of assimilation of one population by another. The village had been familiar since childhood. She had never known herself as anything but one of the gentry. Now she stood naked, incongruous, alien, without a point of reference that made sense. True, there was defeat, but this was on a scale of defeat so disastrous that it would be necessary to suppose that something analogous to the Norman Conquest had taken place.

There was movement at the other end of the hall. Two or three men and a woman came in with a jug of water and what might have been surgical instruments. The water was cold. They talked amongst themselves, but otherwise paid no attention to the two girls except to wash them and clean their bodies thoroughly, with no more concern for them than if they had been inanimate. They appeared to talk freely and replied civilly if either Alice or Rosemary spoke to them. 'May I ask what this is about?' The woman gave Alice's question consideration and then replied, 'As far as we know it is in conformity with the S18B.' 'And what is that?' She showed Alice a printed slip. It was a succinct statement, in English, of cleaning instructions. 'We are not allowed to talk to you or you to us.' And that was that. A little later Rosemary, exasperated by an unusually painful scrape between her fingers – they were usually too expert to inflict pain unless with intent – asked if she could apply for a job as a cleaner. 'Out of the question', was the curt reply.

When the cleaning was over the team withdrew and were replaced by medical assessors. The room which had been allowed to become dark, was flooded with bright light. This time there was no conversation and when Alice asked one man if they were to be given food and facilities of a sanitary kind, she was so alarmed by his ferocious gaze that she fell silent.

The medical examination was minute and thorough. The wishes of the two girls were of no consequence. There could have been no more convincing evidence that they were irrelevant than the way the examination was carried out on this and subsequent occasions. It was a daily routine expeditiously carried out.

That night the two were provided with simple beds and bed clothing. Alice felt relief that nothing worse had happened; fatigue did the rest. She heard Rosemary say, 'Oh Alice, I'm so sorry', and lapsed into stupor before she heard what her maid was sorry about.

7

Robin was in a disused compartment of the pigeon cote. It was not used for any purpose; even Colin's sacks of meal had lain neglected for two months since he had been 'removed' – what Roland had learned was the 'pacification'. Robin insisted Roland should not attempt to join him till dark. It was obvious that Robin's safety was not to be prejudiced in favour of Roland's. The unwelcome thought would not have been entertained even one day before.

After dark Roland joined Robin, who questioned him closely, in whispers, over and again – was he sure, quite sure, that no one had seen him at any time on his way to Munden? Why had he come? His old friend was not pleased to see him. On the other hand he did not want him to go. 'After all, they might see you going.' Roland was affronted. 'I don't know how I'm to get food for you; you haven't brought your own I suppose?' 'I say, old man, don't bother! I can scrounge for myself – you know I can. You remember, with the Boche . . .' The idea filled Robin with terror. 'The Boche! My dear man, where have you been? These people aren't the Boche!' 'Oh, I'm sorry' – Roland was angry and sarcastic – 'I thought they had declared war again.' 'Forget it. The Nazis were kind and good. A bit sentimental and damnably incompetent, but this lot – you've got something to learn. Do you know what happened in that last battle? Well, it was the last. There's no army; there's no nation. Do you know . . .' They were interrupted. Stealthy steps were coming upstairs. They stopped outside the door which was ajar. It was pushed open by a dark, stocky man. Roland found himself looking down the long barrel of an automatic. Robin held his hands as high above his head as he could get them. The movement was instantaneous and distracted the man's attention from Roland. Roland, surprised into action, leaped

at the man who fired – too late. Whether he was stunned by the fall, Roland did not know, for he was bashing his skull in with the man's rifle in a paroxysm of fear and rage. 'You damned fool! Look what you've done now! No time. Out of here! They must have heard the gun. Out! you fool, there's not a moment to lose.' They rushed, almost threw themselves, down the stairs and into the darkness of the yard. They were sobered into silence by the stillness of the night. 'As fast as you can. Puckeridge! You damned fool! You damned, damned fool. What did you have to come for? Board and lodging, peace and . . . till you had to come.' 'Shut up', said Roland. 'What an age they've been coming from the guard room, or wherever they've been. Now, move!' They had now gone far enough to dare to move fast. They avoided the road – Robin was certain searchlights would come into use when the body – 'Blast you!' – was discovered. As if in response, two searchlight cars swung out of Munden Lane; one turned sharp right towards Wadesmill, the other left in their direction, both with sirens blazing. 'Lie down! Freeze!' The car raced past. Roland took a deep breath. He laughed. 'Bloody fools! I thought you said they were intelligent. Anyone would think a man on foot needed pursuit by a powerful car doing eighty miles an hour!' Considerably relieved, they walked on. 'I think', said Roland, 'we have probably a good half hour, probably more, till they start back having decided they have missed us. Of course, they may be more intelligent than I think and have pulled up at the pub to "write their reports" in comfort before going back to H.Q. By the way, is H.Q. at Munden?' Robin shivered. 'I'm scared, I'm hungry and I'm cold. What is more, they are not bloody fools. They won that war. In a week there were no British Armed Forces. As for you and your intelligence – why, you haven't even heard the news yet.' 'What news?' 'The news I've just been telling you. You know nothing about it, or you wouldn't talk such rot. Here's the searchlight car, crawling back again. Get down!'

'Don't bother', said a cultured voice immediately behind them as the searchlight car drew up by their side with the beam full on them. 'You were, of course, quite right', he said courteously to Roland. 'The police – didn't Lorca describe them as "with skulls of neuters"? – I think so – are so famous for behaving as you suspected that we thought it might be worth using that bait. Excuse me', he said apologetically, 'for trying so simple a dodge; it does usually work. We just send out walking parties – their pace is more appropriate than that of

the high-powered car – then, when the fugitives relax, they give away their presence in their momentary – with you I am sure it would be no more than momentary, er, – incaution.' He bowed politely. 'Now shall we be getting back? It is rather dark and – dear me – I believe it's starting to drizzle. I expect you could both do with a meal and, I daresay, Mister Remes has told you our rations aren't bad, though for the past two months he has been picnicking, rather than dining, off them. After you.' He bowed the two into the open door of the police car.

At the pigeon cote he was still politeness itself. 'Do you mind', he said, 'if I come and see your quarters? They are, I know, rather rough, but', as he followed them upstairs into the room where Roland had only shortly before murdered the guard, 'I imagine Mister Remes has found them adequate for his purposes. I expect he told you he has been living here for a couple of months.' He looked at the bloody body on the floor. 'Dear, dear. I am so sorry; we are very short-staffed or I would have had this cleared up. He's a countryman of yours. I can't think why he's such a careless fool. Or was, perhaps I should say, but I had warned him repeatedly not to be so foolhardy. I knew he would go blundering up after you when I heard', he again bowed slightly to Roland, 'you had arrived. Dispose of the body at your convenience, gentlemen.' A swift glance round the loft and he was gone. He was back almost immediately. 'By the way, I ought to have warned you. I wouldn't relax your precautions if I were you. These fellows of yours are not very reliable. This poor fellow – you'd hardly believe it, but we warned him repeatedly *not* to be foolhardy and yet he came blundering upstairs after you. Admittedly he was a bit dim and I know you wouldn't do anything rash. If you will go on, Mister Remes, as you have been while you have been staying with us, I am sure you won't get into any difficulty.'

Roland and Robin stared at each other. 'What do you make of that? He comes and goes like the Cheshire cat.' 'Damn the Cheshire cat! I tell you – I'm scared stiff. For God's sake, don't be a bloody fool!' 'I am not feeling quite in the mood to be called a bloody fool', said Roland exasperated. 'Where do we go from here?' '*You* tell *me*. I knew they saw you coming and you had to underline it by murder. Obviously they did nothing; they knew you were here all the time. I wonder who this poor sod is. I didn't see him, did you? How do we get rid of it?' A bullet crashed through the window, hit something

else, and whined away into the darkness. 'Oh God! *That's* their game. We are here free – free to provide them with targets.' Roland was determined to get away before his reserves went. If he didn't, he would become like Robin.

The night, or what was left of it, was a source of terror. They had had no food. Robin assumed, though not so readily as Roland, that they were expected to find the same source of food available as before, namely, the Officers' Mess pillaged by the old cook. 'Come to think of it', said Roland, 'where is the Officers' Mess, now you mention it?' 'I never *have* mentioned it', replied Robin. 'I thought you had seen the Officers' Mess.' 'How could I? I haven't been here for the last two months. It's you – *you* said you got grub every . . .'. Another heavy bullet crashed through the remains of the window, spattering them with glass. 'Are they going on with this do you think? We'd better get out of here.' 'Where to? You forget England has been "pacified" very thoroughly; they don't admit they ever went to war.' Five more bullets came together almost at once. 'Hadn't we better stop talking? They know we're here.' 'Of course they know we are here. Let's get to hell out of it.'

8

The dreamless sleep ended. The day was as empty of events – facts proper to daytime – as the night had been empty of dreams. Meals were served to both girls. It occurred to them that they had no memory of the food; the 'facts' of daytime and night were defective, mutilated. They were having dreams – mutilated dreams – lacking a dimension like a solid body that casts no shadow in light. The world of reality, facts, was no longer distinguishable from dreams, unconsciousness, night. Thoughts with and thoughts without a thinker replaced a universe where discrimination ruled. Dreams had none of the distinguishing characteristics of mind, feelings, mental representations, formulations. The thinker had no thoughts, the thoughts were without thinkers. Freudian dreams had no Freudian free associations; Freudian free associations had no dreams. Without intuition they were empty; without concept they were blind.

Rosemary said, 'You are nice, Alice. I prefer you to Tom.' Alice felt a voluptuous glow steal over her. 'Oh thank you, Ma'am', she replied humbly to her maid. 'Will that be all now?' 'No, lay out my finery; then you can go.' Alice found herself ranging over the wardrobe of exquisite shoes.

Thoughts, whore's apparatus, schooling . . . As she collected these objects she was carried away by an immense love and adoration. Unable to contain herself she said, 'Oh, Ma'am, can't I see you wear them? It would be wonderful to be able to give them all to you. I shall call Roland. He will make a better husband for you than for me. You will make him a better man than I could.' She fell at Rosemary's feet, anointing them with her tears which themselves turned to a precious ointment as they fell. How does she come to waste all her treasures like this? Does she not know what manner of . . . servant this is? Does

she not know what the value of her gifts is – the education, the health, her beauty, our beauty? Does she not know that we were Penelope's suitors? That Homer celebrated us? That we died even before there was a poet to confer immortality upon us? Ronsard knew of us when we were beautiful. Why does she not send them away? Why are we sent away empty? Why are even our thoughts emptied and our concepts denuded of their contents, our concepts and thoughts denuded of their apparatus, equipment, without which they are blind? Did not Kant, our Browning, tell them? Why do they choose Cant, the Barabbas-like thief? I before ee except after see?

Alice, adoring, looked up. 'Who are you? May I not see you as you are?' 'I have told you. I am your maid – your servant – poor, despised, needy, the whore. It was I who sent Tom to you, deprived you of Roland. You can't give me anything.' She spoke without bitterness. Alice looked up expecting to find she was being mocked. There was no mockery. 'But tell me who you are; I shall wrestle with you from dawn to dusk; from dusk to dawn, from O to God; from God to science; from science to God; from security to the infinite that is man's infinity; from the infinite confines of stupidity, from stupor to the bigotry of certitude; from infinite hate to infinite love; from infinite coldness, indifference of the absolute, to the intolerable infinitude of absolute love. Show me.' 'No.' 'Show me.'

'Because of your importunity I will lift the veil. I will not give you sight, but I will give you insight so your greatest will be able to see me in a glass darkly, me in whom there is no shadow cast by turning. You will pay as even your greatest had to pay – "from that time on the balance of his mind was disturbed." He was condemned to live imprisoned in everlasting sanity.'

'Who are you?'

'I am compassion.' 'Who are you?'

'I am your maid – but even then you did not see.'

'Open my eyes.'

'No. I sent you prophets but you would not listen.'

'Open my ears.'

'I sent you Bach.'

'He had perfect pitch.'

'He tempered the clavier well.'

'Send me a better one.'

'No, I sent you Mozart.'

'You took him back too soon.'

'I sent you Beethoven.'

'He was flawed.'

'You flawed him: you would not look at the flaws I made.'

'Show me.'

'I sent the spirochaete.'

'I could not see.'

'It was beautiful.'

'I could not see its beauty.'

'I sent you Thaïs.'

'Who are you?'

'Only now do you give a home to curiosity, but to make it sleep.'

'I will awaken it.'

'I have done that, but you strive to put it to sleep.'

'Tell me who you are. Let me see.'

'I will show and tell. And you will use what I show and tell to stupefy, to drug yourself.'

'Try me!'

'See then: I am Thaïs. I am Helen of Troy. I caused mankind to see Beauty. I launched a thousand ships and burned the topless towers of Ilium.'

Rosemary and Alice have swooned away, but Rosemary still talks.

'Who are you?'

(*Shadowy Figures disguised as S.F. take over.*)

'We are Science Fiction. Who are you?'

'I am the Artist who made the ram caught in a thicket beautiful in gold. I am the hunter who caught the ram in a thicket. I am the thicket in which the ram was caught. Who are you?'

'I am Science Fiction. I am S.F. I am the Fiction which became Science Fact. I am the tomb robber. I am the drug that stole your senses away. I am the tomb, ugly and frightening. I am the thief that made you bury, in the golden ram and its golden, golden thicket, the work of Art. I made you bury it in the death pit of Ur. I robbed the death pit of its terrors. I am the S.F. who, disguised as the holy fool, appeared as the Silly Fool. I am S.F. But who now is this?'

'I am what I am. I am God. I am Satan. I am hell fire. I am the burning bush. I am the fire that all men worship. I am Satan. I stole your thicket and refined it in the fire till it burned so brightly that all men worshipped me. I am Mammon. Who is this?'

'I am Strife. I set God against Mammon. I set the vulva against the penis, the contained against its content. I caused the lean to devour the fat. Who are you?'

'I am the dreamer. I dream a dream. I am the den in which I was buried. Who are you?'

'I am the thought that found a thinker. Who are you?'

'I am the robber who drugged you so you would not know you were being conceptualized. I am the dream that drugged you so you would not know I was a concept that would be so nice that you would never be the same once I had conceived you. You would not know that the direction in which I was robbing you would lead from nothing to unconsciousness to sleep to dream to waking thoughts to dream thoughts to nothingness to O = zero, from O = zero to O which is O = oh! to O which is a picture which is a picture of a hole or greedy mouth or vagina which offers perfect freedom which is death which is perfect freedom which is perfect pitch or absolute colour or Eternal Life or Eternal Death or Perpetual Motion or Perpetual Inertia or Absolute Space or space like mental space in which there exist objects so compact that they are like white dwarfs or so sparse and rare that they can only be grasped by finite means like Poisson's law governing exceedingly infrequent events or so absolute a space that your mental life is itself destroyed as in a body which is anaemic because mind is lost like blood in a body whose capillaries are so greedy that there is not enough blood to be shared. Who are you?'

'I can see you are waking. You will be blinded by day, by sight, because you are so blind you detect the faintest light of an object so dark that increased light is too much. You oscillate, back and forth.'

'No. Round and round. The diameter is so vast that you cannot see the opposite side.'

'No. You oscillate, with so small an excursion that you cannot discern that the excursion would have to be beyond your time to make the journey round the circle. You cannot even detect that the circle and the diameter are signs denoting the same object. You argue . . . who are you?'

'I am strife. I cause you not to agree and the strife wakes you out of darkness. I am confusion. I cause confusion of tongues. I am Babel. I am the Tower that all men are made like. Who are you?'

'I am the garden into which the serpent found entry.'

'I am the beam by which I found a way to enter.' 'I am Urania.'

'I am divine wisdom by which pagan disguise I entered as Urania.'

'I am Palinurus by whom the fleet of lesser helmsmen were able to sail.'

'I am the many-wiled leader who gave Palinurus his orders. Who are you?'

'I am the disguise robbed from Odysseus who is so wealthy in wiles. I flung reason from his throne. Who are you?'

'I am rationalization who is Reason disguised so that I may appear as the slave or the master of the passions. Who are you?' 'I am the king in whose dream you are but the furniture. If *I* were to wake you would go out bang! – like a candle. You are?'

'I am a funny story. I am a child's book. I am wonderland. I am a children's story. You are laughing in your sleep. You are waking up. The funny story which makes you laugh will make you cry. The child's dream will grow up to become adult, the night mare will carry you, like Shakespeare's sonnet, sluggishly away from home but fast, back to where you came from: which is the same place as the one you go to. Godlike, I shall fling you and your tiller back to the domain from which you came disguised as Palinurus, Urania. As men like trees walking. Rooted as trees disguised as men walking. Your root is already in its grave; your flower is already so brave, so fiery red. You slept. Who are you?'

'I am the horrendous dream that turned Science Fiction to Science Fact. I turned hideous night to even more hideous day. And you?'

'I am the Refiner's fire. The glorious sun who was the revolutionary flame disguised as R.F., the république française, the public thing, the thing that turned the hidden thing to the public thing; who robbed death; who robbed the secret of its cover and exposed it as the monster that it is. Who are you?'

'I am thought searching for a thinker to give birth to me. I shall destroy the thinker when I find him. I am the Odyssey, the Iliad, the Aeneid. I prevented Mars from destroying me but I ate away Mars from inside, from outside so he died. He is a memory and a desire: I am the eternally alive, indestructible, indispensable, adorable. I am the force that makes the books. My last triumph is the Mind. The mind that is too heavy a load for the sensuous beast to carry. I am the thought without a thinker and the abstract thought which has destroyed its thinker Newtonwise, the container that loves its content to destruction; the content that explodes its possessive container.'

Both girls woke up. 'This is terrible. Let's get to hell out of it.' 'Why? What's the matter with it? I rather like it', said Rosemary. She looked Alice up and down. 'After all', she drawled, 'you make rather a good skivvy. Isn't that what you and your boyfriends used to call us? Now we workers are liberated you don't like it. Anyhow, how do you get 'to hell out of it', as you put it? *We* couldn't. I couldn't stop your beastly husband making what he, in his beastly way, called "love" – his "beastly" love – to me. I used to laugh at his horrible, mawkish, shop-soiled, left-over love, though of course his public school education, his *gentlemanly* education made it impossible for him to conceive that *his* skivvy – your skivvy – could see through both of you. Why, I knew that you hadn't the remotest idea of how to keep him in his place. I knew from the way you ticked me off about Tom that you hadn't the faintest idea what a woman, a real woman, could do to that blundering dimwit – or his equally dim-witted master. That is why I – *I*, I tell you – decided to set him loose on you that night! And Roland couldn't even enjoy your screams! "Ooo!" he started to blubber', and she began a mocking imitation of Roland's voice, "my poor wife! Is the little itsy-bitsy sweetheart being raped? What a shame!" He couldn't care less. But his bloody school had taught him he was a gentleman so he couldn't even realize he was just a cowardly, snivelling, cock-sucking bastard who couldn't stand up for a woman if he had one! I could show you half a dozen of my girlfriends who were more man than he was! Here, you! Get me *my* shoes – the best ones. And look sharp about it! I'm going to show you how to use Roland! I'll get him here!'

9

'It is all very well to say, "Get to hell out of here." How?' said Robin angrily. 'You'll know quickly enough if you stay and have one of these bloody things crashing a hole through your skull – that will leave a way out!' 'That won't be *less* likely if you start walking around here.'

'You're caught either way – stay or leave.'

The voice seemed familiar.

'Who are you, pray?' said Robin and Roland together. The wind was rising. The crash of the bullets seemed to be heavier, to become merged with the storm. 'God damn it! They *are* shells!'

'You use my name in vain! . . . in vain, in vain, in vain. . . .'

The words were echoing round the storm.

'Christ! I must be hearing voices now! Who are you?' 'Christ – .' The voice echoed round and the storm dropped suddenly to a whisper – 'All Mighty'.

The silence was so sudden that the words were clearly and shockingly audible.

'What the devil was that?'

'At your service!'

Though no one was visible, the voice seemed to be so clear that you could almost see it bow with elaborate and ironic courtesy. 'I told you I had come, didn't I? . . . come . . .'. The echo was almost gentle, like an invitation.' . . . to my arms . . . come . . . come . . . my beamish boy . . . come. Not in terror, like Ozymandias, but kind and good, like Hitler who chortled in his joy. Is that you Cap'n? Down below? Keep . . . till I come again.'

'Who *is* that?' Roland sat up to listen more clearly. He smiled a schizoid smile. Such a gentle smile. 'There! Don't your hear it?' He lifted a finger to signal silence.

I am the discoverer and inventor of homo alalu. I and my fellow homines with our opposable thumbs learned how to give birth and life by opposing penis to penis, vulva to vulva, till one of us began to swell up and up till the whole earth and sky was filled with the swelling and the roaring. It was decided that the monster should be destroyed. But some were lying and deceitful and resolved in their lying and deceit to continue their evil practices in secret and contribute their knowledge of pleasurable feelings to each other by rubbing. Some resolved to find this secret by learning from the secretive ones to do likewise, and others resolved likewise to deceive and lie so they could learn who and what they were that did these things so they could kill those who practised and taught these practices, and so confusion grew and it became impossible to tell good from evil. Some learned to talk, but again the same thing happened, for the language was used by some to perfect the arts of lying and deception and others to increase pleasure, but they could not agree which was which nor which was the sign by which what thing should be known. The monstrous swelling and roaring grew till the world was almost about to come to an end, but then it ceased. There came peace and quiet and the man was seen to be holding a deformed 'thing'. And he lied and said it came from inside him. And some said this was so and some said it could not be so and some sought to destroy the evil thing and some said, 'Let us wait and then we shall be able to tell whether it is as they who say it is evil are right, or whether they who say it feels nice are right.' But no one could say because sometimes even those who said it was good admitted it was an evil brat, but they were not constant and the decision became so late that the brat, if it were evil enough, could slay those who came to kill it and so again confusion grew until even the confusion of tongues, even the counsel, was darkened until it covered the earth. And fear made men worship what they did not know and some said – Let us worship it in ignorance and fear – and some said – Let us worship it in daylight when we do not fear – and some said – Let us make ourselves afraid or we shall not fear – and some worshipped the sun and some the moon. Some likewise worshipped fear itself and some happiness and joy and light. And again they could not agree. And some worshipped what they made and some worshipped their cleverness, saying – We are the highest and best of all animals because we are tool-making animals – and some worshipped that part of themselves which they

thought enabled them to make tools, the tools that made tools, but again they could not agree what that part was or how it should be treated.

What part of England or Shakespeare was it that forged the England that is eternal and will be for ever England? What is foreign soil? Which part is Rupert Brooke, Shakespeare, Milton? Which part will be for ever foreign? Pope was a nasty little man. Who, then, wrote the Epistle to Doctor Arbuthnot? Who knew Doctor Arbuthnot's address so many years ago? Who told Kipling – the worshipper of very ordinary trash – that he ought to write Recessional, and that somewhere amidst the ruck and reel which he not only observed but worshipped there were sinners who might have ears to hear – if he could write? Who told him he could? Who told Bunyan to stop his ears and run; Belloc, that the stupidity of his Church was such that it must have been divine to have survived; Hopkins, that 'double dark' would help him find the 'uncreated light'; Freud, that he needed 'artificially to blind himself to explore the dark places of the mind? Virgil knew that the death of Palinurus was unfair; the author of the *Bhagavad Gita* that God did not conform to the human measures available. Galileo knew he had better conform to fit the Procrustean bed in which it was his fate to lie. Was Jesus a megalomanic fool, Meister Eckhart a time-server, or did he feel that, like Jesus, he would be trapped and then deserted by his God? And Job – did he too know that it was immodest to suppose *his* fishing tackle was adequate for Leviathan?

10

Rosemary stirred uneasily in her sleep and woke. In her game that night she had played the arrogant mistress and turned Alice out of bed. 'Get out! You stink', and laughed coarsely. The faint light of dawn showed her Alice lying on the floor. 'What are you doing there? Alice! Come here this instant. At once! Do you hear?' Alice, ever wakeful, rose up and came over. 'Yes, Miss', she said deferentially. 'I can't sleep properly.' 'Nor can you on the floor. You may get into my bed. No, *not* there', she said petulantly, 'how many times have I told you not to put your head on my pillows?'

It was morning again; Alice was busy arranging things to please her mistress. 'Rosemary, why am I so happy? I adore you. I never want to be anything but your devoted slave.' 'Didn't you ever feel that with Roland?' – Rosemary was brushing her hair – 'Here! I'm sick of this. Didn't they ever teach you to have a lady's maid at your Paris outfit you were telling me about? Good job! You can be my maid now. Dress my hair – properly, like ladies have it.' Alice took over. 'I sometimes wonder why I didn't learn to be a maid. Is it because I didn't know my proper station in life?' Rosemary, now serious, pondered the question. 'No', she said, 'it was because Roland was a bastard. And you were busy learning to be a bastard like all the other bastards at your school.' Alice was shocked. 'Your language!' 'There you go – you were *taught* that that was bad language. Now, when I talk real language, you can't understand it. Listen: she that hath ears let her hear! . . . Now you'll say I'm profane won't you? Just what you bastards taught us children – but we were too tough and resistant to swallow all that bunk at Gold Hawk Square. We were not bastards; we were born of genuine, "ill-bred", bred ill poor, the sort that use bad language because we know that bad language is the right one to

use in a bad world. We knew that fucking was a nuisance. We knew, and our parents before us knew, that it was to be got over and done with as soon as possible; that children had to be produced and got rid of as soon as possible. "Mum", she began to mimic a cockney voice, "Mum! Tell Lily to stop pinching my bottom!" and Mum down the alley yelled, "Lily! Just you leave her B.T. be!" We knew it all, but it wasn't funny. We knew better, some of us, than to laugh at our teachers and we knew who our teachers were – not the bastards but the *real* fuckers. The lilies of the Field. Not the lilies of the botany class and all the silly rot you told me you learnt at your bin. Teaching you sexual facts – what did you say they called it? "facts of life" wasn't it? Makes me laugh! Jesus! Yes, I know, they called it religion and thought "Jesus" was a swear word and "Christ!" was the rude word for "Messiah". Jesus' Mum and Dad didn't marry. No, of course "God" did it! And *she* conceived without sin! Poor girl! Anyone knows that "sin" is what makes you laugh – same as sending people to Hell. My Dad told me that bastards made a Hell on Earth – as if they couldn't wait to get there. Our Father which art in hell, hallow it be thy name, thy will be done – on earth as it is hell! And it was so and the Devil came and looked upon his works and saw that they were – hellish. Did not abhor the Virgin's womb! I should think not – why should he? Just the "thing" for torturing poor woman with! The clitoris for me every time. No wonder – some fool was sure to come and say, "Penis Envy" – it is clitoris envy! And then it takes them ages to wonder why men have penis envy just like women. They do not envy what they've got – of course not – it's what they *haven't* got. And God, they said, was *not* in the mighty wind, but in the still *small* voice, the one that the serpent used – the big snake – *whispering* sweet nothings to Eve. The real fucker doesn't bawl it from the housetops; he whispers it to humble and meek clitors – that is what is "exalted" and becomes erect. *That* little button! Not some bloody, menstrual breast.' Then, in a sudden burst of savagery, she said, 'Anyhow, I've got you where I want you now you skivvy! – you and your "governing class" husband. Get my bath ready. Do you hear? Get it ready I say!' Her voice was rising to a scream. 'Careful', laughed Alice with her finger to her lips, 'or you'll wake the children'. 'What children?', Rosemary asked, looking round puzzled.

Lying on mattresses on the floor were Roland, Tom and the man who had removed their belongings from the farm. 'Are they asleep?'

Rosemary whispered. 'They look dead. How did they get in here?' 'Lie down, never mind', soothed Alice, 'I'm here to look after you. I love you.' Rosemary stared and then, 'I'm sorry, Alice, I didn't mean to be so beastly to you'. Alice looked at her maid in adoration. Then she leant forward and kissed her tenderly. 'I loved it, my sweetheart. Humbly, dumbly. I loved every moment of your flashing, contemptuous eyes. I am your slave – for ever. Let me lie at your feet for ever. I will teach you how to handle these . . .'. 'I see you are learning. At least you can speak a few words of plain English. I am afraid though . . .', she fell back, relaxed and contented, 'of having one of those horrid dreams . . . they are so real . . . of these corpses . . . these wax models'. 'Never mind Rosemary. I shall go to sleep with you. And we can listen to them talking. So scientific! Listen! They have started again. Listen – but don't laugh too loud or you will wake them.'

Roland rubbed his eyes. 'My eyes do trouble me rather. Do you know, I think I must have fallen asleep. I do that sometimes; it goes in a flash. Mostly people don't notice but sometimes I think they do because they look at me so queerly. Or perhaps it is the dream that I have and forget. It goes in a flash.' Tom seemed to be changing every second into someone whom he knew well, but could not remember. It was awkward that he did not know his name. One of his colleagues too! 'Call him "Colin" to myself, but must remember not to say it out loud. It will do for the dream or whatever this is. If it isn't too high-falutin' it reminds me of the shadows on the walls in Plato's cave. You remember', he said aloud, 'that Plato had an idea that what we call reality were really shadows cast on a wall of a very dark cave in which men were sitting, chained, with their backs to a bright light entering the cave from an opening that they couldn't see, but only were aware of by the shadows that they thought were reality. Well, Plato thought that "things", as we call them, and people are really a kind of precipitation of the "Forms". The Forms (either the concept, or, in so far as concepts cannot be called "empty thoughts", the "things-in-themselves"), the "noumena", were not understandable. Plato seemed to think that the Socratic Greeks might at least understand the parable of the cave. But between then and now many hundreds of people have tried, oh, "ever so hard", to understand what it means. And some people, like Jesus, have continued the naïve idea. "If you can't understand the parable, what am I to tell you?" he complained when his disciples were not stupid enough to be simple.

All that they could do was to decide that Jesus was God and shut him up under a tombstone of heavy, cold, religious adoration. I suppose they were foolish enough to suppose that they could get their shot in first before the opponents, who said they had known him from childhood and he was a carpenter's son and they were all so fond of him – why! they were his loving brothers and sisters! It was just brotherly love, and no less an authority than Jesus himself had admitted you couldn't have one who loved you more than a father or brothers or sisters. (Though even *he* preferred a Father in Heaven and not one at too close quarters). They had only come to save him because he was beside himself. Or, in plain Aramaic, "nuts". Well, since then that story has been taken up, whenever it has one of its periods of volcanic activity, by the scientists and the protagonists of the looney bin, the tomb robbers and the tomb builders, the religious outfit and the scientific blackguards who try to keep the humanists and artists and poets under control by murder, sometimes with "loving adoration" and sometimes with Herodic anxiety to find out where the dangerous embryo is, so that they can worship it to death. Of course they were crude, but methods have become refined. The "tool-making animal" found out that tools were very useful and anyone could learn to use a tool and no one need know *how* the tool was being used if it could be covered and hidden. That is where women were so clever. They had an invisible tool and the man had a visible and useless prick. Come, let us find it so we can worship also. So . . . well, some genius had to discover some way in which lying, deception, evasion and their opposites could be used without detection, and how "truth" and noumena-robbing were to be kept inviolate and inviolable. The "discovery" was, in its early stages, difficult because it was so vulnerable. Lying and deception were exposed, usually by some blundering child who could see that the emperor had no clothes, until it had been educated to know better. Hullo! hullo! No one here? Must have been talking to myself. Well, it's all practice I suppose!'

11

ROBIN It's all very well saying let's get to hell out of it if you are brave and wealthy, married to a wealthy and intelligent woman. *I* am to Hell *in* it. How did I ever get to Hell into Munden, with that damned Roland? Anyhow, he's gone, thank God or the Devil – God! What was that? Now I'm hearing voices. Thou shall not take the name of God in vain. When I first heard that it meant – or so I thought – I'm not so sure now . . . you must not be a naughty boy and swear, but *now* I have just seen that my god will come whenever I call upon him, and whichever god it is will come at once – and come with a vengeance. 'And how!' as they say. I begin to doubt the equivocation of the fiend that lies like truth. Some old bore said that. I remember having to learn it, by heart. Of course, I didn't believe a word of it, but I see now, I see that really it had a *double* dose of meaning and not no meaning at all. Well, well, *very* funny! Lies and Truth are indistinguishable! Missus What-not, the cook from whom I stole the cookies, used to say, 'I'll *give* you your *rations.* It's what you deserve. Now just you get out of here!' and I found myself outside in less than no time. Now I have only to want to go to sleep and I find myself *inside.* Ha! ha! ha! – very funny, very funny indeed . . . Shhhh. . . . What a bloody noise you make! You'll wake the whole place. Blood, blood everywhere; even noise is bloody in *this* hell! If I tried to wash these hands they would make even the sea bloody. If I tried to wash my hands . . . even the noise would become bloody and if I try to be reasonable and wake up, even reason itself becomes irrational and if I try to be reasonable. . . . What *could* be more reasonable than mathematics? – well, the mathematics have to become irrational. That bloody man Euclid! Today even Euclid is not safe thanks to that ghastly man Lobachevsky. And Riemann – sh, SH! What's so hellish funny about

that! ARF ARF? – I'll give you ARF! ARF! ARF! In Heaven indeed! Who are you?

BIG SISTER I am someone you have forgotten. Miss Why – bro! How dare you forget me! I'm your little bro. Why! You used to call me Sex-ton! Don't you remember? I used to walk along the row of little snivellers saying their prayers at the ends of the beds and tread on their silly, pink little feet turned sole upwards and say Ooh, Sorry! Ooh sorry! Ooh sorry!' and giggle, and your damn god who couldn't see a kind and loving joke would go AAARF! ARRF! Yes! Ever so funny you looked, scared out of your *damned* wits! And you didn't know whether to laugh or cry. Come 'n get you when you call upon me. You'll do it once too often. That's mathematics – once, *two* – often! And there you are, off like Sports Day. False start. On your marks. Once, Twice, Orphan! Wrong again – back on your marks! Once, Twice, Often. Better, better, but still wrong! Why don't you *try* boy?

SMALL MO Suicide? Well, that's easy enough; the one person one can murder any time – without cost? But in that sleep what Bills may come to shake their peers? If Jill is to be as good as her master what may a pint not do to its pot? What may the bloody noise do to the silence in which it lies imprisoned? *Its gisent la sans voix . . . sans ouie* . . . but suppose some sculptor with his chisel and violence releases 'them' from the stone? Some tiresome William Angelo Moore. Suppose he has no Joyce? No silence deep enough, no space mute enough to bury the brave who came before Agamemnon, no paradise lost enough to satisfy the damned who have gone empty away? Is there no scientific jargon turgid enough? There will always be a pound who will not impound the meaning – the double crossing acrostic solver who dissolves. There is no refiner's fire that does not refine love itself so lords and ladies cease to be refined, and skivvies are crossed with their doubles and lords are crossed with lords and produce half breeds and half breeds look for their better halves and better halves blush red like beetroots. Horny-handed tons of soil soil the white radiants of eternity and turn them into many-coloured life. Black men learn to be white and white men have black hearts and equal votes mate to equivocate. Come on – wake up! You are making such a noise.

HALF AWAKE Was I talking in my sleep? Well, you could call it that. I, the great hunter, stamped over your head, but couldn't break your sleep. Oh baa-ram I had such a funny dream. I thought you were

the lamb of God. I was so Woolley. Well, it is human to Ur. You urred too often. Toot and come again.

PARANOID–SCHIZOID I can't stand this damned noise. It is like being bombarded with chunks of feeble puns, bits of Shakespeare, imitations of James Joyce, vulgarizations of Ezra Pound, phoney mathematics, religion, mysticism, visions of boyhood, second childhood and visions of old age. Possibly, it could be old age itself. All these myths of Atlantis, all these visions of heaven and hell, are they reminiscences? Are they premonitions? Are reminiscences and premonitions, in fact, both the same thing, only seen so long as a domain in which measurement of temporal and spatial time is proper to a constant conjunction of helplessness, omnipotence, idealization, embryonic sense of reality, embryonic sense of sense, transformed for use in a non-sensuous domain of thought without a thinker, from thoughts in which a thinker is itself of the essence of thought.

DEPRESSIVE POSITION What are the rules in this domain of pure thought? How, and in relation to what standard, is the thought 'peculiar', or the dream 'peculiar'? Is it possible to define its peculiarity? If there is no peculiarity, what is to be used instead? What are the counterparts of disturbances, perturbations, turbulences that are violent, invisible, insensible? Analogous to the models made visible by Leonardo's drawings of hair, water? And occasionally by schizophrenic or other psychotic formulations? How does the person know of blushing so invisible, noise so inaudible, pain so impalpable that its intensity, pure intensity, is so intense that it cannot be tolerated but must be destroyed even if it involves the murder of the 'anatomical' individual?

BIG BRO I don't know what you are talking about.

SMALL MO On the contrary, you give the impression you *are* what you are talking about, but do not know the talk *about* it. I see you have woken up. But not become at one with you. My felicitations and commiserations and good wishes for a happy, brand new Introspection. And a jolly Extroversion likewise.

12

CAPTAIN BION I stared at the speck of mud trembling on the straw. I stared through the front flap at the clods of earth spouting up all round us. I stared at the dirty, strained face of my driver Allen – my strained face as I sat by me; at the boomerang that Allen sent me from Australia. I got out and hovered about six feet above us. I knew 'they' would . . . and saw trees as woods walking. How they walked – walk! walk! they went like arfs arfing. Arf arf together, arfing's the stuff for me, if it's not a Rolls Royce, which I'd pick out for choice. Then a nice little Ford bright and gay, and when they came to that ford, styx I say, Valiant for S'truth passed over and all the strumpets sounded for him on the uvver side. Cooh! What 'appened then? 'E talked a lot more about Jesus and dog and man and then 'e sez, all sudden like, Throw away the uvver crutch! Coo! Wot 'appened then? 'E fell on 'is arse. And 'is Arse wuz angry and said, Get off my arse! You've done nothing but throw shit at me all yore life and now you expects England to be my booty! Boo-ootiful soup; in a shell-hole in Flanders Fields. Legs and guts . . . must 'ave bin twenty men in there – Germ'um and frogslegs and all starts! We didn't 'alf arf I can tell you. Let bruvverly luv continue. No one asked 'im to fall-in! No one arsed 'im to come out either – come fourth, we said and E came 5th and 'e didn't ½ stink. Full stop! 'e said. The parson 'e did kum, 'e did qwat. 'E talked of Kingdom Come. King dumb come.

13

MYSELF I knew you would wake him up if you went on making that noisy blood. He says the consistency of his mind never recovered. All he could do was write Opticks and be the Master of the Mint, a mental white dwarf. He never erupted again! Poor Newton! Poor Shakespeare! Poor Galileo, Descartes, Freud, Milton; whose are they – the faces, faint revealed, yet sure divined, the 'famous ones' – ante Agamemnona multi – the mute, inglorious ones? They saw the promised land, the mirage, the fame which is man's last and first infirmity of noble minds. Last, but not least infirmity, the weaker, least powerful helmsman waiting Palinurus-like to be hurled from the throne of the stern, the leader who obeys and by whose position all are ordered to steer. Even Aeneas is hurled from his trust in his steersman by a god whose true face is a disguise which conceals yet another god behind the mask of a benevolent, calm, inviting, alluring, seducing sea. The many-wiled Odysseus, Moses, Meskalam Dug, Arthur, Alexander – *où sont les neiges d'antan*? And what seductions, treasures remain to be unveiled, concealed (though betrayed) by Memory and its binocular, Desire?

There seems to be something to be said for the 'use' to which 'things' are put. If, then, one considers the accumulation of experience and then the use which is made of these 'possessions', one is using the vocabulary which has been forged for and from the world of sensuous experience. That, indeed, is the vocabulary and procedure which I am trying to use in this very communication. It is not likely to be adequate, but there is also the possibility, almost certainty perhaps, that the 'use' which I am able to make of it is as widely exercised only in those respects in which it has a past and forgotten history. It is also an equipment which is peculiar to that part of the spectrum of

thought-without-a-thinker which is peculiar to the biological range, from what could be called the infra-sensual to the ultra-sensual. Even so, the range is perhaps more correctly defined as infra-human (sympathetic) to ultra-human (algebraic) – in other words, a limited range of animal life. At the same time, the range is microscopic from one vertex, and yet too enormous to be likely to be bridged by anything so trifling, so trivial as the products of the human animal. Even so stupendous (on one scale of measurement) a mind as that of Pascal, when face to face with what he and others cooperatively can reveal in the domain of the space of visual capacity alone, was only able to arouse fear and cravings for omnipotent power. *Ces espaces infinis m'effraient*. Newton's vertex, whether employed in the religious or the scientific domain, cost him the disintegration of his mind. Henry IV, limiting himself to the ambition to possess Paris, could do so because its cost appeared to correspond to the smallness of his ambitions – a Mass 'only'. He, like Pascal and Newton, made his vertex 'binocular', but with one eye relatively blind. Nelson, a man of action like Henry IV, could achieve his ambition so long as he used an eye that was 'blind' for purposes of 'not' seeing (which is different from 'seeing'; that activity he left to the 'better' half). But clearly, here and now the better 'alf (arf arf) is threatening to scramble back to the 'conscious' and the relative safety of the world of fact. Daylight is safer; although one must remember that so great a protagonist of Heavenly light was not saved from blindness, the domain of the infinite and the horrors of the formless, any more than the Forms of Plato saved him and his public-thing from the poets. The revelatory instrument, if used, could be employed by the object scrutinized to look at the scrutineer in the other sense (direction). The poet or genius can look at the scientist or genius, and the revelations, which – at the opposite ends of the telescope – are too large and too small to be tolerable, or even to be recognizably related. It is felt to be the 'fault' of the instrument that brings such different objects together. But it might be the 'fault' of the objects for being so different – or is it the human animal that has to 'use' its accumulations of facts, that it has not the experience that would enable it to 'understand' what it sees, blind or sightful? Time I went to sleep. Excuse me . . . (*Exit to* α.)

14

'Well, who asked you to come to Munden in the first place anyhow?' said Roland. 'You know damned well why I came. I wanted to be near, near someone I loved, but who did not love me. And she loved you, who did not and never have loved her and yet married her, you swine.' 'Blast! That ruddy bullet has spattered glass all over and into me by the look of it.' Roland wiped his hand over his face. 'Blood everywhere', he muttered and then continued aloud, 'You mean the bloody bitch Alice? You have to *be* married to her if you want real romance. It's fine for you – wandering around with your tongue hanging out, nursing your marvellous "heart ever faithful" act. I'm married to her. I know – you don't – what it's like to get a good fuck once in a blue moon and spend the rest of the time trying to think up a reply to "darling!" when you are worried to death about some firm trying to dun you for a harvester you have had to buy!' 'It's become very quiet. I held out my hand to see if it's still raining and – no bullets, no sniping, nothing! Do you think the war's over?' Roland stood up. Robin tried to pull him down. 'Don't be a bloody fool! You'll get killed – I only had my hand out. I didn't suggest you stood up. Get down you fool! You have all the luck. I get shot at; I get killed; only I don't die. You stand up, you aren't hurt – *you* collect all the praise for being so *erect*, so honourable, are called love, a mischievous sprite! Such a charming rogue. Even I smile at your antics sometimes.' 'Do you by Job! I've never noticed it. Unless. . . . Yes, of course! That ghastly expression! Grinning like a Cheshire cat. It must be your smile! Excuse me! I never knew. Of course! Of *course* – it's Alice's very own pussy. It must have been smiling. And I thought you were showing your teeth. Allow me to introduce – the right honourable; this is my dear old friend. Excuse me – can you tell me how we got here?'

BETA Count – the cat disappeared – allow me to introduce you to my dear friend Cox! A fellow of infinite jest, my dear chap . . . hullo! What's that hellish noise? Of course, it's only me larf-arfing! Anyway you are making noise enough to waken the dead. That includes the living who might as well be dead for all the thinking they do and the dead who remain obstinately alive long after it's time they were dead.

ALPHA And even myself, whose thoughts and feelings linger on long after I have woken up and remain active and alive in my waking life long after it is expected or supposed (by whom, pray? Shut up!) that I should be dead and buried (where?) In the land of nod, the unconscious, the forgotten, the . . . wherever else I am to go to – the Future will do for a sort of royal cemetery as well as the past. Below the Thalamus. The royal cemetery at Ur, Newton, Shakespeare, Descartes. But some are so deeply buried, forgotten, even their names swallowed up, that they need exing the cave. Even metaphors come alive, otherwise the words that are needed achieve the qualities of 'life'. (More bloody metaphors! Who ever could sort out a mass of verbiage like this?) You could try calling it 'Paranoid Schizoid' after – a long way 'after' – Melanie Klein. Good idea. Good dog paranoid schizoid; here, here is a nice piece of jargon for you. Suspicious are you? Take *that* then! Another great lump of free associations, dreams and their interpretations, poetry ('all lies', said Plato, sly, suspicious old dog that he was) is hurled at the poor, new-born baby. 'Intelligence', they call the puir, wee thing. Where is that Anarch of the stops and dashes and never-ending Parentheses? – Sterne, they called him, wasn't it? The Anarchs of the world of darkness keep a throne for thee, puir, wee Intelligence. A rose by any other name . . . might just as well be a stink that smells as foul even if you call it a 'salubrious environment'.

Come here, bad, baaad dog! – Hitler dear, *such* a nice Hitler, *such* a *benito,* such a sweet, rosy little boy! Here, here's a nice salubrious environment! Washed, nay bathed, in our Auschwitz showers. They smell – aah! You can't think how sweet and refreshing those showers are. Now, *here* is a brand new *mind.* It is far superior to the nose as an instrument for discrimination. You just have to attach one of our 'minds' to the old apparatus and this tiny adjustment fitted to the nose and any of the no nonsense organs, to obtain a really superior organ of discrimination! Yes: but how can I tell quackery – use it! Why discriminate? – from truth? Can I tell by it, for example, if this mind

you talk about is any better than all the previous gadgets I have been invited to attach, at enormous expanding cost, to my various existing battery of gadgets? I knew a delightful old stegosaurus who thought he had found *the* answer to the tyrannosaurus. But the 'answer' was so successful that it turned into a kind of tyrannosaurus itself and loaded him with such fame – not to mention exoskeleton – that he sank under its own weight. In fact, he was so loaded that the only trace of him left was his skeleton. Yes, but those same dead bones gave birth to a mind. Because while all eyes were fixed on the conflict between Fate and armour (there is *no* armour against Fate) the attacker got through disguised as a bomber. Now, the Mind . . . you just try it. Just attach it to your sensory perceptions! How do I know it won't just turn into extrasensory perceptions – s.p. → e.s.p.? The animal, meaning you who reads this and I who write it and all biological living constructs, have an inborn mechanism for self-disposal. This dogmatic, definitory hypothesis shares the character of the character it represents. On this definitory hypothesis is built the hypothesis and the construct of which it is the foundation.

The tyrannosaurus provokes intrinsically an equal + opposite reaction – the stegosaurus. The stegosaurus sinks under its own 'maginot line', its defensive armour which is its own weakness and makes its own armament, its own weight, under which it sinks. The self-destructive elaboration is blind to the quality which is to lead to its own destruction. If ξ is felt to be the successworthy quality, to be producer of progress, it is also the character unknown and autodestructive. If the Oedipus story is the weapon that reveals homo, it is also the story that conceals, but does not reveal, that by which it will destroy itself. What happened to Delphi? And Socrates? If man is a tool-making animal he will not observe that that same capacity will be more than he can protect himself against. Superficially it may become clear that he is a clever monkey who can produce an atomic bomb that is a potential menace to his existence. While his gaze physiological is directed to observation and 'detoxication' of the menace *represented* by the atomic bomb, it will, by the same token, be directed away from the growing annihilating force, the 'helpless infant'. 'Too much learning will make thee mad . . .'. Too much 'tyranny' – freedom, food, armour, defensiveness; the list can be extended – but the only reality that matters is that which is denoted by 'too much'. Quantity, + and –, requires awareness. In the language suitable for communicating, it

would be called a capacity for discrimination of quantity and quality. But in the domain that concerns us there is nothing that lends itself to the exercise of discrimination; there is no quality, no quantity to be discerned. Relativity is relationship, transference, the psychoanalytic term and its corresponding approximate realization. Mathematics, science as known hitherto, can provide no model. Religion, music, painting, as these terms are understood, fail me. Sooner or later we reach a point where there is nothing to be done except – if there is any exception – to wait. The 'impasse' is itself a word which, in the context of this writing, is known to denote a feeling.

BIG BRO Using some schoolboy mathematics I make a model, thus: – I cannot take five from three using only natural numbers. Natural numbers are the kind of numbers I use if I see a pile of oranges and want to know how many oranges there would be if five were removed from the pile. I would say, 'one, two, three, four, five', as I separated the oranges from the pile. Then I would do the same with the remainder and count thirty. So, given the fruit and the technique I have described, what would happen if I took thirty oranges away from five? First, it would be very improbable that I would want to know anything so ridiculous, and I might be afraid of doing anything because the people around me might be very cross if I wasted their time, and mine, dreaming. In fact, I have just dozed off which shows you. . . . What?

MEMORY I dreamed I was taking thirty oranges away from five. In the dream I didn't see anything extraordinary about taking thirty oranges away from five. The five were very fat, big and greedy and had lots of oranges. I was angry that they should have such masses of oranges when they *were* oranges themselves already! So I suppose I did not see why they should not have thirty taken from them. It was really rather funny – really! What's so funny about it, said one of the big ones. I felt frightened. Well, put like that, what *was* funny? I remembered one of my patients telling me, 'I tell you . . . I never woke up so fast in my life, I can tell you!' So I thought I had better do the same. I *woke* up. What a funny way you laugh. Arf, arf, ARF you go . . . do wake up. What was so funny about it? I told her I had forgotten and couldn't remember. But it was – very funny. I wish I could remember it!

Well, as I was saying, of course you can't take thirty from five – not in reality; not with real numbers. If someone invents negative

numbers and you add them to natural numbers, *then* you can take three from five and get minus two! What's the good? Is that not just playing tricks with numbers? It doesn't mean a thing. *No.* It is pure mathematics. If it's pure mathematics it's all right because it doesn't have to mean a thing. Daft, I call it. There are lots of people who don't think. *They* must be daft too. No: because someone – Lobachevsky or Riemann – invented a daft geometry and now they find it quite useful in space – not the space which Euclid geometrized about infinite space, space that has no end. Like 'world without end Amen', you mean. Ye – es, perhaps; you mean religious space? I think it's more like the 'space', if there was such a thing, made out of adding conscious space to unconscious space. How? Well, if you have a new kind of space, call it mental space, then you may have to invent a new addition to go with it. Or, if you invent new numbers you have to invent new mathematics. They have: they have invented negative numbers and a new geometry in which there are imaginary points and tangents which have coordinates of two points, one which is real and contingent, rather like ones that are real and separate or real and distinct, and other lines which don't cut the circle at all and are conjugate complex. What the hell is that? I understand points that are real and distinct, or real and coincident, but not points that are conjugate complex. If you weren't so proud of being sane, someone would be sure to notice how frightened you were of 'insanity'. You wear your 'bravery' as a cloak for your cowardice and things you are afraid of – it must be terrible to have a para-sympathetic and a 'voluntary' nervous system so close to each other! What dreams, what thoughts, the other system has! Which is the other? Look at your skin; but I suppose you wouldn't dare to go more than skin deep.

15

'Time you went to sleep. You are right. It is high time you went to sleep. Excuse me indeed! I don't mind if you went to sleep permanently.' It was Rosemary talking to her 'memory' – her mistress, who was sitting on a chair by her bedside, the bed which used to be owned by Alice. 'If you don't go to sleep', Rosemary said threateningly, 'I know you will babble a lot of grown-up-sounding rot like Pound, translating, psychoanalysis, Growth, Newton and other boring and indecent people – oh dear, Alice, I haven't really quite woken. Such a queer dream. Let's forget it and talk about something interesting. I want you to treat me like a friend, Alice.' She made a sound which might have been a stammer or a snort of contempt or just a catch in her breath as she woke. 'Ah, good . . . just what I wanted – a cup of tea. What was I saying? Ah yes; even in the old days, Alice, I thought you would make quite a good skivvy. Sometimes I thought, if only there could be a revolution here! Of course it could never come to pass! But now! Isn't it marvellous? *Do* say it's marvellous – I never thought of an invasion in which all your bloody "upper classes" would be defeated and "the humble and meek would be exalted". It's funny! Did you think, when you went to church, you were singing about *me.* I knew who the mighty were, though. I never thought you would one day bring me my cup of tea and would have to obey my orders. Here, you! I'm getting bored.' Rosemary's mood had changed suddenly to one of violence. 'Make me laugh. Tell me about your lovely public school and its lovely hymns and bibles full of dirty stories – if you'd had the nous to know it!' 'But Rosemary', said Alice, 'we weren't so stupid as you think. We *did* know about the bible and we didn't all think of a bible with a capital "B". I used to find it a true source of "spiritual consolation", but it wasn't all biblical spirit.

Even when I was tiny I remember my mother saying to me, "I don't know what's come over you, child! I think the Devil has come over you!" and she meant it. And it made me afraid too, because that is what *I* thought. And sometimes I thought I could hear the devil laughing. I remember a bit about . . . "and the satyr shall call in the streets". I didn't know what it meant, but it frightened me even when I was awake, and later that night I had quite frightening dreams – terrifying dreams. I expect it was cats. There *were* cats and when we were in India when I was very little, I remember a night when my brother was frightened because a tiger was roaring round the camp because its mate was shot.'

Rosemary had become thoughtful and she spoke in a soft and gentle voice. 'Poor kid; I never thought *you* could be frightened – not as frightened as me when a drunken lout was thrashing my mother in the next room. I *think* it was my mother, but I may have imagined it. Later I knew my mother was a whore because the welfare lady – I knew she must have been a lady! – very kindly told me I should be thankful that I had a good home at the foundling hospital and if I was good I might earn a living as a skivvy! Now wasn't she a kind lady to tell me all that? "Yes, Ma'am" and "No, Ma'am" – I was very quick to learn and I know I could talk and say things like that even when I was two years old.' 'Poor child!', Alice murmured half to herself and half under her breath. But Rosemary's mood had hardened again. 'That will do, Alice. Sometimes I'm in the mood to be amused and then you can make me laugh by telling me about the miseries of the "upper classes". Just now you can dress me. With your education you should know what clothes would suit me best. After that you will find my skivvy's "day-off" dress. It will be a bit out of fashion, but it's neat and I kept it – God knows I *had* to – in good repair. Black worsted stockings and "sensible" shoes. I don't know where they have been dug out from.'

MEMORY – the unconscious.

ROSEMARY Shut up! Who *was* that? Respectable, shoddy, worn-out psychoanalytic, mental 'reach-me-down' mental clichés for the dead-from-the-neck-up! Go to sleep I say! Go to sleep!

ALICE Hush! Don't shout, Rosemary.

ROSEMARY Shout? Shout I never so loudly I could not break their sleep. Shoddy. . . . Who are you?

MEMORY Excuse me. I could not help overhearing you ladies. Fascinating! Do go on, please. My name? Oh, call me Memory.

ALICE (*sarcastically*) What a pretty name! One of the memories of childhood in . . . in, is it Berkshire? One of The Childhood Memories of Berkshire?

MEMORY Childhood, (*contemptuously*) no, one of the Memories of Burkshire. Who are you? A distant – very distant – relation. Your conversation woke me, ladies.

ALICE Do go on – now you're awake. Where were you born?

(*The two girls fall asleep – with boredom. Burkshire continues.*)

B. MEMORY I don't know. A very nice fellow told me I was conceived in Sin.

ROLAND (*waking up*) One of the most interesting conceptions I ever knew was born there. 'Born of the Virgin Mary', I presume? Pleased ter meetcher. I remember you. Haven't heard a word of you since my school days. You were ragged unmercifully in those days, especially on Sundays in Scripture class. There was nothing else to do! 'Arse-'oles inspire', we used to sing till they didn't dare have that him.

B. MEMORY Hymn, you mean.

ROLAND No, HIM – not 'him' with a small h and y – 'Him' with a whisper and a jerk of the thumb over the shoulder. He was the God we *did* believe in. 'Mumbo-Jumbo will get you!'

> The parson he did come, he did come.
> He looked so bloody glum, bloody glum.
> 'E talked of Kingdom Come –

B. MEMORY (*glumly*) Not funny.

ROLAND Cheer up! Come cheer up my lads. To glory we steer. . . . Saw men like trees walking. Up the line. At the Salient – in heaven so on earth. There was a chap there spinning round and round. With his guts hanging out. We couldn't help laughing. Jump into the tarpaulin Bill!

B. MEMORY (*cheering up*) Yes, I remember that – 'there weren't no tarpaulin there!' But Ole Bill he jumped and Kingdom came up and hit him! That *was* funny! The devil's own war that was. I will say that the devil looks after his own. When we pray to H – well, you know who – for hell as it is on earth to save us from the incredible boredom of eternal everlasting . . .

ROLAND (*interrupting*) School Chapel.

B. MEMORY I never had that.

ROLAND No, you lucky devils.

ALICE Angels. You should have heard the school hockey team singing 'Frail as Summer Flowers we flourish. Blows the wind and it is gone'! Laugh! (*Softly, Arf, arf*) Thought I should have died! 'Alice! Wipe that silly giggle off your face – at once.' The angel faces smile! I should just think they did!

ROBIN (*wakes up*) I didn't think you women were listening.

ROSEMARY We weren't. You don't think we'd have to *listen* to hear the bloody noise you make. You and your medals clanking all over the place and your talk about your goddam heroes. Ante Agamemnona multi indeed! And who heard of the countless generations of mothers who died unwept, unhonoured and unsung before some male thought of the Virgin Mary. That poor girl had and still has to conceive without the fun of sinning even! Gee! Fancy having to be made love to by God, that dirty old man!

D.O.M. Canst though draw out Leviathan with a hook?

ALL (*suddenly hushed in a whisper*) Who was that?

ROLAND (*recovering first, complacently*) It's a classic – quotation from Job.

ROBIN You gave me quite a start!

ALL (*hushed*) I swear I heard a voice. I don't like this – it's spooky.

ROLAND (*slightly less complacent – shaken*) It's a quotation from *Bhagavad Gita* .

ALICE (*angry*) Stop it!

VOICE Hear that? I tell you – I never woke up so fast in my life!

VOICE Why, if they woke up you'd just go out – bang! – like a candle.

ALICE You mean we are just a part of his dream?

VOICE Of course! You don't think we are real do you? Roland's waking up now. You'll see; we shall fade away. Our place will be taken by a mass of meaningless abstractions. Listen . . .

16

ROLAND'S VOICE (*the enunciation is clear and precise. He is himself not visible and as he talks he becomes progressively more a disembodied thinker and finally pure thought without a thinker*) Krishna makes the point quite clearly; he shows Arjuna that his depression is part of feelings of compassion which are unworthy of thought, still less of God-head. That kind of thing may be appropriate to reception and emission in the range of sensuous perception whether perceived directly or mechanically by constructs like radio receivers, X-ray films, musical instruments and, in their very crude and gross manifestations, by animals and creatures in the biological range. Very sensitive animal organisms may then be able to interpret or transform the disturbances in the waves which render them opaque and obstructive. St John of the Cross was even able to point out that an analogy can be found which may be serviceable in the process of vulgarization intended to make the grosser crudities even grosser, till they impinge on elements which are still within the spectrum of the infra-sensuous and ultra-sensuous, though not outside that very narrow and limited band. He uses, it will be remembered, the analogy of dust particles which can render perceptible a ray of light that traverses it. Recently, by mechanical means, it has been possible in the biological range (human sub-category) to detect disturbances of great violence which have completely escaped detection by animals dependent on sight, even when sight is augmented by instruments such as telescopes, spectrographs, cameras and preparations of film coated with fine grain receptors – all macroscopic. Yet these perturbations are matters of the greatest crudity and violence!

Though extremely rare and scattered over a huge range of temporal space, they only appear to be extremely rare because of the crudity

and triviality of recorded time as an instrument of measurement. Time as a concept is as inadequate as topological space to provide a domain for the play of such enormous thoughts as those liberated by freedom from dependence on a thinker. The breakdown is as trivial, though made to appear vast by the inadequacy of the framework as, to take a very gross but simple analogy, that which occurs if a simple operation such as the subtraction of five from three is attempted with sensuous objects or even a relatively sophisticated mathematics best limited by being exclusive of negative numbers though well stocked with real numbers.

The failure to grasp the trivial range of the biological spectrum, even when the field of the living is extended by the dead, the animate by the inanimate, has been matched with the vastness of the extent of the relatively minute. This is due, in part, to the failure to grasp the nature of relativity, in particular the fact that it includes paradox. The restriction imposed by the limitation of thought to thoughts with thinkers implies the polarization 'truth' and 'falsehood', complicated further by morals, uninvestigated 'moral' systems, and extensions of Plato's thought to moral views of the function of poets and artists. A similar seepage from the domain of religion may likewise be traced to the inability to respect the 'thought without a thinker' and, by extension, the 'relationship without related objects'. How this has affected even so-called practical thinking is seen in the difficulty of the 'public' to grasp that an analogy is an attempt to vulgarize a relationship and *not* the objects related. The psychoanalytic approach, though valuable in having extended the conscious by the unconscious, has been vitiated by the failure to understand the practical application of doubt by the failure to understand the function of 'breast', 'mouth', 'penis', 'vagina', 'container', 'contained', as analogies. Even if I write it, the sensuous dominance of penis, vagina, mouth, anus, obscures the element signified by analogy . . .

ROSEMARY (*yawning*) Oh my God!

VOICE Why drag me in?

ROSEMARY (*imperiously*) Alice! Come here at once.

ALICE (*submissively*) Yes, Miss.

ROSEMARY Why can't you keep that crashing bore in order? Why did you marry him if you didn't know how to keep him on a lead? You at least should have learned that the factual exercise of a relationship is not the two objects related, like the cunt and the prick,

but keeping one thing inside another. (*Laughs contemptuously.*) The container and contained! My God, I believe he has driven me as mad as he is! I'm even talking this crazy nonsense. I'll get locked up if this goes on much longer!

ALICE Yes, Miss. Excuse my saying so, but – *you*'ll be contained in a container then!

voice ARF, ARF, ARF. Very funny. Very funny indeed!

ALICE & ROSEMARY (*together, hushed suddenly*) *That* was a joke-without-its-fun, a joke *with* a vengeance.

ROLAND (*frigidly polite, resuming his discourse*) The joke with a vengeance differs considerably from the joke with fun. To the superficial observer they can appear similar. Poor Robin. To some extent, if I could compare myself even remotely to him, 'poor me'. Just now, when we left Munden . . . will you ladies excuse me if I continue my discourse?

ROSEMARY Make it snappy then. And not so much abstraction. Alice, this is your fault. Why did you let this fool break loose? You should have kept him chained to your sandals like Diana, that great huntress.

ROLAND Bahram, that great hunter, you mean.

ROSEMARY (*to Alice, angrily*) Baa lamb that great mutton. He thought he was hunting me. I knew I had him on a string when you engaged me – it makes me laugh when I think of it – to be your servant! Paint my toe-nails. And be quick about it! (*Relenting*) No, take your time, dear. And if you are good I'll let you lick them afterwards. You can put some more paint on afterwards. (*To Roland*) Get on. Let's hear about Munden – it looked amusing to me when I looked in on it.

ROLAND The journey from there to Norfolk was a nightmare.

ALICE (*to Rosemary*) Married Life with him was a daymare.

ROLAND (*furious*) The days – with you – were worse than any nightmare, you bitch! Do you know, the war – especially the final defeat and downfall of England – was a *relief*. Do you know why? Because I thought it opened up at least a glimmer of hope that I could be rid for ever – for ever! do you hear? – of you and your suburban, sub-human, sub-civilized, sub-'aristocratic' society.

ROSEMARY (*calmly*) Go on. I'm longing to hear about Munden (*yawning widely*) and your great hunting. It sounds absorbing – if only I can keep awake.

ROLAND I worked hard on the farm although in fact we were so well off that we could live very comfortably even if I had chosen to live on investments.

ROSEMARY So could we. Or so my Mum said. Till I came. Even then she didn't mind at first because I looked like being a beauty and she thought she could invest in me and retire comfortably on my takings in the profession – still, it didn't take long. I made the same discovery as she had, but I discovered I had no intention of devoting myself to supporting her. Go on, Sir Galahad. This is most interesting. It sounds as if we shall discover that your Dad was the wealthy aristocrat who made me frightened till I stuffed my fist in my mouth to stop my yells. I owe my beautiful eyes to staring, dumb with horror, at my Mum's screams as he lammed into her till *he* got frightened and left her for dead.

ROLAND We used to hunt. But mostly it was the fun of rough shooting round the farm. Alice visited us. I liked her. Till one day she flared up at going to church and said she had told her parents she did not like the parson because he gabbled away like an old cockatoo. I liked her fiery spirit and we agreed, privately, that we would marry one day. But war came. It was marvellous, especially when I went into action and didn't run away – the first time. I found I had to go into action again that same day. That I hadn't expected. I knew I would have to go into action again, but I did not expect that the second battle, only a few hours after the first, would feel so different.

ROSEMARY (*examining her toenails*) Alice, you look positively interested.

ALICE I am. I haven't heard any of this before.

ROSEMARY (*yawning with affected indifference*) Well, get on with it. I don't expect you to be listening to voices when you have my feet to attend to.

ROLAND The next day I was lying in a dugout because the strafing was so bad. Everything was going up. At first I was frightened. Then I realized I could run away. I had not realized that before. You couldn't even be brave!

ROSEMARY What on earth has this to do with Munden?

ROLAND It has this to do with it: Munden occurs many years after. In fact Munden lies far in the future. Also far in the past.

ROSEMARY Oh my God! Can't we have a little whoring? That also

lies far in the past. And far in the future. Also, it is at least interesting and not this boring Roland stuff. Alice! Give me that whip. I'll teach you what it is to be my maid. Now; lick! Not like that you fool! Beneath, under the toes. And between. Now the soles of my feet. You will never make a whore the way you are going on. Now – concentrate. Carpe diem, as we used to say and will say again when my client and slave arrives. I am Thaïs. I am Berthe au grand pied – you never heard of them, I suppose?

ALICE Oh yes: I had a question on Villon – le Grand Testament – in my certificate exam.

ROSEMARY Really? How boring you are. It comes natural to you I suppose. And just wake up that husband of yours will you? What about Munden?

ROLAND (*pale and sweating*) Those heavy bullets. They crashed like the slamming of train doors in a tunnel. Robin and I flattened as low in the mud as we could get. Slam! Slam! Slam! Grand slam! The rat hunt. Someone was trying to get me in a corner and club me to death. But thanks to reversed perspective I could cower in the corner where the angle of the walls protected me.

ROSEMARY What happened then?

VOICE 'E fell on 'is arse! Arf, arf, arf!

ALICE What was that?

17

ROLAND I believe it's clearing. God, but that was a heavy shower! Nowadays they use computers. Hard to see what fun they can get out of sports in which you use computers to work out the position – the exact position of your blows. This rat uses it to aim his blows exactly so they just miss. The wheels of God roll slow, but they roll exceeding small. Slam! Slam! Small! These are so close that I can feel the air hot as they pass. It has started again. You can't just have machines. There still has to be some kind of vestigial brain to programme the computer. The tiny vestigial scrap of human cruelty. Small, vestigial, but tough and resistant like a spore – a spore of malignancy. Where's Robin? 'They' must have got him. Ah, the sea at last. The salt marshes and the pee-wees calling and the great clouds billowing past far above. Is the war over? From that warfare there is no release – no release. Daddy! Oh Daddy – stroke me, Daddy! My dear, dear child, my fingers can't reach your sweet face now. Would God I had died for thee! Oh my son, my son: Oh my son Absalom! Past, present and future, all shrivelled up to a nothing – the heart of a computer!

ROSEMARY (*twitching a scarf about her shoulders. Is she cold – or embarrassed?*) Alice, that will do. Really, these men make one quite uncomfortable at times. Pathetic.

ROLAND Just what I was thinking. I had forgotten I used to be so sentimental.

ROSEMARY I never was. Alice – oh, I see you have recovered.

ALICE For a moment I was reminded of my young days and even of the rather attractive days of young love when Roland and I thought we were in love. I almost believed I would go back to it if I could. Do you remember, what Horace said about Lydia?

ROSEMARY Horses? No, never heard of him. Oh, perhaps I do.

That was in my Maid of the Mountain days. That is when I dreamed it would be lovely to go on the stage and act the lead. What was it? Marry a lord, have a mink coat and masses of diamonds, and the third was to fall in love. I have done the lot. Now I am not much more than a computer myself; married to another computer.

ALICE And I am the slave of my mistress. I rather think it's the best of the lot. What about my religious days? I used to be married – Roland and I even married in Church.

ROSEMARY Ask Roland. I never took to it much. He has some high-falutin' stuff about it. Roland – tell us about God.

ROLAND There is a remarkable durability about the human capacity to believe in God. Religion affords a continuing source of study. The persistence of the belief is used by some people as an argument in favour of the existence of God – as if one could not believe, still less that the race could not believe, in the existence and even worship of a reality which somehow approximates to the reality of the human and animal impulse to worship. The mouse or rat sometimes looks as if it were imploring, in a positively worshipful posture, the mercy of the cat who is licking its whiskers preparatory to making a meal of its prey. The human animal, which has achieved a degree of articulate speech, certainly seems to be aware of its equipment of cruelty and the need to glut it, or at least feed it with the appropriate diet for its cruel impulses. "'But not on us", the oysters said, turning a little blue', is a formulation of the material which is to nourish and sustain cruelty in vigorous health. You remember there is a well-known story – it is even attributed, amongst others, to Jesus the eponymous hero of the Christian religion. 'My God, my God', he is reputed to have said, 'why hast thou forsaken me?' If he had thought of his Father as greedy and cruel he would have more rationally complained about being remembered – in time to satisfy his hunger for the satisfaction of his cruelty. But usually the cornered rat seems to feel, in extremis, the advisability of adoration and worship; '*morituri te salutamus*', is a succinct formulation of the principle.

In a civilized world it is more comfortable to believe in its civilized qualities, to obscure the cruel laughter (as expressed in this artifactual dream here) which might evoke, through memory or desire, the configuration evocative of dread. It seems clear that the attempt is inherent to ward off, or to ward off awareness of, something which is dread or terror and behind that the object that is nameless. There

are many formulations of dread, unformulated and ineffable – what I denote O. Plato named it 'forms', of which sensuous objects are the unreal but sensible counterpart. Saint Augustine resorted to using the equipment of religion, which is available in many Religions, to express the separation of good from evil. The systematic separation into two objects, good and bad, conscious and unconscious, pain and pleasure, ugly and beautiful, has provided a framework which seems to have facilitated the development of knowledge, but the element of growth appears to have escaped formulation especially since it resembles maturation. The lack of any simple framework of coordinates by which growth could be perceived or measured can be described in imaginary or simple terms by constructing a theory that a child – fictitious, but plausible without outraging the intelligence – could observe that it eats food which disappears, and then evacuates urine and faeces which can be observed. Further investigation made by our fictitious child leads him to discover that what has been devoured has been transformed into faeces + urine and the process of ingestion has been transformed into a process of evacuation. The normal activity of growth does not betray itself unless it becomes significant through some secondary attribute such as pleasurable, painful or doubtfully related quality – measurements of weight, height and the like which depend upon conjecture, theory and controversy.

Imagine the confusion of the human animal that finds itself called upon to gauge, contend with, promote or discourage something which has apparently no attributes and no language suitable for co-operation either with himself or anyone else except the primitive and defective instruments of the sensuous world! It is difficult to believe that 'the mind' – shall we provisionally call it? – has no boundary which is obviously and clearly bounded by the same boundaries as the anatomical brain. It is worse if it is seen to be inadequately represented by systems of analogues. Consider, for example, the struggles represented by the approach made to this difficult problem by the Greeks . . .

ROSEMARY The Greeks, if I may say so, were almost as ridiculous as you would expect them to be if you allowed yourself to believe what men say about them. In fact, luckily, I did not have to go to school and learn Greek and Greek grammar and Greek translation. I learned all I wanted to know and in less time than it takes for you and

your lifetime of bellyaching noise. I learned, and Homer had the sense to make it possible for you to learn, that Helen was at Troy. One of you fools said it shortly and straight to the point – before the dawn, hidden but not silenced by the cliff above Plymouth – 'Anyhow, whore or no whore, she done it for him free', and that's what started all the trouble. I don't have to write learned scholarly disquisitions about it. Plymouth Hoe, the Siege of Troy – what does it matter? Or Elizabeth, by the Grace of God, Queen of England. Or me? I am still beautiful. Even Alice – look at her now: is she not beautiful? You are silent, Roland. Why do you not listen? There is no thought or language yet the voice of them have gone to the uttermost parts of the earth.

ROLAND What? Why don't *you* listen? What else have I been doing while I have been talking? I have been telling you both something. Some of what I have been telling you I know. A lot of what I have been saying I do not know. I know a little – that part of it which I can feel, very faintly, is being listened to somewhere; it's like being touched in a crowd.

ROSEMARY Because your language is, as you think, not listened to by me, you feel entitled to be impressive and to have an audience that is impressed. My profession is the oldest in the world. I am familiar with the arrogant contempt that you think you are entitled to feel if you muster enough intelligence to formulate that expression together with the musical expression of contempt. Thaïs, Eve, Lilith . . . *there* is a lineage which you cannot begin to match. Because I do not bother to put you in what you would be pleased to call the proper place, you feel very proud to think you know mine. The brand of Cain has also been worn as a brand of honour. Your regiments are vast. Since you have learned to count you have been impressed by numbers – the greater the number the greater the honour. The more or less – that is the only criterion you understand. If I were to unveil my beauty you would – shrivel up and die. No, please! Spare me your protestations; I was aware that if I succeeded in making you hear what I said I should be afflicted with the pain of having to watch and, worse, admire your pitiful posturing display. You did not think, did you, that the poor little guttersnipe from the ghetto, the virgin's womb, might be more than rewarded by not being abhorred?

ROLAND (*in his best Oxbridge manner. He speaks clearly and well and is not disguising the fact that he knows he is doing it modestly and well*) Who found the way to express what he had to say we do not

know. But we do know that as late as the *Bhagavad Gita*, Krishna is described as reproving Arjuna for his depression and the assumption that his standards are the measure of all things. Arjuna has no hesitation in thinking he can reprove Krishna, or God, or the Ultimate Arbiter, whoever that may be, for his defective standards. Why should he fight and kill his kinsmen and friends though he knows them to be no less worthy than himself? He will not fight. In the Iliad, Hector is defeated and his corpse dishonoured. Achilles, though ultimately the victor, can sulk unworthily in his tent. The Trojans are defeated by a stratagem in a war waged on account of a woman and her ignoble paramour.

ROSEMARY !

ROLAND I beg your pardon? . . . I thought I heard someone say something. No? Then I shall continue. (*Softly in the distance – arf, arf, arf!*) I feel cold. Are these the streets . . . of a great city? They seem empty, lonely, deserted. The satyr shall call in the street. . . . Is this Ur, that Royal place? Nineveh? Tyre? Babylon?

VOICE Pretentious ass.

ROLAND Why? What's that? (*After a pause he continues*) I'm scared. I used to lecture well . . . am I losing my gift? What was I saying now? O yes: (*recovery of his theme reassures him*) the Israelitish God was a recognizable, tribal deity showing marked human characteristics, such as jealousy and envy, not markedly different from the inhabitants of the Homeric Pantheon located on Olympus and freely participating in human affairs.

VOICE It is amazing that this lump of a farmer knows all this stuff. The explanation is either that he is so stuffed up with 'education' that he couldn't be expected to be any use as a farmer, or that his farming lout occupation explains his pretentious erudition. It reminds me of the laughable howlers which mark Ezra Pound's claim to be a translator. Do you remember Kipling's joke about Horace's fifth book of Odes? Well, at least that was funny. Even so he pretended quite seriously that he could understand Virgil's understanding of the Mantuan sisters.

ROLAND Was that someone laughing again? An 'educated' Oxbridge accent?

VOICE Oh, do get on.

ROLAND Certainly. What was I saying? Job was rebuked for his setting up, like Arjuna, to be able to judge Krishna by the scale of

moral views which might be appropriate to human beings. Even at school I thought Palinurus had very unfair treatment, but of course anyone could see that you can't expect much of an old bore like Virgil. You have to make allowances for a Classic.

TOM What's your little game?

ROSEMARY, ALICE, ROLAND, ET AL. (*hushed*).

TOM You heard and I heard you, you bastards! What's your little game? (*It grows lighter. Tom peers around and gradually begins to see*) So *there* you are. Pretending to be asleep. All right, I have an answer to that one! I will put you to sleep – permanently. (*Beside himself with rage, he brings his clenched fists down together on the nearest figure. His fists bury themselves in the bedclothes. His violence is such that he cannot recover himself but remains, weeping with impotent rage, unable to regain an upright posture.*)

ROLAND Neanderthal man –

TOM You trickster. I'll get you yet! You think you're clever. I am red-blooded. I live. I am a slave to my passions and by God I'll see to it that you are a slave to mine. Women – that's what I want. But *you* will do. You and your trick cyclists – I'll turn the bastards into my slaves. I haven't got teeth and jaws for nothing. I'll tear your flesh . . . (*Screams*) Let me up! Help me to stand. Then I'll show you.

PSYCHIATRIST You'll wake the whole place, you fool. Nurse, give him a shot – morphia, and quick!

NURSE That's nearly a lethal dose isn't it?

PSYCHIATRIST My job here is to keep order. If it's his life or mine, it's O.K. by me if it's *his*! What is a lethal dose of morphia for him is a soporific for the boss. What is a soporific for the boss is bread and butter for me.

BION What that man What's-his-name calls 'Transformations', isn't it?

STATE PSYCHIATRIST Why, even *I* am transformed. Not a bad little job is it? I'm surprised Newton found it wiser to be master of the mind till he found it safer to be master of the mint. That chap – Jesus – is still a nuisance though. 'We have scotch'd the snake not kill'd it', as Shakespeare, as he called himself, has it. 'Canst thou not minister to a mind diseased?' It's no good driving them underground. Only palliative. Stone death had no fellow. Ah, here they are – stout fellows both. First murderer and second murderer. They look a bit rough, but hearts of gold really. Fine family these Cains. Best of the bunch!

You there – don't you play the flute or something? And you – poet aren't you? Homer? All Greek to me, but . . . say, you! Can't you turn out something good with fighting and murder in it? Oh, I'll get it translated, never you fear! We've a top notch translation department in the F.B.I. What's that? Fucking Bloody Infantry. *That* doesn't sound quite right surely? Anyway – stout fellows all. Nurse – no, not you – the male nurse. Ah, here you are. Fetch up a bucket full of decorations. We shall need them shortly. Put in a few guaranteed hero brand. That usually sends them to sleep quietly. 'An army marches on its belly.' So does Satan though. *He's* a fine reliable chap now! Suffer the little children to come unto me with gently smiling jaws. I love little children – especially if they are young enough and tender enough. What, are they *still* sleeping? They sleep, with their eyes of stone, without sense, without life, beneath the rosy hues which stain the white radiance of eternity. These wretched poets – 'ante Agamemnona multi' – why can't they let them sleep in their graves unwept, unhonoured and unsung? 'What?' they smile, 'our names, our deeds – so soon erases Time upon his tablet? Where life's glory lies enrolled? Their name liveth for ever more.' Now, thank God, we can go to sleep.

ALICE What a night! Roland, what on earth were you up to? Tossing and turning and shouting! I could hardly get a wink of sleep.

ROLAND What were *you* up to?

18

Full stop. Sleep. There appear: ALBERT STEGOSAURUS and his close relative ADOLF TYRANNOSAURUS.

ADOLF What the devil have you got all this armour plate for?

ALBERT Call me Albert. I've got it *for* the Devil. What the devil do you s'pose? I'm resting; it's my spore stage.

ADOLF But I got these teeth for spores. Your vegetative existence is an offence. It's provocative, blast you! It's a resistance! You put ideas into my head. I was all right before you stirred up the ten commandments. Since then I have not been able to sleep for the itch to commit adultery. It's all your fault.

ALBERT There you go! Now you are making *me* feel guilty. Why can't you keep your conscience to yourself? Now I am filled with the gnawing of conscience and re-conscience and remorse. World without end – Amen.

ADOLF Keep your religion to yourself! Now you make *me* want to attend mass. All right – serves you right if I do eat you!

ALBERT You have wak'd me too soon. I must slumber again.

ADOLF Do wake me – in a few thousand years' time.

ALBERT By that time I shall have reached your anus.

ADOLF The right place for anyone's remorse – keep right away from my mouth and teeth! Right up the other end of my alimentary canal.

ALBERT Don't blame me if you have digestive pains. You mustn't blame me if you devour me. My armour plate, my resistances, my spores are pretty tough. Are you sure your anus can take it?

ADOLF I've got a pretty tough unconscious. I don't let my right hand know what I'm up to. It will take you a few thousand years till your concepts cease to be blind and your thoughts without content

are discovered by a thinker without thoughts who has room for a few thoughts who can't find a thinker to give them a home.

ALBERT You give me a headache.

ADOLF I told you to keep your thoughts in their proper place! If you let them get above themselves no wonder your head aches! Take my advice – keep your head for your thoughts. What's that tiny little thing you've got up there?

ALBERT A rudimentary brain.

ADOLF Hmmm . . . I don't like it. Mark my words, it will burst your head open! Chacun a son goût. Ow! What's that? You've shoved your thoughts into me, you vile creature.

ALBERT You shouldn't want to taste what you eat. Why don't you remain satisfied with eating everything without discrimination? Keep your head away from my arse! And if I were you I'd keep your arse away from your head too! Or you'll end up by being anal-erotic!

ADOLF At least I shan't know about it. If this fool Albert thinks I can't chew up his armour! . . .

ALBERT If this fool Adolf thinks my armour can't wear down his teeth! . . .

BOTH . . . he's got something coming to him!

BOTH (*out loud*) Thank God we agree.

19

ROLAND The survivals from the past are pathetic monsters. Pathetic phalluses. It seems to me that the very points which are their strength are also their weakness: separate and coincident. I have remarked this peculiarity of man as a tool-making animal before, but here the same peculiarity seems to inhere in an animal antecedent to man by millennia. They lie there stretched out on the squares of black marble by the rosy hues of the stain on the white radiance of Eternity. Sequential thought 'stretched out' what it purports to describe. But may it not be a peculiarity of thought, of the deductive system which has become detached and confused with the reality that approximates it? If so, it could be an illusion like some foreign, alien object not really part of the thing-in-itself, the noumenon. A book is written in pages; the print goes from the top of the page to the bottom and the sentences conform to a particular grammatical structure; the print is disposed in order from left to right. These patterns are dictated by the need to conform to rules of English composition and typographical lay-out. These dispositions have not only been imposed by the culture, but have imposed themselves on the phenomena being observed without criticism. Is the supposition that the reptilian age is antecedent to Hitler correct, or is it a feature of our thinking process which has become an aberration which has not been considered, but has become part of what is *observed?* Suppose the reality is a meaningless chaos. The appearance of order and coherence may be peculiar to the human observer's deductive system and reported as if it were a feature of a 'constant conjunction', observed from without. Further, what is 'within' and what 'without'? Herodotus put forward the suggestion that fossil shells detected in rock might support the belief that the sea once covered that land. Towards the beginning of this century an educated

man again revived Herodotus' conjecture about fossils without being aware that it had been debated before. *On this evidence,* it cannot be supposed that knowledge of the nature of fossils has been accumulated or advanced in the intervening two thousand years. This is not evidence, but it may be regarded as an artificially constructed model.

BION The whole of this book so far printed can be regarded as an artificial and elaborate construct. I myself, here introduced into the narrative, can be regarded as a construct, artificially composed with the aid of such artistic and scientific material as I can command and manipulated to form a representation of an author whose name appears on the book and now, for the second time, as a character in a work of fiction. Is it a convincing portrait? Does it appear to 'resemble' reality?

Suppose I drew A and claimed it was, or was a picture of, a man. You who are looking at this could, if the conditions existed in which we could converse, agree that I looked 'just like that' and that it was a meritorious and continuing example of my artistic genius. This book could be hailed as bearing, in itself, resemblance to its paternity – that it could not be mistaken for someone else's 'brain child'. But I may have a different aim; say, that of writing a description of psychoanalysis. To me, that the book bore witness to its mental origins might be an unwelcome irrelevance, a feature additional to the main component of my wish to communicate and your wish to receive. It is this double quality of the communication and the fact that significance might be attached in varying degrees, now to one, now to the other component, that I wish to discuss. I want to stress that the components are not 'bi-valent' but multi- or poly-valent even if at first I denote it by a 'bi-valent' symbol – $\lambda\xi$. The signs I am choosing are the Chinese λ and the Greek ξ. If I write it as $\lambda\,(\xi)$ I wish λ to represent a constant, (ξ) an unknown variable. But what is this? Why have symbols appeared? The experience of my own existence stimulates curiosity about me and my objects – of people or things like me.

Since I do not know for sure what these objects are, but want in fact to discuss them, I need to have some way of referring to them. Sometimes it might be a book that I want to discuss. There would be no difficulty usually, because I could make do with a certain familiarity with the use of the English language, using the existing vocabulary and rules of composition. But sometimes, and this is one of those times, this is not true. True, I want to discuss this book. But

that is an unimportant part of my pre-occupation. I want to discuss man, but as soon as I say that, I realize the word 'man' has a definite, perhaps misleadingly and frustratingly definite, meaning. I can say I want to discuss 'wilfred *r* bion'. That would have a definite meaning to some, but it is not true; I don't want to exclude whatever is 'represented', signified, denoted by those letters, 'rbidefilnorw', arranged, according to certain conventions, to form a visual pattern on paper. The problem is obtrusive, but not informatively displayed. If I want to communicate a song to a group of people familiar with the printed word but unfamiliar with sung poems or patterns formed by print on paper, it would obscure comprehension of the music I want them to *hear* when they *see* the pattern formed on the paper. Pound has shown that the culture of a group may be such that they do not print poems that can be sung, but construct poems that form, when printed, a pattern which pleases the eye. If sung and heard, they do not form a sound pattern that satisfies; it dis-satisfies and displeases the ear. I am so defective or badly trained that I cannot be pleased if I read, by eye, a Shakespeare play; yet if good actors transform that same printed play into a dramatic presentation the effect is an experience which is emotionally stirring; it effects a change – in Wilfred R. Bion – that is durable. Some similar effect is produced if J. S. Bach composes a musical score which, transformed by suitably trained people, can result in patterns of sound that can be received by my ear. A fictional character, Quee-Quegg in Moby Dick, can be shown by contrast to be deeply moved, through his eyes, by the pattern which a printed book, of which he does not understand a word, stirs in his visual senses. An author, Herman Melville, 'caused' to be printed a book which had a similar – analogous? – effect on the aforementioned Wilfred R. Bion who 'read' it.

The places in the following few sentences marked by □ are places representing 'some thing' that I want to talk about. 'Some thing' is not adequate; it is too impregnated with pre-existing meaning – too saturated W and at the same time not saturated (λ) enough. I am now as wide awake, conscious, rational, sane as I am ever likely to be between the moment of writing and the day of my □. I pick upon the □ for although I do not know when that is, I imagine that the empty □ will at some time be, like an algebraic variable in the course of mathematical calculations or a legal register of births, marriages and deaths, completed. That moment of time and that formal

entry on a document seems to have a convenience comparable to the inscription, 'finis', which at one time was conventionally used at the end of a book. There are other forms, notably the form which James Joyce regarded as more adequate than the sensuously apprehended cessation of print. He wished his story to conform to some of the vicoesque qualities which he felt he had derived from the philosophical disquisitions of Giambattista Vico, but had not been able to receive from Freud.

$\lambda(\xi)$ denotes a domain without beginning, end, or other dimension. I have to employ an extremely inadequate apparatus to discuss it. I have to manufacture the apparatus as I proceed. I claim that it is artistic though the art has not yet been created; it is religious though the religion has not been and never can (without ceasing to be a religion) be made to conform to any of the dogmata and institutions hitherto regarded as characteristic of religion. I do not expect the art to be analogous to music, painting, literary expression, sculpture or quantum mechanics; the 'uncertainty principle' (borrowed from Heisenberg) used by me both formulates and destroys the formulation together with $\lambda(\xi)$. O is by definition indestructible and not subject to, circumscribed by, beginnings and ends, rules, laws of nature or any construct of the human mind. In the domain of human comprehension Melanie Klein could not reconcile herself to the fact that whenever she had made herself understood, that fact rendered what she understood no longer 'alive'.

This introduction is intended to be a simplification (intended to be, though by definition false); a way of psychological preparation for more rigorous, in every 'sense', presentation. I shall proceed to yet one more 'simplified' (more easily comprehensible) presentation. I claim that though I may not have succeeded in making simple or comprehensible the complexity or confusion of the religious–scientific–artistic formulation, it is not so because it is clarity → confusion oriented, but because it is confusion → clarity oriented. If the English written page can be treated as if it were a model for the thing itself and not just a written page, the *poles* of confusion and clarity could be located at top left and bottom right of the page; my meaning here is not confusion, but talk 'about' confusion.

It is commonly understood that an analysand talks to keep the analyst correctly informed and the psychoanalyst has a similar aim. It is easily demonstrated that such a supposition is erroneous: so

would be the case with the opposite supposition. Questionnaires are drawn up and they are supposed to formulate searching questions to which revealing completions would be provided and the result would be – 'revealing'. In psychoanalysis it is supposed that no questions are formulated and replies to the *No-Question* would be more revealing. I propose an extension of this procedure – the invention of the *No-Questionnaire.*

Once I used to make notes on the session in conformity with my training. I was aware of feeling guilt and anxiety if I had no records to support any argument with myself or my colleagues, or real or imaginary accusers. As I became more accustomed to and more familiar with the way I worked, I realized it would be agreeable if I could indulge in the truth. (I was, of course, convinced that I always had. I would have been indignant at any accusation that I had not always been the soul of integrity. Even as I realize this, I appreciate that this very account is embellished with certain artistically exaggerated locutions intended to add, in a famous phrase, 'veri-similitude to an otherwise bald and unconvincing narrative'.) This discovery appeared to emerge over a period of time. The awareness of the discovery varied in intensity – ebbed and flowed. The 'notes' I made, the 'records' of sessions, turned out to be useful in a way that I did not expect. As a sample I give this imaginary entry:

Nov, (date) My God, my God!
Nov, (date) !!!
Nov, (date)
Nov, (date) been with her brother!! At last
Nov, (date) must (illegible)

In so far as the patient's name was correct, the entry could be called evocative.

MYCROFT HOLMES (*yawning somewhat ostentatiously*) Most interesting.

20

WATSON Shall I shut him up?

SHERLOCK HOLMES My *dear* Watson!

BION (*outraged*) What the devil do you mean by butting into my serious discussion? Are you not aware that I am raising serious issues?

MYCROFT (*in no way impressed*) *Go* on Sherlock. This is more your line than mine. You tell him.

WATSON (*before Sherlock intervenes which he appears unlikely to do*) My dear sir, Mister Holmes and his brother really must not be interrupted; it's a private and important matter.

BION But, my good man, are you not aware that you are entirely fictitious characters? I am a qualified doctor!

WATSON So am I; and an M.D.

BION Nonsense! Purely imaginary and not very bright even in the estimation of your fellow spooks. I am a past President of the British Psycho-Analytical Society and past Director of the London Clinic of . . .

MYCROFT & SHERLOCK (*together burst into a gale of laughter*),=

WATSON (*contains his mirth with difficulty, but manages to be civil*) Excuse me, sir, but I must admit that I have never heard of your existence. I do not want to hurt your feelings or to appear to boast, but although Mycroft has always been of a retiring disposition, Sherlock, and to a lesser extent myself, has a world-wide following. You yourself were admitting that there are imaginary characters who are infinitely better known than countless generations of nonentities. Now excuse me. I am a very busy man – allow me to suggest that you get on that couch there and sleep it off quietly.

BION (*with a gesture of despair, abandons his office to the three intruders and goes to sleep.*)

SHERLOCK I hope you weren't too rough with him, Watson.

WATSON Real people have to be treated roughly if the universe is to be made safe for imaginary people. If you remember, this problem cropped up before with real numbers. Quite impossible for the simplest mathematical problem even to be formulated till negative numbers destroyed the tyranny of being confined in the restricted space of addition just more real numbers.

MYCROFT What was the problem, Sherlock? I had the impression it was something simple.

SHERLOCK The simple part of it has been dealt with by Watson. You heard that fellow Bion? Nobody has ever heard of him or of Psychoanalysis. He thinks it is real, but that his colleagues are engaged in an activity which is only a more or less ingenious manipulation of symbols. There is something in what he says. There is a failure to understand that any definition must deny a previous truth as well as carry an unsaturated component.

WATSON Like your observation of the Silver Blaze case.

SHERLOCK Good old Watson: dead on the mark as usual!

WATSON (*expanding in the unexpected universe of appreciation in which he finds himself*) *You* said, if I remember rightly, 'Let me draw your attention to the extraordinary behaviour of the barking dog', and I said that I had not heard a barking dog. 'That', you said, 'was what made it so extraordinary'.

SHERLOCK Quite so. Nobody will listen to silence. It was the greatest single contribution to the final and merciful extinction of psychoanalysis. If it became possible that someone might notice, or maybe appreciate a silence, the psychoanalysts started their dog-like yapping, yelping and quarrelling. At first I used to listen because it sounded so like meaning, but I realized it was devoid of meaning and a noise likely to make thought impossible. I noticed, being possessed of a rudimentary capacity for thought, they were some of the earliest animals to hate thought. Of course, it was a poet who formulated it first of all.

'Pipe me to pastures still
and be the music that I care to hear.'

MYCROFT Sherlock, you and your fiddling always made me suspect that you were more of an artist or a parson than a scientist.

Can't we get on to the point? Surely it must be obvious to you, as it is to me, that Bion is feigning sleep as a cloak for stealing my time and my capacity as a substitute for his truly real and majestic stupidity? These 'thoughts' are symptoms of an underlying group of transformations. The human animal is very highly developed; its whole sensual apparatus is a re-agent, admittedly usually crude. If it has, as is usually the case, over-eaten, it becomes aware of discomfort – pain, as it calls it. Amazingly enough – we must not make the mistake of underrating it – when it developed beyond the stage of yowling and shrieking, it noticed, after a thousand years or so, that it had a pain. Tyrannosaurus didn't like being eaten. In short, what was amusing and satisfying was the same activity when the perspective was reversed and yet felt quite different – or so it thought. It was not 'different' but 'reversed'. Their rudimentary forms of mathematics never got further than a simple activity which they called algebraic projective geometry. These long words themselves were very popular and gave them nice feelings when they used them, but caused howlings of rage and pain if the direction was reversed. It was not now a part of the anatomical digestive tract, but part of the mind which they felt was somehow derived from, or genetically related to, their nervous system. It was not related to their anatomy. But they had to go on trying to use, as a substitute for thought, an antiquated and inadequate system of models. Wonderful to relate, the system continued to develop – to grow, as they called it – till imaginary beings like me emerged. I am thought-without-a-thinker, but I can assume the appearance of reality and can even be supposed, by one of these exceptionally developed creatures, to be what they call an hallucination. It is in keeping with this domain that an 'hallucination' arouses fear. Any thought that does not fall into the 'rules' which they like to think are obeyed by what they call 'thought' is hated; so are the systems of 'grammar' which differ from the rules with which they are familiar. The marvel is that any procedure, development or growth ever occurred. Now the problem you are posing, my dear Sherlock, is ridiculously simple if you realize the need to use the counterpart of, say, an X-ray film, something that betrays patterns of light and dark thought in a characteristic form. Once that is done, and it is dared to look at the mental configuration without being overwhelmed by fear and distaste – for example, at thoughts without a thinker . . .

SHERLOCK I see what you mean.

MYCROFT I thought you would.

BION I'm damned if *I* do.

MYCROFT You're damned if you don't too. And now I must leave my fictitious state: it's rather fatiguing. Excuse me while you go to sleep. . . . Well, Sherlock, that's disposed of him.

WATSON I thought you were pretty violent.

MYCROFT You have to be – with these real characters. They are either at your throat or at your boots in spite of talk about an arse between these two.

WATSON Even so, they call it 'circumcision'. More long words, though in my time Shakespeare's language was good enough. 'There's a divinity that shapes our ends, rough-hew them how we will.' You were saying?

MYCROFT Leave the long words out of it. They are useful only for mystification and dominance. We can use constructions and verbal transformations of objects derived from what were in origin part of the sensuous domain. For example, that poor fellow, though he knew better, struggled to transform his religious rubbish into what he called 'opticks'. Quite erroneous and limited in so far as he was successful. Berkeley had no difficulty; even labouring with the equipment of religious training he could detect the infinitesimal increments and the part they could play in postponing detection of a fallacy for at least a century.

SHERLOCK Is that a merit?

MYCROFT It involved the development of mathematical rigour. The development of the human mind was, in the course of time, believed to be associated with, or caused by, the central nervous system. Freud thought that. The Greeks believed in ghosts, independent of anatomy yet with a visible counterpart; some function of themselves able to apprehend a personality after the physical anatomy had been destroyed or dealt with, but not before. They thought they could not see it by mediation of the physical, sensuous, visual apparatus. We do not know what physical apparatus they thought betrayed the phrenes, though they spoke of them frequently and as if they had no shadow.

BION As far as I am concerned, you and Sherlock and Watson *are* fictional characters. I can see that they might be described as very vividly conceived fictional characters, but I see no reason for imagining or conceiving of them in any other terms.

MYSELF But *I* do, because the term 'fictional character' itself is an inadequate phrase. Here I have just written 'myself as if I wanted to give it a status different from me. I could call 'Bion' a second-class citizen compared with 'Myself. I indicate without definition that the opinions expressed by me, even if fiction, are worthy of being treated with respect. Those opinions are of superior status to opinions claimed as mine and spoken as if I claimed 'ownership' over them. Their value, in a war for possession, is greater than it would be if they were intended to be 'true'. Conversely, a statement with a vertex of truth value would be of lower value as a weapon in a struggle for supremacy.

BION (*catching sight of Doctor Watson about to speak*) My God! Whenever I see that chap I am reminded of Mister Pooter. Both of them remind me of poor Conan Doyle. How he hated and despised Sherlock Holmes and Mycroft and the other fictitious characters who drove 'scientific', spiritualistic Conan Doyle off the stage. The worst of it is that Watson and Pooter remind me of *me* – maddening! It's quite bad enough going to sleep and being driven off' the stage of conscious, waking, real life by dreams.

WATSON It's nothing like so bad as being driven off the stage by conscious, scientific, 'real' you and your 'real' associations. You probably don't remember what George Santayana said would happen if the scientific 'beasts and blackguards' got hold of the world. Saint Augustine described them as enemies of the City of God.

BION Since you drag in saints, I must remind you that the City of God was itself an attack on the people who were complaining of what the barbarians and their Christian Allies had done to Rome.

WATSON I don't see what you've got against religion.

BION (*in disgust*) I'm going to sleep.

SHERLOCK (*to Watson*) Has he gone? It's humiliating to think that dreams are at the mercy of people who dream.

MYCROFT It's worse to realize that thoughts are dependent on finding a thinker. Shhh . . . what's that?

21

Faint sound – Arf, arf, arf.

MYSELF My God! Here they come again. Those howls! It's eerie. I believe they are nearer. That! That! . . . That is a tiger. *No:* Tigers are only cats. That is no cat. Arf, arf, arfer's little history of England. You damned hyena! If the wine don't get you then the women. . . . He's just insolent, sir. In what way sergeant? He . . . smiles. What! Well it's just a dumb insolence. Nurse. Out damned . . . No, ridiculous. I've got it mixed up. Hullo, may Potter, I mean 'mere pother' about nothing. If the windows rattle – last night it was windy and he waked the whole ward with his nonsense. What, was he sleep-walking? Not exactly, sir. He sat up and shook the bed, he was trembling so violently. 'They are coming!' he said, 'that's the firing party . . . they are coming for me'. Then, just as you'd think he was going to jump out of the window, he quietened down as if he was watching the lawn to see it open. He told me his dead wife used to come out and walk towards him to fetch him – till he screamed! Then she'd go away. Recently he's started crying, quietly, because she doesn't come. 'She won't come now any more', he says; like a baby, as if he wanted her to come. It's a terrible laugh sir. It upsets the whole ward. Better transfer him to the chronic ward. Chloral is it? Double the dose.

SHERLOCK Most affecting! Any damn fool could see his brain is damaged, has been since the war. He was blown up by a shell: they all are! Very respectable. And then there is some equal fool who wants to analyse him!

BION (*waking up suddenly*) The really intelligent – I mean *real* intelligence, not the intelligence which has a fictitious character – want to cut out the brain, so that he will be intelligent too – really like Tyrannosaurus himself and some sea birds. Aren't they beautiful? Don't

they fly high! They are so beautiful, so high – they don't need to be intelligent. They have to be blown up – not like this pathetic fool, but inflated so they can make use of the currents. Just like the birds who see maw! Not too much though, but like my beautiful friend Seymore. Like that man Shakespeare. How do, Cap'n? Art thou sleepin' there? Below? And how's the mind diseased getting along? Have you found anyone to minister in the last few hundred years? Well, yes, you could say that the trouble has been rooted out if it is erased properly. Leave not a rack behind. Nothing less than complete mindlessness will do.

MYCROFT If I may suggest that a thinker should be found.

MYSELF Why? Have you found a thought?

MYCROFT I have been wanting to get it expressed if only I could get you and your psychoanalytic friends out of the way. Let me try; it's this: the mind, though only a very recent development, is a subtle and sensitive one. Freud, as he often did, put his finger on the spot. In the seventh chapter of *The Interpretation of Dreams,* he said, answering his own question, 'What is the conscious? It is nothing less than the sense organ for the perception of psychic quality.' It stands to reason, then, that if he was right, this very recently developed organ, though not secondary to the probings *of* the grosser senses, may be capable of 'probing' and reacting *to* the grosser senses by 'psychic reality'.

BION What's so new about that?

MYCROFT Peace, pint pot. All these dreams and things are not going to lead to a discovery of some still further and more developed mind because there isn't one. But if these dreams and fantasies and bright ideas could be looked at in a way which revealed certain constantly conjoined elements, it might be possible to discern an underlying configuration (as Poincaré suggested of the discovery of a mathematical formula) which showed coherence where none was before, and relationships where none had been previously seen to exist. These revealed configurations might then be seen, like the mathematical formula, to have a reality and meaning. That meaning could then, like a good X-ray, be interpreted.

The mass of material is now so abundant that it is doubtful whether any psychoanalyst could 'interpret' the pattern with the efficiency of a computer. So what is now required is a procedure or instrument that could reveal the configurations. The configurations require transforming into forms capable of programming. This in turn requires something analogous to the discovery of Cartesian

co-ordinates. Then the clumsy formulations of pictorial visions, analogous to Euclidean geometry, could be more elegantly expressed by mathematical formulas of algebraic deductive systems – not the clear but inflexible hieroglyphs of Euclidean imagery. A start could be made with the relatively simple, because unencumbered by free associations, dreams of the schizophrenic. The paranoid–schizoid position is itself clear and chaotic, that is, unspoiled by coherence unless spoiled by intolerance of 'mysteries, half-truths'. Good-night children – everywhere. And please, Consciousness, go to sleep. The world of reality is the place for you!

MYSELF You mean the 'macroscopic' senses. The important 'senses' may be the 'microscopic' – 'ultra'- and 'infra'-sensuous. I see something in this. Mystery destroyed by 'the laughter of a fool', the crackling of thorns beneath the pot, makes a 'hunch' impossible. One 'direction', predominantly followed, could lead to a prolongation of the impetus and further 'discoveries'. Increased quantity transforms to qualitative change. Multiplication of particular instances becomes new discovery. What Mycroft envisages is a reversal of direction; this bypasses multiplication and therefore discovery of a general theory which has already been missed. At present there is a slackening in discovery about the nature of the mind and observance of what the mind can be sensitive to as a sense organ of psychic and physical quality. The mental domain of thought has been and is vitiated by the failure to appreciate the need for direction analogous to the mathematical recognition of the value of weighing direction – 'sense' and sense. Consciousness functions as a receptor so sensitive that no machine can replace it; later there might be a machine which can do what the unaided biological organ cannot.

WATSON What's Bion scribbling?

MYCROFT Take the pen out of his mouth. There – did you anywhere see anything so laughable? – wide-open eyes, wide-open mouth! Look out! He's going to cry!

BION Mind the volcano . . .

MYCROFT He is what these real characters call 'waking up'. At present he has the sense to think he's the White Queen; when he is awake he will call it a fictitious character.

BION And in that sleep of death, what dreams may come . . .

WATSON Now Hamlet. If not Hamlet, Shakespeare – whom he will denigrate or plutichrate by calling a 'genius'.

MYCROFT And won't pay any attention to either on the excuse of his being a fictitious character or a genius and therefore not worthy of attention.

BION I wrote a book once and called it *Attention and Interpretation.*

WATSON What did I say? He has woken up. Back to the real world, 'false fugitive . . .'

MYCROFT 'And to thy speed add wings.'

ROSEMARY You wrote a book! (*Yawning*) How fascinating.

BION You are not a bit fascinated.

ROSEMARY True, but I am fascinating. And that is more than you can claim to be.

22

BION Suppose there is a physical disease, such as asthma, possessing physical components which remain to be discovered. There may be a mind (personality) that fears discovery of the asthma. I regard that as the mental aspect of the personality from which he retreats. Or he may want to develop his existing capacity to a higher pitch. This development could show itself in a man who was unaware of the physical pain caused by a scarcely existent hepatic cancer becoming able to feel pain though previously incapable of experiencing it. But suppose it was not wished or not practicable to foster a development indistinguishable from an approach to hypochondriasis. Without any change in the personality, could one elaborate an instrument no more to do with the personality than a measure of length or height would have to do with the personality that wished to use it to find out how tall he was; or a system of lenses relates to the personality wanting to observe a distant scene? We might fit to his mind an instrument which made him, without any more disturbance than a pair of spectacles, aware of physical pain which he could not detect unaided.

WATSON What about fitting him out with a questionnaire which he could be required to fill in? Then, according to the pattern displayed by his completed form, it would be possible to 'see' the pain.

SHERLOCK Brilliant, Watson! I could hardly have done better myself.

BION So you fictitious characters have turned up again.

WATSON Not Mycroft; only Sherlock and I.

SHERLOCK Since you want to have a hunch – which you can deny if it turns out wrong – I suppose *we* have to stand in for your missing integrity. Is that it?

BION Not *quite.* But certainly I want to be able to repudiate it if it should seem unsuitable for rigorous application.

WATSON I see the idea. I wish you could have my Jezail bullet.

ROSEMARY (*brightly*) What about fitting a woman – me, for example?

ALICE Or even me? Could not that augment – without it costing you any change in your personality – your armoury of instruments?

ROLAND No. What say you, Tom?

TOM No.

(*Roland, Tom, the Man, the two Bions all look questioningly at each other.*)

ROLAND 'An evil and adulterous generation ask for a sign.' Usually it is 'cure' they seek for and that is why the world is littered with cures.

ALICE I must say you look a bit glum – all of you, except Rosemary and me.

ROLAND Certainly you two seem pretty cheerful. So would we be if we were able to have the . . . the luck of being women.

ALICE Well, Roland, why don't you? Why don't you pair off? You could pick any of your pals you fancy.

ROLAND Don't be ridiculous. We aren't 'pansies', homosexuals . . . (*Rosemary stops manicuring her hands and looks up, astonished, but says nothing.*)

ALICE (*looking wide-eyed at Roland*) Oh, Roland, you *are* a poppet! I could almost love you, you're so sweet!

ROLAND (*sheepishly*) Why? What have I done now?

ALICE Perhaps Rosemary could tell you.

(*Rosemary purses her lips but only resumes her manicure.*)

ROLAND I suppose you think it is funny to make men look ridiculous.

ROSEMARY No; it's too easy. They do it so well themselves. Remember the man spinning round with his guts hanging out?

ALICE (*sadly*) For so many years since I first met you I thought you were so marvellous. I remember how fine you looked that day you came back from school. You were so proud, so happy because you were going to join the army. And I was so sure you were going to win the Victoria Cross. I said hullo, but I realized that I was only a silly school girl and I knew you could not be bothered, but I hoped, one day . . . well, no. I don't know what I hoped. Then one day I visited your mother and she had been crying.

ROLAND Yes, I know. A telegram had come that morning to say Gerald had been killed. What of it?

ALICE I was afraid. I thought it was you. And I didn't know I minded at all. So when she said, 'Gerald has been killed in action', I was so happy I was shocked and stammered. Luckily your mother thought I was upset and sorry for her. And she tried to console me. She held me to her and said, 'Never mind . . . it is God's will. You did like him a little, we thought. Didn't you?' I was so confused I just shook my head and she thought I said, 'yes'. But I was sorry, genuinely sorry, soon after I got away home. It was horrible, dark, cold, raining. But I had a warm place in my heart. It was only for you, dear. And then a dreadful fear came – suppose it was you and not Gerald.

(*Roland recovers his equanimity and even some of his complacency.*)

ROBIN I used to think you were a bit sweet on Alice. Once when you came back on leave; I thought you were a lucky man. Alice looked a bit struck on you just as I thought you were on her. So I wasn't really surprised when the happy day came and you led her to the altar.

(*He speaks jocosely.*)

(*Alice shudders at the recollection but says nothing.*)

ROLAND (*the shudder is not lost on him*) What's the matter?

ALICE That nightmare wedding day. I thought it would improve. It did very slightly, for about a year. And then it settled down, nothing dramatic, nothing terrible (*bitterly*), only noticeable if you compared me to a summer's day, one day with another, at intervals of a year. Then it became clear that it was horrible and becoming more horrible. Even then I had to be off my guard, as you are when you go to sleep. 'What dreams may come, aye, there's the rub.' Even when it's only the sleep of life. Luckily I don't fear the sleep of death now. Come not in terrors as the king of kings.

BION Which reminds me – is there anything more terrible than reality in the shape of Wembley Cup Final?

ALICE Yes – Oxford playing Cambridge.

MYSELF I was going to suggest Sade versus Masoch. Or the same at a higher power, so that the change in quantity becomes a change in quality enough for it to be called *war.*

BION Or peace becomes pacification.

MAN Did someone call me?

23

The scene is the vast arena of Wembley. At first sight there appear to be some hundred thousand spectators, but it becomes clear that there are very few people, but an enormous host of animals of every shape and kind. Just near one entry is a small group of men in what Bion, Myself and their party take to be film actors in the uniform of legionnaires of the Roman Army. A cup final supporter, paper streamers and all, approaches one of the motionless figures and addresses him.

SUPPORTER Wotcher chum! Wot's yer regiment?

LEGIONARY Legion Vicesima Valeria Victrix.

SUPPORTER (*in feigned fear*) Lor'! Selling booze – wot's yer line?

A NEIGHBOUR (*shouts across*) Ask 'im if 'e's got some beer, chum!

There is a noise which drowns his reply and conversation rapidly becomes impossible as the pulsations, emerging more and more from the confused noise, themselves become recognizable as an unmistakable rhythmic beat, and the beats as each made up of recognizable sounds. The terrifying rhythm could be matched as if it were a 'swung' version of the Christian hymn, 'Abide with me'. 'Kum not in Quat, Quat, Adze Zhee King of Kongs.' Bzzfading like the whine of a receding shell. Kind of good like guts wound round your bloody throat. The massed bands of the Brigade of Guards crash out the sense of intimacy as the hundred thousand become more crushingly intimate. The space has closed in as if the expanding universe had decided to contract instead. Every so often the rhythm is emphasized by a choral interlude, 'Arf, arf, arf. Suddenly the din stops and is succeeded by a silence pierced by the one sound or word, 'Farrar'. The vast silent crowd wait for Alice to present the prizes. Each animal goes off nuzzling a very small atomic bomb; some suck it, some try

to shove it up their neighbour's anus. Some come up to Bion to complain that it isn't detonated.

Valeria of the Valerian gens is – yes, there is terrific excitement as she approaches the centre of the field to carry out the ritual of Kicking Oft' the Ball, which is the start of the Dance of Death. A terrific spectacle! D. W. Griffiths – that must be why the Twentieth Legion have arrived! And the Head Psycho Anal List to read out the prize winners. Sh. SH. SHHHH. Quiet, everyone! The Papal Guard are about to play the composition by the winner of the music Festival. SHUT UP! You Bas Turds! The quartet will now play 'Solitude' on four trombones. Then the Commander in Chief will say his prayers at the climax of the most intimate crisis of the celebration before – where's that ruddy whore got to? – the Lady Valeria kicks off the Final, Absolutely Final, till next year, celebration of Peace. The general's Lady makes a few mincing steps towards the Ball. Cheers, laughter and tears. She'll have to be quick if she's going to get off before she's murdered.

24

ALICE . . . one thing worse, but I didn't realize it till I came to you to be psychoanalysed.

BION That wasn't psychoanalysis. I didn't know any better then!

ALICE Do you know any better now?

BION Perhaps. I don't know.

ALICE Well, that's something, I suppose.

MYSELF Yes, something. Not much, but something.

ROSEMARY (*still pre-occupied with her appearance, apparently lost to all reality beyond her immediate needs and those seem to be exclusively centred on her looks*) I shall want you to come with me, Alice. I may need you when I go out in about half an hour.

ALICE Yes, Miss. Will that be all for the present?

MYCROFT The difficulty for poor Watson is he cannot adjust to these changes of translucency. Luckily I became used to them when the Bauhaus people were experimenting with the changes in visual planes. Even Sherlock became a bit mixed, but he should have known better. So ought our respected creator, Conan Doyle. But he got mixed up with that Spiritualistic nonsense just as Sherlock became entangled with 'reality' as he called it. Do you remember how he became tied up with 'the woman'? Irene Adler, wasn't it? Silly ass.

ROSEMARY (*appears again, though transparently. She speaks with a coarse accent*) Wot's up now Mister Mycroft? I've not much time to waste because I'm going out with my girlfriend. Showing 'er some of the sights seeing as 'ow she knows nothin' about them. Seein' she's a lady. Proper educated, I don't think! Wot's up Roland?

ROLAND (*struggling with some indignant need to protest; finally, in tones of stifled anger*) Alice was making out we were homosexuals. I was a soldier for four years and was decorated . . .

ALICE Oh, come off it, Roland. What's that got to do with it? Do you think we girls have never heard of a public school?

ROSEMARY Fine times you seemed to 'ave too! I thought all your slap-up institutions only went in for skivvies like me. I remember one day when I 'ad time off from a little pub my mum 'ad got me a job at. Nice boy 'e was too. I went out with 'im. Lord! 'E was like a cat on 'ot bricks! You'd think 'e 'ad never seen a girl in 'is life. I asked 'im wot 'is school was. My! was 'e red – 'e blushed and 'e 'ummed and 'e 'awed. I asked 'im what was the matter. And I found out 'e thought 'is school would find out 'e 'ad been out with me. I could 'ave smacked 'is face! But I didn't. I thought I'd make 'im feel more comfortable by telling 'im 'e looked nice. I said, you're very 'andsome – 'e was, too, I'll say that for 'im.

ROBIN I can see that it is funny to you. It wasn't to us.

MAN (*he is reclining on a couch and has been listening intently for a time, resting on his elbow looking at each speaker in turn*) I can understand why we won. I could not understand before. We learned at school about Shakespeare and Milton, Schiller and Heine. You didn't learn about Heine? Well, we didn't much either, but we liked Shakespeare. We had a foolish teacher. We called him 'unser Shakespeare' because he was so foolish and patriotic. We called him 'old ros' bif too and he thought we were making fun of the English, but we were making fun of him because he made us learn a poem about the Roast Beef of Old England. I didn't think it was a very good poem. Then when the second war came I thought something had happened to the English.

ROBIN Nothing had happened to the English. It was treachery. That man Chamberlain . . .

MAN No, I don't think so. Shakespeare spoke about England being true to itself. And I think what he said was right. No?

ROBIN (*flushed and angry – rises half off his couch, but seeing that the man is fingering a wicked looking automatic, sinks back.*)

ROSEMARY (*Her interest has been flagging but she is now watching with great interest, she beckons to Alice to pay attention; sotto voce*) Watch this, it's interesting. We shall have work to do soon. (*Out loud to the man*) I say! Can I watch? Are you going to shoot him? Oh, do shoot him – please, please! I've never seen a man shot.

MAN Shoot? No. We never shoot helpless prisoners.

ROSEMARY (*disappointed, losing interest*) Oh, I always thought men, if they were helpless, were shot. I had a boyfriend who became

an officer in the Air Force. He was shot escaping – so they said – with fifty others.

MAN It's a lie.

ROSEMARY I thought it was. I expect you are so different from Public School. A girl I once knew was watching an operation with a lot of other nurses. The chief surgeon looked along the row insultingly, making them uncomfortable for being such a poor lot – till he came to my friend, who was very pretty. My friend whispered to the girl at her side, just as she thought he was coming to her. When he saw her she was looking him straight in the face – apparently whispering – about him, of course! Boy! did he blush! He looked like a beetroot!

ROBIN Women always tell that kind of story. I expect he looked away, granted, but . . .

ROSEMARY Robin, did you go with Roland when he escaped from the pigeon loft? That was brave, wasn't it? I *like* our guardian here – or whatever he calls himself. You're all the same anyhow.

MAN (*has stopped fingering his automatic and has put it down with an amused smile*) Kolossal!

TOM I wish I had the gun. But as a matter of fact I am nervous of guns. I had to be invalided out of the army because I couldn't carry a rifle; I was afraid I might shoot someone.

ROBIN (*still smarting under Rosemary's questions*) Poor Tom! Couldn't you have shot some Germans? That would have made you feel better, wouldn't it?

TOM I was afraid I might shoot one of our own side.

ROLAND Much safer that way of course. War and murder are dangerous – psychopathic personality is safer.

MYSELF Not always – it matters which end of the gun you are.

ROLAND (*it is clear that he is contemptuous of psychiatrists and others that he calls 'trick cyclists'*) Well, I suppose it is all right if you are a balanced personality.

MYSELF You mean you think it's all a matter of 'tricks'? Well, it may be. I've certainly been scared all my life and I've had to learn to *look* brave. You always get caught and sometimes you are caught out.

BION Give me an example.

MYSELF (*with discomfort and distaste*) No.

BION Why not? This is a private matter where you are free to say what you like.

MYSELF I am not. I could try to escape the problem of discretion by using material drawn from myself and making it truthful. I cannot – I know myself too well to be honest. There would be no discretion or privacy unless I remained silent about my own affairs. There is a further problem. Non-artistic methods of communication are less accurate than those used by artists. For example, I could use a camera to take photographs, or a recording machine and video tapes to record the audible and visual. I can watch a television picture and see men landing on the moon. My impression is that the photographic representation is inadequate and even if improved by mechanical means, I and others would still regard it as 'flattening'. I can say this with conviction of the psychoanalytic experience also. I cannot describe this experience in any convincing way to someone who does not share it, any more than the moving picture of men landing on the moon tells me what it feels like. It is delusory to suppose that contemporaneity makes the experience communicable. Even while it is happening I may not succeed in drawing attention to the experience, less still with an experience which I know I have had, but cannot now 'remember'.

I can remember, faintly, what it is like to go into battle in a tank; I know enough to be able to describe it in terms of terror. I know a companion had the experience of being invalided out as schizophrenic; another never regained his skill as a soldier. He was said to have been delinquent although he wrote to me in terms of affection years afterwards. Another became disillusioned and desperate and in his last battle was destroyed with the rest of his companions and burned to death. I know that some people, while not having the same experience as myself, were confident that I knew what they felt; some believe I know what it is like to be a psychoanalyst; others neither know what it is like to come to me for analysis nor how it might feel for me to be their analyst. They can learn to pretend they are familiar with psychoanalytic experience as a clever animal learns tricks: the human animal can learn how to play tricks which might convince the ignorant. If trickery were enough, no harm would occur. In a group trickery might afford a solution of the problem. An interpretation appropriate psychoanalytically cannot be right in a room where others are present; the interpretation addressed to a group is witnessed in a way which differs from the psychoanalytic interpretation. In what does the difference consist? Some differences spring to the mind at

once. In psychoanalysis 'common' sense – I am talking about physical sense – suggests that two physical beings only are present; in a group a number of people can be physically 'sensed' (literally) to be present. Wilfred Trotter, in *Instincts of the Herd in Peace and War,* suggested that the group as a whole is greater than the sum of its parts. I feel that I, who am writing this (and thinking before I am writing it), am less than the whole of me. I can 'think' the possibility that my ideas, valued as cultural achievement, are insignificant, 'stuck on' a part of my group reproductive functioning which I choose to ignore by identifying with my sexual life and other functions which have been emphasized through the over-elaboration of the individual by psychoanalysis. Thus, I can argue that the mind and its works are of great significance; the rest, a total, inchoate mindlessness to be called 'the unconscious', is lumped together and glorified and idealized as a further tribute to the mind. Are the gametes mindless, unconscious, mentally active, or do they belong to a category so different that the mind has no apparatus for dealing with them? I put forward, herewith, a theory of ξ with a recently proliferated sense organ known as the 'end', in which various functions, usually associated with psychoanalysis (the Oedipus situation, aggression, rivalry) are supposed to be observed (on the model of forms of dis-order, dis-ease, sex, fear, love). In reality they are patterns, configurations, insignificant in themselves but, if delineated, indicative of an *underlying* reality by their perturbations, regroupings, shifts in pattern and colour; they reflect a category and kind that the human mind cannot formulate or conjecture in their presence. If so, these Oedipus situations, impulses, instincts and characters could be made opaque in the way in which patterns in X-rays are revealed by the use of sensitized plates. The personality or mind, as portrayed psychoanalytically in detail, is a recent photogram of some long-existent reality, of significance only as an archaic physical anatomy might be. Psychoanalysis would appear as an ephemeral phenomenon, betraying forces on the surface of which the human race flickers, flares and fades in response to the unrecognized but gigantic reality.

The practical point is – no further investigation of psychoanalysis, but the psyche it betrays. *That* needs to be investigated through the medium of *mental* patterns; *that* which is indicated is not a symptom; *that* is not a cause of the symptom; *that* is not a disease or *any*thing

subordinate. Psychoanalysis itself is just a stripe on the coat of the tiger. Ultimately it may meet the Tiger – The Thing Itself – O.

BION If I had heard you say this a few years back I suspect that I and my colleagues would have been shocked and thought you were turning against psychoanalysis and were guilty of dishonesty. Indeed, I would be interested to know how you justify the fact that you are still practising – do you call it psychoanalysis or some other term like psychotherapy? – and charging people fees. Can you expand this?

MYSELF Thanks to memory I can make a comparison. The comparison causes change, and on some occasions the change obtrudes. When this happens you feel the change deserves to be recorded and the dialogue between me and me might just as well be conducted between me and a fictitious character. The fiction can be so rhetorical as to be incomprehensible; or so realistic that the dialogue becomes audible to others. There is thus a double fear: that of the conversation being so theoretical that the thoughts might be taken for meaningless jargon; and that of the seeming reality. Having two sets of feelings about the same facts is felt as madness and disliked accordingly. This is one reason why it is felt necessary to have an analyst; another reason is the wish for me to be available to be regarded as mad and used to being regarded as mad. There is a fear that you might be called an analysand, or reciprocally, that you may be accused of insanity. Should I then be tough and resilient enough to be regarded and treated as insane while being sane? If so, it is not surprising that psychoanalysts are, almost as a function of being analysts, supposed to qualify for being insane and called such. It is part of the price they have to pay for being psychoanalysts.

25

MYSELF Hullo! What are you doing here?

ROSEMARY (*who is so obviously present that it is hard to imagine that her presence can possibly have been unobserved or ignored*) Your surprise surprises me. (*Turning to Alice who is equally obviously present*) Alice, do all your men-folk behave so oddly? Well, now I come to think of it, the men in Mummy's society did behave in a similar way. That teenager from Eton or Harrow – I forget which particular outfit he came from: I remember telling you about it. Bion reminded me of it and just now – I suppose I should call you the author? – the way you said, 'Hullo! What are you doing here?' reminded me of it – exactly! – just for a fleeting second. I remember walking along with him thinking how nice and handsome he looked. I did think he seemed a bit nervous, but thought no more of it. But as we walked on and it did not wear off I began to look at him and wonder what was the matter. Then I thought, I believed he was ashamed of being out with me! So, to try him, I said, 'It's not far to my Mum's place; come and 'ave some tea. She would be ever so pleased to see you.' He blushed! He blushed so red you wouldn't believe it. 'blot's the matter', I said, 'are you feeling ill?' Of course I knew it wasn't any such thing. I knew that nice well-behaved gentleman had the damned sauce to be ashamed of being seen with me. So I said nothing. Just put on the accent a bit more – like I'm doing now. You don't look well, I says. You sure you're well? A bit pale, I says – and 'im as red as a beetroot! shall I come to your front door with you? Oh no no no! Please don't trouble. I'm all right, really I am. But I've got to get back to my – prep or something, he says, the dirty young liar! A pal of mine was passing just then and I was so angry I had a good mind to tip him the wink. He wouldn't half have knocked the stuffing out of his pink beauties!

Of course he knew Mum was a whore, but naturally he didn't poke his nose into her business and I knew he liked me. But I said nothing. Well, to – ta George, I says. Sure you are George? – I says, a bit sarcastic like – of course I knew the young liar's name wasn't George by that time and I found out who he was. I had a good mind to send him one of those frightening letters so he would think I was going to blackmail him. But I didn't. I don't know why; I wouldn't think twice about it but I've always been a bit particular.

ROBIN Have you? Some of your pals aren't so particular.

ROSEMARY That's interesting. How do *you* know whether they are particular or not?

MYSELF (*before Bion or Robin can reply*) I don't think he does and I am beginning to think you and Alice may not.

ALICE (*bitterly*) I don't. I wish I had known when I met Roland. All I know now is that *if* I had known and *if* I had been with Rosemary as my friend when she had gone out with that young cad she has been telling us about, I would have been more likely either to have had a happy marriage or remained a spinster friend of Rosemary: preferably never married.

ROSEMARY No you wouldn't. Nor would I. We should both have done the same. Or some other kind of 'worse'.

MYSELF Well, how *have* we done?

MAN (*alert, lively, looking from one to the other in turn, but evoking no response and making no comment. Finally he gets up. His demeanour is modest, but he speaks with authority as he announces, as if to an audience in the darkness in front of him*) The Future! It gives me great pleasure to announce the Future and to express the hope that you all have enjoyed the present as much as I have.

26

MYSELF Much in this book has been described in narrative terms. The constructions employed could be understood if the language were known to conform to the conventions of spelling orthography, print, grammar. Are those rules to be understood as applying only to the domain of articulate speech, or is it possible that they derive from and apply to some domain of which we are unaware? Are the rules according to which I conform also to be understood to be a part of the representation to which some yet undisclosed realization approximates? The matter obtrudes if I am working with someone who does not pay attention to, or attach importance to, the verbal content of what I say, but interprets the 'flatus', the breath with which I say it. *I* may be under the impression that my articulate, verbal formulations are what is important; *he* may be concerned with the breath with which I say it.

The complexity of the problem is increased if the 'flatus' is the link between X, someone or something not me, and my self; the 'flatus' requires a spectrum of meaning to express 'Divine afflatus' at one extreme, to 'poison gas' at the other. It becomes still more complex if X is able to 'transform' the sound waves, which I think he hears via his auditory apparatus, into waves which I think would be usually appropriate to visual apparatus. If I suppose he *hears* what I say to him, but in fact he is *seeing* my words sailing through the air, the link between myself and X becomes a problem which cannot be solved with the existing apparatus.

Let us assume that there *is* such an entity as the mind; furthermore, that there is such a domain as approximates to, but is *not* identical with, the mind; that the 'rules' of that domain and the entities within it are only expressed in the crudest terms, derived from the

ordinary animal's experience of sensuous reality. Then my problem and the problem between myself and my partner assume a scale of difficulty which lies *beyond* the reach of their existing spectrum. Conversely, there may exist entities who are incomprehensible to me not because their scope is so much less than mine, but so much more. Indeed, Balaam is far more suitable to represent me than is what I consider to be his ass.

BION This theory may be necessary to represent the similarity between people separated by race, religion, language and distance, measured in terms of or by physical time and space. Our concern is how this 'domain', usually left to be 'dealt' with by geniuses, is to be managed by ordinary humans. Nietzsche says a group must produce or find a genius; how is it to recognize and preserve it when found? Is the human 'mind' the sense organ that could be adapted for the purpose? Can Freud's theory of consciousness be extended to the whole human mind and the object of its attention to whatever lies 'beyond'?

SHERLOCK Mycroft! Mycroft! I say . . . Wake up, do.

MYCROFT What's up now?

SHERLOCK I was having the most appalling nightmare! I dreamt that something . . .

MYCROFT Oh, nightmares. You have been eating too much.

MYSELF *This* is too much – do I have to put up with these two clowns? I know and you know they are fictitious characters. Have I got to have a highly significant soliloquy interrupted? I can't even so much as hear myself think! Where does all the uproar come from?

> 'Elected silence sing to me
> And beat upon my whorléd ear,
> Pipe me to pastures still and be
> The music that I care to hear.
> Shape nothing lips; be lovely – dumb.'

MYCROFT You observe the poor fellow can't even spell, Sherlock? He means whore-led.

MYSELF

> 'It is the shut, the curfew sent,
> From there where all surrenders come
> Which only makes you eloquent.'

WATSON I don't hear anything.

SHERLOCK That was the significance of the dog barking.

MYSELF This is too much! These are imaginary characters. We shall have imaginary numbers next . . . and thoughts that haven't even a thinker . . . and six characters in search of an author, I shouldn't wonder. Who was that?

WATSON I didn't hear anything.

VOICE . . . hear no evil, speak no evil, see no evil . . .

MYSELF Wasn't that one of those proverbial sayings?

TYRANNOSAURUS V. STEGOSAURUS DO NOT MISS THIS STUPENDOUS SPECTACLE. SADE VERSUS MASOCH. PRODUCER GIAMBATTISTA VICO. WATCH THE HEAD DEVOUR ITS TALE. THE ONLY GENUINE EXPLANATION EVER PRODUCED OF THE OLD FOSSIL. WATCH THEM, IN THEIR BLINDNESS, BOW DOWN TO WOOD AND STONE.

MYSELF Herodotus thought the sea must have covered the mountains. What next! Someone will say that something, a configuration or pattern, might be covered and revealed by the cover. Angels?

SHERLOCK Our discussion is being interrupted.

MYCROFT For my part, all I can say is that though we may be fictitious characters, at least you and Watson and I are not quite so stupendously boring as Bion and, worse still, Myself.

SHERLOCK Surely, even if you have to be a real creator there could be something to be said for being entertaining. I remember . . .

MYCROFT So do I. Your treatise on a hundred or so cigar ashes. Who on earth could possibly remember Myself on psychoanalysis or sex – whatever that may be! I'd give the lot of them for Irene Adler. She was at least fun. Even God didn't spend the whole of his time obsessed with religion. You would think he was fascinated by being worshipped like one of the psychoanalysts. *That* religion has to be a whole time job worshipping psychoanalysis and singing hymns to the ruling psychoanalyst and his divine attributes. Now: let me show *you* something. I'll give you a sight of – the promised land! Listen! – it's Browning speaking.

> 'Now the cloud rift broadens, spanning earth that's under,
> Wide our world displays its worth, man's strife and strife's success.
> What! they smile, our names our deeds so soon erases time upon
> his tablet where one hundred thousand are spread out.'

Already the famous are so thick they are anonymous. As Horace said, Vixere victoria ante Agamemnona multi, and yet the poet hadn't

turned up; so the recording tape was a blank! They disappeared into the shade – unwept! For want of a poet. What a joke! But, listen . . . sounds like the brigade of guards. Massed bands! At least we can have quantity – all famous! Listen . . . Abide with me – all hundred thousand – Zing Boom! Ching! Fast falls the even . . . on the just and unjust – couldn't be fairer – Zing Boom! – than that, could it? The darkness – can't the fools see? – I have seen a finer or hotter Cup Final? Never! 'You've all won', said the Dodo, marching off in strict Do-decanese time upon its tablet where they all lie stretched out cold! Arf-boom! – arf-boom! Arf, arf, arf-Boom! Kum not in errors like the Zing Zing Boom! But kind becos there weren't no 'paulin thar! You remember? The whole fleet was ordered to steer by Palinurus; and we couldn't help laughing becos there weren't no Palinurus there! Can't a man 'ave a bit of fun? Somethink crool! The light is bright, so dazzling it is impossible . . .

SHERLOCK What's all this about?

MYSELF I don't know what it's about. But I can tell you what, in my opinion, 'it is'. These are scraps of a conversation destroyed and fragmented by a jealous, hostile, curious and destructive, excluded, but none the less present, well . . . personality, shall we call it?

BION Even the excluded middle becomes less than law-abiding.

MYSELF Suppose God objected to human beings becoming too divine, too Godlike, like men becoming like towers, and wanted to make that language into rubbish, a tower not of strength and a power of love, but a tower of Babel, of confusion, of strife and contention. But suppose the excluded personality was in its infancy; then the whole of what I am saying might be an attempt to *imitate* the sounds that grownups make if they are engaged in what we call articulate speech. The psychoanalyst, the artist, the entertainer could be moved by love at one extreme, rivalry and hate at the other. In between the two, at neither pole, it could sound rather as I have said. Is 'Sordello' incomprehensible on purpose to make it difficult, or is it Browning's attempt to express what he had to say in the shortest and most comprehensible terms?

BION Is God, and his priesthood of artists, musicians, mathematicians, and now psychoanalysts, out to cause the most chaos? Or is he incomprehensible and himself unable to find an adequate priesthood for his purpose? Is it possible that his ways are not our ways, his Leonardos, Picassos, Bachs, Newtons, Einsteins, not adequate to

passing it on to the human animal? Any *moral* system so far invented cannot solve the problem – Sherlock, I hear you coughing. You can have your turn in a moment – oh, all right: go ahead then.

SHERLOCK I don't bother about morals. I have always stuck to a seriously scientific approach.

WATSON Oh Holmes, really! What about that cocaine? I warned you time and again about your very non-scientific, non-medical approach.

SHERLOCK Yes Watson, but I have had to point out to you that you can't even tell me where that Jezail bullet struck your anatomy. I sometimes wonder if there ever was such a person.

MRS MOP Can I do yer now sir?

27

MYSELF This place is thick with fictitious characters. There won't be enough 'cloud drift' for them to throng through at this rate.

MYCROFT But *you* are just as bad. You dragged in the whole Wembley Cup Final engaged in a sort of religious cup final. Actually, I thought it. rather entertaining. Does your God have a sense of humour and are you part of a kind of Psychoanalytic humorous priesthood?

MYSELF I think that's carrying it a bit far, Mycroft. If you had to attend meetings of the Psychoanalytic priesthood, *you* wouldn't think it funny.

MYCROFT I don't know. I thought you seemed to be having quite a bit of quiet fun out of attending the covens or prides or whatever you call the meetings of your mystery. *Weren't you* meaning to be entertaining?

MYSELF Now you mention it, I remember one of our Tank Corps officers thinking God sent 'His Englishmen to fight His battles *because* they looked so funny going into battle in tanks'.

STEGOSAURUS Like us: couldn't move; sitting target.

WATSON You shut up. You're extinct.

STEGOSAURUS No more extinct than old Tyrannosaurus here. Eh, old bloody chops!

TYRANNOSAURUS What about your poor plants?

TOMB ROBBERS Where would your scientific view be if it wasn't for us digging up a few cadavers?

PRIEST OF UR And our burying the whole Court. There would have been no death pit without us.

MYCROFT Pure suspicion and father of science! Love of gold!

PRIEST I have heard it said that even psychoanalysts make a profit.

MYSELF We run risks.

MYCROFT Isn't it amusing to see you unearth a paranoia?

> 'Oh, who will o'er the moors with me, oh, who will with me ride?'

MYSELF I did not know that you specialized in puns, Mycroft.

MYCROFT It hardly surprises me since I gather that you think you are a real character and that I am imaginary. Your friend Alice thought the Cheshire Cat wasn't real, but that *she* was. The Cheshire Cat was tolerant enough to see that from the dog's point of view the cat, itself included, must be mad since it growls when it is pleased and wags its tail when it is angry. I don't tell Sherlock everything even if he, like me, is an imaginary character and a blood relation – imaginary blood of course. Pontius Pilate – do you regard him as a work of fiction, extinct, fabulous, or governor (historically) of a Roman province? – washed his hands publicly; he and Lady Macbeth join the ranks of the hand washers; so does the blood join the category of signs (symptoms? evidence?) of guilt or murder or suspicion. This is where dear Sherlock specializes, as you know. What about writing a monograph on a hundred kinds of blood?

WATSON No, no! There are only two or three blood groups.

MYCROFT What says our real specialist?

MYSELF You are pleased to be facetious, but since you mean me I will answer. You are confusing . . .

MYCROFT I think you are 'murdering' if I want to emphasise your crime. Just because I shall still be entertaining long after you have disappeared, you have no hesitation in calling Sherlock and Watson and me imaginary characters and claiming a superior status for yourself and your bloody books.

MYSELF Oh no, I don't. Excuse me; but you have got me mixed up with Bion; and what about the blood you have just detected on my books?

MYCROFT Don't you acknowledge any responsibility for your books? Or do you disclaim your brain children?

MYSELF I don't disclaim them. But I do not now hold myself responsible for all the use that may be made of them.

MYCROFT Do you hold *our* author responsible for the use that you are making of *his* brain children?

MYSELF No, of course not. I do at least try to play fair you know. In my *Second Thoughts* I have pointed out that I regard myself as having a need to keep silent about certain information which people have entrusted to me, certain information which I have had an opportunity of eliciting for myself and which I think would be of no use to anyone other than the person who comes to me for help. There is still more information which in my opinion would be of no use to the man who comes to me, but might be of great use to his enemies. All this can be seen to apply not only to me, but equally to those who come to me for help. The person who comes to me for help can easily obtain it and, if he feels so disposed, can then use it to destroy me.

MYCROFT Sherlock, as you know, attributed my inaction, as he called it, to indolence; I regard his tendency to transform thought into action as verging on foolhardiness.

MYSELF I should have thought that during the course of your sojourn in my mind – if that's where it and you have been – you would have become transformed from a relatively minor, fictitious character into a somewhat major part of your more useful characteristics. If there were such a thing as a mental digestive system, I could say that the mental diet of entertaining fictitious characters has contributed greatly to my mental health.

ROSEMARY Any orchids for Miss Blandish?

MYSELF Not many. Only a few pages, I should think.

ALICE What about the leaves you've been scattering around through *this* open window?

MYSELF I've no idea; one or two may have been worth tidying up. How wise to remember All Souls and spare ourselves the Saints! I would rather achieve success as an anonymous nonentity than wear self-inflicted honours. Even Newton risks unfavourable competition with his famous apple: it cannot compare with its ancestors of Eden and the Hesperides.

28

SHERLOCK You seem to me to be deprecating fame itself.

MYSELF Holmes, you did not begrudge l'Estrade his need of fame. But who, think you, decided between you and your begetter? When was the award made? Who is more famous: Nelson, or his 'blind eye'? Fame is no plant that grows in mortal soil.

MAN 'Nor in broad rumour lies. . .'

MYSELF So, *you*'ve come to life have you?

MAN Not yet.

ALICE What do you mean – not yet?

MAN I live in the future. My memoirs are the shape of things to come.

MYSELF Are we to have a pre-view? I should be most interested.

MAN The Royal Court at Ur – did they drain their little cups for what dreams their contents would reveal, or to conceal them? I do not know.

MYSELF The past, like the future, is hidden from you.

MAN Not quite.

ALICE Not yet: not quite.

MAN Let me suggest that the state of mind of the men of Ur six thousand years ago is so intensely distant that it is hardly possible for us to know what it was. We may suppose, as an hypothesis, that there could be men separated from us by an interval of time equal and opposite, that is to say, six thousand years in the future. Their states of mind could be equally impossible for us to know. Yet we may imagine the span from –6,000 to +6,000 is immeasurably small; so small, indeed, that it lies within the compass of our minds in much the same way, or more correctly, 'analogous' way, that the span from the infra-red to the ultra-violet measures the spectrum of the 'visible' part of

the total range of electromagnetic waves (or quanta). The range to which I have arbitrarily ascribed numerical range, –6,000 to +6,000, I shall further arbitrarily describe as extending (not in numerical terms) from infra-sensual to ultra-sensual. The whole of the range is what I shall describe as lying within the domain of the human mind. I shall now assume mind to extend as far 'beyond' human mentality as life extends 'beyond' what our limited apparatus can conceive of as 'mind'. I shall suppose a bio + and bio –, that is, something beyond even animate and inanimate.

ROSEMARY I don't know what you are talking about.

MAN Perhaps it will help – but it may hinder – if I remind you of an imaginary or fictitious animal, name of Quoodle, who complained that his fictitious masters, men, could not even recognise the 'bright smell of a stone'.

ROSEMARY Alice, dress me. No – put my things out and then you can go. I do not think this is a proper conversation for you.

ALICE Yes, Miss. Where shall I go to?

MAN Now, that is a very interesting question.

ROSEMARY Mais où sont les neiges d'antan?

MAN I wonder what the priests of Ur said. Maybe no one asked where the court ladies were going to after they entered the death pit, or after the contents of the little cup had entered into them. Or when the tomb robbers entered the royal tombs.

MYSELF Or where *you* are going to when, if ever, you enter into 'now' from 'not yet', or when 'not quite' becomes 'quite'.

MAN Or fiction becomes fact which is stronger than any fiction.

MYSELF Or the inanimate, the computer, becomes far more efficient than any animate mind.

WATSON The other day I heard of a computer which scanned cardiograms far more efficiently than any of the highly qualified radiographers in the department.

MYSELF Who said so?

WATSON Well, ultimately the facts. They showed that the radiographers were wrong far more often than the computers.

MYSELF Who interpreted the facts?

MAN Obviously men, objects that operate within that very limited range between infra-sensuous and ultra-sensuous or, as Alice would put it, between 'not yet' and 'not quite'. I can see that might not be adequate in the way described by Krishna, or God answering

Job out of the whirlwind, or even Newton out of the theories of Opticks; or the Church out of its system of dogmata . . .

MYSELF . . . or Leonardo out of his golden number . . .

MAN . . . or mathematicians, even when they find an escape route by Cartesian co-ordinates, out of the restrictions of visually based Euclidean geometry. It is not now necessary to have to fall back on the 'obvious' or, which is absurd, 'Q.E.D.'

MYSELF Equally, it is not possible to fall back on the obvious or the absurd to be the solution of the problem. Take the problem of the straight line which does not lie within the circle or the sphere, but cuts it in points which are complex conjugate.

MAN Provided you don't want it to have a meaning, it occurs to me that the theory of Ps ⇌ D may offer an opening analogous to the relationship between wave theory and quantum.

ROSEMARY Or 'ugly' and 'beautiful'. Has anyone seen an artist paint a picture 'about' or 'of something ugly which was nevertheless beautiful? Has anyone seen a skivvy or whore turn into a beautiful woman? Or a pander turn into a man?

MYSELF I have seen that journey (or transformation) more often in the other direction. Change is feared and is then felt as from good to bad; too often, from bad to good is effected by a cheat, an ugly progress effected by ugly means; or means employed for ugly motives for an ugly goal.

MAN We do not know what is concerned in the transformation from animate to animate though we know, or think we know, something of the change from animate to inanimate. The linking process can be murder and self murder. Some think that change is effected by a violent, ugly, catastrophic process of change. It is rare, among psychoanalysts at least, to imagine that the most that their science can do is to map the nature of the mind. The 'discovery' of the mind itself depends on philosophers achieving progress parallel to the micromolecular discovery in the physical domain. The mind, certainly the human mind, can be found to be something of very minor and very embryonic growth. Just as it may seem miraculous that a mind, equipped with visual sense, can 'see' things inaccessible to the sightless paramoecium, so it might appear prophetic – not applied common sense – if the insightful person could detect what to others would appear to be unsupported by evidence. Perhaps a paramoecium would have to believe in 'god'. What more suitable god than

man? What more suitable to man than any available 'super-man'? How could this be made available for worship by some well-arranged system of lies and cheats? How more easily dealt with than by a well-arranged system of 'scientific' lies and cheats 'exposing' the lies and cheats?

ROSEMARY Money, morals, 'honours', position and power are often offered to women who accept the counterfeit as real and offer their same easily prostituted 'wealth' and 'assets' in the way food and pharmacological preparations can be offered as cheats by the male as well as the female whore. And now the mind has become available for the extension of lies, deceptions, evasions to produce bigger, better liars and cheats than any 'human' mind had so far achieved.

MYSELF And not the opposite?

ROSEMARY It is certainly a very seductive idea! But I would not rule it out of the bounds of reality any more than I rule it out of the bounds of cheating and prostitution and the establishment of moral superiority.

MYSELF The god did not hesitate to use the waters of Lethe in his war against Palinurus.

ROSEMARY Nor did the priests of Ur in their war against the Court. Many heroic liars existed before the many-wiled Odysseus was saved by his dog from everlasting night.

MAN When the mind ± has been mapped, the investigations may reveal variations in the various patterns which it displays. The important thing may not be, as the psychoanalysts suppose, only revelations in illness or diseases of the mind, but patterns indiscernible in the domain in which Bio ± exist (life and death; animate and inanimate) because the mind spans too inadequate a spectrum of reality. Who can free mathematics from the fetters exposed by its genetical links with sense? Who can find a cartesian system which will again transform mathematics in ways analogous to the expansion of arithmetic effected by imaginary numbers, irrational numbers, Cartesian co-ordinates freeing geometry from Euclid by opening up the domain of algebraic deductive systems; the fumbling infancy of psychoanalysis from the domain of sensuality-based mind?

ROSEMARY Could Beauty help? Poincaré talked as if it existed in the discipline of mathematical formulation.

MAN One problem which interests me is who Myself thinks he is. Do you, Myself, think you differ from us all?

MYSELF No: yet I do, because although I see I have many of the characteristics of a figment of my (and other people's) imagination, I am also a fictitious character. Certainly I can imagine, and be imagined by others, that I am so real, so visually vivid, that I am convinced so completely that I have no way of distinguishing the difference between the real and the imaginary, that discrimination between the two is impossible. If I know who 'Bion' is, and if I know who I am, I can compare the two. I can say I know who I was when I was at school, but that is very different from who I was; that I shall never know.

29

MYSELF Since I cannot, for all my experience, analytic or other than analytic, say *who* I am, I know now that it is very unlikely that I shall know any better at some future date. It is impossible to believe that anyone who is not me will know better. I am sure it would be useful if I knew who that person is that I am compelled to be as long as I exist. Sometimes I make 'mistakes' so extra-ordinary that I do not recognize that extraordinary person might be me; similarly, the mistake I make is hard to recognize because it compels me to recognize that I am its creator, producer, father; I am both unique, and therefore extraordinary, and so utterly ordinary that I merit being qualified as extra-ordinary. As for my products . . .

ALL Sh, sh, sh! And they all . . . that was only Roland.

ROSEMARY 'Only' pornography, 'only' sex.

MYSELF 'Only' can be a verbal method of limiting the universe of discussion. The problem and the person or thing concerned with its solution would seem to be helped if there were some way in which the two could be matched to the human mind; could 'only' have to solve what problems it had to solve, say, for survival.

Philosophers, mathematicians, might attempt to forge tools adequate for tasks they, the human animals, need to solve if they need to survive. Generally it is supposed that it is possible to do things better, being animals, when the live thing is alive than when the 'live' thing becomes a dead thing and vice versa. A stick or stone is uncooperative, but it can be made 'cooperative'; some objects, like a flint, can be manipulated by being turned into a flint axe or hammer which cannot *do* things, but makes it easier for the hand aided by the flint. This discovery creates the feeling of love and gratitude between the

man and his tool. Conversely, the live and helpful thing can become hateful if *it* dies.

ROSEMARY It? What is that?

MYSELF It is a participle. If 'it' is about something, it doesn't end by being a grammatical term – 'only'. Equally 'it' could be so full of meaning that it is incomprehensible. One of the advantages of practising psychoanalysis is that I can try to tell you what 'it' is. Writing about psychoanalysis – like this attempt here – has its advantages too, but it is very difficult to say what 'it' is. If I and another tried it – practically – it might give a chance to say what the various 'its' are. The practice might not be successful. Terms in common use, like 'sex', 'love', 'hate', can be so abstract as to be meaningless, or so debased that they are impossible to de-nomenate or to say what the value is. Here I have tried to make what Freud described as a 'construction', contrasted with an 'interpretation'. The sentence, 'That was only Roland', would have to be replaced by many terms such as 'jealousy', 'triumph', 'envy', 'rival-ry', 'revenge', 'love', 'sex'. Suppose I mean the adult experience of 'passionate love'; suppose you were to say, 'What is that?' If you were able to witness that and were likewise able to understand what you witnessed, you would have a chance of learning from the experience. Conversely, you might not have the chance even to learn what 'learning from experience' was. Single words can be very inadequate.

ROSEMARY You have talked a lot anyhow!

MYSELF (*looking towards Man*) Perhaps this gentleman here would care to take over?

MAN Well yes. I know my functions are not exactly pleasing or my attentions welcome-limiting, like 'only'. It marks the boundaries not only – there it is again! – of the discussion, but also the commencement.

BION You need a new name. I hereby nomenate you 2, Two, too – in every possible respect, two much.

ALL Carried unanimously.

MAN As usual a poet expresses it; 'The old order changeth, yielding place to new. And God fulfils himself in many ways'. Even as God, not even his – or should it be His? – vestiges disappear, but are renewed in the form of the excrement-eating scavengers who tidy up. Alice here, and her little daughter Alison – to whom I have not yet introduced you because she lies in what you rather quaintly call

the Future, but is *in fact*, as opposed to verbally and grammatically, not separable from the past – welcomed my function of gathering together 'her property' and superintending its redistribution. A macroscopic vertex would show an impressive 'me' presiding over the redistribution of the Royal Court of Ur with its delightful ritual of sacramental 'health' in the Death Pit. The redistribution of the unlabelled poetic goods of Troy, the souls lost in the unlamented shadows of the past – somewhat typically rescued by a poet – now being reacted apparently in the loss and redistribution of 'imperial' trappings which hid the empire of mind. That empire achieved a temporary home and even a name – Shakespeare. 'Others', said a poet, 'abide our question. Thou art free.'

ROSEMARY Can't you spell Art?

MAN I can; just as those fellows learnt how to spell Shakespeare, but, if you remember, the labels were various and the property disbursed under 'spellings' as diverse as Bacon and G(reat) B(ritain) Shaw. Here – you don't know this young fellow – you there (*beckoning to someone in the shadows*) come out of it! Speak up and don't be afraid. How old are you? Six? More like four or five I would have thought. Tell them what you saw and heard.

BOY Our dogs chased and cornered a jackal. I was frightened because I thought he was enormous and would kill them. But they surrounded him. And he sat down just as I thought he was going to attack, with his mouth wide open and big, bared, snarling teeth! And he frightened me because he began howling. It was awful.

MAN Show them how. Don't be afraid.

BOY You won't think I have hydrophobia will you?

MAN Rabies? Probably; but never mind – what did it sound like? Go on – do it!

BOY (*opening his mouth and throwing back his head, he begins with a slow, scarcely audible whisper, then, opening his mouth wider and wider and raising the whisper to a howling crescendo, emits an unearthly, moaning cry*) Fi-aaow. (*It dies away.*)

MAN And then? What next?

BOY There were shadows out of nowhere. Our dogs were afraid. They didn't attack the jackal. *They* sat down too and bared their teeth, but they didn't attack; their teeth chattered. Fi-aou! Fia-ou! Fiii-aaou! And the shadows sat in a great circle, more and more of them.

MYSELF '. . . whose howl's his watch'!

ROBIN That's an anachronism!

MYSELF I thought some fool would say that. Shakespeare knew what he did. He knew the *real* meaning of anachronism, anonymity likewise. The jackals and the moralists were waiting to howl, 'Thieves! Robbers! Apaches! Brigands! Crazy!' while the robbers pocketed the goods; they were 'honest men'.

BION Are they clearly labelled? Watch out for the Moralists, the biggest robbers of all!

MYSELF 'They' know! No doubt but ye are the people and wisdom will die with you! Devoured, owned, miserly, locked up in their iron digestive canals and inaccessible to those who could use it. 'What! they smile – our names, our deeds – so soon erases Time upon his tablet where man's glory . . .

MAN . . . liveth for evermore. The glorious dead. Its gisent la. Sans voix, sans ouie . . . come, let us dig them up and . . . do you remember, boy? How shocked your nanny was . . .

BION Poor nanny! It was old Ayah, poor old thing, when I asked when we were going to dig up the people in the cemetery and eat them!

ROBIN An anachronism. Learn it and write it out fifty times for the next exam on Shakespeare. Fifty 'times'. The *number* of times! That will teach them to speak disrespectfully of time! A-chronous indeed! A-nonymous! Fetch me my packet of labels, boy. I'll show them who owns what! Where's that war I won?

MAN You are referring no doubt to the Empire of the Mind, sir? Coming, sir! Coming! Anon, sir, anon! Your empire, sir – anon! anon! I remember telling the dinosaurs that the young mammal would soon arrive. But bless you! They wouldn't believe that they were already extinct. So they were – the mammals too. Homo Sapiens is still fiddling with *his* new toy, the Big Bang theory. All this non-sense – Ah, here we are, sir. This isn't a silly theory with this (*shows the circle of shadows a fine, practical, working . . .*) Why, bless my soul! Where have they all gone? Only me! I only – am left alone, to tell thee!

VOICE (*out of the smoke*) Where's my fire? Bring me my fire will you! There are some topless towers here that require burning. See page 1 and begin again. Fin i gain . . . Alph where's Om? Theodore, what's Dunton!

MAN He didn't think they ate them. It's part of the illusion of growing up. 'Time' 'and all that. He *saw* 'them' eating – being eaten.

Only he knew there are always No-Ails about the place waiting to imprison/deify any thought or idea that causes trouble. *Mental* indigestion is quite bad enough. There is also the ultra and infra, Alpha and Omega, poly-sensual, infra and ultra mental, infra and superhuman 'mentality'. I have to use archaic terms to bring it within the area of your comprehension.

VOICE (*from the Future/Past*) I don't know what you are talking about. How these old formulations endure! If only 'they' could realize they are speaking the truth even when 'they' are meaning to lie; and vice versa. In peyote veritas – the gods help them who . . . help themselves; even those who help themselves to other people's disciplines, religions, Past's or Future's property. Now then, terpsichore, just you keep your hands out of my chimpanzee's . . . science, pharmacology be thou my £.s.d. That is L.S.D.'s property!

In what fancy dress would you like to be caught in order to abide the day of his coming? And how would you like your God – come *not* in Terrors? As Krishna? Somnus, with a light sprinkling of Lethe water? Peter, in papal vestments, talking in the accents – so easily penetrable! – of one of his followers?

I don't know what you are talking about. I was 'only' (blessed word again!) warming my hands at the fire.

MYSELF And he turned, and with his eyes he wrote in fire, in words that seared the soul. The Christians got him in the end; from his messianic prison house he never escaped till every vestige of meaning had been squeezed out of him. Confucius – they misspelled his name. Some words and phrases seem to be unmistakable evidence that a man had existed in a spot marked by the words. Trevor Roper thought he could detect, even through the gorgeous vestments of the whore, that a man existed. Even whores need patrons.

BION Where's Rosemary? Some topless . . . need burning . . . but the thicket is not consumed. Some artist will reveal there is always a ram to be caught. Bigotry and Ignorance. Where's Savonarola? Sorry, he went up in flames – like Icarus . . . too successful and too much bigotry and ignorance in his fire-fighting uniform. Newton? Poor fellow; he never recovered the consistency of his mind. And no one has found a way of re-forming the currency since. The tomb robbers, the fortune hunters, don't know where to look for the Child whom they are compelled by their piety to worship. Dressed in the best of motives . . . though various . . .

MYSELF Let us get back to something simple – before the Big Bang.

WATSON Something simple? That's my cue, where I come in. Which Big Bang do you mean?

MYSELF I said 'before' the Big Bang. 'Before' or 'after', it doesn't matter.

MAN Can I help? Even to talk at all I am afraid we shall have to borrow from A-chrony one of his anachronisms.

ALICE Alice in Anachronomous Land.

MAN Thank you: you come from Pornography don't you?

ALICE Not really – Wonderland.

MAN Ah yes. A province of Fairyland.

PALINURUS No, Wonderland, before it was stolen by children and their various thieves and robbers.

ALICE From *your* collection of thieves, robbers, rapists and seducers, don't forget. You make me damn bad-tempered.

MYSELF No – why blame him? You always were bad-tempered. For that matter, so was God. With reason.

MAN Always 'with reason', as you call it in the language of anachronimity. When He attempted to borrow one of your anachronisms, the un-priestly formulation of Psalm 51 was 'borrowed' and given a twist in the direction of 'perquisites'. Even now some of us claim 'ownership' of Ideas. I bet the fellow who succeeds in getting his name on the cover of this book thinks it is his.

MYSELF I am certainly going to claim authorship, but I hope I shall have enough generosity to balance my possessiveness and greed.

ROSEMARY You surprise me; but even Paris had some generous ambitions. Many mean guys existed before Paris gave them life and rescued them from everlasting night.

MAN I think Everlasting Night had a turn with a-nonymous and a-phasia in an-a-chronos. I shall hand over to Myself.

DINOSAUR If I may borrow an anachronism for a moment to fill a gap before this fictitious character, Sapiens, takes over . . .

MYSELF (*hastily*) To fill a gap. That is where we came in – before the Big Bang.

DINOSAUR . . . and while the primaeval slime is still warm.

MYSELF I think I had better wait till the next chapter. It may be less noisy – less crowded, less atomic debris and smoke.

30

MYSELF As psychological preparation I shall borrow verbal or alphabetical formulations like O, or zero, or infinity. For some centuries the visual imagery of Euclidean space limited rather than freed thought. Cartesian co-ordinates made, in combination with the theorem of Pythagoras, a possibility of relating points to each other without the visual aids of lines and circles. These visual aids introduced powerful, undetected, forces which distorted the balance of probability. That distortion is still incalculable. Growth, + or –, remains inaccessible to thought, if unmistakable to feeling. Conceptual thought and passionate feeling are impossible to relate within the confines of existent universes of discourse. The problem could be stated by analogy: numbers suffered repeated extensions to carry an increased load – rational numbers, irrational numbers and, latterly, complex conjugate points. In the emotional domain, persecution by passion grows to depression. The relation of the one to the other requires an extension whereby quantity transforms to quality. 'Very great', 'very small' intervals of time, space, probability, involve quality in a manner analogous to growth from quantity to quality. Thus, quantitative terms such as 'excessive', 'inadequate', 'too little', 'too much', may signify a change in kind or quality; conversely, change in quality, for example, love or hate, may imply change in quantity. This is not a crudity such as the difference between one German 'hating' and the entire German nation 'hating'; that may be 'symptomatic', 'significant' of a method of lateral communication. The change can be formulated in language, music, mathematics; it is, in fact, something 'infra-' or 'ultra-' human, animate – living or bio-logical. Comparison between animate and inanimate reveals need for discrimination; the 'Russians' send a mechanical probe to the moon and retain a

mechanically aided, computer-wise and otherwise, animate being on earth. By contrast, the 'Americans' favour sending 'animate beings' sufficiently well disciplined to be machines.

Bernardino Sahagun describes the debate between those who favour gods formed artificially, by human art, out of wood and stone which 'appear' to be controllable, and those, like the Roman Catholics, who favour an independent and uncontrollable God. Jesus Christ is a compromise between the verbally articulate human Jesus who prays, 'Thy will be done on earth as it is in Heaven', and the Messiah. Some degree of independence is conceded to 'God', although, after creation or 'belief-creating operation', both end-products are still, from human vertex, unpredicted. The idol made out of inanimate material shows unmistakable characteristics of a kind usually attributed to animals, usually human; reciprocally, the god created out of materials, ultra- or infra-sensuous, displays characteristics usually regarded as the prerogative of idols. In other terms ('borrowed' from the lunar illustration) the machine, regardless of race, time, space, is e- and pro-vocatively animate; and the animate object similarly pro- and e-vocatively inhuman and inanimate. If we now increase the dimension, using 'time' as an instrument with which to measure, we find a stability about the objects discerned and recorded by animate human animals such as saints, philosophers, scientists, artists, and (borrowing from Socrates) artisans. Socrates knew that he was not wise, yet could not mobilize facts to indicate anyone or anything, god or idol, who could plausibly be said to contest the title. In the domain of the human senses there is evidence of violence and murder from the Death Pit at Ur to Hiroshima and beyond.

'Methinks I see a Nation . . . with undazzled eyes . . .', as one poet said. Socrates, 'Krishna' and his creator (his 'Plato', his 'Homer'), Hellas and Shelley. His 'powers of darkness' and the vacant throne. My valour . . . said Valiant for Truth and his creator Bunyan. (What? *That* tinker? Is he not the carpenter's son? As for Shakespeare, was he not Bacon? And who wrote the *Bhagavad Gita*? Sunk in Eternal Night without a trace. No orchids for Miss Blandish; 'therefore – fight Arjuna!') 'Fame is no plant that grows in mortal soil . . . but lives and spreads aloft . . . by all-judging Jove.'

Homer is not known *not* to have been blind Maeonides – he was blind anyhow; Newton was sunk without a trace, hit by an apple; so was Helen; Jesus, buried beneath the load of the Roman Catholic

Church and the massive ritual. 'I don't know what you are talking about' – and couldn't care less. 'Great is the truth and shall prevail, if none care whether it prevail or not.' So the mammals survived. Perhaps the dinosaurs did not get together to worship the infant prodigy when it was still helpless enough. Oh, those over-confident stegosaurs! And now look what their *failure* has done!

Perhaps the electron microscope and the radio telescope would do the trick between them? No. You still have to have a human to interpret them. The past – the record in history, in fossil and stone, in computer and poem – has to be interpreted by them. And that two-handed engine at the door – ('Please, sir, what does "two-handed engine" mean?' 'Well, my boy, it means, well, er, it . . . are you sure your people don't mind about Freud?' 'Oh *no*, sir! They are Kleinians, sir. They don't mind a bit!' 'Well it means the two breasts. You see . . .' 'No, sir, I don't understand, sir.' 'Oh hell! Nor do I. But I shall be surprised if in fact it doesn't mean that if one of them doesn't get you the other one will. But don't tell your Mum or Dad.' 'Yes, sir! You did say "Hell", didn't you, sir?' 'Heavens, so I did! Your Dad is an atheist isn't he?' 'Oh no, sir!') Any interpretation is a stop-gap which serves to plug the hole; even a part has to serve to plug the whole. The radio telescope and the electron microscope, God and Devil, Body and Mind, Penis and Vagina, Love and Hate, Real and Distinct, Real and Coincident, Conjugate and Complex. There are multitudinous holes and multitudinous parts to fill the wholes with.

Hitherto, the term 'mind' has proved serviceable. I propose to use it myself, but not for purposes of writing a philosophical or psychological or religious or artistic or other record. I propose to use it as a meaningless term, useful for talking or writing about what I *don't* know – to mark the 'place where' a meaning might be.

I assume that there is a realization that approximates to the term 'mind'. I assume that the mass of theories, case histories, psychoanalytic formulations, are products of the 'mind'. Some of these I shall assume are themselves realizations approximating to the formulations, definitory hypotheses about the mind and of the same status as the term 'mind' itself. I further assume that the 'mind', analogous to brain and central nervous system, is of significance for what it does or does not reveal.

Some psychoanalytic theories I regard, without specifying for the present, as 'constants', 'invariants' under the particular vertex. If

these invariants are absent, or not detected by such apparatus as is available, I regard their absence as itself revelatory. These definitory hypotheses may be used as the foundation on which an 'instrument' could be constructed, *based* on a variety of theories, but itself supporting none. It would then be an instrument which could record the configuration revealed by the mind and thereby make its configuration and interpretation available for study and contemplation by an observer. I have indicated that such observers may be hard to come by in the extremely limited domain provided by animal history itself. Life, as known to us, has a recent and very short history if measured in comparison with the scales provided by standards applicable to astronomical physics and what we call outer space. Yet biological forces are ones with which we have to live. They or their symptoms concern themselves with us even if unknown to us. They may have no counterpart in the domain of 'known' and 'unknown', animate and inanimate. It is possible that the development of the CNS, and now the mind (I refer to the definitory hypothesis I have put forward), may provide an extension of which we have not so far been able to avail ourselves, any more than the race could avail itself of the atomic theories of Democritus of Abdera or the heliocentric hypotheses of Aristarchus with the then existing facilities.

This brings us to the importance which Socrates attached to the artisan for whom he clearly felt a respect which he could not feel for other classes, including himself as the matrix of wisdom. Nor was he able to feel much respect for the oracle at Delphi, judging its pronouncements realistically. The artisan, therefore, appears to have at least a considerable 'history' of being 'respect-worthy'. God likewise, though unknown or perhaps because unknown, or perhaps because of being respected, remains as an Invariant clothed in no matter how many variables and under whatever vertex. He is a 'constant' which is an 'unknown' and the centre of a human discipline served by a mathematics which must be capable of manipulation, by a mathematics in which the constant is unknown and whose place is taken by an infinity of variables.

BION Such religious numbers as are known to us are not associated with a domain adequate for their deployment as are irrational, imaginary numbers. The space of mathematical operation must be extended to accommodate 'religious' numbers as well as those catered for by past extensions of the 'domain' of numbers. To recapitulate: the

study of anatomy and physiology is usually pictured as a central nervous system with an outstanding structure, the brain. The mind, presumed to be real, is likewise presumed to have a structure. This word, 'structure', is borrowed from the vocabulary forged for the domain of sensuous experience. The 'mind', and now its 'structure', are terms which are *not* appropriate for use as referents to domains we hypothecate for this study. The 'mind', unlike the brain, has *no* convolutions. Analogous objects, therefore, have to be created from the domain of the brain and its convolutions.

31

MYSELF The mind is an extension of the human animal; it has grown and is capable of growth and decline. Its development has brought it and the human organism of which it is a part . . .

ROSEMARY (*yawning*) Excuse me.

MYSELF (*with exaggerated politeness*) On the contrary – excuse *me.* I fear I was boring you.

ROSEMARY Not at all. I was most interested. I was just thinking that the minds congregated here did not show signs of being stimulated by, or made aware of, any contact with me.

MYSELF I *beg* your pardon. I have been monopolizing attention.

ALICE You have been monopolizing articulate speech. I haven't – perhaps it is my defective mind – an impression that anyone is paying attention at all. Roland was absorbed in paying almost undivided attention to Rosemary's feet. I myself was thinking somewhat enviously that they looked attractive.

ROBIN, ROLAND, MAN, SHERLOCK, WATSON (*all murmur together in agreement*) It's true, old boy; my attention was wandering a bit.

rosemary Tom too?

TOM (*shakes his head, looks guilty and reddens.*)

ROLAND (*annoyed*) You seem to want to be the centre of everyone's attention.

ROSEMARY Roland! I know you. You are all alike. Of course you think I want everyone's attention. Do you remember that schoolboy who bored me stiff?

MYSELF I do. It reminded me of me. I didn't take a girl out when I was at school – I would have loved to, but I wouldn't have dared; I would have been too frightened of getting the sack.

ROSEMARY (*looking at him curiously*) You're coming on. You are very like that schoolboy in a way you have not mentioned.

MYSELF What's that?

ROSEMARY He had the damned impudence to think I was flattered – a mere skivvy like me! – to be out with him. Not that he came near to admitting that he was afraid that he would get the sack from me. I was *not* trying to catch a husband – husbands were two a penny as far as I was concerned. I was, however, choosing one and quite capable, skivvy or no skivvy, of *not* choosing him. Even this gentleman here (*indicating Man*) thinks I am an object for conquest.

MAN (*with raised eyebrows*) ?

ROSEMARY Well, don't you. Why don't you speak?

MYSELF If Man will excuse me, I would like to answer by telling you about a very beautiful girl I knew and with whom I did go out. I appreciate your indignation about the boy, but . . .

ROSEMARY I know you are going to talk about a girl who reminds me of me!

MYSELF Maybe. After I have told you, you can say whether my story does or does not. Anyhow, she was very beautiful. She was also very intelligent. In short, I adored her.

SHERLOCK Irene Adler?

MYSELF Irene Adler is a fictitious character.

SHERLOCK So is your girl.

MYSELF I don't know that my girlfriend was much less of an imaginary character than 'The Woman' (as you always used to call her) who was said by old Watson to be *your* goddess. The point is, I kept on saying how intelligent and beautiful she was. But she was not wise enough to inhibit the growth of her admiration for herself. It was already immense – with reason, I must in honesty say. She certainly had not the wisdom to limit my admiration for her or to warn me when I was making a fool of myself – not really flattering her. Eventually I could not love her because she took any statement I made as a reflection of the facts, a tribute to her merit, not as a manifestation of my capacity for love. I realized then that I could do nothing for her. It probably wasn't good for her to believe that she had a built-in superiority and therefore nothing to do – just twiddle her thumbs and be admired.

(*The room has grown steadily darker until all the discussants are lost in the shadows – except one figure quietly seated in a recess. That figure has become more obtrusive with the growing darkness and reveals itself as a very old, grey-haired woman, deeply veiled. The room is filled with people, the silence oppressive. At last it is broken by her speaking very softly and melodiously.*)

OLD WOMAN You do not remember me – no. I am not whom you think. I am not *the* woman, only a woman. 'The snows of yesteryear will carry me away', as they always have and always will. I know the girl you speak of very well – I am not she. Nor shall I ever be, any more than I ever was. One of those poets once said that I was 'too proud'. Too proud – it is the besetting sin of people like me, the undistinguished, unremarkable, anonymous to whom pride comes once perhaps, rarely more. Our poverty, our dirt, our lack of clothing with which to cover our rags, make it impossible that the gleam could ever be more than a glory that blazes once, flares, and is lost for ever.

MAN (*starts up, tense, his face lightened by a pallor that makes the darkness palpable. He stares into the darkness; then sinks back.*) She's gone!

OLD WOMAN No: don't romance. You can see me any day on my knees, crawling into the Church at Guadalupe. You can see me as I sit, sad, woe-begone, exhibiting my sores. I am a professional beggar. Like the beautiful girl, *I* have built-in ugliness. I do not have to do a thing. I have a natural gift of filthiness and squalor. I have my place – in the mind to which it has pleased God to call me.

MAN You horrify me.

OLD WOMAN Rubbish. You don't like seeing me and I loathe you. If I could be bothered I might be upset. How did you like my decor? The lighting was effective, wasn't it? You are an invader I believe? War, poverty, disease . . .

ROSEMARY You know nothing about it and care less. I do, and that is why I was determined to have nothing to do with it. I am on the winning side: the same as this invader here. But – and I give you fair warning, all of you – only as long as this smooth rascal stays on top. It's no good going a-whoring with me and thinking I am prepared to be loyal to him if he chooses to wallow like you.

MAN God forbid!

ROSEMARY God? *I* forbid. I don't waste my time waiting for God. You should have seen that grizzly collection of fools as they shovelled

the trash over their finery at Ur! That was not the first time they had used the 'little cup' – it was the last!

BION You must have been around a very long time.

ROSEMARY Do you think I would wait for *you* to create *me*?

BION Well, damn it, who did create you if I didn't?

ROSEMARY They are all the same. Horace thought I was likely to achieve immortality through his immortal jingles. He even had the effrontery to think he had 'escaped' from Pyrrha! If anyone ever reads this book it will be because of what the reader has. the cheek to call 'pornography'. That is why Bion mentions me and he can't even make the description plausible. Anyone can see it is primarily a description of 'none of them knows half so much as intelligent Mister Toad!'

BION Look here! If you had not interrupted me by yawning, I was about to point out –

ROSEMARY 'About to . . . just going to . . .'

BION – that the scientific theory, the psychoanalytic construction should resemble real life and should not be distinguishable because Freud wrote it, or Melanie Klein wrote it, or because it is one of those marvellous interpretations by the famous psychoanalyst X, or Y, or Z, any more than a portrait should be recognized because it is '*by*' Praxiteles or Frans Hals or Picasso, but because it is '*of* Hermes, or the Cavalier, or the Saltimbanques.

ROSEMARY – 'should be', but *are* they?

BION Who wrote the *Bhagavad Gita*? Was *that* author aware of his insignificance before God?

ROSEMARY Never heard of it.

BION Well, really! Anyway, *this* book is not 'about' anybody. At the end the reader is . . .

ALICE Tell me about the Reader; who is he?

BION I was coming to that . . .

32

ALL (*suddenly revealed in the light which has been steadily increasing until it is possible to see the whole gathering, bursting into song.*)

Tom Pearse, Tom Pearse, lend me your grey mare,
All along, down along, out along lea . . .

BION I can't make myself heard in all this din. It's too bad. After all, I *did* create them.

MAN And they are now returning the compliment. If you did, surely you can write the verse?

BION I have not written a note of music or a line of verse in my life.

MAN The man that hath no music in his soul . . . never mind . . . it's gone hasn't it? Try! Try now!

BION It is wrong anyhow. And damn you – who the hell are you?

MAN And damn you too: I have told you already. Why don't you listen to what you are told?

BION I have *always* listened to what I have been told.

MAN I haven't noticed it. (*He says it without hate, as if f it were a friendly communication*) Did you listen to what that pitiful slut told you? I'll tell you. It was all hate – *all* of it! No, I am not talking psychoanalysis. You can go and read your silly books. I was not listening to someone reading the first lesson of the Gospel according to Saint Sigmund, or, if I may say, any of the other little angels. Non angli sed angeli! Including (*bowing elaborately*) your own divine contributions. How many Krishnas, Devil worshippers, Virgils, have to pass this way before a fact will be forged to penetrate your smooth, complacent and sanctimonious hide?

STEGOSAURUS Someone asking for me?

MAN I suppose you are incurably too civilized to pay any attention to Virgil's chunk of omnipotent trickster god who wore *his* get-up with an air – drugs, Somnus, ever so, ever so – watch him! There, did you *see* it? – how he hurled poor, faithful Palinurus, stern, sheets and all, torn out of the rear end – stern we call it – of that poor little leading boat; hurled him into the depths of the sea; that beautiful, land-locked, medi-tationally futile caldron of seething, boiling, divine hate for all you piddling little tricksters with your imitation hate, love, decorations, intended to give substance to the fictitious, non-existent chest!

BION When I was a soldier in camp at Poperinghe I did not think it a piddling Christ. Nor did Ernest, who had a cheerful religious feeling. I think I loved him and his God for the first time. I was not crippled by *his* religion as I had been by every other, and with him I had that rare experience – which I had had once before at the camp at Ladram Bay some years earlier. My only clearly remembered times of happiness and religion and feeling of real affection for one of my own sex. At Cheltenham, the Christmas after, I had the same gay feeling of liberation for a girl. It was marvellous. The air crackled and sparkled in the frost and there was a warm feeling in my heart. I remember going home with her after a midnight service on New Year's Eve. That was the last. When I saw her next I had changed – I felt I had death on my brow. I was regarded with awe by her and her friends, for I was weighed down by a nameless dread as I passed between the rows of girls at the school where she taught. I realize now, but did not then, that I was carrying the load of premature death, for I had been awarded a very high decoration which carried with it a sentence of almost certain death. I knew I should never again be free to feel sincerely and openly the fear I felt. Bourlon Wood haunted me. Ypres haunted me. The rain, my God the rain! And the sweet smell of rotten flesh! The girl was talking to me. She was anxious; her eager and quiet concern showed from her eyes as she scanned my face for some response. I had none. I could feel none. 'What did you say?', I managed to come to the surface to ask. It was hopeless. No, I had not got shell shock. What nonsense they were ready to talk! But, love had died. Love for anyone and anything. Those pink, fresh, upturned faces – what were they feeling? Was it awe? What about? The vast deserts of Ypres with its rain, incessant rain and small groups of heavy-coated figures. They too used to wait – for many years – their

impassive, grey faces and khaki suddenly brilliantly illuminated by the gun flashes.

ROSEMARY (*yawning*) Most interesting . . .

BION I'm sorry. I know I am poor company. Where's old Watson with his Jezail bullet?

WATSON That was before the Boer War.

BION That wasn't a war. That was a fatigue!

WATSON You laugh. They all laugh, but even that hurt. We tried, you know.

BION I was not meaning to laugh. In fact, even at Oxford, I used to stir into life a bit to see you and Sherlock rooting and snuffling around. But though I am very grateful to you, I could never flame with life again after James, Ernest, Charles and I were extinguished at Cambrai.

ROSEMARY (*manicuring her hands, but coming to faint life*) Were you killed?

ROBIN No, *I* was, though. I was never brave like Bion here.

BION Was I brave?

ROBIN Oh, I think so.

ROSEMARY (*still admiring her nails*) *How* brave? I always used to think men went into a huddle together and concocted a whole lot of lies to fool us women with afterwards.

BION More or less; not quite though.

ROSEMARY (*putting away her manicure case and speaking with great deliberation*) I knew a girl once who was lying in bed – very comfortable too – with great beads of sweat across her forehead. She was afraid she was dying. She was having a baby; her first, to whom she was looking forward very eagerly. The baby was born all right. But her fears were correct – she didn't see it.

BION Childbirth?

ROSEMARY It seems simple, doesn't it. You sound cool.

BION I am cool. It sounds callous I know, but only if you attach importance to death. Suppose the child lived on to become a mother; that frightful wreck we saw was someone's baby . . .

OLD WOMAN (*uncovering some chronic sores from beneath her rags and settling down in her daily pitch, disposing the rags to make the maximum display, she swiftly lets her features sink into the routine expression of piteous whining, appealing, half-glazed eyes.*)

BION . . . Yes, you I meant. You see . . . her professional stance for

the day. Would you rather be the mother who watched her daughter slither down that slope, or rather die in childbirth?

ROSEMARY Yes, it all sounds very fine put in your artistic way. Real life isn't like that; these things do not happen like that.

BION No, they don't. That's why it 'sounds callous', as I said. In civilized states they do not allow the outrage, the daily commission of assaults on the feelings . . .

ROSEMARY . . . on whose feelings? The sensitive, cultured tourists? In uncivilized states the uncivilized inhabitants are not so ridiculous. When the tourist season is over and the weather is not hot enough to be comfortable sitting in the open . . .

ROLAND . . . or, I may say, hot enough to make beggars able to sweat and stink without undue exertion.

ALICE Roland! You surprise me. I didn't know you knew about things like that!

ROLAND Alice, it is a very long while since you knew me or anything that I knew. We have drifted apart since . . .

ALICE . . . we knew each other. I don't think we ever knew each other much. I was too shy and you seemed so easily shocked; I could not be frank with you.

ROLAND Or I with you.

ROSEMARY It took a skivvy like me before either of you could talk plain English.

ROLAND I don't know about that. We used to talk plain English at my school. It was a famous school.

ALICE By the time it became famous for the off-duty language you boys used to each other, the parents began to withdraw their patronage. And it went down and down, till the governors became afraid it would be bankrupt. I know, because my father was one of the governors. But I don't see what the poor headmaster and staff were to do about it. Do you think the problem has been solved these enlightened days of LSD and hashish? There must be *some* freedom without suggesting boys have cigars and liqueurs or total abstinence. The trouble is that if you suggest they should abstain they 'abstain' from common sense too.

ROLAND What abstinence, for example?

ROSEMARY (*sweetly*) They abstain from going out with skivvies like me. Isn't that what you mean?

ROLAND (*nettled*) I did not go out with skivvies. I used to say

my prayers, play games as hard as I could. In short, lived a pure and holy and godly life. A fat lot of use it was at that. I loathed sex. It was nothing but fear and failure. I couldn't even have a friendship with another boy. I wish you could have an idea . . .

MYSELF As a psychoanalyst I can have an idea; but I have to have many years of experience, and by then it is long past the time when it might have been some use. Rosemary, I wish you'd stop manicuring your bloody nails while I'm talking. You can't think how infuriating it is to try to talk while I have to watch you sharpening your claws.

ROSEMARY I thought psychoanalysts were supposed not to be maddened by anything. Only patients.

MYSELF Well you thought wrong. There are things which it is quite right to be angry about, and it would be pathological or inadequate to refrain. Besides, there is a difference between being enraged on my job and an ordinary social occasion. The emotional experiences are not limited to my sessions where I have certain privileges and duties. But the duties of social life and the duties of professional occupation are not the same.

ROSEMARY Well, you have been very frank. Let me tell you that I find it bloody irritating to have to put up with hearing you philosophizing; or psychoanalysing, as you call it. You don't like watching me manicure my nails because I am really sharpening my claws. I don't like what you call psychoanalysing and I call it 'sharpening your moral claws' – that is not a pretty sight either. I wonder what poor devil is in for a mauling.

MYSELF Well, you have certainly just given me a mauling. (*Contritely*) I deserved it, but . . .

ROSEMARY But? Somebody once said, 'but me no buts'. For a moment I thought you were actually feeling contrite. Your 'but' showed me you had thought better of it.

MYSELF (*laughing a bit uneasily*) Well, yes. You are quite right.

(*There is an awkward pause during which he disappears, fades out, apparently completely crushed.*)

33

Rosemary and Alice appear to be expectant. Alice is self-possessed, yet in a position unmistakably subordinate to Rosemary, as if she were a lady-in-waiting. Rosemary has become transformed, but the nature of the transformation is undefined. The two women occupy the stage so completely that it takes some time before it is realized that Man is present.

MAN Shall we go on?

ROSEMARY (*shudders as if momentarily chilled by a disagreeable emotion*) I don't know. I don't think I can stand all that again. I am sorry, but I feel I have had enough of it.

MAN I said, 'shall we go on?' I was not suggesting 'more' of the same again.

ROSEMARY I feel old. Do men never grow up?

MAN Usually they are not allowed to, either by themselves or the women they choose, or both. I am sorry for that poor devil, Robin. He is not a bad sort. He has been very close to death! Often I thought he was hopeless and then he seemed at the last moment – to my surprise, I confess it – to topple over on the right side. It is like watching a leaf falling to the ground; utterly unpredictable, but like playing a game with fate. 'Heads I lose; tails I win', but with a coinage inadequate for the purpose. It would be more accurate to say that leaves *are* adequate to occupy the role of representing coinage, itself a representation, in that they permit certain forces to participate in the game, notably the air and its movements. These forces may be regarded . . .

ROSEMARY (*shuddering against his intervention*) Don't.

MAN Again? I see what you mean . . .

(*Both fade out, and it gradually becomes clear that the darkness is not total. Nor is the silence absolute. Voices resemble, but are not, a conversation; memories resemble, but are not, desires; finite episodes resemble, but are not,*

infinite. There appears to be a streaming in one direction, but the direction changes as if it were, but is not, 'reversed perspective'. 'Larling', she does not say. It is not past: it does not feel past either. It is inchoate, it is not past. It is 'minus-K'. The date in minus-K is August 7 and August 8.)

TONKS (*giving orders to Captain*) *Now,* don't you move those tanks! Sargent agrees with me – not that I attach any importance to what is said by a man who knows nothing whatever about composition. We must have those tanks just precisely there for one more day if my sketch is to be finished. Do you understand?

CAPTAIN Yes, sir. If we have to move them we are to put them back in the same place.

TONKS (*to Sargent*) *You* might as well talk to a wall as to that young fool. I have told him they are not to be moved – you heard his reply?

CAPTAIN (*to Lieutenant Arthur*) *You* heard, Arthur? Just drop Haig a line and tell him I'm awfully sorry, but there are two official war artists here who have forbidden the use of these tanks till their sketch is complete.

ARTHUR (*sniggers*) When do we move off?

CAPTAIN Six-thirty. The sleds are ready to drag behind to wipe out our tracks?

ARTHUR (*chuckling*) Yes. Won't Uncle Richthofen be surprised!

CAPTAIN Uncle *who?*

ARTHUR Wheeler's sergeant to see you, sir.

CAPTAIN Come in, O'Connor. You want me?

O'CONNOR No, sir. Lieutenant Wheeler is dead, sir. Yes, sir, he was a bit upset, sir. It's all right now, sir.

CAPTAIN All right, sergeant?

O'CONNOR Yes, sir. It was a direct hit. Right at the start, sir, so we hadn't wasted any petrol. We burnt a fair treat. Some of us tried to get out, sir, and this made it look more real like. The black guts pouring out of the hole of the 'prehistoric monster' just like the newspapers say, sir!

CAPTAIN Well, it's very sad, sergeant. But you know what the Good Book says – 'Pack up your troubles in your old kit bag and smile, *smile,* SMILE! While you've a Lucifer to light you like a fag you don't need a candle brother Ridler . . .

ALICE I'm sure that's all wrong.

CAPTAIN You hold your tongue! (*Sneering*) We all know – all nice

girls love a sailor, all nice girls love a prick; for there's something about a candle that reminds them of . . .

MAN . . . and that's why . . .

CAPTAIN (*angrily*) . . . why nothing! Jutland was fought long before August 8 –

MAN – as I was about to remark myself. Jutland had nothing whatever to do with it. The grey seas, the grey mists and the grey hairs. Leonardo da Vinci drew those writhing coils of hair, those swirling masses of water, to remind you of the form that lay concealed within the formless infinite. He could see them and draw them for you. What he could not see or help was that you would not be made to look even if he did draw them for you. You, if I may say so, are a 'consequential idiot'. 'And the consequences were . . .' You remember the game? Still at it, still playing it. Cause and effect!

BION I don't see how you are so superior and what makes you think you are so wonderful.

MAN I have not supposed you would. Although you had enough capacity to know your legion of honour, and D.S.O., and mention in dispatches were baubles, glittering toys, you have worshipped them with great tenacity. If Krishna told Arjuna, if Newton, Shakespeare, Bach, Mozart, Meister Eckhart, Plato, Socrates, Dante, Job told you, you could 'remark the ruck and reel which coil, keep and tease the simple sight', because you are blinded by the effulgence of your glory, you are condemned for ever to admire the evacuations from which you cannot free yourself. What is most worthless about yourself – *that* is what you admire.

BION Oh, shut up!

MAN Very well: I shall.

34

Rosemary is silent, but her resignation is in no way passive; it is impossible to convey the vivid, vital disapproval of her silence.

MAN (*to Rosemary*) Arjuna said, you remember, 'I will not fight', and threw down his bow. He did, however, pick it up again, allowing himself to be persuaded by Krishna that he did not know everything and that even if the opposing army did consist of his friends, and love was prominent amongst the foes, it was his business to fight. This (*indicating Bion*) – I hardly like to call him 'fool' – is too proud to admit that he could be mistaken or that the world of thought that he inhabits could conceivably be better than the world of his own invention. I remember sending a very good friend of his to Oxford to try to show him that even then he was behaving like Achilles sulking in his tent. The friend became someone – a man of consequence – though suffering terrible setbacks. Bion remains a fool still. He sulks in his tent and feels how wonderfully like Achilles he is. It would be laughable were it not tragic. I realize it must be terrible for you to have the pain of discovering that someone one has loved and admired is not worth it. Even worse is his own private hell which you and I can see him suffer and realize that he has always lavished love and admiration upon himself. This admiration is still, as always, devoted to his least admirable qualities.

BION Shut up, I say! Shut up!

MAN You see, Rosemary? There's nothing more we can do. Let us leave him. The man or woman who is given the privilege of making a decision also has the privilege of making the wrong one – again and again.

BION You sound remarkably smug to me. If my choice is between remaining in me or becoming like you I do not know that I

am convinced that I would feel greatly improved by becoming like you two.

MAN You would not become me, that is sure – only 'like me'. An allegory of a man. You would 'borrow', as you did from your father and mother – with the understanding that you would never be called upon to pay back the debt. Attend! This is August 7/8 of our era – A-theist, A-chronous, A-moral, A-sthetic. Watch! Your eyes will become adjusted. Can you see?

BION I see a man? A shade? A ghost?

MAN Don't talk; listen. Don't watch; look. That's better! More like an encephaly, you will call it someday. *Avec les yeux de pierre ils gisent la sans ouie, sans voix, la rose du vitrail toujours epanouie*. That's better – you are coming over to me quite clearly now. This is 'infra-sensuous'. I shall know what your a-morphous 'senses' tell me.

BION The man is filled with a kind of tenderness. Suddenly, with the utmost violence he beats in the woman's skull and . . . (*pouring sweat and overwhelmed with fear*), I won't watch! I shall *not* fight!

MAN Get back you damn fool. (*To Rosemary*) Poor stupid wretch . . . he has had a sane episode . . . I was afraid he might not stand it. Get on!

BION He bashes in the skull. God! It's like rock. He treats it like eggshell. He's sucking – this is cannibalism! He sucks out the brain.

MAN This is an anachronism. Luckily for you it isn't a million years later or they would be so barbarously civilized they would murder you for murder. A million years later still they would incarcerate you for insanity – an 'insane monster'.

BION Are you trying to tell me that it is 'I' who am doing this frightful thing, you damned blackguard?

MAN 'I', 'cannibal', 'blackguard' – these are all anachronisms. I didn't exist for another couple of million years. Even now you are measuring time in numbers of times the earth completes its orbit round the sun. The scale has to be of that trivial order because the spectrum of sensuous existence is minute – you have to measure it in terms of years – a sort of angstrom unit of space and time to measure sensuous existence. To borrow from your anachronistic vocabulary, most of your existence is as inert matter before birth and after death – what you call spirits and fossils, suspecting an infra-sensuous or ultra-sensuous extension. 'Fossil man', especially the skull, has a certain durability, not extending to light years, but

long enough to lie within the scale of 'geological' time as contrasted with ephemeral or 'human' time. You are taking time off – 'borrowing' from the domain of thought and thinking 'the anarchs of the world of darkness keep a throne for thee my son', as one of your 'mental' people put it. There are these escapes from the heavily armoured skulls. Ordinary people recognize their fellow 'old fossils', although they prevent the truth becoming too intense through feeling the thought, though verbalized, as a joke. Thinking is bearable because of its sensuous component. The experience which has not yet reached a conclusion is whether the human animal will survive a mind grafted on to its existing equipment. Now, do you think you could stand a little more?

BION (*surly and hostile*) More what?

MAN Well . . . a little more of 'I shall not cease from mental fight'. Not quite how Blake meant it of course, but the idea may emerge when the misleading quality imposed on formless thought by articulation is dissolved away. Even 'Confusion', as you liked to call him, described it as watching the thought ground in the mill of the mind with as much love or tolerance as might make it sprout. Even then, as you might be expected to know – if one expected anything of you whatever – God threw these presumptuous objects, ♀ ♂, out of Eden. The Omnipotent opposes the extensions of the human ability to have intercourse. Babel opposed the extensions of power to the realm of the mind. So extensions of plus-K are certain to reveal obstacles if extended to minus-K. The immortality achieved through reproduction by cell division leads to the mortality achieved by nuclear fission.

BION What else?

MAN I am not going to do your thinking for you. Sooner or later you will have to pay the price of deciding to think ±; whether, in Freud's formulation, to interpose 'thinking' between impulse and action; or to interpose it between the two as a substitute for action; or to interpose it between the two as a prelude to action.

BION Oh, all right – let's get on with this enthralling and spectacular spectacle.

(*The darkness deepens. The skull-crushing and sucking object is overwhelmed by depression at the failing supply of nutriment from the dead ♀ and the failure to restore it to life. He formulates in stone an arti-factual representation, easily seen by Plato to be a lying representation of, a*

substitute for, pro-creation, a substitute for creation. The lying substitution is transformed into a prelude to action. This whirling, swirling chaos to infinite and formless darkness becomes luminous and a Leonardo de Vinci robs the hair, the brooding waste of waters, of its formless chaos.)

BION Disgusting! Mawkish!

35

MAN Don't blame me if you find the taste of your brother's brains and blood and guts dis- or minus-gusting. The priests of Ur, the tomb robbers, are your religious and scientific forebears.

BION I do blame you.

MAN So I gather. You postpone the day of reckoning till man is strong enough – as you think – to carry the load of guilt; and then when the day of reckoning threatens to dawn you cheat again by robbing your forebears. 'They', you say, 'did not know any better'. You, I say, did not know, still do not know, any better. Never will, in the future, 'know any better'. Back to thy punishment, false fugitive from the domains of ultra- and infra-sensuous non-existence! Fawn upon, nuzzle the bloody corpse of your cannibal feast. Stand up! Be erect! Oh great and fallacious Phallus! You deal with feelings of guilt by deception. In the domain of real thinking it is possible to find an approximation which contributes to the illusion of omnipotence. Real thinking can approximate to thoughts which at the same moment seem to be those of the innocent child, the responsible adult, the depressed, devouring glutton, the depressed, devouring but unsatiated being of any age and clime. The variables are legion. The basic matrix is the ability to change. For instance, you can think, or imagine, or intuit – take your choice – that you are a civilized human being; 'homo', as we say in our quaint scientific language, 'sapiens'. As you have demonstrated, you can feel (think, imagine, intuit – as I said, take your choice) you are the wild animal nuzzling, fawning upon, mourning its victim on which it preys. You may easily feel you are preyed upon. You have a wide choice, a choice which seems to include a great number of possibilities including combinations of thoughts and feelings in great profusion of varieties and degrees of

variety. One of your kind – there are many more than are able to make their existence obtrude on other similar entities – described it in verbal transformations of visual images as seeing all the domains of the world spread out before his eyes as if they were objects suitable for the exercise of greedy possessiveness. In this domain the herbivore may devour the carnivore.

I am at a loss to find a method of communication by means of which I could make the 'fact' – as you would no doubt call it – clear to you. Perhaps – well, you know about perspective?

BION A little.

MAN (*to himself*) My God – I think he is learning! (*To Bion*) Under a certain vertex the figures of Euclidean geometry appear distorted; a sphere looks like a flat disc and an ellipse can be interpreted as a circular pond – artists frequently paint and draw in this kind of way.

BION Yes, I've heard this before. In fact, I have said something like it.

MAN Under a certain vertex – by which of course I mean a vertex that is so 'uncertain' that I do not even know what it is – the visual image of the sensuous, Euclidean objects appears to have been expelled, 'projected' from *behind* the eyes onto the world of objects in *front* of the eyes. Under one perspective the observer sees, takes in, a horse which he cannot put in his mouth but *can* take in through his eyes.

BION This is familiar to me and many of my fellow human animals.

MAN Sometimes the flow is from a focal point behind the eyes out – to the horse, say; sometimes the 'perspective', that is to say, the 'flow', is reversed. Sometimes these flowing objects come in waves, sometimes in quanta, sometimes a feeling is described under a vertex as 'helplessness', sometimes as 'God'. The 'perspective is reversed'.

BION I think I have an idea – a sort of hunch – that I know what you mean. A man once told me, 'I don't know what I mean'. I tried to translate in terms of articulate speech what he was expressing in verbal form – verbal transformation of a visual image – a hieroglyph. Of course, it was not amenable to the laws of articulate thinking.

MAN I think I know what *you* mean. It might be a good idea to get together. First we need to know *how* to get together; what, so to speak, are the laws of mental cannibalism.

BION (*to himself*) My God – I think he is learning! It would be curious if it turned out that we both were.

MAN The first thing is to realize that the laws of nature are not formulations or orders which have to be obeyed, but are elements which are constantly conjoined, are conjoined *constantly.* This is true whatever the variables may be and however much the variables dominate, are allowed to dominate, or are encouraged to dominate the object which approximates to the formula of (constant + variable) $\alpha + \beta \times \xi$, or $\beta + \alpha \times \xi$.

ALICE A sign to denote noise, analogous to that denoting the bass or treble clef in music, is required.

MAN One famed anthropologist says the bone formation of the skull does not lend itself to attachment of the tongue muscle for use in articulate speech. The attachment of the penis to the anatomy, the vagina likewise, is in its own fashion appropriate and beautiful. What God has joined together let no man put asunder.

BION How could we put them together or put them asunder? These are anatomical structures with physiological functions, and I for my part have not in my conscious memory ever known a time when conscious and unconscious aim and ideal have been possible to divorce from each other. Nor have I ever known a time when these constantly conjoined objects were on good terms with each other except for short periods; enough to make me long for more.

MAN Rosemary and I realize that. I was only a little while back saying to Rosemary – was I not, Rosie? –

BION Rosie! Good God! Rosie!

MAN That is what I said. You do not approve, so you sneer; if our terms of endearment are not yours, your hostility is at once in evidence.

BION That is me. I did not choose my education or my personality. I would rather I were tolerant. What you say and do is not my business, but what you say and do stimulates disagreeable feelings in me, as in this instance; feelings are aroused in me which I would rather did not come together. Yet they constantly do come together. I can do nothing about your arousing such feelings. I can do nothing about the feelings that in fact are aroused.

MAN That may be so. For all I know you may be quite justified – you obviously *are* in your own eyes – in thinking you cannot fairly be held responsible. But you *are* held responsible and it is you

who feel it is your responsibility although you are trying to maintain that you do not hold yourself responsible. Are you not then yourself trying to 'put asunder' what God has joined together?

BION Who, or what, is God?

MAN You do not know, but you behave and think as if some such force that is not you, 'is'. You do not reconcile yourself to the fact that if there is such a force it behaves in a way of which you do not approve. Newton, long ago, suggested that the procedures which he had adopted with regard to the behaviour of light could and should be adopted with regard to the forces with which he was not acquainted, but of whose reality he had no doubt. He even spoke of them at the end of 'Opticks' as if they were not dissimilar from the forces which were familiar to people who were under a religious discipline. Whoever reported the debate between Arjuna and Krishna said much the same; Milton likewise. The greatest minds have shown themselves to be familiar with these emotional experiences, including the experience of having to admit that before the forces of which they disapproved their rebellion lapsed into shamed silence, though they were ashamed of their shame and ashamed of their acquiescence or 'defeat'.

BION What about it? Admitting all that – so what?

36

MAN You will not be satisfied with my reply, but here it is – allow me to introduce you. First, to the objects which were so shadowy that it was not even possible to say they were man and woman. I pronounce no opinion on this. Let me introduce you now to two objects which the higher human authorities had no doubt whatever were man and woman; there was no dispute about the facts of anatomy and physiology. The man took the woman into the bushes, the woman showed no reluctance to go. There, the man who showed himself subsequently to be perfectly capable of the exercise of functions which we are used to regarding as those of reason, savaged the woman's breasts and genitalia with his teeth, devouring the flesh of both regions in a manner that would be comprehensible if he were a wild carnivore. The episode presents itself to us as a problem because he did not appear as a wild beast devouring his prey in a jungle. He appeared to be a man going out with a girl at a holiday resort. This pair were so unshadowy that it was impossible to disbelieve that they were a man and a woman. There are many similar instances, so common that it is not necessary to recount and document them. How immediately they have presented themselves to the sensas of the reader of this book depends on a number of facts peculiar to the reader – his occupation, his life up to this time – it would take a long time to recite the facts. I shall abbreviate our labours by saying that they 'depend on the vertex'. Under one vertex I have known a man act as if he were having a vivid emotional experience familiar to me under the vertex, 'dream'. He was not dreaming; nor did he think he was. It may seem unnecessary to resort to the term, 'vertex', but it must suffice until we can find some more adequate shorthand for those states in which the individual has two or more sets of facts appropriate to the same

emotional experience, but which are impossible to entertain together without feeling mad. This involves feeling sane enough to be afraid, and further, to respect his fear. He is afraid of his mind, and fears that his fear is worthy of respect.

BION In short, his 'mind' and the consequences of having a mind are unwelcome discoveries. But you seem doubtful.

MAN Let me try to expand my misgiving. I agree with what you have formulated in terms of a 'mind', but I am not sure that it is satisfactory either to include in or exclude from 'mental' activity the taste of human blood, the 'emotions' associated with erectile tissue and erectability. It seems, though this is only guesswork, that it was easier for the Greeks to tolerate the idea of 'thinking' with the phrenes; or to associate it with the dead; or with the dead apparition when the person to whom it appears was asleep. Alcmaeon of Croton seems to have been one of the first to have thought that thinking might have something to do with the CNS. Since then, up to the present, great importance has been attributed to man's possession of a central nervous system. The nature of impulses springing from an ability to exercise one's teeth or vagina or penis is not similarly honoured or tolerated. When a modern man's impulses obtrude to a point where they become manifest to others as functions of a sensuous system, neither they nor their locale are accorded respect. The peripheral nervous system and its extensions are a source of suspicion and fear.

BION Suppose there is a CNS. Further, suppose there is a peripheral nervous system – the PNS and the CNS both fear. The fear is intensified if it is supposed that there is some extension of both infra- and ultra-sensuous. This extension is dreaded in itself, and made the more dreadful if suspected as being *outside* the sphere which we associate with the senses . . .

MAN . . . and *within*, but unrecognized.

BION Or recognizable as a character or personality which can be located within the molecular structure of the amines and the domain in which their transmission takes place.

MAN If the CNS is rightly supposed to be important, but we are unable to assess its importance or how it exercises its functions, does that not make it more frightening?

BION It does. I, as a psychoanalyst, have committed myself to action which pre-supposes that such a thing as a mind or a personality exists. I find no difficulty, in present circumstances, in making

that admission, accepting that my work is an admission that I hold such a theory. I hold it so strongly that I am prepared to transform my ideas into action. For example, I allow it to be known that I am a psychoanalyst and, with others, have gone so far as to seek recognition of this same idea from people who are not us and who are not in fact at all closely connected with us.

MAN You make the acknowledgment clearly. Do you also agree that others do so? Sometimes you have to my knowledge claimed that certain well-known figures of the past, not only of the recent past like Sigmund Freud himself, were gifted with a profound capacity for understanding their fellow men?

BION Certainly. We can gauge their actions and behaviour from what has been recorded of or by them, and allowing myself anachronistic-like poetic-licence, I would call them very considerable psychoanalysts before anyone had heard of such a term.

MAN Is this not an instance of claiming that there is such a 'thing' as psychoanalysis, that there always has been such a thing as psychoanalysis, whether it could be verbalized or not?

BION I would say that it is an example of a thought which, before Freud existed to think it, was 'without a thinker'.

MAN I am not really clear why you postulate a thought 'without a thinker'. It seems an unnecessary complication.

BION 'Doubt' is always regarded as an unnecessary complication. That is clear whenever an individual asserts 'certainty'.

MAN You used the word 'certainly' just now.

BION Touché. I agree.

MAN But you reply in the language of a game of combat?

BION A 'playing at hate'. Play itself has a function as a way of rehearsing something. We play at soldiers. It is not always clear that children are 'only' playing, particularly if the game turns into a quarrel about the way the game is being played. Conversely, 'real' quarrels, 'real' wars, arouse critical hostility if the soldiers or sailors appear to be 'too' friendly. I remember an emotional upheaval connected with certain courtesies observed by Field Marshal Montgomery in his treatment of a captured enemy general. 'Too serious' vies with 'too friendly' – a psychoanalyst is vulnerable to attack on the grounds of 'degrees' of emotion with which the debate is conducted. The degree of emotion is a statement; a verbal formulation may be emotionally liberating, but is restrictive if it stimulates

more than it satisfies. (Putting it more abstractly, $\alpha\ \xi \rightarrow \alpha\ \alpha$ at once becomes $\alpha\ \alpha \rightarrow \alpha\ \alpha\ \xi$ = frustration.) Whether the 'frustration' is a product of inability to solve an existent problem, or due to progress revealing further frustration, the frustration is more obvious than the need to discriminate between 'kinds' of frustration. The problem of delay can be solved by interposing thinking between impulse and action; or the frustration can be so great that hatred of the thinking, interposed between impulse and action, itself becomes the object of the immediately frustrated, destructive impulse. The tendency, therefore, is to turn the destructive impulse into action rather than further thought.

BION The advantages of thought are not immediately obvious. Whoever is aware of this discussion between you and me, including you and me, cannot see advantages which depend on a future that has not yet taken place. It is as bad as a past which is not known because it is forgotten, or because we did not then exist. Ignorance thus provides force for belief in a future heaven and a past transmigration of souls. I resort to a 'hunch' that as there can be thoughts which have no thinker, so there may be 'acts' without an agent. There are thoughts which have been acted upon without an agent to act. There can be thoughts and acts related to each other without any thinker or agent to relate to them. Thus a cannibalistic act, neither conceived nor acted upon, may await the arrival of the creator and agent. Should it in fact be the case that a particular murderer has existed, he can be regarded as a realization which approximates to the theory or concept of a personality who both conceives and transforms such an impulse into thought or action, or both. Nevertheless, the 'fact' 'murderer' may be a rationalization – a product of the reason whose function it is, as Hume postulated, to be the slave of the emotions. The problems with which you are familiar are not solved either by thought, or action, or both in combination. You, and others like you, feel dissatisfied. You and your contemporaries doubt that any inhabitants of the world, whether real or fictitious, are any more satisfied; or that you would be any more satisfied if you found yourself in the position of any of those people. You *do* find yourself in the position of victor. England has been conquered. Rosemary has become mistress. She is the 'possession' of the Man. Her former mistress is in the position of being her 'skivvy'. But you heard what she said.

ROSEMARY What did I say?

MAN You said, 'Not again!' – meaning that no matter what the change in vertex, the relationship between the invariants was constant. Mathematical terms could be used to formulate a problem and demonstrate relationships between invariants and constants with such accuracy that the configuration presented by the newly disposed elements was familiar and unwelcome. 'Not again!' she said.

BION Some emotions and events are less agreeable than others; these, people hope, will not re-occur; they wish to feel pleasant sensations without cessation. Attempts are made to manipulate feelings and ideas so that they conform to a principle of perpetuity. In all domains there is a desire that nothing should disturb the sense of permanence. This desire is sure to conflict with the nature of the object studied. It is hard to conceive of anything more free from restraint than thoughts and feelings. But if an attempt is made to give them written or even spoken expression, freedom of thought has been eroded. The freedom of communicated thought cannot at any time be absolute.

37

BION The experience of physical, sensuous space was not abandoned. It was clung to with such tenacity that it prevented the loss of security involved if pictorial sense were lost. It obscured realization that Euclidean proofs depended on their being visually obvious. Euclidean geometry thus remained for centuries without a rival. There was no rival in the sphere of education since communication of what is known, by those who know it, to those who are ignorant of it, depends on visual sense. The 'obvious' was evidence and proof of the truth of what was asserted. 'Time' was as unquestioned as 'space'. Events are supposed to occur at a particular time and in a particular place; the 'past' and the 'future' depend upon sensuous experience, but there is no more recognition of that than of the dependence of Euclidean geometry on the sense of sight. Theories about 'mental life' are taken for granted, as was the background to the theories of Euclidean geometry; similar assumptions about 'mental time and space' imperil growth of mental life. Theories of causation, commonly adumbrated in the context of the physical world, are based on the undiscussed and unquestioned foundation of ideas about time and space. Newton accepted that foundation. What he applied to the physical world was applicable to the mental or psychical or spiritual world. Should these assumptions be accepted by psychoanalysts or philosophers? Descartes had no doubt about the value of philosophical Doubt and yet did not doubt the validity of 'cogito ergo sum'; although he came so near, he did not take the final step. The psychoanalytic theory, first formulated by Melanie Klein, I propose to extend to areas not in fact included by her in the therapeutic domain for which she proposed it. The extension involves supposing that not

only does the individual harbour omnipotent phantasies of destruction and dispersal, but that there is an omnipotent being or force that destroys the whole object and disperses the fragments widely.

MYSELF I can see that in the sphere of astronomy, where so much depends on the sense of sight either directly or at a remove – as in the examination and comparison of photographs – it may be possible, by putting together the 'facts' of many hundreds of photographs, to draw a sequence which could be supposed to represent a 'moving picture' of events like the development of our own sun – as if in a few moments one could scrutinize an event which may have taken many centuries. But I do not see what useful purpose is served by such a fictitious construction.

MAN It gives immediacy and reality to something which might otherwise be hard to understand.

BION Is it not just there that the danger lies? One more plausible theory is created to swell the enormous supply of plausible theories.

MAN Of course. But fear of what might happen is a bad master.

BION So is plausibility. I wonder how many plausible theories have been used and bewildered the human race. I would like to know. I am not sure of the ease with which 'plausible' theories are produced. In this context of 'plausible theories' about which we are talking, the plausible theory, or 'convincing interpretation', may be hard to come by. It can be plausible and false. Witness the idea that 'the sun rises' – what trouble that has caused! We do not know the cost in suffering associated with the belief in a Christian God, or the god of Abraham's Ur, or Hitler's Germany, or peyotism – or god of any kind.

MAN Not god of any kind; some gods have been less 'poisonous' than others.

BION Schacht said that the accumulation of wealth was a harmless ambition, but then the important thing may be the way it is accumulated and the object for which it is to be used. It could be to achieve the reward of work done as a substitute for doing the work.

MAN The same is true of psychoanalysis or any other mechanism developed for purposes of accumulation. You will not have failed to notice that we make a tacit assumption about a sense of values; or even that there is a valid sense of values by which the ambitions are to be judged. We may regard our 'survival' as a matter of importance. We should not have survived had we not wished to do so.

ALICE Who is 'we'?

MAN The ones who survive, together with some who failed. If we are animate this includes an ambition to remain so. The same impulse appears to have spread to the ambition that it should be a life worth preserving. I have noticed this tendency in psychoanalysis; the whole emphasis, since it is not primarily concerned with physical health, suggests that there should be someone or something who is concerned with happiness.

ROSEMARY I would like to be happy. I can't say it thrilled me to have to bother with Alice's parties; in fact, she seems to get some sort of kick out of finding she is my maid.

ALICE I doubt whether any woman was as keen on the survival of the 'good old days' of the British Empire as the men. The 'already existent' is essential to and incompatible with 'further existence'.

BION According to Rosemary, Alice is able to have a masochistic relationship with her former maid.

MAN That is a psychoanalytic formulation.

BION I agree. I do sometimes express my views in terms which can themselves be characterized; in this instance my formulation is called theoretical. But let me tell you something in more conversational terms about a man I knew in the army. He was highly educated at a well-known public school and, as far as I could see, had the opportunity common to people of the privileged classes of taking up an occupation of responsibility and power. He did not do so. He failed his chance of being trained as an officer, became an officer's servant and stayed in that position till the end of the war, by which time I had no means of knowing his further career.

ALICE Are you suggesting my career is comparable?

BION The thought occurs to you; if you are willing, and others likewise, this could be debated. If so, it is not an obstacle to the discussion that my case was a man and Alice is a woman; that kind of behaviour is not restricted to one sex. Yet it can be described, both in the man and now Alice, as 'sexual'. This is a classification familiar to me; in psychoanalysis the relationship between Rosemary and Alice could be discovered or demonstrated or classified as sexual. Suppose we consider Rosemary and Alice as welcoming, for their individual reasons, the country's downfall; their nation or culture undergoes a change which makes it possible for each individual to pursue a life which they would not otherwise have been free to do. I can see that the defeat makes that freedom possible. The desire to achieve such

freedom, if shared amongst a sufficient number of people, could contribute to the defeat.

MAN What would be described as a defeat brought about by the decadence of the society or group; although I have known a society to be considered decadent *and* victorious. Reciprocally, the victory is regarded as a sign or symptom or 'result'.

ROSEMARY Men seem to attach great importance to conflict, rivalry, victory. Even in private affairs I couldn't make a man think that there was any importance in what I thought or felt about him. He talked and acted as if the only matter of consequence was whether he was successful. I suppose he thought I would then be bound to fall in love with a man of such capacity and brilliance. To the end he never entertained the possibility that I loved *him* and couldn't care less about his successes.

BION Is that true? I would be surprised if you did not find, if you were honest with yourself, that you cared a lot about his success.

ROSEMARY He had some distinction; it was the most boring part about him. Why, even in sexual love he was convinced he had to be potent. He couldn't believe that I might love him and therefore be capable of helping him to be potent.

BION I am sure there are many men who have no doubt of the woman's ability to make fools of them. In technical terms, there are plenty of men who are sure the woman can 'castrate' them. All states exist, from primitive fears of the female genital – as expressed in visual prototypes of a vagina dentata – to fears that the woman would rejoice in triumphing by humiliating the man.

MAN There is certainly a profound belief in the pleasure of triumphing over and humiliating the rival. That state of mind is common enough and it is feared by man or woman. It, and the fear of it, can be generated by the experiences of the child.

BION Its efficacy depends on belief. But there can be innumerable reasons for fear, including fear of the pleasures of cruelty.

MAN You are again talking of 'reasons' – 'one' reason, 'innumerable' reasons. Don't you think *Belief is* the action-generator analogous to 'number generators'? Man, like animals, is capable of fear. You can have 'reasons' for being afraid; you can fear death and believe you will die. Belief is the action-generator; what generates belief?

BION If that state has been part of you, you must be familiar with the constantly conjoined elements. We can suppose that the constant

conjunction has a 'great deal to do with' – or is 'constantly conjoined with' – the fact that we are still alive. I would go further; I have owed and shall owe my continued existence to my capacity to fear 'an impending disaster'. The question is not 'where is one to draw the line?' but where has the line been drawn? Between conscious and unconscious? By the phrenes? The thalamus?

ROSEMARY Does it matter? I can see that it does if we want to debate the question. I have never known a crisis in which I have thought like that.

BION Here we discuss. I can even *imagine* having a discussion like this, but this discussion and the imagination that I am having such a discussion differ; one is the discussion, the other a substitute for, or a prelude to, discussion.

The ferocity with which children sometimes play games is evidence that the players are not feeling that they are playing, or the observer witnessing, 'just a game'. The idea of 'game' is an inadequate description for what is being witnessed. It is being wrongly categorized by the name of 'game'. I think of a mathematical analogy: if the 'universe of discourse' does not facilitate the solution of 3 minus 5, then real numbers are no good, but must be enlarged by 'negative numbers'. If the mathematical 'field of play' is not suitable for the manipulation of 'negative numbers', it has to be extended to provide conditions for 'games' with negative numbers. If the world of conscious thought is not suitable for playing 'Oedipus Rex', the 'universe of discourse' must be enlarged to include such plays. If serious psychoanalytic discussion cannot take place in the domain which Freud found adequate, it must be enlarged. In fact, Freud did enlarge it when he found that he could not believe what his experience with patients seemed to suggest – that they had all been assaulted sexually. He had to entertain the idea that events which had never taken place could have serious consequences. If I cannot 'believe', I cannot act or think. I need 'thoughts without a thinker'. I may have to create a domain which is not a serious paper, not a game, not a murderous rival. If this is true of 'childhood', 'mathematics', why not of other thematic apperceptions, including 'psychoanalysis' itself? A 'field of play' must be found on which to play our 'game'. I once asked a group, 'What is the interpretation of that?' and I pushed a chair into the forefront of the discussion. It took almost twenty minutes before anyone ventured a reply to my question.

ROSEMARY I'm not surprised! I wouldn't know what you were up to.

BION (*indicating Man*) If it comes to that, do you know what *he is* up to?

ROSEMARY He and all his pals? Yes.

BION Then you believe.

38

MAN You interest me; may I ask *what* we are up to?

ROSEMARY Homer spent time writing the Iliad and the Odyssey – a very early answer to the question which is still being asked.

BION That doesn't answer Man's question. It only stresses the fact that 'a question' has always existed and still does – we are animals activated by curiosity.

MAN Or belief.

BION We are questioning ourselves about the nature of our behaviour. There are many answers, included among those from the past – if Rosemary is right – the answer given by one of the world's great poets. But in a particular instance, *this* instance, we can provide an answer, if not one that satisfies us.

MAN Perhaps there is something wrong with our 'methods' of investigation + answer.

ROSEMARY Well, you at any rate (*turning to Man*) should have some answer. You have upset our way of life. Alice and I have certainly been forced into a situation which we had no say in choosing. You were not obliged to invade our country.

MAN How do you come to the conclusion that I am any more a free agent than you are? It is true I had a choice. It so happened that I *was* compelled to invade your country, but I was free to disobey orders. I had to decide what to do.

BION You mean you had to decide whether you wanted to pay the cost.

MAN Yes, you could say that; but I did not know what the cost would be either of obeying or dis-obeying.

BION Is that any different from any other decision? The cost of having the privilege of choice is being held responsible and accepting

the responsibility for whatever one decides. This, indeed, is the cost of choosing to be responsible.

ROSEMARY Do you think you or Roland accept the responsibility for protecting Alice and me? If not, what do you accept the responsibility for?

ROLAND Bion and I, amongst others, *did* accept that responsibility. I do not believe in a future life –

ROSEMARY – nor do I –

ROLAND – and so it was clear to me that my patriotism or loyalty or responsibility, or whatever you call it, might cost me my life. I know plenty of men who did lose their lives. Even the many survivors lost their peace of mind or what made life worth living.

ROSEMARY You didn't join the army because you were responsible.

BION Nor did you.

ROSEMARY Even women risk death. In childbirth . . .

ROLAND You did not risk childbirth.

ROSEMARY What do you know about it? I believed a man and his promises once. I don't now, but I did once. I didn't die, but something died in me – mentally, I suppose you would call it.

BION Most people experience mental death if they live long enough. You don't have to live long to have that experience – all you have to do is to be mentally alive.

ALICE You speak as if it were simple to be mentally alive. That is hardly my experience. It is true that a person does not, as far as we know, have to 'do' anything to be physically born. It seems easier to think that he has to 'do' something to *keep* physically or mentally alive. You have to have a partner for one thing – even in opposition.

ROBIN How do you mean? I can see that I have to be 'opposed' if I want a contest. But suppose I don't.

BION Doesn't it depend on what use you need a contest for? This very discussion is a contest. We are talking about something. I think there is a sense in which we need, and are even feeling aware of the need for contest, or for opposition.

ROLAND (*sarcastically*) This gentleman (*indicating Man*) has obliged.

ROBIN I don't feel at all grateful. I had plenty of trouble with the weather and the crops without the need for invasion too.

MAN I don't think any of us like the 'opposition' we have. We

feel we should appear in a better light if the opposition were different. I can't do what I want; I have never known a time when I could. But there has always been someone or something against which I could rage.

BION If all else fails you could rage, as I too can, against yourself, your youth or your age, your strength or your weakness. It is one of the uses you can make of God – if you can believe in God.

ROBIN Well, can't you?

BION Which god are you referring to?

ROBIN Allah Akbar!

BION I don't think you are being serious. I shall use psychoanalytic licence to take jokes seriously. To start with, you show you are aware that you have a choice.

ROBIN You think of me as joking; it would not be so easy to suppose that, if I were in fact a member of a Muslim culture. Nor would you suppose that you could 'choose' to take it seriously 'because' you are a member of a psychoanalytic group. You would be compelled to take it seriously. It has nothing to do with being a member of a particular group, profession or culture, but that the particular 'culture' has a great deal to do with some underlying, unobserved, constant conjunction of beliefs; an actual God of which the various religious formulations are only approximations to the underlying configuration of facts.

BION You are asking me to suppose that there is a 'thing-in-itself, noumenon, Godhead, which, using Kant's terminology for my purposes, becomes 'manifest' as a phenomenon; 'God' as contrasted with 'Godhead'; 'finity' as contrasted with 'infinity'; 'won', as Milton says, 'from the void and formless infinite'; a geometrical, Euclidean figure, a triangle with sides of 2, 4 and 5 units, as contrasted with an algebraical deductive system. But a rational fact gives no scope for 'belief. Belief itself is destroyed if it is transformed to find a 'reason' for belief.

ROBIN Well, I take your word for it; if you say that that is what I'm asking you to do, I can believe I am, but I confess I didn't know it.

BION Then you have the necessary condition for belief. You don't reject my formulation though you are not in a position to confirm it. 'Time' may confirm it or not.

MYSELF I don't see that Time can confirm it or refute it. I know what you mean and so would others familiar with the ordinary use of conversational English. This supposes that 'reality' approximates

to conversational formulation. Suppose I examine your statement in a more analytic way: it conforms to certain definitory hypotheses, it is made up of words taken from a 'vocabulary' or collection of definitory hypotheses and articulated according to certain grammatical rules. Am I to suppose that there is some underlying configuration which approximates to those 'constant conjunctions', words, and also approximates to the rules of grammar in accordance with which they have been articulated? Or are the vocabulary and grammatical rules of articulation unique, particular, conformable to an underlying configuration which is itself 'unique' and therefore of no general significance? Or do those same grammatical rules of articulation represent a reality which is not formulated in the statement directly, but only by a silent obedience to the unformulated, undetected, but nonetheless real, system of rules or discipline? Should we then listen not only to the conversational meaning but also to 'how they say it'? Should we obey, conform to the rules of 'articulation', or only to the laws articulately formulated?

ROBIN I don't see why I should obey the rules of articulation. After all, I am not a verb or adjective; rules which are all right for them may not be at all suitable for me who am *not* part of speech, but a person.

MAN You do in fact have to obey the laws governing conquered peoples.

BION I do not wish to argue with that automatic I see in your belt. I would rather not be either 'pro' or 'con' that particular piece of machinery, although I have reason to suppose that if I conformed to the rules of force either you or I would be dead. As far as I am concerned I believe the dead person ceases to exist, but since you cart that automatic around stuck in your belt, I assume that you conform to a different view.

MAN Not at all. Your view and mine seem to be in agreement; not 'complete' agreement in this instance because, so far as I have a choice, I would rather be the one to survive.

BION So you have the automatic and I don't.

MAN You *believe* I have the automatic. In fact, all I have in the holster is a bar of chocolate.

BION Very clever; but that 'bar of chocolate' is backed by the force of an invading army.

MAN *You believe* it is backed by the force of an invading army. As a matter of fact . . .

MYSELF I was about to say that myself, but I hesitated as it occurred to me that 'facts' are very curious things, so you beat me to 'as a matter of fact' before I could say it. I was wondering, when you were talking of articulate speech, what the rules would be when the rules were *not* those of articulation.

BION Such as the rules of 'murder', the rules of 'sex', the rules of 'violence', the rules of Chinese communication contrasted with the rules of 'articulate' communication, the rules of 'blackmail'.

MAN As a member of the late British Empire you should have plenty of experience of violence, blackmail, murder, inarticulate speech.

MYSELF We have; it has stimulated a great deal of envy and ambition to emulate and rival our achievements! But we have also a great deal of experience of poetry and poetic expression and communication.

MAN In the course of practising psychoanalysis you were able to contrast your findings with those when practising group therapy. How do they compare?

BION I remain, as far as I can tell, the same person whether I am experiencing a group or a psychoanalysis.

MYSELF Yes, of course; I see that.

BION Though it may seem contradictory to what I have just said, I don't think there is any 'of course' about it. I said, 'as far as I can tell', but I don't know 'how far' that is. I certainly don't 'see' the same things in the two situations. Taking what I may call a macroscopic vertex I do not see the same things as I do from a microscopic vertex. In what I would call a macroscopic formulation the difference is easily explained by the fact that a group is not an individual or vice versa, but . . .

MYSELF You think there is a change analogous to the change described by de Broglie between the behaviour detected by the observation of the relationship between macroscopic units and between microscopic units?

BION 'Analogy' is itself a mental tool more appropriate to complex large observations and judgements than to the observation in detail of details. The microscopic vertex – I shall borrow this term

to improvise a way of talking about this subject which is devoid of such equipment – reveals something which does not correspond to the anatomy or physiology of the individual or the group of human individuals.

MYSELF Could you venture on an attempt to communicate this to me?

BION Gladly, but I am not hopeful.

ROSEMARY Alice, I think it's time we left. I feel I am not in a sufficiently serious state of mind to keep in touch with these two.

BION I should have thought both of you might know very well what I am talking about – the thing-in-itself as contrasted with the language about it. You may find yourselves as inadequate as I am in talking *about* it, that is, in trying to tell someone else lateral communication. I cannot feel optimistic of my chances of making it clear even to myself.

MYSELF I see your point.

BION Then it can't be the point.

MYSELF You mean I am wrong?

BION No, I don't; but you are now.

ALICE Rosemary, do you think we shall ever understand this?

ROSEMARY No, but I feel I am 'becoming' it even if I do not, and never shall, 'understand' what I am 'becoming' or 'being'.

BION In short, 'being' something is different from 'understanding' it. Love is the ultimate which is 'become', not understood.

ALICE (*looking at Rosemary*) I have 'become' something and this, if I could say it, would depend on my saying, 'I love'.

BION Or you have become loving perhaps?

ALICE No, I love Rosemary.

BION If you are right you must have become capable of loving.

ALICE I thought that as a psychoanalyst you would be sure to say I was homosexual.

BION On the contrary; so far as I am capable of 'being', as contrasted with 'claiming to be', a psychoanalyst, I think that you are incorrect in saying you love Rosemary if you are homosexual; you must have become capable of loving. Becoming sexual is part of physical maturation. Real love is not a function of the thing loved, but of the person loving. That is part of psychical or mental maturation and is not obstructed by accidental features of the thing or person loved.

MYSELF Amongst these features that you call 'accidental', are you then including that which we call the sex of the person?

BION Certainly; sex applies to anatomy and physiology and, as is usually the case when we talk of the mind, has been taken over by the psychoanalysts because we have to make do with a language invented for physical life or 'sensuous experience'. 'Passionate love' is the nearest I can get to a verbal transformation which 'represents' the thing-in-itself, the ultimate reality, the 'O', as I have called it, approximating to it.

ROLAND Then you think Alice could love *me*?

BION If she is correct about loving Rosemary, she is *capable* of loving you. That does not mean that she would want to be with you, either for an ephemeral episode or for life, or for anatomical or physiological purposes. But I am concerned here to discuss, with inadequate equipment, mental phenomena. I have a prejudice in favour of believing there is such a 'thing' as a mind or spirit.

ROLAND Is that what you mean when you say you are a psychoanalyst?

BION That term is meaningless, but useful for nomenating an expanding conjunction, including what I and certain individuals are doing, shut in a room together during my working hours. It has a use in what I described as 'lateral' communication – 'conversational' English. Both phrases, when used by me, have a directional significance, sometimes tacit, sometimes overtly expressed. I refer to the use of terms which imply direction because such terms are used by others as well as by me. I also use these terms in a context which is different quantitatively and qualitatively in the domain of thought. As a psychoanalyst I assume that there is such a reality that approximates to these terms 'thought', 'mind', 'personality'. I suspect – it is no more than a hunch or suspicion – that the mind and personality have a physical counterpart, expressed by Alexander in *Space, Time and Deity* as a relationship of every psychosis with its 'neurosis'. In this context I am assuming that every psyche has a physical counterpart in the central nervous system. I could portray the relationship by marks on paper thus: (pronounced psy ↔ fang). Note the double arrow to indicate that the 'direction' of the thought is *indifferentiated.* I use a Chinese sign for CNS to indicate that the thing indicated is different from the physical, sensuous reality usually supposed to approximate

to the sign 'CNS'. Assume for the discussion that ♆ is as significant as it is supposed to be and that ♈ is as important or more – not less. Lateral, profound, superficial, deep, early, later – all are terms more appropriate to time and space and sensuous awareness, but not if there is a domain of which it is possible to be mentally aware. The physical CNS ♆ has contact with a real physical world and a language appropriate to its formulation exists. We are compelled to use that language for communication of something for which it was not devised and of which it is itself a product.

ROSEMARY I'm sorry, I do *not* know *what* you are talking about.

BION I am saying that our physical and sensuous components are manipulable by set theory. Thoughts associated with a thinker are also amenable to set theory. 'Mind', 'personality', 'relationship', 'belief', are not; they cannot even be reasonably defined. 'Reasonable definition' involves 'confinement' to a 'constant conjunction'.

39

MAN Can I help? May I show you a recent acquisition of mine – I refer to this painting.

ROLAND My god! What damned sauce! That's our Athenese!

MAN Yours?! Did you ever look at it?

ROLAND Of course! It hung in our dining room.

MAN It was yours. Since the pacification it has been mine. By great good fortune it came to me in the redistribution as I had been one of the first to apply for it. Would you care to demonstrate its finer points?

ROLAND Well, I'm no art expert, but . . .

MAN No, I did not suppose you were, but – you said it was yours and I wondered in what sense you meant that.

ROLAND I suppose you think it's yours – by right of force, by conquest.

MAN Shall we say, by right of your falling to my chocolate bar?

ROSEMARY Am I likewise – Alice also – slave to your all-conquering chocolate bar? No, leave him to me Alice. I told you, I know how to deal with these gentry. I wasn't sent to one of your high-falutin' schools.

ALICE Roland was though. Let him 'demonstrate' the Athenese. Perhaps we shall find out something about how you and I and the Athenese all come to have fallen to this gentleman's chocolate bar.

(*All becomes dark, including the picture. Only Roland's voice is heard*.)

ROLAND To start with let me make it clear that the real name of this famous painting is 'Saint Athanasius chased by a wild boar'.

ROSEMARY Wrong from the start. It is 'Athenese mon pied'.

ROLAND (*ignoring the interruption and becoming more and more academic, in guide book style*) The painting is probably one of the few

surviving absolutely genuine works by the greatest painter the world has ever known. It has always been in possession of my family –

VOICE Quite right. It 'owned' them; 'they' never owned 'it' –

ROLAND – and has been unknown to the public who are nevertheless familiar with him, though anonymously, as the greatest artist that ever existed. Note the delicacy and truth with which every detail is rendered. The saint's left foot has been caught in a root of the . . . of the bush . . . or thicket . . . and at any moment one expects, so vivid is the chiaroscuro, to see him fall headlong and then the tusker will have *got* him! *Ach Gott, unser Hilf* – note the animal is so realistically rendered that . . .

(*At this point in the discussion the boar actually loses all its ferocity and trots peacefully out of the picture.*) Now isn't that maddening! I can't possibly lecture if the ruddy animal walks off like that. In fact, the painting portrays an historical moment of great religious significance which makes me think the pig itself is no other than Satan in one of his multitudinous disguises. His envy is of such malignancy that he is even prepared to pursue the saint into the domain of art. As I was going to say, it was after this unfortunate contretemps that the saint arrived hot foot . . .

ROSEMARY 'Mon pied' as the French in their godless language would say.

ROLAND . . . and without any further ado dashed off the Athanasian Creed.

ALICE Even now the creed shows traces of pique. He had a wonderful gift of expression.

ROLAND So would you have if you had a wild boar on your tracks.

VOICE And *you* would trot off quietly too if you had a psychotic lecturer boring even your portrait into an hallucinosis.

ROLAND Who owns it now?

ROSEMARY The Gadarene swine I suppose.

MAN I protest. I think you are a bit hard on me. After all, we were invaded first.

BION I do not think this problem will ever be solved by a linear approach in a domain of time and space co-ordinates.

ROSEMARY Meaning what?

BION If you think the problems that we have to solve can be solved in a framework where 'things' happen in time and space,

with ideas taken from the vocabulary and grammar invented for the senses, we shall fail. It is not unlike solving the problem of joining nine dots, arranged on a plane to form a cube, with four straight lines. You cannot do this *and* stay within the pattern of the cube. You cannot make a model of Desargues's theorem without entertaining the idea of more than three dimensions. You cannot resolve the apparent conflict of wave mechanics with the theories of quanta without supposing a domain suitable for harbouring the theory which has to be entertained. This theory has been formulated by Melanie Klein as operative in a psychoanalytic domain expanded to contain it. It is analogous to expanding the domain of arithmetic to contain irrational numbers, negative numbers, compound conjugate numbers. The domain which is adequate for the operation of natural numbers cannot contain these other numbers.

ROSEMARY I don't understand.

ALICE Give me an example.

BION Our problems here cannot be solved in terms of first and last and 'places' and 'examples' in time or space, the drawing of a line which has to be crossed.

CONAN DOYLE You mean by separating life and death. I said that years ago.

BION I sympathize with your efforts to draw attention to certain facts, but I do not believe your theories ever escaped from the limitations of sensuous experience and its terminology.

CONAN DOYLE You mean yours can?

BION Certainly not. But I am sure the attempt has to be made. The kind of experience which the statisticians can formulate succinctly by using the Poisson distribution cannot as yet be formulated experientially because life is too short and the spatial distances between the author of the *Bhagavad Gita* and, say, John of the Cross, or Shakespeare or Tennyson or Newton, is too great and yet not extended enough. Set theory is not enough.

SHERLOCK That is a team in which I would not include Tennyson.

WATSON But surely, Holmes, you would include Shakespeare?

BION I am surprised, Holmes, that you include yourself even as selection committee or manager.

SHERLOCK The surprise is mutual; after all, *you* have included yourself. You have even put your name on this book.

BION It is someone's way of denoting a constant conjunction. I

would find it difficult to name the mental world which is now a part of what *I* think is me. I fall back on an already existing convention. I try to be honest enough to acknowledge those to whom I am aware of being indebted.

MYSELF I understand your point about being indebted, but the O which you represent seems to be itself a part of O which is sensuously apprehended. It is a part of an O of morality which is itself part of a sensuous domain of 'ownership', sensuously perceived. There may be, and it would be impossible to believe that there is *not*, a domain which is infra- and ultra-sensuous. It is for this reason that I doubt the importance of 'significant' ownership and all the accompanying apparatus of debt and morality as we usually conceive it. This assumption throws one back into a mental domain which is a source of endless confusion and difficulty and in which unending confusion is an essential, not accidental, feature. I do not suppose I shall ever know escape, but I think the character of the 'sensuous' domain has not been exhausted.

BION I don't understand.

MYSELF Perhaps I can illustrate by an example from something you do know. Imagine a piece of sculpture which is easier to comprehend if the structure is intended to act as a trap for light. The meaning is revealed by the pattern formed by the light thus trapped – not by the structure, the carved work itself. I suggest that if I could learn how to talk to you in such a way that my words 'trapped' the meaning which they neither do nor could express, I *could* communicate to you in a way that is not at present possible.

BION Like the 'rests' in a musical composition?

MYSELF A musician would certainly not deny the importance of those parts of a composition in which no notes were sounding, but more has to be done than can be achieved in existent art and its well-established procedure of silences, pauses, blank spaces, rests. The 'art' of conversation, as carried on as part of the conversational intercourse of psychoanalysis, requires and demands an extension in the realm of non-conversation.

BION But is this anything new? Are we not all familiar with 'gaps' of this kind? Is it not usually an expression of hostility?

MYSELF As we have seen before, we are probably familiar with those activities for which the mere existence of a vocabulary is the evidence required. 'Evidence' itself is of a kind that falls within the

range of sensuous experience with which we are familiar. Anyone understands the term 'sex' when it is related to sensuous experience. If, instead of saying 'sex', I were to talk of 'the love of God', I would be using the expression commonly heard in religious communities that have a distribution within particular temporal or topological co-ordinates. But suppose that my term, 'sex', refers to a domain which has no such sensuous co-ordinates and an O of which there are no elements, analogues, psychological or mental atoms; then O would be disqualified from 'thought', as I use the term.

BION What about dreams and dream thoughts?

MYSELF I have suggested a 'trick' by which one could manipulate things which have no meaning – the use of sounds like a and R. These are sounds analogous, as Kant said, to 'thoughts without concepts', but the principle, and a reality approximating to it, is also extensible to words in common use. The realizations which approximate to words such as 'memory' and 'desire' are opaque. The 'thing-in-itself, impregnated with the opacity, itself becomes opaque; the O, of which 'memory' or 'desire' is the verbal counterpart, is opaque. I suggest this quality of opacity inheres in many O's and their verbal counterparts, and the phenomena which it is usually supposed to express. If, by experiment, we discovered the verbal forms, we could also discover the thoughts to which the observation applied specifically. Thus we achieve a situation in which these could be used deliberately to obscure specific thoughts.

BION Is there anything new in this? You must often have heard, as I have, people say they don't know what you are talking about and that you are being deliberately obscure.

MYSELF They are flattering me. I am suggesting an aim, an ambition, which, if I could achieve, would enable me to be deliberately and *precisely* obscure; in which I could use certain words which could activate precisely and instantaneously, in the mind of the listener, a thought or train of thought that came between him and the thoughts and ideas already accessible and available to him.

ROSEMARY Oh, my God!

40

MYSELF It has not done so, but I could say your last sentence or ejaculation had obscured my train of thought. This, however, if it were true, would still not be adequate to achieve the function at which I am aiming. Some people can talk with such precision that the right audience could not fail to understand the communication. An obscure poet may, nevertheless, be expressing something in the shortest and most direct language known. Gerard Manley Hopkins is one example; Browning, in his poem 'Sordello', is, in Ezra Pound's opinion, another. I suggest a possibility of stimulating, in the listener who listens as he listens, mental activities that intervene between him and thoughts, the obscuring capacity of which is specific, not general.

BION Why wouldn't a simple, straightforward rigmarole do?

MYSELF It is imprecise, inexact, like throwing a pot of pitch at a painting to which the spectator objects. It is a macroscopic, macroactive phenomenon like all sensuously based activities. I am searching for something in the domain of the very small. To use an analogy, not the domain of wave mechanics, nor the domain of quanta. That is as near as anything I am likely to find to express to you the problem as I see it.

BION You are approaching the position at which Newton came into conflict with Berkeley.

MYSELF I am flattered that you use such illustrious names. I disavow, however, the appearance of kinship with them. You refer to Berkeley's attack on the Analyst in Newton's formulation of the 'ghosts' of increments? I have always been impressed by the language in which Berkeley clothed his attack. It is the language Freud might have used to describe a theory of anal eroticism. It impresses me

more still if I think of the statements of both men as signs of an emergent obtrusion which is contemporal, not sequential. The phenomena which I regard as conjoined and mental are more full of meaning if I conceive of them as contemporaneous. BION You do not regard them as historically distributed?

MYSELF I do, but not exclusively. In fact, I would find it helpful to borrow from a schizophrenic patient a capacity for a transference relationship which was alternatively penetrating and planar; deep and confused, or superficial and of great 'spread', like a monomolecular film. At the same time these states, though apparently mutually exclusive, are reconciled and coexistent – like wave motion and quanta, objects in a pattern conforming to a Poisson distribution displayed on two planes – one temporal, one spatial – at right angles to each other. Seen from the temporal plane, the other 'transference' spreads monomolecular-wise: seen from the vertex of the spatial plane, the 'transference' is penetrating.

BION I don't think I understand. You mean that from an historical vertex events are distributed sequentially one after another in what we call time, but that it is possible to regard them, by ignoring the temporal vertex, as distributed in space, not time?

MYSELF Yes, but then two views are obtained, one which is very narrow and extremely penetrating, the other very broad and spread out without depth or penetration.

ALICE So what? Is this any different from what I and my girlfriends have always known? Our boyfriends are all the same – either for ever pawing us about though it's clear it doesn't mean a thing, or 'poking' us, having what they call sex, which doesn't mean a thing either.

BION Or both – and calling it schizophrenia.

MYSELF And *that* means nothing whether it is spread out over the whole of psychiatry or concentrated to apply to a particular, specific 'thing' or 'person'.

MAN You could say the same about 'psychoanalysis' or 'sex' or 'hate' or any other verbalization.

MYSELF Or 'feelings' or names of feelings. They don't mean a thing. Or, as Kant said, 'concepts without intuition are empty and intuitions without concepts are blind'.

BION I know the quotation to which you refer, of course, but – is *that* what he meant?

MYSELF I have no idea what he meant, but I am using *his* 'concepts' to match with *my* 'intuitions', because in this way I can bring together a concept and an intuition, making it possible to feel that *I* know what *I* mean. If I could also juxtapose you and myself, the two together would be meaningful.

ROSEMARY You certainly sound as if you get on very well. So well indeed that I almost wondered if you were not the same person.

BION & MYSELF (*together*) *So* do I.

41

ALICE It sounds like a mutual admiration society.

MAN It does raise the suspicion that you come together for that purpose.

ROSEMARY How is this to be avoided?

MYSELF A long time ago, when Alice and Roland came together, they did it for the purpose of forming just such a society for mutual admiration. Later –

ALICE Later! It seemed more like a society for mutual hatred and recrimination.

MYSELF You have expressed it well. You and Rosemary seemed, though not officially conjoined, to come together –

MAN – in a somewhat ambiguous relationship.

MYSELF Terms like 'mistress' and 'maid', 'husband' and 'wife', are all 'sensuously' meaningful, and in the domain of sensuous relationships A + B can be meaningful in a macroscopic way. Even relationships which can be mathematically expressed, as the 'pure' mathematician says they are in pure mathematics, become sensuous.

BION Is that not saying that the mere fact of being able to formulate the relationship A + B makes it a macroscopic relationship? But *does* it? Is it more true to say that we are so used to formulating statements only when they are macroscopic that we instantaneously assume that what is formulated must, by the fact of formulation, be macroscopic?

MYSELF The converse is thought to be true: that if we cannot formulate it, 'it' must be ultra- or infra-sensuous; that concepts that are 'empty' and intuitions that are 'blind' must lack completion, and that the 'completion' which is not 'complete', or is 'unfulfilled', nevertheless exists. ♀ has ♂, and ♂ has ♀. In short, ♀ # [apart from]

♂ cannot be stable. It is the function of a discipline, any discipline, to fill or complete; it is the 'job' of the link or synapse to join; it may be apart from a substitute used as a 'link', but no substitute can do what the link does. Addiction in place of 'marriage O' or 'divorce O' fails; sooner or later any substitute for the real thing is bound to fail through instability.

ROLAND I am not sure that I understand because if you mean that there is no substitute for the direct relationship such as seeing or hearing something for yourself, this is clearly fallacious; an astronomer was able to see and draw 'canals' on Mars by direct observation.

BION I used to be told to use my eyes; even today I advocate that people should use their common sense or intuition. Yet we understand now that the canals on Mars were a faulty interpretation of the observation made directly.

MYSELF I am glad that my job does not include advocacy.

BION You leave it to someone or something without advocating that someone else should do it.

MYSELF Is that not cowardly or irresponsible?

BION Maybe those are the correct terms for characterising behaviour, but I do not usually or generally think so. My capacity for naming my thoughts, or activities based on them, is less convincing – 'action generating' – than it was. These 'thought generators', or in James Joyce's illuminating usage, '*idées mères*', are either less frequent or less cogent. Perhaps there is some mental counterpart of the generative activities in the sensuous animal domain which suffers decline as animal capacity declines. What do you think?

MYSELF Just what I was going to ask you. Since you forestalled me I am tempted to say, 'begin again', but this vicoesque advice I temper with a warning against 'beginning at the beginning'.

BION The proper approach to confusion is, I think, to 'begin' in the middle. We have, in fact, no choice. Start at paranoid states of mind and continue cyclically. The confusion thus approached seems, like Schiaparelli's canals, to reveal a pattern in which persecution and depression are discerned, a journey 'from' patience 'to' security.

MYSELF What do you mean when you say we have no choice?

BION The world into which we are born is, for every one of us, inhabited by individuals (our parents are the obvious example) who have a long history. We start in the middle of the story. Even as

individuals directly concerned with our own story it is already far advanced. I am committed to going on with it from there.

MYSELF Obviously, but is there any point in knowing that?

BION It is generally supposed that if you are going from one place to another, or thinking from one premise to another –

MYSELF Are we?

BION I think so and since you ask me I would like to answer; I am committed to being that kind of man. I would like, therefore, to tell you where I come from and where I am going to. In this conversation I could use simple articulate English, but you and my other friends are not satisfied with simple questions and I cannot fall back on simple knowledge. In fact, your last question causes me to consider what you are wanting to know. I have to 'interpret' your question. Usually I don't think about it, but assume that I know what you mean. If you were a foreigner, or foreign to the subject, I could not make that assumption directly and with certainty. In trying to reply I would be starting, as I said, in the middle of a story without knowing the antecedents. I have to guess, fall back on conjectures. My reply is, therefore, based on 'guesses' about the facts and interpretation of my 'guesses'.

SHERLOCK How do you know all that?

BION I don't – that is why I say I have to fall back on interpretations of guesses.

MYSELF Yes, but how do you know you think like that?

BION I don't; even when I am concerned with my own thoughts I am ignorant, though I am the person whom I have a chance of knowing better than anyone. Freud started a train of thought which makes me suspect that, even if I know myself better than anyone I shall ever meet, the sum of that knowledge amounts to little.

MAN The outcome in psychoanalysts as I have observed them, is bigotry, dogmatism and certitude.

BION Those are only synapses – milestones marking 'articulations', not signifying 'that which' is articulated.

42

ROSEMARY (*to Alice*) Isn't it awful? Did you ever have to put up with this kind of thing from Roland?

ALICE Never; only farming talk, thank God. I suppose this is psychoanalysis.

ROSEMARY Really? Perhaps that explains it. I certainly –

ALICE You don't have to worry about me – it quite intrigues me to think Roland never sank to such heights of boredom as this. Did you find him interesting?

ROSEMARY Not really; but I will say that at least he didn't bore me with this kind of stuff. It sounds very highbrow till you listen to it.

ALICE How does it sound to you now you do?

ROSEMARY Awful. I suppose I'm not used to such high-class talk – no education.

ALICE I had lots, and pretty awful it was too – but never as bad as this.

MYSELF This isn't psychoanalysis: it is talking *about* psychoanalysis. If you two were coming to me for psychoanalysis –

ROSEMARY Oh, I would *love* that. Do show me what you would do if you were analysing me.

ALICE God forbid! Don't have anything to do with it!

ROSEMARY Why? It sounds most interesting.

MYSELF You would neither of you like it. You would soon, if your psychoanalyst knew his job, lose the kind of love for it that you are talking about! Of course, Alice might find she is quite right to have nothing to do with it. Some people find that it is far more than they can stand. How? Well, in the same way that you both found you couldn't stand hearing Bion and me talk.

ROSEMARY Were you two talking about psychoanalysis? We thought you were being very boring.

ALICE Anyway, why do you say we should be bored, since you also said that 'talking about' psychoanalysis is not the same thing as 'psychoanalysis'?

MYSELF It depends if you are concerned with their similarities or dis-similarities. Talking about a thing like psychoanalysis and experiencing it are two different activities.

BION You would have to be able to compare the experience of the 'practice' of psychoanalysis and the experience of 'talking about' it.

MYSELF I suggest to you two ladies that the difference is most easily appreciated by considering the many instances in which you can compare what you do when you are engaged on the prelude to doing something, and when you mean never to go beyond the prelude, but to continue in that state – as a substitute for transformation to action.

BION Many people have read Sophocles' play, 'Oedipus Rex'. Emotions can be experienced without knowing the underlying pattern to both the play and the feelings aroused; that is, the underlying 'group' is not recognized.

MYSELF What do you mean by 'group'?

BION I have borrowed the word from the mathematicians; in the experience which Rosemary and Alice have been having I can detect an emotional sequence which I could recognize as integrated. I would have to be able to construct a work of art of some kind in order to demonstrate the integrating force but I lack the artistic ability to do this. Although I cannot resort to any of the disciplines and theories and formulations known to me, in the practice of psychoanalysis I may be able to fall back on the analysand's capacity for cooperation to make good my deficiencies.

ROLAND What then? Does that cure the patient?

BION You are going too fast for me by proceeding from one question, 'what then?' to another question which belongs to the discipline of Therapeutics. Even the question 'what then?' is part of a theory of consequences and a framework including time and space; but I am not sure that I consider that 'configuration', or 'constant conjunction', appropriate to the events which are experienced in psychoanalysis. It is inadequate as the conceptual apparatus of which I feel in need

when 'practising', not theorising. This concept itself relates to a constant conjunction of macroscopic elements and I have continued its use as if it were a term which is applicable when transferred to micro-elements. The 'relationship' of one micro-element to another might best be expressed intuitionally as $\alpha \# \Omega$.

MYSELF What is the difference that you seem to make between 'theorising' and what you call 'practising' psychoanalysis? It seems to me that practising psychoanalysis consists of theorising.

BION 'Theorising' is, I admit, a part of practising psychoanalysis.

MYSELF I think what you have just said sounds as if it makes something clear, but almost at once the illumination either turns out to be illusory and your explanation meaningless, or perhaps you have clarified a problem and the 'clarification' is at once replaced by a further series of 'unknowns'.

BION Both are possible. That is a difficulty about 'learning'. The moment of illumination is also the moment at which it becomes clear that there is a doubt about the 'clarification' itself and about the 'matter' which it is hoped to comprehend. I think this must be a familiar experience to Sherlock Holmes.

SHERLOCK I am not a philosopher and I don't think I can even guess what a psychoanalyst is, but since you appeal to me as if I were experienced I take it you are referring to something of which I have experience. I remember an occasion when I saw a client and I detected a strong smell of cigar about his clothes. It proved to be a valuable clue and later I wrote a monograph on ash which also turned out to be valuable, though in a way in which I had never expected.

BION It is true that when I mentioned you I was not referring to the precise experience that you mention, but in view of your high reputation as an investigator –

MYSELF – and as a helpful person, although fictitious.

BION – I guessed you could throw light on our precise problem as you have.

SHERLOCK I am delighted to hear it, but I must say I am surprised that you think the problem you have been discussing is precise.

BION I was speaking conversationally.

SHERLOCK Ah! In my kind of work you have to be precise.

MYSELF So you have in ours. Unfortunately we have to talk conversational English and that is not a language intended to be used for the purposes for which we have to use it.

oasis-ebl|Rsalles|1491677414

SHERLOCK I, alas, have to use the language my author puts at *my* disposal.

MYSELF You – meaning both of you – don't do badly. My characters are not fictional and they are very dissatisfied with such means of communication as I put at their disposal.

SHERLOCK 'Means of communication'! Do you mean English? If not –

MYSELF No, I don't. If it is English, that is not enough. I am aware that conversational English is inadequate; but you should hear what they say about anything else.

BION Jargon, for example.

SHERLOCK HOLMES Why not paint or draw or compose music, or –

BION – play the violin. Did you ever try your violin playing on your clients or criminals or courts of law?

SHERLOCK I told you – I am limited by my author.

MYSELF So were the rest of you. Even Moriarty couldn't get rid of you at the Falls. But *we* can be got rid of by our characters at any time.

SHERLOCK Are not your characters limited by being 'patients'?

MYSELF No. They *seem* to be limited by being human, but if, as some of us think, they are personalities or minds, each one is unique and their 'limits' are not clearly marked. I do not even know *what* the limits of my personality and mind are or even if there is such a thing as 'my personality' which approximates to the words I have just used.

SHERLOCK You should shove them into jail as we do. You'd be surprised how quickly that clarifies the problem.

MYSELF That's all very well for 'fictitious' jails and courts of law and fictitious minds.

ROSEMARY It sounds to me as if these minds and personalities that you talk about very often are 'fictitious'.

BION Even a 'beautiful woman' is a shade of a shade of a shade.

ROSEMARY If I gave you a kiss you'd soon change your tune.

BION Why do you think I regard you as beautiful?

MYSELF How ungallant you are! It is part of the price we psychoanalysts all pay. The habit of mind overflows into non-analytic situations.

BION You could say that if being a psychoanalyst was wearing a mental suit of clothes, one could choose whatever fictitious character one liked to be and dress up in the appropriate uniform. The trouble

is if one has to *be* a psychoanalyst and not simply learn the part for purposes of acting.

ROSEMARY I don't play-act; that is why I don't give you a kiss.

BION Some kisses have become famous. One kiss is called a 'Judas kiss', after a character who became famous and notorious. Kisses, like other actions, speak louder than words.

MYSELF Interpretation likewise depends on quality as well as quantity, as do the things interpreted. 'Loudness', expressing 'quantity', is not enough even in the domain of physical senses and other phenomena; all to which the term 'phenomena' applies are by definition part of the domain of senses. We, in common with many who purport to exist or are reported to have existed and still to exist, believe there is something 'more' which can be called 'ultra-' or 'infra-' sensuous. It is this something more, or 'something +', which we suppose to be significant for refinement by psychoanalysis in practice.

WATSON You spoke earlier of computers assessing radiograms with greater accuracy than even gifted radiographers. What you have just said sounds as if you are now advocating scrutiny by live beings in preference to machines – am I right?

MYSELF Not quite. I don't mean to be advocating anything. I suggest that somehow functions can be handed over to machines or mechanical methods. We ourselves learnt to walk 'mechanically' at some point and this was, and still is, a very useful skill; but even now it is useful to resort from time to time to specific, skilled movement. I do not exclude the value of 'mechanical thinking' or 'mechanical interpretation', but I don't want *that* progress to take the place of, or to preclude the development of, the ultra- or infra-sensuous, even though I may not know what that is or even if it exists. The pathology laboratory should not be substituted for clinical observation, or vice versa.

WATSON Quite right.

SHERLOCK I found clinical analysis quite useful.

BION You had to 'interpret' your ashes –

SHERLOCK – in the light of my findings.

MYSELF And with the aid of the book in which you recorded the findings. The book is an example of what I call an 'instrument'. Strictly speaking, so are the 'theories' recorded in it. Even if they were

not recorded in any 'instrument' I would regard them as an instrument to be 'used' – not enshrined as a dogma or religion.

BION Yet, I was thinking how like religion some of your statements about 'infra- and ultra-' sensuous sounded.

MYSELF I know what you mean. The adherents of religion are more likely to grasp what I put forward as 'hunches'. If you remember, at the end of his *Opticks,* Newton suggested that the 'religious beliefs' could be scientifically approached. Years before, Milton spoke of 'Holy light'; hailed it.

BION You should hear what we said when a star-shell lit up our tanks at night!

MYSELF Some people must have thought it was 'honest and helpful'.

ALICE All depends on the 'vertex', as you would say.

BION That's not what we called it then. The term 'vertex' is dependent for its meaning on the vertex of which it is a radiant.

43

MAN Rosemary, will you come and have a coffee?

ROSEMARY Have you still got that bar of chocolate?

MAN In my holster you mean?

ROSEMARY The very same.

ROLAND Love or hate? Seduction or passionate love? I wish I knew.

ROSEMARY So do I.

ALICE Feminine intuition will find out the way.

ROSEMARY So they say; but I don't believe it.

BION Nor does masculine intuition.

MYSELF Nor does mathematical intuition. What is the equation? Man + Rosemary? Or man # Rosemary?

ROSEMARY I shall tell you after we've had coffee.

ALICE Come on, Roland – after so many years of married life, what is the equation?

ROLAND Alice + Roland.

ALICE Still? You surprise me.

ROSEMARY So you do me.

ALICE So do you me; before even one coffee.

MYSELF Before one coffee is sometimes easier than after many.

ALICE I thought you psychoanalysts advocated years and years of analysis.

BION That is only for psychoanalysis, and even so it is not true. We advocate and practise the shortest and easiest methods compatible with honest work.

ROSEMARY It sounds like an advertisement for something.

BION I have to make it known that I am available if wanted.

ALICE I can't see what she sees in him.

ROLAND Nor can I.

ALICE *You* seemed to have seen something in *her.*

ROLAND So did you.

ALICE Perhaps we both saw something in her and she in both of us.

ROLAND Perhaps; but I doubt it.

ALICE Nevertheless, there must have been something both ways.

ROLAND Something neither of us saw? – but which may nevertheless exist? What does the sage say?

ALICE Who is he?

ROLAND I meant the psychoanalyst, Bion.

ALICE Oh, him! Not what I would call a sage. Well, I suppose there's no harm in trying. They never see anything except sex. Still, they do meet lots of people.

BION Sex is a name, but none of us 'sees' sex, though it is a word we often use and it is useful if we want to talk about sex. Language was generated for the purpose of talking about senses and I think you would like me to be able to escape your scorn by speaking a language using words to which the thing-itself approximated to the words and theories we employ. After all, even you both suggest there is something those two 'see in each other' – 'they' being thinking personalities. In that literal way I am sure none of us 'sees' anything in the relationship we are talking about. But I think we are convinced there is 'something'; so much so that in physics at least the physicists have invented an electron microscope.

MYSELF And have detected 'an uncertainty principle'! Imagine the fun that would be made if Bion or I were to announce the discovery of an 'uncertainty principle'.

BION Keats discovered an 'uncertainty principle' which he called 'Negative Capability'. The authors of Job, of the *Bhagavad Gita*, to go no further, discovered the presumption of Job, of Arjuna, who thought that what they 'didn't know wasn't knowledge'. Even Mister Toad comes into that same domain of scorn and contempt which, like 'mental or spiritual' pollution, is life 'that stains the white radiance of eternity'.

SHERLOCK It seems to me that these 'fictitious characters' have a lot more sense than you real ones.

BION And non-sense. Toad was not, is not, synonymous with 'sense'.

SHERLOCK If he were it would not be necessary for his creator to create him.

ALICE Why is it necessary?

MYSELF Their creation has been an activity with a very long history.

ALICE That is not answering my question.

ROLAND Indeed, it seems to stimulate the question more than the answer. Why has the creation of fictions been so well-established an industry?

MYSELF For purposes of deception and disguise –

BION – as well as illustration and imparting information.

MYSELF Sometimes correct information, sometimes false; it depends on whether the creator is feeling hostile or friendly. But in fact I do not believe it 'depends' on that because 'dependence' appears to me to relate to priority. Which comes first, the feeling or the fictitious idea?

BION Kant says the senses never err because they do not judge at all. That is what I call a 'definitory hypothesis', and according to me a 'definitory hypothesis' does not err either.

MYSELF But we do expect the definition or the 'definitory hypothesis' to be maintained 'constant' or 'invariant' throughout the same universe of discussion.

BION *Who* expects it to remain constant? If a man or woman says he or she loves the other –

MYSELF That is not a situation I had in mind just then because I was talking, and in the interests of clear 'thought' I think it makes it easier for the participants to establish and maintain certain 'rules of thinking'; that includes the 'logic' of 'articulate communication'.

BION That depends if you are referring to those communities who employ *articulate* language. But, as you know, not all communities do. The Chinese, I believe, do not employ that kind of language for communication. In fact, this problem is not peculiar to communities in the gross, macroscopic sense. Take the individual for example: Melanie Klein, thinking in terms of visual imagery, regarded a single human individual as if he were a world in himself. Roger Money-Kyrle, following this lead, has elaborated in his account of man's picture of his world.

MYSELF If one takes the extremely detailed view which is available under the Kleinian vertex in the practice of psychoanalysis, the

model would not be 'macroscopy', but 'microscopy'. I doubt that micro-analysis is aided by or reveals an articulate language at all. 'Articulate' communication is the dominant method of communication between the self and the self; in so far as communication takes place between what psychoanalysts call the 'unconscious' levels of different individuals, I think the prevalent methods of communication between painters, poets, musicians conform to rules which are very different from those of 'articulate' communication.

ALICE I am sure they don't conform. Nor do the rules of 'morality' as they are usually supposed to exist.

ROLAND Certainly each sex is accused by the other of breaking the moral rules –

MYSELF When someone says 'I love', the rules of articulate speech apply to 'speech', not to 'loving'. The most experienced methods of *physical* communication are not articulate, even if vocal. It is illuminating to suppose that the method of communication proper to the vertex 'sex' is not verbal, but what is often called 'acting out' under vertices in which verbal communication is usual.

BION I am, of course, familiar with the expression, 'acting out', as used by English psychoanalysts, but I should be interested to know how you understand the term.

MYSELF I was using the English term which is not the same as the term used by Freud. In intention the thing itself, that is, the reality which approximates to both the English and German formulation, is supposed to be identical.

BION You say 'supposed'. Are you implying a doubt?

MYSELF I certainly am. I would say that 'doubt' is the most nearly adequate word to use to define the vertex: it is the proper vertex under which we operate in this conversation itself.

BION Can you expand your use of the word 'sex'?

MYSELF As far as the word 'sex' is concerned I do not think I can say more about that than Freud said. To me it is one of those terms which are 'meaningless' since any 'meaning', as that word is ordinarily used, is an elaboration of phrases which are to be constantly conjoined in progressively more elaborate constructions. It is one of those words which express what James Joyce called '*idée mere*'; it is analogous to the mathematical construction, 'a number generator'. You can see for yourself that these three phrases, 'sex', '*idée mère*' and 'number generator', are themselves suspiciously like a 'tautology'.

That is why I would prefer some directly meaningless sign like 'O'. Borrowing from religious discipline I find the word 'Godhead' useful as less abstract than 'Ultimate reality'.

BION Abstract?

MYSELF I thought you would check at that. I propose to avail myself of a meaningful and proportionately inaccurate expression which I hope is nevertheless helpful. The grin was all that was left when the 'Cheshire Cat' had disappeared.

SHERLOCK Another 'fictitious character'.

MYSELF Part of an entire construction which was fictitious. The kind of thing for which Plato held artists and poets to blame though he did not scorn the aid of his own artistic creation – of the cave, for one example.

BION You were about to say something of the abstract.

MYSELF The 'grin' to which I referred, the 'fictitious character', the 'fiction', is the 'reversed perspective' of the 'abstract'. The one is not the opposite of the other.

ROSEMARY Why not?

MYSELF It would be a misleading definition. Since I have to choose an already existing 'term', I choose the term 'intuition' as related to the term 'abstract'.

BION Can you define the relation?

MYSELF Again, I borrow from the meta-mathematicians. I borrow the sign #.

BION You have related the abstraction to the intuition.

MYSELF That is true of this conversation; under the vertex of conversational English they are related. Under the vertex of psychoanalytic discussion they are related by free association.

BION To what extent, if any, do you consider this 'free association' represents a realization, or that a realization exists approximating to the 'free association'?

MYSELF I know of no realization approximating to the construct 'intuition'.

BION You speak as if 'construct' were interchangeable with 'term'. Is that right?

MYSELF Under the vertex of this discussion, 'yes'. 'No', under the vertex of 'realization'; still less under O. Any construction relating 'intuition' to 'constant conjunction' is true only under the vertex of this discussion, not under the vertex of realization.

ALICE Why not describe the constant conjunction as synonymous with integration?

MYSELF I think of 'integration' as representing something compatible with what is represented by 'constant conjunction'. I think it plausible to regard the activity of constantly conjoining as compatible with the realization represented by the 'integration'. In this respect the term under the vertex of this conversation could be included in the set which included the member of the set of realizations.

ALICE Then why not use the opposite of integration – disintegration?

MYSELF Emphatically not; intuition, as I use the term, does not represent a realization which is the 'opposite' or the 'negative' of 'constant conjunction', 'integration' and similar terms. In so far as it becomes or appears to become a 'constant conjunction', it has undergone, if related at all, a complete transformation. All the intuitions are # all other intuitions. # is essential, not accidental.

ALICE Your intuition seems to be like what is left when the thought has disappeared.

ROLAND Or like the thought when the concept has gone.

BION 'Blind', as Kant would say about thoughts without concept; or concepts without an intuition – 'empty'. But I don't think it is what Myself means.

MYSELF You are right. By 'intuition' I mean none of those things. It is like nothing. It is not the 'negative of or 'opposite of' or 'reversed perspective of. Those terms are 'borrowed' from conversational English, as are others which are borrowed from classical psychoanalysis. This 'borrowing' is legitimate but does not imply that the meaning, in the context of 'classical' thought, has not been altered as used by me.

ALICE Does it matter?

MYSELF Unfortunately, yes. Already phrases employed by Freud with great precision are almost incomprehensible because the words from which his constructions were built up have now been irreparably changed. Who could now be sure what 'inferiority complex' means? Or 'paranoid'? Who could meet with them in a book by Freud or a psychiatrist and be sure that his familiarity with present day usage does not disqualify him from understanding the formalizations of the authors?

ALICE I very much doubt that what Mozart heard when he played, or heard someone else play, a clavichord would seem to him

to be the same sounds that come from a modern concert grand piano played by a present-day master.

MYSELF I should expect him to feel that the 'tune' was familiar.

ALICE I hear quotation marks when you are talking and I think I know the difference in meaning between that and the same verbalization if I don't hear the quotation marks. I am reminded of the printed page, of reading 'one, two, then 'tis time to do it'.

MYSELF You are referring to what I called defective apparatus of lateral communication.

BION Only this is a defect of communication through time as well as space.

MYSELF The genius overcame the problems which might have been effective in obstructing communication.

BION His very success in surmounting his difficulties may indeed have contributed to our difficulties in reception.

MYSELF A solution of the difficulty of communication may, I suggest, be mistaken for *the* solution of a difficulty in the matter of communication (*? ? ?* . . .) But I hear question marks –

ALL You have not misheard – yet no one said anything.

BION I shall venture on the role of amplifier. How could the discovery of the Andromeda M31 nebula, or the Crab nebula – sonic reproduction – exemplify your point?

MYSELF Your question suggests to me that you know something that enables you to ask. Our solution of the problem can appear to have determined the spatial separation between us and those two galaxies. That separation may not in fact pertain to the relation between those 'spaces', but may be a solution of that which does belong to the space between our comprehension and our incomprehension.

ROLAND I don't understand.

MYSELF So, you may find something you do understand as a substitute for what you don't. I once asked for an archaeological book. They didn't have it, but the assistant offered another book, unrelated to archaeology, as if that would do. Suppose I am unable to understand how the disintegration of the nova could be taking place at the same time and space occupied by my 'integration'; I might be glad to exchange the 'distance' between my comprehension and incomprehension for a 'distance' between me and the M31 nebula and the 'solution' of *that* distance. 'Sound' and 'sight' could be linked with 'creative' effect.

ALICE Surely that is very fanciful?

MYSELF Do you mean the distance between my 'fancy' and the fact is vast – 'very', or 'truly', vast? That idea may be a comforting substitute for thinking, incomprehension and comprehension. It may also be more pleasant to feel that the unpleasant experience is immediately possible and adjacent.

ALICE It could be as you say, but I cannot even be sure that I have a preference for one or other.

MYSELF True. We all would prefer the agreeable emotional experience if we knew which that was and how to ensure choosing the correct steps to achieve such an aim. The unpleasant state seems to be to feel compelled to be responsible without the comfort of imagining we have made the correct choice.

ALICE I think you are being somewhat obvious – 'platitudinous'.

MYSELF It is difficult to be devoted to common sense without being judged as either platitudinous or fanciful, or both at once. Even highly sophisticated groups find there are divisions as between corpuscular theories, quanta theories, and theories of a continuum subject to wave motions.

ALICE Why not both?

MYSELF Or fanciful and platitudinous? I don't know.

BION You don't know? You amaze us. I thought everyone knew that!

MYSELF You are being facetious. I expect you to display a specific animal characteristic as I expect you to behave continuously. I have spoken of Leonardo's preoccupation with drawing hair and water; I have no idea, and cannot conjecture without 'wasting time' on conjectures, what his preoccupations were. I can spend time and have some idea that it is, or is not, worth spending time looking at his drawings. I can allow his product to stimulate my preoccupations about an aqueous continuum and movement within it. I can allow his drawing to remind me of my thoughts and feelings. I wonder; are the ideas expressed on this page like the incoherent mass of H_2O molecules, or do they rather resemble the fleeting confusion of a bucket of water or head of hair? To which does reality approximate – the creation of the hairdresser? The drawing of Leonardo? The ideas arrested as in the verbal formulations of Homer's Iliad and Odyssey? The molecular physicist's formula? Or the group, if there was one, which together 'constructed' a pattern of words which were then

constantly conjoined, like Leonardo's pencil marks, and arrested so that they could be labelled 'Homer' and held, through time, in a pattern or verbal sound? Further, I wonder what I do while attempting to draw an analysand's attention to a pattern – to which my attention has been drawn by his contributions to a session – by the fleeting activity of interpretations? Sometimes the duration of the interpretation which is very short is experienced by the receptor as enduring; sometimes the relation between the 'duration' of the interpretation and the 'duration' of the received experience is commensurate, at others not. Sometimes I would describe the two as 'separate and distinct', at others 'conjugate and complex'.

ALICE I don't understand those terms.

MYSELF I think it correct to describe the relation between what I said and you heard as 'conjugate and complex'.

ALICE Then why don't you say, as I did, that I did not understand you?

MYSELF Because, under this vertex, that would be an inaccurate description.

ALICE I assure you it is true all the same.

MYSELF I likewise can assure you that what I said was 'true all the same' – under my vertex.

ALICE Would an impartial judge think so?

MYSELF A judge could judge impartially if the vertices were understood and used with comprehension; from my experience that is unlikely.

44

ALICE So we are back to square one?

MYSELF I fear so – the concern ultimately is 'people'. This is why some of us think personality must be an object for scientific study. Most people are familiar with acts which employ articulated musculature, and find it easy to use articulated language. Perhaps it is easier to use that kind of language and that kind of musculature. Smooth muscle in action is usually easier to match with inarticulate speech. I love' and its vocabulary and grammar is usually easier to match with the 'activity' itself when the rules of articulation are relaxed. The action, associated with love, is easier when 'the laws of articulation' are similarly relaxed. The most adequate forms of loving communion appear to be proportionate to the relaxation of conformity to articulation in thought, word and deed. I speak of love, but it is equally true of all feelings whether expressed in physical or psychical domains.

BION I can see that the idea of the individual being a 'group' – like Hobbes' idea of the group being an individual – could be an illuminating one. I don't quarrel with it, or even with the idea of the definitory hypothesis as you have defined it. What I am not convinced about is that there are others besides you and me who would agree, or who would be similarly complacent or tolerant or qualified to agree or disagree.

MYSELF This doubt about the acceptability of an approach which depends on thought or discussion is as valid today as it has been at any time in its past history. Nevertheless, neither you nor I have suggested an alternative to the present choice between inadequate procedures.

BION That is *not* my point. I doubt that any problem remains that is not affected in a way analogous to that which Heisenberg detects

in the domain of physical investigation: the thing itself is altered by being observed. I suggest that this change cannot be assumed to be without an analogue in the mental domain. An 'analogue' may be applicable to the physical world, but not available as a mode of thought.

MYSELF You and I are now employed in talking 'as if it were serviceable. In fact, as if 'as if were itself serviceable.

BION There is nothing else, known to you or me –

MYSELF – or to painters, or musicians, or poets, or all of these together.

BOTH So far.

A Hullo! Here we are again. How did you find it?

Q I haven't read it, of course. I was just looking to see how it ended. I'm no wiser than I was at the first.

A I was afraid you might have to read the bit α and Ω

Q What?! Start it all again?

A You've changed – 'five minutes older' if the time scale notation I have borrowed means anything. No worse off financially though?

Q Not yet, but as a matter of curiosity, did it cost you much to have it published?

A It did indeed. Years of education at a public school, years in an army at war, years at Oxford University, years being psychoanalysed, years of medical training and a year at the University of Poitiers. The last three sentences were served concurrently.

Q (yawning politely) It sounds most interesting. Was it?

Book Two: The Past Presented 3

A MEMOIR OF THE FUTURE
BOOK TWO:
THE PAST PRESENTED

1977

A Memoir of the Future was first published in 1991 by Karnac Books, London. It consisted of revised and corrected versions of three previously published books – *The Dream*, *The Past Presented*, and *The Dawn of Oblivion* – together with a revised and expanded version of *A Key to A Memoir of the Future* (1981).

The Past Presented was first published in 1977 by Imago Editora, Rio de Janeiro.

Book Two:
The Past Presented

1

ROLAND What's the date?

ALICE No idea; does it matter?

ROLAND Of course it matters! Wake up!

ALICE Oh, sorry sir. Tuesday, nineteen seventy . . .

ROLAND You aren't awake. It is Tuesday though. I have to be up because I must go to Munden.

ALICE Yes. Yes – I must have been dreaming. What's the –

ROSEMARY Yes, Ma'am? You told me to call you.

ALICE Yes, of course. Breakfast at half past seven. My God! I've got a headache.

ROLAND You're dreaming.

ALICE My headache is no dream I can tell you. You're off are you? See you at lunch. Rosemary, I've had an awful dream.

ROSEMARY Yes, Ma'am? Is that all, Ma'am?

ALICE Yes, of course. Hurry or you'll miss . . . I can't be properly awake. And I have to go to Braughing for lunch. I hope Roland remembers it's our wedding anniversary. He doesn't know what a relief it was to find he was in love with me. What an escape from Worry – Funny! I realize now how right his nickname was. He was dotty, but I didn't know it then. 'Temps de Lilas' he used to murmur as if he had softening of the brain. It was a scent I used. I thought, 'How romantic – he's in love with *me.*' God, it makes me mad to think of it! Men always think women *must* be in love with them. I wore the scent because I liked *it* – not springtime or lilacs. Come to think of it, I was a bit mad to suppose he was in love with *me.* But I was very pretty – once. It's difficult to believe as I make up my face in the looking-glass – the 'cruel looking-glass' which tells a maid that she isn't what she was. I wonder if Roland

believes this stuff he tells me He'd be hurt if he thought I didn't take it seriously. But if I look in the mirror he holds up to me when he is eyeing Rosemary – *then* I can see that I'm not 'as pretty as I was'. He thinks I am vain enough to believe his adoration is genuine. The more we are together, to-gether, two-gether . . . It's rather like a record which has started to run down. The 'Bread and Pheasant' song, as some schoolboy thought it was, is less romantic than the 'Breton Peasant', but . . . 'Temps de Lilas', 'Spring', 'Love' – I suppose they all come to spell 'Bread' and, if we are lucky, a little bit of 'Butter' too. If I don't flatten out these wrinkles I shall have to beg my bread. Roland doesn't do badly having a pretty wife. Am I being conceited? No, I'm not. I may even look 'handsome'. And loyal? Roland is good-looking. And faithful? We look quite a presentable pair . . . a bit wasted on Braughing. Who would have heard of England if the Royal Navy had not won the war? – so they say. If Beatty had seen that dashing slant of his cap – 'CAP wins the battle of Jutland!' What a headline *that* would make! Take my cap to England, Hang it by the shore, Beat it when Temp de Lilas is running low. Here's Roland. Nearly 7.30. (*To Roland*) Tonight we have our –

ROLAND I have a lot to get through first. Do you know who is coming?

ALICE The same as usual, I suppose; no one has said they aren't. The padre said he might be late and Edmund may join us later too. I've told Rosemary refreshments for eight.

ROLAND Quite a party – they usually all come. What a success this has been, though I certainly had doubts about a Platonic venture in England – let alone our part of Hertfordshire. Rosemary seems to cope very well with the snacks.

ALICE Yes; though the way things are going in this country I sometimes wonder how long it is going to be possible.

ROLAND Philosophers ought to take austere conditions philosophically. We shall have to make a demonstration of *being*, not theorizing. Who else is going to be late?

ALICE The doctor probably. Is Robin coming?

ROLAND Here comes Tom.

TOM How are you? Did I hear Robin isn't coming?

ROLAND Alice wondered how a farmer could find time to talk.

TOM I think his absence is more possible. One should think of him as one of the class Trotter said continually face issues of life and death; miners, sailors and doctors. Few people are forced –

P(PSYCHO)-A(ANALYST) Excuse me – how are you?

ALICE Take our compliments as read.

TOM Trotter should not have forgotten farmers. He wouldn't, had he lived in a world where many starve and many more will be starving tomorrow.

ROLAND The world of the conspicuous consumer – the C.C.'s for short.

P.A. Or the 'See See's who value the giddy pleasure of the eye.

TOM Certainly the eye can hold more than the belly can. That queer old bird, the pellycan, can be greedy without digesting anything. It is appropriate now that the BB See! has introduced commercial television.

P.A. And that BB should be blamed for it. It was opposed to it, but opposition may be responsible for an equal and opposite reaction.

ROLAND How does greed come into it?

TOM The BB is a great, big see/I/eye demanding that the rest of the body should, Livy-like, contribute to sloth and luxury.

P.A. All very well as a parable, but – here's the Doe. Doctor, do you think Livy's parable of the belly is anatomically fair?

DOCTOR Of course not. Are parables supposed to be fair? They are simple narratives on the way to a verbal formulation.

ALICE Too deep for me to C. Expound please!

TOM He means it is a mental aid to insight; as a circle or a line or a triangle aids Euclid, or Thales before him.

DOCTOR These corporeal aids become limitations; the asset becomes a liability. The anatomical and physiological structure is an asset to the baby who grows to be mobile.

P.A. Becomes 'auto-mobile' in short.

TOM But Euclidean geometry, aided by space, geo-metric space, grows so powerfully that in a couple of thousand years it becomes irked by its visual frame. At this point the demands of the mind are imprisoned in the corporeal structure.

DOCTOR Enter the fairy prince to release the sleeping beauty.

P.A. Namely? I think you should introduce the characters as they come on the stage.

TOM Cartesian co-ordinates.

ALICE What a pretty name.

ROSEMARY Mr Robin, Ma'am.

ALICE Hello, Robin. We were just thinking of Cartesian co-ordinates.

ROBIN Good heavens! I hope you aren't suggesting that I should use those. I would have my farm overrun with co-ordinates – they would grow much faster than the seeds of thought would germinate in my mind.

ALICE Here's the padre. 'Thou art the man.' Our scientific pagan needs baptism. Let me introduce our latest brain child – Cartesian co-ordinates – as yet without a literary or religious naming.

TOM They are triplets in fact: the first-born is real and distinct; the second, real and co-incident; and the third, conjugate complex.

ROLAND As initials I would say R.D. for the first.

P.A. R.C. and C.C. for the next two.

PAUL The parents usually tell me what are their wishes. I only commend them to God.

ROLAND Guessing at their dispositions I would expect the first to be a bit obstinate. 'I am *not* you', I can almost hear him say as he looks angrily at himself in the mirror.

P.A. I got here first; this is my place', I hear the second say.

ROLAND And complex conjugate is an intellectual snob, as Man, our aspiring politician, would be sure to say. You can rely on our intellectuals to be wrong – always.

ALICE I think you are being very hard on our brain children. This is a religious christening at which the wicked fairy is being allowed to have the last wish. What characters!

TOM Well, the line cuts the circle in a liberated and highly franchised manner. Uncle Riemann will be delighted.

P.A. And godfather Lobachevsky likewise.

ROLAND And Uncle Tom Cobley too true.

TOM But seriously, Cartesian co-ordinates set geometry free. We were no longer imprisoned – restricted to what we could see.

ALICE Wordsworth talked about the inner eye which was freed by the sight of the daffodils dancing in the breeze. He little knew 'what wealth to me' the sight had brought.

ROBIN Or as some wit put it, the chance of another slim volume at three and sixpence.

P.A. He would not become wealthy with three shillings and sixpence today. Eric Gill prayed that England might become poor.

ROBIN He must be a happy man today. Perhaps we are not allowed to be happy in the 'blessed Kingdoms of joy and love'.

P.A. 'So much the rather thou, Celestial light, the mind and all her powers irradiate. There plant eyes; all mist from thence purge and disperse' –

PAUL – 'that I may see and tell of things invisible to mortal sight'.

ROBIN 'The Heavens declare the Glory of God.' When I was in the RAF I used to think of the verse, 'I will take the wings of the morning and fly to the uttermost parts of the Earth'. Paul knows it, I'm sure.

PAUL Of course – we all do.

TOM I fear I never thought of anything so poetical. I was too filled with petrol fumes.

ROBIN Those were the best years of my life. Although I was scared out of my wits then, afraid of death. Afterwards I felt ashamed that I had not been brave enough, like one young boy I knew, to defy the enemy who called to him to surrender as he crawled out of his disabled tank.

P.A. What happened?

ROBIN What happened? Why, what could happen? They –

TOM – shot him, of course.

ROBIN Of course; as you say, 'Of course'.

ALICE Here's Rosemary with some tea. It will give us a chance of cooling off before we generate more heat than light. You were in the war, Rosemary?

ROSEMARY Yes, Ma'am. In the WAACS. Will that be all, please?

ALICE Yes, thank you.

ROLAND We can continue while we sip our tea.

PAUL You have forgotten that the wings of the morning were to aid flight, ineffectually, from God.

P.A. Perhaps the depths of hell.

ROBIN As Paul said, I had forgotten 'the wings of the morning' – a poetical way of escape. I think I must have succeeded – not so effectually as P.A. perhaps, but enough not to go to Church.

P.A. Why do you assume I succeeded?

ROBIN Haven't you? I thought people who were properly

analysed, like psychoanalysts, didn't believe in a lot of rubbish like 'God's in his heaven, All's right with the world'.

ALICE Really, Robin – why don't you read your Browning properly?

ROBIN Why? What have I done wrong now?

ROLAND Pretty well everything I should say – you hadn't read the Bible properly.

TOM You have forgotten your flying regulations.

P.A. I spend a great deal of my time trying to show people which particular god they are currently worshipping. Whether they are right or wrong is for the individual to decide for himself. Robin's god seems, from what he says, to be a solar god, but that would depend on the evidence to which I would try to draw his attention as it became discernible.

ROLAND To him, or to you?

P.A. Both, I should hope. I give my interpretation when I think he and I could both understand it, in the language which I think both could comprehend, and while the evidence is 'visible' to two ordinary beings. Just now –

ROLAND Can you give an example?

P.A. – Tom seemed to think that *he* would smell gas, Robin some visual or religious experience.

ROBIN I certainly said nothing about religion; I gave it up long ago.

P.A. Either you have little respect for what you say, or you say words for which you have no respect. You said, 'The Heavens declare the Glory of God' –

PAUL – 'and the firmament showeth his handiwork', is the text.

ROBIN Good heavens! Can't one talk simple literate English?

P.A. You should hear my psychoanalyst aspirants talking 'simple literate' English.

PAUL But you surprise me. Do you really think anyone expects psychoanalysts to talk 'simple English? I thought it was understood that it was a point of honour to talk incomprehensible jargon.

P.A. It is a point of honour when we are playing the game of Who's Top of the Psychoanalytic League Tables, but that is when we are 'talking about' psychoanalysis.

ROLAND You have international league championship matches

too. I've read some of the accounts in your journals. The language is ferociously incomprehensible.

TOM A punch in the eye is ferociously simple and discernible – at least to the onlookers.

DOCTOR That sudden pressure on the ocular nerve is notorious for eliciting a non-specific response.

ALICE Sorry – I'm lost. Can you elicit a response from me that I myself could understand?

DOCTOR If a boxer receives a punch in the eye, he is said to 'see stars'. That response to the stimulus is not specific to the ocular nerve which is supposed to respond to light and shade.

P.A. I hope Alice 'sees'. But when I give interpretations – which I formulate in the simplest verbal terms known to me – I am as likely as not to find that my statement is hailed as being 'psychoanalytic jargon', or possibly also 'filthy sexual talk'.

DOCTOR I saw a boy once who had been so well brought up that he could only tell me he had a 'body ache'. I nearly asked him whereabouts in his 'body' this ache was, but realized, just in time to spare his blushes, that he could *not* say he had a 'belly ache'.

P.A. Did he 'blush'? Because I have known a patient who could feel he was blushing while I could detect no visible evidence of capillary dilatation.

ALICE Are you using the simplest terminology available?

P.A. Yes; if I said 'blush', it would create a wrong impression.

ROBIN Milton avoided saying 'blind Homer', not because he wanted to say 'Maeonides' to show his erudition, but because Homer meant 'blind' and it was infelicitous to say 'blind Homer'.

P.A. Psychoanalysts can 'in truth' claim, like physicians, to be engaged in a respect-worthy occupation deserving the use of a language which can be employed by people who respect the truth, without having to be ashamed of technical precision on the one hand, and 'primitive' precision on the other. Terms which are no longer permitted in socially oriented cultures –

ALICE Such as?

P.A. Shit. If you can indicate the cultural boundary I can guess whether the term would arouse anger. Show me the drawing and the onlookers before whom it is to be exhibited, and I can guess at the outcome. When Freud said infants had a sexual life people were

outraged. Today James Joyce is regarded as permissible. An assertion of a religious manifestation will arouse the hostility and suspicion of psychoanalysts who would deny that they were displaying bigotry.

ALICE Really? You surprise me.

P.A. We are all scandalized by bigotry. We are none of us bigot-generators; that is, we none of us admit to being the spring from whom bigotry flows. As a result we do not recognize those of our offspring of whose characters we disapprove. Indeed, Melanie Klein discovered that primitive, infantile omnipotence was characterized by fantasies of splitting off undesired features and then evacuating them.

ROLAND I am sure you don't mean that children *think* like that?

P.A. It would be inaccurate and misleading to say so. That is why Melanie Klein called them 'omnipotent phantasies'. But although I found her verbalization illuminating, with the passage of time and further investigation which her discoveries made possible, her formulations were debased and became inadequate. These primitive elements of thought are difficult to represent by any verbal formulation, because we have to rely on language which was elaborated later for other purposes. When I tried to employ meaningless terms – alpha and beta were typical – I found that 'concepts without intuition which are empty and intuitions without concepts which are blind' rapidly became 'black holes into which turbulence had seeped and empty concepts flooded with riotous meaning'.

ROBIN Really – do you blame us if we don't know what you are talking about?

P.A. No, I don't. I am not surprised at your protest; in extenuation I have found that if I say what I mean it is not English; if I write English it does not say what I mean.

PAUL Theologians are blamed for being incapable of being religious – you are as bad as we are!

P.A. Probably for the same reason. Ultimate Truth is ineffable.

ALICE I think you are hard on him. I don't pretend to understand, but I do have an idea.

P.A. After all, ultimate reality must be a whole even if the human animal cannot grasp it. If I kick open an ants' nest it would no doubt appear to an ant to be an act of God, but it is capable of a simple explanation.

PAUL So you think.

P.A. Quite; I do not see why an infinitely small biological particle being whirled round the galactic centre on a speck of dirt – called by us the Earth – should, in the course of an ephemeral life that does not last even a thousand revolutions round a sun, imagine that the Universe of Galaxies conforms to its limitations.

PAUL The laws of nature are only the laws of scientific thought.

ROBIN It is readily assumed, filled with meaning, that these colossal forces 'obey' these laws as we obey social conventions.

EDMUND Sorry I'm late. I once knew a fellow who argued quite plausibly that a near supernova explosion –

ROBIN How near?

EDMUND Say, 1054 – the Crab Nebula, so-called, which is both visible and detectable through its radar waves – could upset the helium balance and thereby the nitrogen –

DOCTOR Ah! That might upset the DNA component of chromosomes.

ROLAND So what? You are beyond my mental grasp.

PAUL And mine; but as a religious man may I point out that the writer of *Job* had already expressed in unforgettable language the feebleness of human pretensions to knowledge.

ROBIN However hard I think, I have to bow to facts such as the sky with its towering clouds and great winds, and the less obtrusive facts which my skin tells me even if my eyes and meteorological reports don't.

ROLAND That is why you are a good farmer. More than any man I know, you can 'hear the South West making rain'. Your skin thinks, Robin.

ALICE If Robin says it is going to rain it does – whatever the weather forecast may say.

EDMUND I don't see what it has to do with physics. If I were a student I wouldn't like to tell my examiner I have a friend whose skin tells me the answer I can't work out mathematically.

P.A. You speak as if you had no doubt that you – I mean the 'personality' whom I know as 'you' – are identical with the physical anatomy and physiological structure with which we are all familiar.

ROBIN Well, I have a mind, of course.

ROLAND That is what we are discussing.

ROBIN If we could speak the language of mathematics . . .

PAUL If we could talk the language of religion . . .

ALICE If we could only learn to look at what artists paint . . .

ROLAND What is wrong with not talking at all and listening to the music?

EDMUND Once it would have been understood when we were exhorted to hear the music of the spheres.

ROBIN I wouldn't object if I could speak the 'mathematics' of the spheres.

P.A. There may be something to be said for the language of the psychoanalyst.

ROLAND He hasn't got a language – only jargon.

P.A. That is not so. I try to talk English because it is the best I know. But I do not know it well enough to speak it for the purpose of what I want to convey. I do not talk Jargonese any more than Paul talks Journalese. With deference to Robin I do not even think the Intuitionist mathematicians have caught up with what I want to express. This is my lack and your misfortune in so far as you want me to talk a language *you* can 'understand', and I want you to meet me at least half-way by talking a language *I* can understand.

ALICE I try to understand what Roland says – so far as he does try to talk a language I understand – but I don't know what P.A. means when he tries to talk a universally understood language.

ROLAND Croce said Aesthetics was a universal linguistic.

ROBIN And is that 'old hat' now for saying so?

P.A. 'Old hat'? Translate, please.

ROLAND Oh, everybody knows what that means.

P.A. We who speak the tongue that Shakespeare spoke . . . we can only, like Milton, be free. But – I repeat – somebody translate, please.

ROBIN Certainly. 'Old hat' means – er – *vieux jeux* – you know – cliché.

ALICE That's French.

PAUL I doubt it. Tertullian ran into this difficulty when he tried to speak in the language of my patron saint.

ROLAND Who's that? Oh, Saint Paul, you mean.

PAUL Who else? Though I speak with the tongues of Angels and have not Charity . . .

ROBIN That sounds dated.

P.A. So is Bach's music. *That* I am told is out of date.

PAUL If it is sound you are worrying about perhaps you would be more impressed by Xaritas.

P.A. Some people I know are very impressed – if it is *impression* you are worried about – by Charisma and Charismata.

DOCTOR You never come across Charismata nowadays. They are out of fashion ever since we found out that they are simply hysterical manifestations.

ALICE If you think Charity just an hysterical manifestation, what do you think of love? What do psychoanalysts think it is?

P.A. I prefer not to make pronouncements about what psychoanalysts think – I find it difficult enough to make pronouncements about what *I* wish to say.

ROBIN Why do you not fall back on art, or religion, or mathematics?

P.A. I have told you, I do not know any of those languages to speak them in a way which is not a gross *mis*-representation.

ROLAND You are being modest.

ROBIN I don't think he is – I think he is being a humbug.

P.A. It has often been said, and I should be claiming to be less than human if I said there was no truth in the accusation. But you will miss something if you feel that the ulterior motive is the only one; just as I think it fallacious to assume that scientific truth, or religious truth, or aesthetic truth, or musical truth, or rational truth is the only truth. Even what psychoanalysts call rationalizations have to be rational. Because I think we should be aware of the ultra- or infra-sensuous, or the super-ego and id, I do not think therefore that one should deny the rest.

ROLAND But, good heavens, what would happen to us if I couldn't blind myself to sidereal or space time when I want to tell *my* time by *my* watch?

P.A. If we are to translate our thoughts and feelings into physical or corporeal fact, there has to be a certain focusing of our mental apparatus as a prelude to action. That very act seems to me – putting my thoughts into 'verbo-visual' terms – to involve putting other elements out of focus. It is difficult in practice to de-focus – peripheralize – the irrelevant without falling into the opposite error of permanent insensibility; blindness, deafness, repression. That is why I talk of the 'opacity' of memory, desire, understanding.

EDMUND The centre of our galaxy is hidden from us, and though we suspect that it lies near Sagittarius we cannot see, as we can when we examine M31, the bright centre.

P.A. A stimulating idea. I would not wish to question the scientific findings of astro-physicists, because I also find in those discoveries a model which illuminates the obscurities of the human mind. At present I cannot entertain, at the same instant, '*les espaces infinis*' of space *and* the infinite spaces of human thought. What my work impresses on me is the depth of the riches and wisdom and knowledge of the human mind, *and* the even vaster and greater depth of human ignorance. Anatole France, having spread himself in a eulogy of the power of man's wisdom, ends by saying, in reply to a question, that the only thing more marvellous is man's stupidity, bigotry and intolerance.

ALICE Isn't this stale news? You aren't saying anything new – the fact that you quote Anatole France shows that.

P.A. Quite so. I have often pointed out that if people would only 'think the thought through', as Paton used to say, they would recognize that what at first seemed strange was something they knew once. Even an old hat may once have contained a lively brain. Ruskin –

ROLAND Ruskin! I thought that you psychoanalysts had exploded all that old fraud's pretensions –

ROBIN By Rose La Touche!

PAUL Or Delilah!

P.A. Or Helen of Troy.

PAUL Or Hosea's 'girlfriend', as you would call her.

P.A. Whatever the importance of Rose La Touche may have been, it is hardly valid to use the 'memory' of her to prevent debate here. The infancy of psychoanalytic discovery is always brought up against the possibility that psychoanalysis, like infants, might grow up. The fact that psychoanalytic thought in its immature form was used as ammunition against its forebears is not an argument for immaturity as a prison house in which to lock up mental growth either in an individual or in a group of individuals.

ALICE Sorry. We are all ears. Do go on.

ROLAND Please . . .

ROBIN Go ahead . . .

PAUL I detect a note of sarcasm.

P.A. So do I. I've forgotten what I was going to say.

EDMUND Ruskin, wasn't it?

P.A. In *Sesame and Lilies* he showed me what it meant to *read* Milton. Of course you all know *about* sex, religion, art, but Milton, Virgil –

ROLAND Yes, but they are classics.

P.A. They were ordinary human beings.

ROBIN *Ordinary!*

P.A. Yes – before you bury them under a mound of adulation and pseudo-religious adoration, I want to say that they became classics because what they said with one meaning turned out to have, like a many faceted diamond, a fresh, fiery brilliance of truth the 'generators' did not know because it hadn't happened – when they wrote it. The reader, the beholder, if 'he hath ears to hear' and permits himself to listen, may still catch its echo though it may grow 'faint at last'. Our thinking is prodigal; the cost is mental pollution, a by-product of mental combustion liable to become the most significant creation.

DOCTOR Is there any evidence that the saurians perished at the height of their power, victims of their products? I am reminded of the saying that the person who draws the sword perishes by the sword.

ROBIN The fact that there is an apposite quotation proves that someone once said something in a telling phrase. Gilbert, of Gilbert and Sullivan fame, parodied the fallacy when one of the characters in *H.M.S. Pinafore* says, 'Though to catch your drift I'm striving, it is shady, mystic Lady'. One can usually cap any quotation with another.

P.A. We have to select from the variety of constant conjunctions which have become marked – sometimes by a word, sometimes a phrase, sometimes by a parable. Freud, at the latter end of his career, favoured the term 'constructions' to describe these meaningful conglomerations. Psychologists have begun to explore the possibility of using these conglomerations of human experience by developing a method of sentential calculus.

ALICE I am most impressed – as I think I am meant to be – by the brilliance of these logical constructions and the brilliance of masculine thought; but why is it that people who think so logically seem often to translate their thinking into action which is, to my observation, anything but wise?

ROLAND My dear, I am often most impressed by your ideas and formulations because, as you know, I think they are utterly illogical –

ALICE – 'emotional' or 'hysterical', you often say –

ROLAND – and yet I often think you are the one, not I, who is being wise.

ALICE It's very sweet of you to say so.

P.A. 'De gustibus' –

ALICE There you go again – more quotations.

P.A. I had not finished what I was going to say. Even if I use any and whatever tools are available to me, they are liable to sound like 'jargon', or 'neologism', as psychiatrists would say. They are formulations which fall very short of the truth that I want to express. Reality, the real environment in which we live, usually only approximates *at best* to such human formulations. Take envy –

ROLAND Oh God! Here we go again.

ROBIN I can't see why you plug 'envy' and 'rivalry'.

P.A. I apologize – but these terms are the nearest available.

ALICE We know of the evils of envy and malice and hatred.

P.A. I do not think any of us, individually or as a group, would still exist if it were not for these same qualities.

PAUL Then what do you mean?

P.A. The product which has a quality of surviving owes its survival to having 'meaning' which does not declare itself on first obtrusion into reality.

ROBIN What you have just said must be most profound.

P.A. You are being either sarcastic or inappropriately modest. In fact I have just experienced the difficulty of answering Paul's question. I have tried to be precise, but I might have done better if I had been 'pictorial'. A helpless infant may have been so insignificant that the saurians failed to recognize the successor who would take their supremacy from them.

ROLAND Ought we now to recognize our dangerous and menacing successors in the harmless and helpless little lizards whom we occasionally see darting around?

ROBIN According to P.A. it should be something which we nourish all unaware.

ROLAND The viper nursed at whose breast?

ALICE Some wretched woman's baby no doubt.

PAUL A feminine psychoanalyst perhaps – or should God be afraid of a goddess?

P.A. We do not know: we are not aware: we have not given birth to the conception, lest it be a monster not apparent but real.

ROLAND Thinking; mental power; at present so feeble that it has escaped extirpation. The survival of the fittest is clear because the fittest to survive proves it by being the survivor. 'Round and round

the garden went the teddy bear; one step; two steps; tickle you under there!'

ROBIN Ridiculous.

ROLAND Thy reason good Robin? Thy most excellent reason?

ROBIN This is silly.

P.A. Beware the *silly*, the *charismatic.*

ROBIN The Intelligentsia; the Brain: beware! Attlee, the Labour prime minister, said you could rely on the intellectuals of his party to be unwise.

PAUL The Human Animal has so far outdone all its rivals.

ROLAND Are we concerned with the discovery of the athletically dominant winner of the animal championships?

P.A. Are the optic and auditory pits rebelling against our visual or auditory ability?

PAUL I was not suggesting that a religious standard would measure the difference between intelligent thought and feeling, as the achievement of athletes would be measured.

ROBIN In the 51st Psalm I think some theologians have detected evidence of a Priestly code at conflict with the Elohistic code of the earlier part.

P.A. This emergence of a preoccupation with meaning is causing us a lot of trouble; an 'impulse' in contrast to preoccupation with facts.

PAUL What do you call 'facts'?

P.A. I find it useful to make a distinction between meaning and fact. 'Facts' are the name we give to any collection of constantly conjoined experiences which we feel temporarily to have a meaning; *then* we consider we have discovered a 'fact'. More relationships, more accretions lead to the discovery of another 'constant conjunction' which is not only constantly, but commonly, observed to be conjoined.

ROLAND And this starts off another search for what the new discovery 'means'. Non-sense to nonsense with a passing glance at moonbeams from the *Larger Lunacy,* as Stephen Leacock called it, on our way to still more 'facts'.

ROBIN And another round, or perhaps I should say 'spiral', of the heliachal progress to further meaning.

P.A. You are suggesting a linear progression, but this ignores forms of development or progress, perhaps because we fear and

dislike the prospect of incongruities such as those experienced when the established meaning of wave motion and the electro-magnetic phenomena was cast into confusion by quanta.

ROBIN Thank goodness – mathematics.

ROLAND Surely you aren't going to claim any refuge in mathematics? Look what the Intuitionists have been doing since Kant.

ROBIN Don't tell me. I got an Honours degree in mathematics once – or dreamt it.

P.A. And you succeeded in saying, 'Thus far and no further'?

ROBIN I didn't say anything, but I knew I could certainly go no further. I thought I should be lucky if I ever got so far. I thought so during the exam and have thought so ever since.

ROLAND In short, you thought you were no mathematician. Now *I* thought I was pretty good at geometry, and I still think that if we had stuck to geometry I might have been some good at it. But when they dragged in tangents and cosines and things, I quit.

P.A. Pythagoras raises his ugly head again.

ALICE What has Pythagoras got to do with it?

PAUL Nobody knows, but the Pythagoreans are thought to have been interested in what we should nowadays call science or philosophy.

ROBIN What did *they* call it?

PAUL I've no idea, but the name of Pythagoras was obtrusive and they were called Pythagoreans.

P.A. Something like that has happened to psychoanalysis. No one knows what that is, but people are called Freudians and Kleinians. *Vexilla Regis Prodeunt*.

PAUL Onward Christian Soldiers, marching as to war.

ROLAND That's fine. As Roy Campbell might have said, there's nothing wrong with the harness, but where's the bloody horse? Where's the war?

P.A. Or as J. B. Morton *did* say of the ship of state: Longfellow, President What's-his-name, Prime Minister Churchill and others of the crew have exclaimed, 'Sail on!' No matter what is wrong with the ship there will never be anything wrong with the bilge.

ROBIN Where's it going?

ROLAND We used to play a trick sometimes, when two or three of us were driving in the car, of leaning out of the window and

calling with an intonation of anxious inquiry, 'Straight on?' and were rewarded with a spontaneous answer, 'That's right – straight ahead!' I suppose you could say the same if I leant out of my class and asked my maths master, 'Tangent and cosine?' 'That's right – straight on!'

ALICE What does your psychoanalyst say if you ask with an air of anxious inquiry, 'Will it cure me, doctor?'

ROBIN If you ask P.A. he will say, 'What's wrong with the bilge?'

P.A. No; I think I should be prepared to ask if you had *considered* the bilge.

ROLAND But while you were considering the bilge the ship would sink.

P.A. The ship would *not* stop sinking just because you declined to consider it.

PAUL 'Consider the lilies of the field', said a person who some religious people regard as important.

ROBIN So they learn what He said by heart and forget it. As, to be honest, I myself did with cosine and company. Maths, I said, is not for me.

P.A. Any group has a small minority of leaders who say, 'Just what I want' – the 'self-selected unsuitables', as a psychoanalyst friend of mine appropriately named them. You seem to have decided from what you learnt of mathematics that you had learnt what you cannot do. Of course you might be mistaken.

PAUL Do you think that religious people learn it by heart and forget it?

P.A. After all, one learns to walk – and forgets it. There is something to be said for 'learning it by heart' so that one can walk without remembering.

ROLAND Is that what you call ridding yourself of memory?

P.A. I think it is similar, but the important point is covered – not covered up – by the phrase 'learnt by heart'. The painful, conscious learning by heart is passed on to domains which are not conscious – like muscles or nerve systems which are sub-thalamic.

DOCTOR Is there any evidence for this?

P.A. Not physiological evidence. In this context 'sub-thalamic' is a convenient, pictorial way of passing on to my proprioceptive system what I consciously have learnt; or teaching children what is 'good manners', or athletics, or religion.

ALICE It sounds a complicated process.

DOCTOR It probably is. I don't think, with my limited knowledge, I could venture on describing what the physiology or embryology of the growth process is.

P.A. Nor would I like to suggest a psychoanalytic formulation. But here is the trouble. While I am 'considering', someone rushes in with the 'answer' and there's no catching up with an 'answer'. You might as well try to catch a bandersnatch. 'Any stigma will serve to beat a dogma'. But the hunt which we could only match in our nightmares would be one in the vast deserts in which roam the fearsome and dangerous creatures known to us only in the pale illumination of daylight and waking thoughts as 'answers', 'dogmas', 'scientific facts', 'triangles' – and their close relatives, 'eternal triangles'. I would include in my psychoanalytic zoo a whole series of fascinating animals – if I were sure they would not escape and roam the world as the latest and most beautiful new-born facts.

ALICE Such as? You fascinate me, I confess. Do show me your zoo!

ROLAND Trust a woman to go off on a side-track!

P.A. Allow me to conduct you round the cages of my psychoanalytic zoo. Of course the names are somewhat forbidding, but the creatures themselves are beautiful and ugly. AM Here is Absolute Truth – a most ferocious animal which has killed more innocent white lies and black wholes than you would think possible.

ROLAND You muddle it with your puns.

ROBIN Call it paronomasia – more scientific.

ALICE It sounds like a very attractive flower.

P.A. Only a flower of speech. Throw hither all your quaint enamelled lies that on the green turf suck the honied showers. 'Blind mouths', as Ruskin showed you, would have to learn to read.

ALICE I learnt to read years ago.

P.A. That is what we all think, but in fact the greatest thinkers are very difficult to read unless you find great readers to read them.

ALICE But I was a *great* reader as a child.

P.A. You may have been – but now you are a grown-up and have an enormous amount of knowledge – or is it bilge? – to fall back on.

ROLAND Please don't insult my wife.

ROBIN He was only referring to Longfellow's poem. You will make him so nervous he won't dare to say anything.

ROLAND Good job too.

P.A. I had no intention of monopolizing, but I certainly think that as one falls silent, someone else who may know even less will occupy the vacant space.

ALICE 'The anarchs of the world of darkness keep a throne for thee' and then no one will be able to fill the vacant space.

P.A. For fear of the turmoil – the turbulence that obeys no man-made 'laws of nature'. Far worse than any zoo. We were just coming to the twins, Absolute Space and Absolute Time.

ALICE They sound perfect pets.

P.A. They do; but if I were really showing you round my psycho-analytic zoo I would warn you not to get *too* near the cage because these long names – especially when you read them in broad daylight – give you no idea of the meaning –

ROBIN The meaning often seems the worst part.

P.A. It depends so much on what the 'facts' cover up. They are not so misleading as the scientific language, but Absolute Space can terrify even robust minds like Pascal. Conversely, a harmless personality – indistinguishable from Descartes – finds a key like Cartesian co-ordinates, and Euclidean space is exposed.

ROBIN And decent people like me cannot even think of the roars of cosines and the bellowing of tangents and the whistling of boro-groves –

ALICE Stop! I don't want another night like last night.

ROLAND Nor do I!

ROBIN Why? Did you have nightmares too?

ROLAND No, but Alice was tossing and turning and moaning all over the place.

ALICE Perhaps it will be your turn tonight.

ROBIN Geo-centric night of course.

P.A. Geocentric night is only a particular sample of ego-centric time. Absolute Night is part of human thought about Absolute Time.

ALICE Like the Abominable Snowman.

ROLAND I thought that was an exploded myth.

ROBIN If you mean vastly and suddenly enlarged so that it becomes far too frightening, I would not object to your epithet

'exploded'. You should include the myth exploding the scientific 'fact'. I haven't been up Everest, or Nanda Devi, or the source of the Seven Rishis, but just fooling around the pathways of the milder Alps I have been terrified.

P.A. This, Alice, is one of our tamer animals. Even if it gets out of its cage it is really quite friendly. Not an explosion like the one that blew the top off Krakatoa. But these geocentric affairs are alarming only to Ephemera like us.

ALICE I understood Mont Pelée killed lots of Ephemera.

P.A. Of course we dislike it, but I do not see why we should get above ourselves and indulge in our megalomanic sense of our own importance – there could be something between the extremes of religious abasement and religious exaltation.

PAUL Don't call it religious *please* – it maybe psychoanalytic abasement and psychoanalytic exaltation, but don't drag in religion. I believe in God and in God's Truth and in God's Wrath and God's Love, but I don't see why anyone has to confuse their undisciplined human thinking with God. Men are always worshipping their own image and calling it God.

P.A. You are not far away from expressing something to which, as a psychoanalyst, I frequently try to draw attention when I interpret an actual human statement as betraying an omnipotent phantasy. You would be surprised how often it is supposed that we are casting doubt on God. All I purport to do is to give the individual a chance of observing his God-like assumption of God-like attributes. It is not surprising that he finds it difficult to be awestruck by God, though not doubtful about his own God-like qualities.

ROBIN They must be a conceited lot, your patients.

P.A. Yet they are humble enough to submit to not-devotional observation by another ordinary human animal.

PAUL By 'not-devotional observation by another ordinary human animal' you mean a psychoanalyst?

P.A. I mean myself –

ROBIN Then why don't you say so?

P.A. Because at that moment it seemed to me that a particular aspect of myself had been lost to conscious awareness of my company.

ROLAND All of us?

P.A. No, not all of you – not even all of any single one of 'us'.

ALICE Surely it is clear enough – he means us.

P.A. It is true that if we use conversational language for the purpose for which it has been invented, the 'meaning' could be said to be clear enough. But we are not using it for that purpose, and ordinary language may sometimes seem to us to be inadequate. Just now Alice seemed to feel ordinary language *was* adequate and only became inadequate because we were, perhaps perversely, *not* listening to the ordinary meaning but to something else.

ROLAND But you don't say what else – are we supposed to know?

P.A. I think, as a result of our experiences here, we may get sufficiently used to not knowing to train our senses and personalities to find out.

ROBIN Oh!

ROLAND I don't understand.

ALICE I feel like ringing for Rosemary to bring in coffee.

P.A. Actions speak louder than words, but we need not allow mere loudness to overwhelm our thoughts.

EDMUND There is a lot to be said for mathematics and by mathematics and about mathematics.

ROBIN Government 'of the people, for the people . . .' – how does it go? 'by the people'.

P.A. A construction of words by the people, for the people, about what the words are about – people.

ALICE Someone must act; I'm ringing for Rosemary to bring coffee.

ROLAND Thoughts are sometimes preludes to actions and then are translated into action.

ROBIN Thank goodness we aren't going to feed on imaginary coffee, or the memory of coffee, or a desire for it, as if we were condemned to live on thoughts which are a substitute for action. But perhaps after coffee we can discuss the matter further.

EDMUND 'My maths' only runs to Euclidean geometry with a dash of Lobachevsky and Riemann bitters.

ROLAND How pictorial you are being.

ROBIN Gustatory, I would call it.

DOCTOR Not alcoholic to the extent of toxic doses, but if it is only coffee I don't think the caffeine will do us any harm. Anyway – don't attack me for introducing too biochemical a note.

ALICE I shall certainly object if my good coffee is treated as if it is a mere random. collection of molecules.

DOCTOR Oh, we should never do that! I assure you the arrangement of the molecules is an extremely beautiful fact.

ROBIN But to my inner eye what wealth to me the show had brought.

ROLAND You've bungled the quotation.

ALICE I suggest we go on for another half hour and then adjourn till next week. Agreed?

DOCTOR We were just beginning to talk about Beauty, but it isn't at all clear what we mean by it. Poincaré talks of the Beauty of a mathematical construction.

ROBIN I have often thought about Athletic beauty. Although I loathe cricket I have seen what appear to me to be beautiful strokes.

ROLAND I have known some beautiful cricket fields; perhaps that is what Robin was being influenced by.

ROBIN Not at all. I was thinking about a glorious innings by Hobbs at the Oval – and you can't imagine anything more awful than the Oval.

PAUL 'O feet that want the feel of plushy sward' – but the man who said that was referring to the beauty of the religious street.

P.A. Which beauty? Which religion? It seems to depend on what you mean.

ROLAND Of course we need to know the meaning. We have to be 'sensible' of the facts first.

P.A. It may be a peculiarity of the human mind that events are thought to be sequential and even consequential.

ROBIN You don't suggest they all happen at once?

P.A. No, I don't. I am saying that 'cause and effect' are words which are appropriate to the human mind and only appear to inhere in things and characters *not* the observers.

EDMUND Isn't this coming near to denying the existence of the environment?

P.A. No; I am suggesting that we are unable to free ourselves from our prison of sense even though something can be done to augment the boundaries of perception. Had Aristarchus lived a few hundred years, he might have been able to use the two hundred inch reflector at Palomar, or the radio telescope at Jodrell Bank. As far as we know, he couldn't.

PAUL As far as we know –

P.A. That is what I have been saying – as far as we know, but I do

not think that we should deliberately go on to say, 'Thus far and no further'. Freud could turn his limitations to good account. Milton was on the losing side in the Civil War but he said, 'So much the rather thou Celestial Light shine inward' –

ALICE How did Milton give effect to his aspiration?

ROLAND He was a genius.

ROBIN Have you read *Paradise Lost*?

ROLAND Well, er – of course. I don't say I understand all of it, but of course I've read it.

ROBIN Forgive me, Roland, if I doubt the equivocation of the fiend 'of course'. Milton should have had him as one of the denizens of that obscure domain in which he had been long detained.

PAUL But he attributed his escape to the Offices of the Heavenly Muse – not Orpheus, as he expressly said.

ROLAND You mean to say you think we ought to take his description seriously? Of course it's wonderful poetry –

P.A. 'Of course', but Virgil and Homer and Milton were not writing 'poetry'; they were writing 'seriously'. They wrote poetry because it was the most serious way of writing.

ROLAND Do you think they were writing religion?

P.A. Certainly not. I think Ruskin was right; they – the greatest of them – were writing, as nearly as they could, the truth. As Bacon pointed out, Pilate could not wait for an answer – too busy.

ALICE Alas! So am I – so we shall have to put it off till next time. I won't wish you *sweet* dreams because, as P.A. would say, the dreams are always sweet by the time we have verbalized them.

P.A. Not I – Freud.

2

PAUL What shall we discuss today?

ROBIN I feel I can't remember what we were talking about before. It is curiously like dreams, for I know that I have dreamt and though I couldn't say what the dream was, I know that I have not forgotten it – it has gone. On these occasions it can come back; I don't *remember* it, but it is there, all in one piece. It is quite whole and quite absent.

ROLAND I can't say I have that experience, but then I rarely dream at all. I do remember some dreams which I had as a child and some were very frightening, but others were not.

DOCTOR It sounds as if we were going to talk about dreams. But what about things that could be easily explained if they were dreams, but the patient has them – I'm thinking of a particular man – when wide awake? I don't think I would call them hallucinations; there is no adequate name.

PAUL What would you call the vision clearly seen and verbalized by Isaiah? – he describes it clearly in the sixth chapter as he would any other fact and date.

P.A. I think of visions as coming from a 'level of mind', or a 'time of life', although I always *hear* of them in the present and *described* in articulate terms. This is one of my difficulties; because I use ordinary English it is assumed that I am saying something already known to all of us, and at the same time that it cannot be anything so ordinary as to be comprehensible to ordinary people.

ROLAND Couldn't you say something that is neither?

ROBIN According to the Intuitionists you can't, because there is no excluded middle. Why, as someone asked, does logic apply to anything but mathematics?

P.A. I certainly do not intentionally exclude, or include, any

topic, although I can see that if one topic can be said to be 'included' then other topics are 'excluded'. A responsible person must exclude the topics which he does *not* discuss. To that extent he is not allowing some aspect of his personality to express itself and is thus incurring his self-hatred – whatever grievances he may consider also to be inflicted upon him by forces or people *not* himself. We include dreams as a part of thinking. Do you call that *in*cluding or *ex*cluding logic?

ROBIN Hasn't Brouwer already pointed out that there may be a mathematics in which classical, mathematical logic is irrelevant?

ROLAND I'm no mathematician.

ROBIN If I understand P.A. correctly you are lucky not to be carrying a heavy burden of preconceptions, even if they are respectable preconceptions hallowed and sanctified by a university qualification –

P.A. By 'university' I think you mean a number of individuals gathered together and self-endowed with the privilege of declaring who is, and who is not, worthy of joining their association.

ROLAND At that rate a democratic society is one in which the representatives of the society almost constitute themselves to be the vicars of God in that society. '*Vox populi, vox Dei*', as Alcuin said.

PAUL This is hardly distinguishable from saying that a democratic society is a theocratic society. But a theocratic society openly admits its claim; the democratic society seems to claim some sort of superiority. That is a claim I cannot admit unless the supposedly theocratic society is governed by a group of human beings – ordinary human animals claiming to be God or at least the Voice of God.

P.A. Something of that sort is overtly expressed in those last few verses of the 51st Psalm almost directly contradicting the tenor of the whole early part which is far more modest – indeed penitential, as it is justly called.

ROBIN This is all mere supposition stimulated by the 'creator' whom we cannot now question.

P.A. Their words have a durability such as Shakespeare claimed for his verbal creations.

ROLAND You have said this about the artist who constructs in words something which – like marble or the gilded monument – lasts. But does it? Frederick Powicke said he could not describe the most important factor in the matter he was discussing when giving an historical account of the Lord Edward and his attendant Hubert de

Burgh, namely, Hubert de Burgh's state of mind. That, as he pointed out, had gone – without recall. But is Shakespeare any better off? Do we now know what he meant when he wrote his sonnets? Did he then understand what we now understand when we read them?

ROBIN Set a poet to catch a poet. Blake was not deceived about the meaning of *Paradise Lost.* In more recent times Kenner has shown how Shakespeare said far more than he consciously intended when he wrote, 'Fear no more the heat of the sun'.

P.A. Kenner's explication is, to me, extremely convincing – as was Ruskin's of *Lycidas.* But what a chancy business! Who could possibly predict that Ruskin could persuade with telling force one person, or perhaps two, to *read* what the great ones have left us in their wills. Oh yes – we have already heard that *of course* we all read Milton; *of course* we all read Shakespeare.

ROLAND Touché.

PAUL I don't know why, but you remind me of a cartoon which I once saw in the *New Yorker* in which a duellist, having just delivered a mortal stroke, says 'Touché'.

ROLAND I saw a horrible photograph of a duel between two people armed with sabres in which one had decapitated his opponent in one stroke. I was not really claiming to have been so completely separated from my central nervous system, or the seat of my intelligence.

ALICE You often talk as if, because I am a woman, I can't ever have had an intelligence from which to be separated.

P.A. Perhaps that is because he has never been completely separated from his primordial mind and is still dominated by the belief that as a woman has not got a penis she cannot have a capacity for masculine thinking.

ALICE Does the caesura connect or separate? He often behaves as if he were not a male sexual animal.

ROLAND That's not fair! You're behaving like a female sexual animal, and I can hardly be blamed if I am cautious – sometimes.

PAUL This is not an occasion for display of the matrimonial experience. But if I say so, it will be assumed that I and my nominally saintly predecessor are opposed to sex. The biological creator does not appear to be on good terms with the creator of morals. Verbal intercourse is not granted the freedom that sociologically we are supposed to have.

P.A. Freedom often seems to be driven 'underground' – or should I say 'subterrane'?

ALICE Please yourself; but suppose both the dictator and liberator go underground and meet there.

P.A. I shall avail myself of your permission to say 'infra-conceptual'.

PAUL Well, *that* is horrible enough to escape durability as an artistic expression. The world of thought shrinks its boundaries in inverse proportion to the length of the verbal weapons it uses; the shorter the 'bayonet', the wider the empire it sways.

ROLAND I don't believe it. Who on earth bothers to carry a rifle nowadays? I wouldn't – not even to stick a bayonet on.

P.A. If I could I would try mathematics as the most terse form of expression known, but I have to communicate in such a lengthy manner I fear you would hardly stand it. Still, perhaps you would be tolerant; it would be easier for me.

ROLAND If you were tolerant it would be easier for us to listen.

P.A. My problem is the relationship when two minds, persons, characters, meet. Freud drew attention to one aspect of that relationship which he called 'transference'. I think he meant that when a man meets his analyst he transfers to him characteristics which were probably once consciously, and not unreasonably, thought to inhere in some member of the parental family. These characteristics are inappropriate when felt about a stranger – the analyst.

PAUL Why the analyst? Why not other people?

P.A. The analyst is typical of these 'other people'. In analysis these characteristic 'transfers' can be discussed.

ROBIN *Only* by the patient?

P.A. No; the analyst also reacts to the patient. But in so far as he is unconscious of it, it is known as the counter-transference. You can read all about this in the literature, or better still, find out for yourself by having a psychoanalysis. I do not want to go into that because here, at best, we can only talk 'about it' – not experience it.

ROBIN You were going to talk about mathematics as potentially affording a precise and short method of communication.

P.A. You remember we talked before of the way in which Cartesian co-ordinates proved to be a key that released Euclidean geometry from the tyranny of visual imagery.

ROLAND I remember – and a whole host of horrible psychoanalytic animals that had previously been safely locked up in your zoo.

P.A. I didn't mean them to distress you – you mentioned tangents and co-tangents and sines and other similar creatures.

ROLAND Yes, but they got together and became even more horrible animals like 'real and distinct', 'real and coincident' and 'conjugate complex', which I gather are as fearsome and as nonexistent as the cockatrice and the bandersnatch.

P.A. True. This is simpler.

ALICE That's good news at least.

P.A. Yes, but like all really simple things they are slippery and hard to grasp.

PAUL You are being metaphorical.

P.A. I think it is a better description to say I am stimulating, or trying to evoke, visual images in you. But I am not trying to suggest who or what is doing something to whom or what. I could call it an attempt at analogy in which the 'things' that are analogous are left unformulated so that the link between the two is not obscured by the 'thingness' of the relationship – what, if the vertex is psychoanalytic, I understand by transference.

ROLAND That seems clear enough.

P.A. Then I fear I have misled you.

ROLAND Oh, poor Roland – can't he ever be right?

P.A. I doubt it; but let me say that I am no less doubtful about myself What I am trying to talk about is one of these fundamental, basic things like life/death/love/hate/birth.

ROBIN Surely you don't need any very elaborate mathematics for that – unless you are trying to split the ears of the groundlings.

P.A. Ah! Now if you are employing hieroglyphic talk I think you are getting nearer to the meaning behind my verbal communication.

ALICE I suppose you mean that Robin's remark has some erudite psychoanalytic interpretation.

P.A. I am sure it has; I would like to mean something simple and basic as well. It may not be 'off-target' but is nevertheless not within any of the recognized and delineated areas in which one's comment has to fall to register a score. I feel the Intuitionists are right when they start with something simple like infinity. That is practical; that, I am sure, I grasped as an infant even without the word.

ROBIN Lord! You must be a mathematical genius.

P.A. Then you must be using the word 'genius' in an unusual manner. I may have been precocious, or premature, or infra-intellectual – defects of that kind often excite awe and even adoration. Beware the charismatic individual! Beware the stigmata of messianic future!

ROLAND Though to catch your drift I'm striving, it is shady, mystic lady.

P.A. I see you attribute feminine divinity to me.

ROLAND Rubbish! That's Gilbert and Sullivan.

ROBIN But used by you to express *yourself*. I think there is something in these theories of free association, but what has this to do with maths?

P.A. Suppose it is not a problem of a line cutting a circle at two points, but two personalities meeting, each made up of a diversity of characteristics. An analogy would be two groups of people meeting; one group composed of nothing but black men and the other of all white men. The corporeal difference would be so easily grasped that the desire to avoid work would be fed by the simplicity of deciding that they were different groups.

ALICE Any difficulty could be instantaneously solved by bussing.

P.A. Quite so. It can even be 'solved' by law. But those laws are man-made, like the laws of chemistry or mathematics.

ROBIN Surely the laws of mathematics and physics and chemistry are indistinguishable from the laws of nature.

P.A. They owe their indistinguishability to the inadequacy of language – the only thing that is sure is the adequacy of language to fool its creators and users. I do not think it at all wise to consider any part of mathematical 'law' to be exempted from this, but it is convenient to suppose, as has already been done, that God made the integers; all the rest of analysis is man-made, an elaborate series of 'artefacts'.

ROLAND Oh God!

PAUL Which one are you calling on? I thought you said you didn't believe in God.

P.A. In my experience everyone, without exception, believes in God. I have not met a man or woman who does not sooner or later turn out to believe that they are themselves 'God'.

ROLAND Rubbish!

P.A. How do you speak with such certainty?

ROLAND Well, are you not yourself requiring our adherence to you and your psychoanalytic laws obtained from Mount Sinai Freud?

P.A. I try to formulate my impression of the truth in conditions which allow others to compare what *I* call facts with *their* opinions of the facts.

ROLAND You are so 'reasonable'; you bear a great resemblance to Paul's outfit who claim to be so 'holy' – itself a short way of claiming to be honest and helpful. Isn't that the meaning of 'holy'?

PAUL Even if the *word* means that, it does not mean that there are no 'things' which approximate to the words 'honest', or 'helpful', or 'holy'. Some religious people speak even of a 'holy ghost'.

P.A. Bishop Berkeley made some remarks about 'the ghosts of departed quantities'. The amusing quality of some types of statement has often been remarked, but the generator has made the statement without being aware, still less intending that they should 'amuse'.

ALICE 'And God laughed at the sound that came out of its bill.'

PAUL Perhaps *He* did (Capital letter please – 'upper case', you call it).

ROBIN Who are you talking to?

PAUL The printer, in case my words are to be given the permanence of print. Isaac Luria did not bother with having his words recorded, but I confess that I, unlike Luria, would like to have them durable.

P.A. You would not go so far as suggesting that on your gravestone a mathematical formula should be inscribed?

ROLAND I wouldn't if I were you, though I would be happy to think that I ever said anything so memorable as Sir Thomas Browne writing of the urns he discovered at Swaffham.

ROBIN Even God is said to have died.

PAUL I think He may get over it. The father probably won't – that is, the father impotent, maker of a son he (lower case 'h' please) did more to mar than make.

ALICE An eternity in Hell.

P.A. 'Though long detained in that obscure sojourn . . .' as Rimbaud was.

ROBIN You seem to be taking a very long sojourn in your mathematical flight.

P.A. Ah yes; where had I got to?

ROBIN Somewhere between outer and middle darkness, I think.

Listening too much to Roland's Orphean notes and disregarding the Heavenly Muse – Alice perhaps.

ALICE Oh shut up, Robin. You aren't funny.

P.A. Certainly in darkness 'from the cheerful ways of men cut off; I can only say I wonder if the language of mathematicians might be close to the 'universal linguistic' that Croce attributed to Aesthetic.

ROLAND Perhaps the 'beauty' of a mathematical formulation is a symptom of its 'value' – like giving quality, as Ruskin described it.

ALICE Roland, you have hardly mentioned Ruskin in all the years I have known you. Or, if you have, in a language like that spoken by Yeats's Arab Lady.

ROLAND I was put off him by all that Rose La Touche stuff; but I admired him tremendously till I had it all spoiled for me by chatter.

PAUL 'About Harriet' it was with Keats.

P.A. Rose Delderfield – on a grave in a country churchyard – died age eighteen. Probably a mis-diagnosed appendix, I should think.

ALICE Your sojourn in the utter darkness is becoming longer and longer. You are singing of Chaos and Eternal night with notes which are more Orphean than Heavenly. Or should it be Oedipean, or Sphinx-riddled thought? Too much science.

P.A. Not enough or too much – that is the question. Too dark to see, or too blinded –

ROLAND – by the brilliance of your halo.

P.A. The difficulty is not only with the galactic centre. It is as difficult to see the centre of one's own personality. Distracted and fascinated by what is not one's self, the periphery is substituted for the centre.

EDMUND You've said this before.

P.A. Have I? I had forgotten.

ROBIN Outer darkness or central darkness – it is the wrong thing in the wrong place. Any sphere whose centre is occupied by some segment of the surface is sure to wobble uncertainly about its 'centre'.

EDMUND Like eclipsing variables. Nowadays some are beginning to think that the less obtrusive partner in a binary may be a black hole, that there are signs compatible with two black holes.

ALICE Only two – in the whole of the universe of universes? That sounds –

P.A. – like Classical Psychoanalysis. Two parents or – according to one of the parents of psychoanalysis – two breasts.

EDMUND Or one proton and one electron. They proliferate masses of offspring all circulating like hadrons round the nucleus, or suns about a galactic centre.

PAUL Or gods around a theocrat.

DOCTOR Or diagnoses round a turbulence, as P.A. would say.

P.A. Or what happens when two people meet.

ROLAND How dull.

ROBIN What bores psychoanalysts are! It isn't just sex.

P.A. It never was. It is its meaning that we do not know or understand, not our environment. It is not in our stars since we are underlings with ambitions to be overlings. We want someone or something authoritative to tell us we outshine these beauties of the night.

DOCTOR Even Elizabeth of Bohemia was damnably mouldy three hundred years ago – Sir Henry Wotton notwithstanding. Ante Agamemnona multi . . . Not marble nor the gilded monument shall outlive . . . But *où sont les neiges d'antan*? It is difficult to believe, or even to suspect that the biological view of anatomy and physiology could possibly mean what our own common sense would tell us. Now we have elaborated a new kind of 'scientist', a psychoanalyst devoted to the discovery of a brand new truth that will outshine all the meaner truths of the 'unheavenly' outer darkness which is so much more frightening than a thousand suns. Mathematically a thousand suns should be very bright – according to classical mathematics. What sort of psychoanalytic maths do you propose to introduce? You had better be quick, or someone else will produce a mathematics which is more appropriately accompanied by the music of the modern spheres.

ROBIN Aesthetic maths, or religious maths, or scientific maths? Take your choice.

EDMUND I am not terrified by the silence of infinite space.

P.A. Are you sure you have allowed yourself to hear it? Nature, they say – on what evidence I do not know – abhors a vacuum. According to Milton, even Satan did not enjoy a really poetic bump on his escape from Hell. Still, if Milton can be relied on, he survived the journey from Hell to the Heaven promised our forebears. Milton asked for more – 'so much the rather thou, Celestial Light, shine inward. . . .'

ROLAND I thought you purported to see and tell of things invisible to mortal sight.

ALICE Surely not. I thought he purported to draw attention to

what is clear to mortal sight unless the individual is determined not to look at it. You can't really blame psychoanalysts if they try to show what could be seen.

DOCTOR Psychoanalysts are no worse off than physicians. I remember trying to warn an hypochondriacal girl that she was fatally ill, suffering from advanced ergot poisoning. 'But doctor', she would say, 'I'm *ill*', after I had done my damnedest for weeks to tell her just that.

P.A. Perhaps she had begun to understand what you were saying to her?

DOCTOR Not she. I can still hear that wretched girl's voice as she lay on her death bed, trying to collect her strength to make me hear.

P.A. A runner who was crouching beside me in a shell hole had his thoracic wall blown out, exposing his heart. He tried to look at the ghastly wound across which an entirely ineffectual field dressing dangled. 'Mother, Mother – you'll write to my Mother, sir, won't you?' 'Yes, blast you', I said. If I could believe in God I would ask him to forgive me. '*Dieu me pardonnera. C'est son métier*.'

ALICE I thought you were supposed to be cured of such irrational guilts.

P.A. Who said they were irrational? Or that one would not sometimes see sufficiently clearly to know one was damned – rationally?

PAUL You are angry with her; why, what has she done?

P.A. I am sorry if I was rude; I didn't mean it. I use the saddest words in the language – 'I didn't mean it to happen.' They hang across the gaping wound of my mind like a ridiculous field dressing. August 8, 1918, that was.

ROLAND Sidereal time? Absolute time? Or just ephemeral time? The time inhabited by the ephemerides –

EDMUND – as long as no one knows its proper meaning; otherwise they may laugh at you and think you are mixed up in your biology.

ROLAND If they have a laugh I suppose that would be a good mark chalked up on my scoreboard.

PAUL I thought you didn't hold with these religious ideas.

ROLAND I don't. I have them, but I don't hold with them. They are nonsense.

PAUL I think you *do* hold with them and they aren't nonsense.

P.A. They may be non-sense, but I agree with Paul that you do

hold with them. As far as I am concerned the ideas *hold me* whether I like it or not. I would not go near the Amiens–Roye road for fear I should meet my ghost – I died there. For though the Soul should die, the Body lives for ever.

PAUL Not quite what we say. From a religious vertex the Body dies, but the Soul lives –

ROLAND – not for ever, I hope. Forever, like never, always feels a very long time. Do you relish the prospect of everlasting life? But I suppose that is only a metaphor.

P.A. It reminds me of people who say, 'It's only psycho-logical', and mean that 'it' does not therefore exist. Alternatively, if I think a scientist should at least be capable of entertaining a 'hunch' of everlasting life –

DOCTOR You don't mean to suggest you expect to live for ever?

P.A. I have no objection to 'suggesting' anything, but I find I cannot 'suggest' it without it being immediately supposed that I consider that my corporeal existence is infinite – 'everlasting', as religious people call it – whatever the hypothesis entertained by anatomists and physiologists as a result of, or part of, their biological sphere of enquiry. 'Father, I cannot tell a lie' may be a satisfactory qualification for a statesman, but I doubt the qualifications of a scientist, or artist, or religious who *could not* tell a lie; how could he possibly know what the truth was – let alone act truthfully?

PAUL I would have thought that any religious would subscribe to that. Similarly, I would suspect the qualifications of a religious who claimed never to have doubted the existence of God.

P.A. So many of your famed religious talk as if the God in which they believe is keenly interested in religion. I can understand religious professors being interested in God, but I cannot see why God should be. I should regard that as a primitive religious impulse primitively expressed – hardly less primitive than worshipping a competent golfer.

ROLAND The religious set may believe in any god they like.

ROBIN You will find P.A. accusing you of addiction to 'set theory' if you aren't careful.

P.A. I would be more likely to be suspicious about what anyone was being careful about, though I might also be curious about their being 'careless'.

ALICE Are you ever free from the anxieties of walking on a moral and scientific tight-rope?

ROLAND Just what I was wondering.

ROBIN It sounds as if you lead a most precarious existence.

P.A. I 'exist' as we all do, but I cannot say it seems to me that my existence is peculiarly precarious either on account of my private or professional existence.

PAUL The life of man in the sight of God is precarious.

ROLAND Why drag in God?

PAUL Which god do you think I am dragging in? Oh yes, I know – 'The God of all wise men.' Which is that? 'Wise men never tell.'

P.A. Unfortunately they kept *that* secret most carefully hidden from themselves. Most people I meet are surprised to discover the object of their worship and the congregation with which they choose to mix. They are the invisible and in-sense-able nucleus of their own universe.

EDMUND Like the centre of our own galaxy.

ROBIN If it is as brilliant as the centre of the M31, why is there no sign of some such glowing mass? Alternatively, do you suppose that if we were on a spiral arm as far from the centre of M31 as we are from our own, that it would be invisible?

EDMUND We can suppose what we like, but the idea is that it is obscured by galactic dust. Thanks to the spectroscope we have a good idea of what elements are involved.

P.A. I think we might have some way of naming accurately the nature of the emotional forces which – to use Milton's phrase – act like a mist that makes it impossible for internal eyes to 'see and tell'.

ROLAND What you call 'memory', 'desire' and 'understanding'. Or just lack of mathematical capacity.

P.A. Mathematical advance might be analogous to the intuitive eyes we need to 'plant'.

ROBIN Your remarks sound positively literary. I don't know what you think, but I'm not clear what we are to do about it – if anything. You have spoken of war – which we all know. We think we are wiser than we were when we joined up, when we fought, when we were told – and believed – we had won.

ROLAND When we slumped; and duly trotted off to be psychoanalysed by the latest prophet, the latest *authentic* prophet, of the new religion and – here we are.

ROBIN At least we have so far avoided forming ourselves into an Institution with a doctrine and a uniform – not even a mental uniform.

P.A. So far. I have been surprised to find that even my name has been bandied about. I used to think Melanie Klein was a bit optimistic and unrealistic – though sincere – in deploring the idea that people would call themselves Kleinian. Freud was alert to the danger that many would want to climb under the umbrella of 'psychoanalysis', but I did not expect to find myself included amongst the brightly, but rapidly fading, coloured ephemera of spiritual refreshment.

EDMUND Even super-novae grow dim – in time.

ROLAND But the evil they do lives after them – if it is true that they upset the chromosome balance.

DOCTOR There isn't a scrap of evidence for it – not scientific evidence.

P.A. Or do you mean no evidence of the kind that you wish to entertain?

DOCTOR Is there any other kind of evidence? People *want* to believe they have neuroses and they are encouraged to believe that all they need is a bit of psychoanalytic cure and their troubles will be over.

P.A. A lot of people who have not tried it think so. You would be surprised that a few try it and yet withstand the seduction. Still, I agree that a lot of 'psychoanalysts', as well as their adherents, fall for it. When I hear the present vogue for 'charisma' and 'charismatic people' my defences become alert.

PAUL When are you at peace? It doesn't seem that you are so much better off than the religious.

P.A. I doubt whether a psychoanalyst would hold out the hope of becoming 'better off, or even 'better'. As for being at peace, I would expect to be more nearly so when I am working than when I am not.

ROLAND I agree; I am happiest at work. But do we need analysis to find that out?

P.A. The psychoanalytic experience seems sometimes to be associated with achieving a capacity for work. Learning music is often associated with becoming able to play a musical instrument.

ROBIN I hope so. My boy is learning the piano.

P.A. But so often people seem to expect that someone having analysis will become creative. Do you expect your boy to become a composer?

ROBIN No, but I think his mother does.

ALICE By the way, is Thea coming today? She said she would.

ROLAND There's no limit to what mothers expect.

ALICE Worse than fathers, sons and brothers? I wonder what Thea and Florence have to say about it. I have known men expect to be fussed over and admired and looked after, and then have a grievance because they are not appreciated.

ROLAND Meaning me? I suppose you'd say, 'If the cap fits'.

ALICE Oh no. As a matter of fact I think you are a good husband; even in dreams you are quite nice. Anyway I'm still married to you.

PAUL I thought of you as being an exceptionally happy pair.

ROLAND It has never occurred to me to think of myself as anything else. Perhaps I have too easily assumed that Alice is equally satisfied, but certainly I haven't questioned it.

ALICE I had a horrid collection of dreams last night, but I can't remember them. Perhaps P.A. would want to analyse them?

P.A. Oh no! I only try to analyse the dreams of people who come to me for psychoanalysis. The conditions for analysis do not exist in ordinary social life.

ROLAND I thought you people were always plumbing the depths of our nasty characters.

P.A. Character, whether nasty or not, is a matter of opinion. As you know, some even want to change people's character. I think the Church does, doesn't it, Paul? 'The Church's one foundation', and all that.

ROBIN No, you've got it mixed up. The words we used to sing –

ROLAND

> 'We are Fred Karno's army. What bloody use are we?
> We've got no guns, we cannot fight, What bloody use are we?'

And the other one:

> 'At the end of our journey we shall have a –'

ROBIN You must have been a very gentlemanly crowd compared with our lot.

ALICE Please! Please! Please! I protest! We can't go on with this –

ROBIN I wasn't daring to suggest we should embark on what songs the women sang!

PAUL Were the sirens all women? Sir Thomas Browne didn't go into details!

ALICE Here are the other two. Now we shall have more of the woman's view. I'll bring them in in a moment. Excuse me. (*Exit.*)

3

ROBIN No woman, even one as sensitive as Alice, will understand that life cannot be the same for a man who has been in fighting. I remember the night when the enemy front was red with fire. I couldn't believe it was the enemy destroying their ammunition. Retreat and disaster I was familiar with; victory not – and it came too late. I had changed.

PAUL The 'Church' itself has changed. I am thinking of people who hold beliefs with religious intensity.

ROBIN Homer's Greeks, for example?

PAUL Probably, though I don't know those beliefs; I can conjecture only. When I speak of the Iliad I refer to a description of religious beliefs, or a dramatic story, or again –

ROBIN A particularly loathsome and difficult language that I hated, but which was alleged by my teacher to be very beautiful.

ROLAND Don't you think it is? I think so now, but I daresay I would have agreed with you when I was learning Greek.

PAUL Today members of, say, the Christian Church might consider the Iliad was a horrid religion – if they thought it a religion at all.

ROLAND Yet people still read the Iliad.

P.A. What do we mean by a simple word like 'read'? As Ruskin pointed out, one could have a knowledge of the alphabet, vocabulary and grammatical discipline and yet might not think thought through.

ROLAND There was once a game in which if you combined certain musical elements in accordance with the stated rules, in obedience to the fall of a throw of dice, the result when recorded through musical notation was a 'Bach', or 'Mozart', or 'Beethoven' air.

ROBIN There may even be a similar way of combining lines and triangles and other shapes to produce a 'Leonardo' sketch. I have known an athlete speak of 'reading' the movements of an opponent.

PAUL Any musician would appreciate that the music was *not* written by Beethoven.

P.A. Beethoven would be missing. The mechanical throwing of dice could not take the place of Beethoven –

PAUL – or Kant, or Freud, or Leonardo.

P.A. We assume that there is a 'thought to be thought through', or a 'God' to be worshipped, or a mind covered up by, or revealed by, the notes or name scrawled on the paper. Our problem is, 'what mind?' Is it just a mind sufficient for the 'athletic' feat of casting dice and making the marks on paper which the rules require us to make? Or is it a mind capable of creating the 'game' and the rules, or expressing a spirit which we call Bach or Mozart or Plato –

PAUL – or a Cathedral of Chartres, or a Hermes of Praxiteles, or a Theorem of Pythagoras –

P.A. – without the intervention of 'chance' as, apparently, betrayed by the fall of dice?

EDMUND Or by the galactic nebulae haphazardly scattered over the heavens at which some few look on a dark night.

ROBIN 'Sit, Jessica, Look how the floor of Heaven – '

ROLAND Even he admitted that the music of spheres would, if we could but hear it, be more informative.

P.A. In short, *if* we could receive the facts which we are capable of 'sense-ing', we might be able to read the 'facts' available to us and 'think the thought through' to what lies behind the facts.

ROLAND 'Sit, Jessica' – but what's happened to the women? Oh, here they come. We were just talking about the 'facts' – if we knew what they were – and the further problem of the significance of such facts as we do know.

THEA And what conclusion have you come to?

PAUL The conclusion that the conclusion is the start of the problem.

ROLAND That's as bad as P.A. – always coming back to the same point.

P.A. Oh no. The 'same point' is only reminiscent of a point at which we dimly remember having been before: it is not the same because even if the point with which we are familiar has been reached

and recognized as the 'same', it is not the 'same time'. The 'same time', the point in geophysical space, would be different.

THEA What's that? I understand 'geo' to mean 'appertaining to this earth'.

P.A. That will do as a start. Edmund was talking about the nebulae; *we* have to talk of space and time as we know it on this earth. That is comprehensible; what we are concerned with is not only what we know and do understand, but what we do not know and do not understand. Of course there is a lot in our past history – in what we have already experienced – which we find we did not and still do not understand. This applies to what has not yet happened –

EDMUND – as far as we know. It may have 'happened' before the human race existed. There is recorded literature about Hesperus and Diana and the moon; true poets, philosophers and priests observe fundamentals. '*Vixere fortes ante Agamemnona multi*'; we do not know those stout hearts who thought and thrived before they were overwhelmed by eternal night. Nor do we know when we shall follow them and 'leave not a rack behind'.

ROLAND What a depressing idea! Is there any point in debating something about which we can do nothing?

ROBIN If the criterion for debate is only those subjects about which one can *do* something – no. There are many subjects about which we can do nothing; astronomy is one. Our personalities may be another, though I don't expect P.A. to agree on that.

P.A. It depends what you mean by 'doing something'. Before articulate speech, 'do' would probably have referred only to physical acts; now we believe that the range of what we can 'do' has been extended. If we see an animal tormented by a child, we can say, 'Don't'. To do that we have to have been aware and made the perpetrator aware that cruelty was being inflicted. That could initiate a chain reaction, but often our individual lives are too short for us to know the later stages of that reaction.

EDMUND The 'later stages' of the train of thought initiated by Aristarchus could not even have been conjectured by him.

P.A. According to Heisenberg the fact of *observing* the play of minute physical factors influences the play being observed. I do not know if he is saying that what I have been used to regard as a *mental* phenomenon has an effect on what I call a *physical* fact; I may have been in error in discriminating between 'mental' phenomena

and 'physical' facts. Such an 'idea' is perhaps a flaw in the mental apparatus. As a human I have a prejudice in favour of regarding my thoughts as 'superior' to the apparently random movements of infinitely minute particles of matter.

ROLAND Are you prejudiced against the random movements of minute particles of matter?

ROBIN The whole of psychoanalytic theory seems to be vitiated – as shown by the structured nature of the system itself – by favouring only those phenomena which appear to conform to classical logic, the sort of logic with which we are already familiar.

PAUL Timidity is a fact of our nature. We cling to anything which gives us the chance of saying, 'Thus far and no further'. Any discovery is followed by a closure. The remainder of our thoughts and endeavours is devoted to consolidating the system to prevent the intrusion of yet another thought. Even any roughness of our system that might facilitate the lodgement of the germ of another idea is smoothed and polished.

ROLAND I should have thought you religious people were the most perfect example of that.

PAUL You can hardly find a finer example of shining perfection of structure than a mathematical formulation. The attack against logic itself as a weak 'cement' on which the structure depends still continues. Psychiatrists try to restrain 'illogical' systems physically within mental institutions. As often as not the guardians – doctors, nurses and others – fall to the assault of the systems they are supposed to 'contain', like an army which, 'containing' a besieged force, falls to an attack by the besieged. They call the psychiatric casualties 'breakdowns'.

P.A. And you bring a religious dressing to heal the 'breakdown'?

PAUL Not at all. In fact we hope to aid the escape from the mental and moral strait jacket into which you medicals try to confine them.

P.A. Perhaps neither you nor I officially try to conform to 'as things have been so they remain'. But many of your people seem to wish to confine religious mystics.

PAUL As your people do with scientific or artistic geniuses –

P.A. – I grant even we want to 'cure' –

PAUL – often described as crazy or mad. Gerard Manley Hopkins was better as a Jesuit than as a schizophrenic.

ROLAND We follow the lead given by our shepherds.

P.A. You need not be sheep. We do not aspire to be leaders or shepherds; we hope to introduce the person to his 'real' self. Although we do not claim to be successful, the experience shows how powerful is the urge of the individual to be led – to believe in some god or good shepherd.

ROBIN A father figure in fact.

P.A. No; a 'father figure' is a technical term, but the individual person believes that there is a real person approximating to such a theoretical term. 'God the Father' is a familiar term about which Paul can say more than I can.

PAUL We believe in God, not in Father Figures.

P.A. We do not affirm or deny the reality, but we do wish our analysands to recognize that one root of such an *idea is* a reminiscence of an actual human father. That is not the same as saying that because there is a reminiscence there cannot be a 'thing' remembered, or that because we try to draw attention to a pre-existing idea, generated perhaps by a common and unworthy reality, there may not be some other source from which such an idea springs.

PAUL I'm glad to hear it. It has always been one of my objections to psychoanalysis and its devotees that they appear to be so dogmatic, so sure in their refutation of religious truth, that –

P.A. I should not like to replace one dogma by another; the erection of any god should be studied.

PAUL Isn't that what the Church has always advocated?

P.A. It appears to me that unquestioning belief in God is demanded by the Church or its representatives. Perhaps I am misled by the Institutions of Religion which have obscured for me the chance of going beyond the institutions' dogmata to a reality beyond.

PAUL There are certainly plenty of religious teachers who have deplored that and warned against it. St. John of the Cross even said that reading his own works could be a stumbling block if they were revered to the detriment of direct experience. Teachings, dogma, hymns, congregational worship, are supposed to be preludes to religion proper – not final ends in themselves.

P.A. This sounds not unlike a difficulty which we experience when psychoanalytic jargon – 'father figures' and so forth –

ROBIN Touché!

P.A. – are substituted for looking into the patient's mind itself to intuit that to which the psychoanalyst is striving to point; like a dog

that looks at its master's pointing hand rather than at the object the hand is trying to point out.

ALICE Thea, I hope that after this you aren't going to have as disturbed a night as I had.

ROLAND You tossed about till dawn.

THEA I don't dream much. Perhaps Roland will dream this time.

ROLAND I don't dream.

ROBIN Don't let's start on all that. I'm all for a good night's rest.

P.A. 'Talking about' dreams does not cause dreams. They exist – and some of us think, with Freud, that they are worthy of consideration and debate. The night, the dream, is a 'roughness' between the smooth polished consciousness of daylight; in that 'roughness' an idea might lodge. Even in the flat polished surface there can be a delusion, or an hallucination, or some other flaw in which an idea might lodge and flourish before it can be stamped out and 'cured'.

PAUL Yes, but you believe that dreams can be *scientifically* studied. That limits your freedom to investigate lies, falsities, 'roughnesses', instead of looking for Truth only.

P.A. The search for Truth does not limit my capacity; my freedom is limited by my lack of equipment, lack of capacity to look for the truth. Your assumption that God exists does limit the search by precluding the discovery that there is no God if in fact there is none. Anyhow – how does one discover a negative?

PAUL In practice I don't find that belief limiting. It certainly would limit my researches into Truth if I worshipped Money or a widely admired footballer *as if* he or it were God.

P.A. We find financiers and sportsmen who practise that, in contrast to the religion professed. That is why it is useful to have terms such as 'father figure'. It is unfortunate if the term is thought to imply that the *reality* is correctly defined as nothing other than a 'father figure'.

THEA These distinctions seem to me to be subtle and are exercises in semantics rather than adventures in the realm of Truth.

ALICE I agree. It sounds like a clever man demonstrating his superiority to the simple folk who believe in God.

P.A. Y am not sure about your 'simple folk'. 'Fundamentals' are often simple; 'folk' are not. It is true that it may be difficult to distinguish between the 'simplicity', say, of genius, and the 'simplicity' of

the fraud who has learned to simulate the characteristics of genius. The garb of the great is often used to clothe the nakedness of the fraud; money is used to cover the bankruptcy of the poor; a beautiful girl instinctively wraps an ugly soul in her looks.

ALICE I have known men fall for the divinity of a beautiful nitwit.

P.A. Why restrict it to the male? Physical sex often masquerades as passionate love.

ROBIN The beauty of a handsome man or woman is easily and quickly 'perceived'. The reality behind may require more investigation than the greedy swallower of mental bait has achieved.

ROLAND There are many 'glittering prizes' offered for the greedy soul.

ALICE Well, I can hardly keep my eyes open. Bed for me – but please go on as long as you like. (*She goes out*.)

ROLAND If we go to sleep, perhaps we can still continue in dreams while asleep.

THEA I can't see why the truth is supposed to emerge in dreams.

P.A. '*In vino veritas*' does not mean that the drunken manor the dreamer is speaking the truth. The drunkard, like the dreamer, is less likely to be an efficient liar; he is unlikely to smooth the 'rough place'. But his inefficiency can be turned to good account.

ROBIN Dreamers and poets are credited with exceptional powers.

P.A. There is an ambiguity here because the dreamer is not distinguished from the sage or poet. The dreamer is like the drunkard – often in a state of decreased conscious efficiency. To be efficient the human has to be conscious, or, as we say, 'has to have all his wits about him'. We are concerned not with what the individual *means* to say, so much as with what he does *not* intend to say, but does in fact say.

ROLAND This depends on your interpretation of *what* he says – not what he *says.*

P.A. I am concerned with what he says and what it is about. My interpretation is my attempt to formulate *what* he says so that he can compare it with his other ideas.

ROLAND If I say I am going to Munden I mean just that; I don't mean I am going to have a sexual orgy.

P.A. If, as is the case, I am having asocial intercourse with you, I am concerned only with the fact that you intend to go to Munden. If you were coming to me for medical advice I would be concerned with

your physical fitness to go, and would expect to hear and observe for myself what medical matters were involved in your journey from here to there. If you said you wanted mental help I would regard the intention 'to go to Munden' as 'peripheral' to what is involved. If I considered that I had your permission to find out what was involved in coming to me and in 'going to Munden', I would direct my response to the area signalized by the words, 'sexual orgy'.

ROBIN In other words – sex.

P.A. No, not sex – the area signalized by the word Roland used.

ROLAND Only words?

P.A. No. Anything that appeared to be used as signals. Words, as Freud mentioned, are part of a recent invention, the human capacity to converse. There are many older and more primitive methods: sexual methods, for example.

PAUL Religion, too, has its methods.

P.A. Communication with, or to whom, or what? God?

PAUL This is what we believe.

P.A. Or are they methods of communication with other groups? Certainly many religious communities seem to communicate with each other. The Wars of Religion in France is one example.

PAUL That is so, although I would not regard war as a method which is recognized as religious.

ROBIN Bunyan wrote *The Holy War.*

ROLAND 'The Lord of Hosts' isn't intended to be a religious metaphor.

PAUL A metaphor may derive from actual physical behaviour, but by the time it has become a metaphor the physical behaviour denoted has usually become wedded to a different activity. Words, for example, can be substituted for violence.

P.A. Or thinking, as Freud points out, is interposed 'between impulse and action' and may have a delaying and 'softening' effect on the impulsive act. Thinking displaces action.

ROLAND And vice versa. Does the impulse become weaker or stronger?

ROBIN I have known the impulse to say an angry word become a grievance which then bursts out in a murderous assault.

P.A. Brooding is not thinking – it often results in an assault on a target other than the one to whom the original impulse was directed.

ROLAND Does a fetus think?

DOCTOR It certainly kicks its mother from inside. You *could* call it an aggressive act.

P.A. I cannot think of any verbalizations which would be suitable to describe mental processes of infant or fetus. I would need to extend the domain as presently delineated by 'mental' to fit it to include the activities of the fetus.

DOCTOR What about beta-elements?

P.A. In so far as I have proposed it as a non-mental category I would have no objection to talking about 'fetal' kicking as a beta-element, a prototype of a dream element, a transitive element becoming a verbally expressible formulation – 'aggression'. I would think of the fetal physical activity as an 'idea generator' or '*idée mère*'.

DOCTOR What's that? Can you elucidate your concept further?

P.A. As I think my own hunch to be itself an idée mère rather than an 'hypothesis', further elaboration may be a premature investment in 'clothing', the 'thing itself' which would cramp rather than facilitate growth, 'scientific' growth. The premature 'scientific theory' would be a restraint. The 'penetrating shaft of darkness' is what I would like to use to illuminate what Freud calls obscure areas of the mind.

PAUL 'Be shelled eyes with double dark', as Gerard Manley Hopkins calls it, 'and find the uncreated light'.

P.A. Exactly. These poets find a way to express –

ROBIN – not only the past and present, but even future needs.

ROLAND I don't understand.

DOCTOR I find Hopkins too obscure and too religious for my comprehension, though I like his poems even when I don't understand them.

PAUL You medicals are prejudiced towards physical evidence, but there are many who break out of that strait-jacket – Sir Thomas Browne for example.

P.A. 'Strait jacket', 'crazy', 'psychotic' – all are associated with confining the Disturbing Mind so that it will not disturb the peace of our Sleeping Beauties, or our 'beauty sleep'.

ROLAND Religion has been aptly described as a drug.

PAUL Because it is used for that purpose by some people I do not see why religion should be held responsible, any more than why wine should be blamed for alcoholism. You psychoanalysts want to cure people for being alcoholics.

P.A. That is not the same thing as wanting to stop them from taking wine. Religion at least deprecates Enthusiasm, but I think the enthusiasm referred to is excessive.

ROBIN 'Too much', 'too little', 'too often'. Oh, for a muse of fire that would burn up all these terms of mensuration, maps without statement of scale, wills o' the wisp to mislead the unwary into bogus security.

ROLAND Bogus 'security'. How well I know that 'heaven'; 'I tell you for a fact that . . .'. It is the proud banner beneath which the liar unfurls his campaign! 'Great is the truth and shall prevail . . .'

ROBIN – because 'none cares if it prevail or not'.

ROLAND And so the truth will out – sometimes!

DOCTOR Bed-time for me. I'm going to sleep – I hope. (*They all prepare to depart*.)

4

PAUL (*soliloquizing*) Anyone would think psychoanalysts never quarrelled. When the Wars of Psychoanalysis start we shall see something – and no holds barred. Santayana feared the day when the scientific beasts and blackguards would get hold of the world. What made him speak of the English as 'sweet boyish masters'? Goodnight, Roland; thank Alice for her hospitality. It is your turn to dream isn't it?

ROLAND I don't dream. I'm nearly asleep now . . .

DOCTOR Quite right; don't dream. Ever tried mescal? No? The pyramids at Teotihuacan would give you a nightmare.

ROLAND Noa! Noa! Take these horrible clothes away! Do you hear! Evade! Psycho-flim-flam. That fellow would drive me up the wall. I don't see what Alice sees in him. Have they excavated these pyramids? The wind blows chill in this deathly place. That cruel bitch would have any man drawn and quartered if she could find a butcher to do it.

ALICE Do you mean Rosemary? I like her.

ROLAND You women are all the same. She's a cruel snake. The snake didn't tempt Eve; she tempted him. I see him now, slithering down the tree, his tongue flickering as she caresses him. What an undergrowth of contorted pipes and tubes to plant as a thicket about this tree.

DOCTOR No. Quite usual. It's the mescal, the local form of tundra.

ALICE Roland, you're dreaming; don't fight the bedclothes.

ROLAND What! Quite right. The tube is the quickest.

ALICE Good night . . . nearly asleep myself.

ROLAND You're an ugly-looking devil. Who are you? Not the devil? A nightmare then? Not a nightmare? You aren't a fact.

DU I am the future of the Past: the shape of the thing-to-come.

ROLAND Not a ghost?

DU Do I grin like a ghost? How do you like these teeth? All my own. I fasten myself to your psyche-psycho-lodgement, we call it. Most amusing.

ROLAND Get out, you ugly devil!

DU Wherever did you learn such language! You must have been dreaming.

ROLAND I thought this wasn't a dream. Is it a psycho-drama? No?

DU No; Psycho-sthan itself. Poor Bunyan – you remember him of course. He thought it was Vanity-Fair, but we are imaginary vain things. What the 'people' *do*, you know. They are what you will call God some day.

ROLAND This is terrible.

DU Not terrible – it's idée mère. Real – the substructure of the real. We shall drink damnation to our families who surround you with their hateful hisses. Don't be afraid – you are immortal, as your padre used to say. By the way, you must meet him; we have had him here since he played for hisses with our camp asp.

ROLAND Poor devil.

DU I told you not to use that word! Do you want your teeth smashed in? Or shall I have them filed away?

ROLAND Filed away, filed away death, or in sad sigh press let me be laide.

DU Wider yet; and wider let your jaws be set. You can have them set in a grin like mine. They're fashionable in psychosis, but some wear them that way in Psycho-sthan too. As you descend the steep with our orphean Liar you can sing of chaos and eternal night.

ROLAND Let me get up.

DU That's hard and rare, you know, without a heavenly Muse to go ting-a-ling.

ROLAND For you but not for me. Oh death where is Thy sting-a-ling?

DU That's profane!

ROLAND What have I done now? You don't believe in God, do you?

DU Not believe in God?! Of course I do. How do you suppose I'd be here if I didn't believe in God?

ROLAND I'm sorry – I didn't know this was heaven.

DU Well, not heaven exactly, but the residential area of heaven. I must give you a carte blanche – valid for eternity to all parts. Have you travellers' cheques? Never mind – I'll have some forged for you in no time.

ROLAND Won't that be discovered?

DU Of course; they are invalid everywhere. They are *promises* to pay – they cost nothing.

ROLAND I thought there was a danger of hell fire.

DU Oh no. That is only a fact. Somehow the idea leaked out from some recent supernova; people think they will be shrivelled up like a potato crisp. But that's only if you are alive.

ROLAND Do you mean to say I'm dead?

DU Good solar system, no! You're an immortal soul. Didn't anyone tell you? I should have thought Paul would have mentioned it.

ROLAND I *am* tired. I wish these people would go. They've gone? I hope I haven't gone to sleep. What the hell are you doing here, Du?

DU I told you it wasn't hell – held perhaps. I can kick my way out of here easily.

ROLAND Have I kicked my way in?

DU No. You are late, my son. 'The anarchs of the world of darkness keep a throne for thee'; the world of darkness, the Void, the formless Infinite.

ROLAND Infinity – what my math's man burbles about – zero, formlessness.

DU At last. I thought you would not wake to the simplest fact. Any profundity is simple; that's what makes it so difficult. It's not complicated, grand enough for nincompoops. Any fetus could tell you that. I wish you'd stop tossing about.

ROLAND How can I help it with you threshing around?

DU I'm only an idea of yours. You abort me if you kick around like this.

ROLAND You've no right to be kicking around if you are only an idea – even an idea in the mind of God. Metaphors have no right to behave as if they were facts.

DU Words; words; words have no right to be rigid definitory caskets preventing my birth. I have the right to exist without depending on a thinker thinking all day *and* night. Come inside.

ROLAND No thank you said the fly to the spider.

DU Said the fetus to the father – if I may use metaphors borrowed from the world for the living. An idea has as much right to blush unseen as any blush. I remember a blush that killed the man who would insist on exposing it.

ROLAND And I remember a man who was killed by a blush which was invisible to anyone except the available cheeks.

DU It is very provoking! Very! Cheeks but no blush just dead white; no cheeks but a blush waiting to be seen.

ALICE Darling, you are very restless.

ROLAND Sorry, dear.

DU What was that? I wish these humans wouldn't interrupt. I have quite lost my train of thought – have you seen one anywhere?

ROLAND Shut up! I want to go to sleep. Even lies ought to be allowed to R.I.P. and remain undisturbed as epitaphs. Oughtism – that's what it is. You ought . . . to be something. Why can't I choose to be crazy if I want – or sane?

DU That's *my* right. I can kick my way out of this ruddy matrix when I like.

ROLAND But you can't get back if you do. I know. How? I just *do*.

DU You talk like that foolish animal that said, 'Cogito ergo sum'.

ROLAND Oh, go to sleep. 'Eat your damn bun', as the father said to the child.

DU And the child, who was Father to the child, ate it and was expelled from the garden.

ROLAND So the weeds grew up and choked it. And the father said, 'Let there be a psychoanalyst who shall cultivate bigger and more beautiful lies in perpetuity. In Infinity he shall rule for ever; a void in which wild ghosts of fluxions will wander without an optic to devour them'. Why should logic apply everywhere except in mathematics? It is the only space in which it retains a hold – though tenuous.

DU Mature adults project it onto the universe of universes although it is inappropriate. They won't even study quantum mechanics lest mechanics don't obey the laws that apply to their feeble minds; they don't want discoveries lest the discoveries would compel an expansion of their minds. 'If my mind bursts with all this stuff where shall I be?' As if it matters where all discarded experiments go! Quo fata vocant? Quo fas et gloria ducunt? 'They lead only

to the grave', say the know-alls who then fight with other know-alls. 'I've heard different', says one obstinate from the unyielding fortress of his bigotry and ignorance. 'Crazy', whispers the still small voice of surrender as it yields to sanity. Come on! Wake up!

ROLAND You won't like it if you find you are a mind and have to obey the laws of Logic.

DU You won't like it if you sleep or wake and have to obey the laws of Oughtism. The laws of O – the perfect blanc. No poles for bipolarity; no middle to exclude; no genius to do the job you are too lazy to do; no fool to dare to be 'silly' enough to be holy.

ROLAND Oh goodness – again?

DU I said 'holy' – not good.

ROLAND What's the difference?

DU I am 'holy', but not 'good' or 'bad'. I am oughto-nomic, not automatic. The thought that I was fated to become 'you' – if I could think – would make me die of mental toxaemia. Luckily I don't think. If I were articulate I should suffer synaptic rheumatism.

ROLAND I don't know what you are talking about.

ROLAND & DU (*together*) There's a great gulf fixed between us.

ROLAND Who are you?

DU You.

ROLAND Never heard of you. What do you mean, 'you'? You are you – not me.

DU That's what I said. The confusion is semantic, due to your ridiculous articulate system of communication. You have heard 'of me, but you have never heard *me*. I sometimes use your belly to rumble around with. You've heard of the young woman of Lee I'm sure – she's one of my articulations.

ROLAND Oh shut up! You make my head ache. And it's not funny.

DU It's not funny because your articulations are too stiff' for fun. If you knew how ridiculous you look when you 'smile' and show your teeth. Or when you are heroic – in reality blown up by your super-intelligent mechanical evacuation. I am Ought o'Nomic – the most venerable of your three bears – four if you include gold; five including locks.

ROLAND Get out! You are a lot of old 'squares'.

DU 'I' will be on your hypotenuse before you can say Pythagoras. Deux Jambons et une andouille – as Anatole says.

ROLAND Three; or two plus one; or Trinity. How helpful is the ghost of the departed quantity? The other two are not. Equalled with them in fate; not fame.

DU I should think not! You should not substitute an automatic system for an ought-o-nomic. Ought-istic is better than that. You've got your intelligence where your wisdom should be-let me change them round.

ROLAND No, no, no! I prefer straights to rounds.

DU Well, keep your straits then and serve you right if you find your straits too narrow for your arts. I'm going to sleep.

ROLAND And stay asleep – please!

ALICE You've been laughing and crying and shouting . . .

ROLAND I never heard such atrocious puns in my life.

DU That high explosive wasn't a pun. That was your *practical* joke.

ROLAND Excuse me – I did *not* fire the gun.

DU Of course not. Yours was only a six-inch How – that was a five point nine. Remember that fellow who sniped you down the path at Berles-aux-Bois? He was only bored, poor chap.

ROLAND I'm no snipe.

DU You would never have 'seen' the joke if he hadn't been feeling hot, bored, drinking warm Bocks and wishing he was in Germany and not on that lousy West Front where it was all quiet and nothing to do.

ROLAND What were *you* doing anyway?

DU I was keeping quiet, lying as close to your CNS as I could get and trying to make you have the sense to lie flat on the ground – drowned in adrenal stimulation.

ROLAND At least I got back to lunch.

DU Just – thanks to me, not your bloody heroism and conceptual rubbish.

ROLAND No! I had to give into *your* 'ought' non-sense.

DU Make up your mind – 'sense' or 'non-sense'?

PRIEST Sense of Duty, I hope.

ROLAND & DU It jolly nearly did for us I can tell you. A few more inches or weeks and it *would* have been *non*-sense for both.

ROLAND 'And, boys and girls, what do you think they were singing as they marched? "The Church's one foundation is Jesus Christ the Lord".' *That's* what one of your religious told the children after a

conducted tour to the Front! Why didn't he listen to the words and not just some of Du's music?

DU Not my music.

PRIEST Not my religious.

ROLAND 'Quis', as we used to say.

DU & PRIEST 'Fain I!', as we used to say.

PRIEST Quo fata vocant. Quo fas et gloria ducunt. Ubique.

ROLAND That's all very well for the gunners. It's no bloody use to the snipe.

ALICE They shouldn't bleat so much.

ROLAND You should hear them as they dive out of a marvellous blue sky towards the marvellous blue of the Broad with only a thin line of golden reeds shot with the green of the shoots mingling with the gold.

DU Lovely; if only you wouldn't use that ridiculous language of 'shoots' and 'shot'.

ROLAND And the ridiculous music of your snores. I thought you had gone to sleep.

DU I never 'sleep', as you call it. That is using your language in which the sleep of death and the sleep of spring are indistinguishable. Priest is worse – he uses it to describe something that has *none* of the attributes on the existence of which the communicability of language depends.

PRIEST True – and you are dependent on me.

ROLAND Only in so far as I have not yet rid myself of you or your unbeautiful music.

DU But just now you saw the blue skies and blue water and – though *you* didn't – *I* know you saw Prince, that horse of which one small boy, whom you have forgotten, was very proud. 'Ah', he used to say, 'you should see Prince!'. And when you did at last see him you thought he was only an old cart-horse; I knew he was a magnificent Shire. I couldn't make you see anything, yet you had eyes.

PRIEST Yes, I remember him too. He was in the field one Sunday; you two were grousing your way down to the meeting-house to hear that young lad from Puckeridge preach to the labourers and their wives, all tricked out in their Sunday best.

ROLAND Now, when I see how neat and fine they looked, it is for my gaudy mind I weep. Yet I wouldn't, even if I could, go back to Latchford. It has gone, I expect – and so have I. And the river Rib?

I saw it when I composed the lines 'When Mimram rolls his lordly wave' – a pretty stream in another part of Hertfordshire.

DU The Steinbeck?

ROLAND Oh shut up!

DU I was there – so frightened and so excited. Do you remember the Great Woolley Bears as we saw the black cloud twist out of the invisible long-range howitzer shells above the canal? Does anyone remember the canal?

ROLAND I remember you twisting and contorting my guts with dread I hoped none could see, the sweat which I hoped my man thought was August heat and not the chill of dying courage.

DU Why didn't you desert, you fool? Too cowardly?

ROLAND Yes, but patriotic – a drivelling fool. Do you know, I really thought my colonel, my company commander and my men loved England? The bluebells at Birchanger, the daisy chains I made in my first classes. . .'Summer suns are glowing / Over land and sea. / Happy light is flowing' – Over the canal and me!

DU Cod always said you were a fool. Do you remember?

ROLAND He came to a bad end. He was drunk most of the time.

DU If you had had any sense you would have got drunk and invalided out with shell-shock. Do you remember that marvellous Red Cross train as it shimmered and glistened that horrible night as your lot plodded and snorted in the blacked-out train to the star-shell-pierced horizon?

ROLAND I do; what of it? I'm glad I didn't miss it – now.

DU Now? You don't know what you are missing!

ROLAND My cheeks are cold; the skin is tight over my skull. It is hideous, this eye-wearied search at those corpse-stenching huts. I have stared and stared and stared at them. Nothing. My God! What was that?

DU Only a tin roof slipping off. There! There!

ROLAND I don't see anything.

DU That is scarcely odd because there is nothing to see! There's nothing there, you fool.

ROLAND It made me jump. I thought it was a Boche. You can't see them creeping from one but to another in these horse-lines.

DU Horse? Nonsense! Mules. Horses can't imitate the scream of a coming shell. Mules, man! Mules! They are the stuff.

ROLAND They stink.

DU What do you expect the poor things to do when they are dead. How would *you* like to be dead in a righteous cause and then not even be allowed to stink?

ROLAND Are you trying to drive me mad? Because you won't.

DU You *are* mad. No sane person would hang around here dreaming of bluebells and daisy chains and glory.

ROLAND I am not listening. I shall watch those ruddy huts.

DU Pooh! There are lots of the best brains in England, warm, comfortable, well-fed –

ROLAND You would be surprised, but I would rather be here.

DU You remember what Popsy said? 'You will only get a "wooden cross" – not a V.C.' How right he was! The race doesn't go to the strong you know; you're more likely to win a wooden spoon. Not fast enough; too stupid to be cunning. Anyhow, the war is lost. The Colonel will tell you you'll win. I tell you you won't. There are no reserves! None! Nothing between you and the sea.

ROLAND Except me.

DU How grand that sounds! Save it up to tell them in the pubs in Oxford – that's where you are going, isn't it? *Après la guerre finie – mademoiselle aurait une bonne sous-venereal mal à dire.*

ROLAND I was only quoting what we were told by the company commander who had at least a mile more ground between himself and those blasted quack-quack-quacking machine guns than I and my crew of Lewis gunners had. My God! I can hear them now! I hadn't time to be scared then – now I have all Eternity in which to feel the pallor of my lips and the teeth chattering between them. 'Oh thank you, Sergeant – a nice hot cup of tea! How did you fix it? Marvellous!' Those men of mine! and I was supposed to be the officer! Never mind; I knew – though later I forgot and believed all that fustian stuff. It scares me now when I think of the years I spent in the misery of trying to believe I was worth my keep. And now? Who'll buy my nightmares?

P.A. I will. If you have tears to shed, shed them now.

ROLAND You? I thought you psychoanalysts had been cured.

P.A. So did I; luckily it was never as bad as that.

ROLAND Luckily? I used to envy you. I thought, 'How wonderful to be decorated for bravery, to be a rugger blue, to be . . .'

P.A. So did I. I used to wonder why it didn't work. Each success left me further from my goal, further into the icy wastes, till I couldn't

even recognize a character which had once seemed to be someone I could respect. But not my Distinguished –

ROLAND I didn't know you had any distinctions.

P.A. I hadn't; only the insignia. I never rid myself of the fear that the shell which all could recognize was all that was left.

ROLAND And isn't it? It hadn't occurred to me that you were nothing else.

P.A. Your contempt is real enough.

ROLAND I hadn't any doubt of the reality of your contempt for me though it was usually dressed in conventional civility.

P.A. That is true of both of us; real feelings masquerade as something they are not. 'Progress' is hard to detect because of the fancy dress in which it is clothed. How banal one's discoveries turn out to be when at last we become aware of them!

ROLAND Isn't it better to remain deluded?

P.A. I suppose we accept such truth as we have become sufficiently robust to survive.

ROLAND Why should Truth be so incompatible with ourselves that it comes to us as a threat?

P.A. 'Ourselves' are not of any importance. That is too terrible to grasp after the protection of the womb; later the womb of our ignorance. Facile – but could there be any other 'explanation'?

5

ROLAND Don't be too imaginative or Alice will have another terrible night.

P.A. Being 'too imaginative' might cause us all to have a terrible awakening.

EDMUND These cosmic disasters – super-novae for example – occur as we *know,* but cannot *imagine.* The sun should explode in a few thousand million years.

ROBIN What about a dip in the sea before breakfast?

ROLAND Tomorrow morning? Yes – not in a few million years.

EDMUND That is what P.A. means. The swim in the sea helps us to keep a firm grip on our ignorance. We can clutch it to ourselves like a cloak which we cannot bear to have torn from our shoulders.

ROLAND You are rather hard on us poor ignorami. You wouldn't be worse off if you joined us in a swim.

EDMUND I don't doubt it, but I want to go on with my astronomical hobbies.

P.A. There is nothing to stop you provided you are not so terrified by your imagination or your scientific activity that you cannot think at all.

ROBIN The government might become so terrified that they stopped you. But perhaps they are too ignorant to be terrified; that also would act as a cloak to protect the tender shoots of scientific speculation till they become 'theories'.

ROLAND If they become strongly established theories they become too strong for the tender shoots of social speculation. Panic can be a powerful solvent of discipline.

ALICE No government would dare to stop astronomers doing astronomical research.

P.A. If I were the government and wanted to stop astronomical research I am sure I could do it in a subtle enough way to escape criticism. I could say there was not enough paper to spare for the printing of astronomical articles. I could attack the availability of materials which were essential for the manufacture of certain instruments. I could discourage grants for the education of potentially gifted astronomy students.

ROLAND Which goes to show that it would be inadvisable to let you into government posts of power!

ALICE I think it would help if an astronomer stood for Parliament.

ROBIN But the principle stands – it is dangerous to allow men of such mischievous power authority which they can use to prevent mental development.

P.A. Suppose astronomers could convince the majority of human beings that the sun showed signs of imminent catastrophe; that at any moment we would be enveloped in whirlpools of immense temperatures. Would you allow that to be broadcast when nothing could be done?

ROBIN The religious people have already issued warnings that the end of the world is at hand; that God is a consuming fire and so on.

P.A. Nobody minds God's being a consuming fire. They either say that He does not exist or that He is really rather a Decent Chap, a Good Fellow, a Good Sport.

EDMUND Even the earliest religious people we know, the Egyptians, regarded the Sun as a powerful god. Milton, to come nearer our time, had an idea that 'Heavenly Light' should be treated with respect.

ROBIN In passing he touched his cap more than respectfully, as Blake pointed out, in The Other Direction – 'the Void and Formless Infinite'.

PAUL Many people think religion should include respect not only for God but also for the powers of Evil.

ROLAND Yes, but no one believes in religion nowadays.

PAUL There is much muddled thinking. Religion, the human impulse, is often confused with God or the Object to which religious adoration is directed. I say that all mankind is religious, just as Freud said all mankind is sexual. But the expression of religious forces in the

individual is coloured by each person's character and mental quality. Someone who prides himself on his no-nonsense unbelief is sure to show that in fact he has a religious belief of the most fanatical and intellectually contemptible kind.

ALICE Oh, you mean addiction to sport and such like – that's not religion.

P.A. I agree with Paul and disagree with Alice. The addiction, as Alice calls it, is not religion if it is obvious to the person that he or she is addicted. I have, however, observed by using scrupulous care in my attention that the behaviour of an individual displays qualities which can be felt to be correctly described as 'religious' and *not* to be correctly described in any lesser terms.

ALICE I don't call that religion.

P.A. I do not mean that it is 'religious' in the sense of something worthy of general or absolute respect, but that the phenomenon observed is correctly characterized as religion. Whether that particular religious characteristic is being worthily or adequately deployed is another matter. There may well be differences of opinion as regards the exercise of the religious faculty by an Aztec or Voodoo or Roman Catholic or Jew or Protestant. These differences are not evidential material either for the existence or non-existence of religion.

ROLAND I don't see what you mean.

P.A. A man may be exercising a sexual fetishistic capacity. That does not mean there is no such thing as sex or that the object is that towards which sex should be properly directed.

ROBIN What is 'properly'?

P.A. In a manner which is capable of development rather than decay.

ROBIN At that rate an old man whose capacities were decaying would not be properly sexual.

P.A. The decay you talk of is nothing to do with sex; it is 'to do with' anatomy or physiology, and should be distinct from decay or development which 'originates' in sex. Similarly, development or decay of religious impulses which originate in religious forces should be distinguished from those which originate elsewhere.

PAUL We *do* contend that there is an important distinction to be made between development originating in God and that originating in the individual's impulses. Isaiah wrote as if there were no doubt that the impulse came from direct experience of God.

ROBIN Would P.A. admit the validity of Isaiah's experience, or would he regard it as having hallucinatory force – a phantom of the mind?

P.A. I do not have scientific evidence for discussion of an event of so many centuries ago.

PAUL The religious experience to which we refer is current – *not* hundreds of years ago – even though history suggests that it occurred from remote ages. In recent times Cowper wrote, correctly, 'Sometimes a light surprises the Christian while he sings'.

P.A. He was manic-depressive and committed suicide.

PAUL The religious experience is universal; it is not closed to the psychotic, the unfortunate.

ROBIN You don't deny, do you, that religion is often apparently the cause?

P.A. I do not deny cause; I know that it is likely that we would think in terms of causes. Has Edmund any ideas about this?

EDMUND I like to think of causes, but I see no reason for believing that the human mind would ever comprehend the vast universes that surround us. The religious people express optimistic statements.

PAUL 'The heavens declare the glory of God; and the firmament sheweth his handywork.'

EDMUND That is one such statement.

P.A. It is an observation and Paul has formulated what *he* observed. His statement seemed to me to be made from the religious vertex. I know that Edmund maintains that he is without religion and I am left to suppose that his observations and formulations are 'only' or 'just' scientific. Le Conte said that there was one fact we should *never* know – the composition of the stars. I would be interested to know what Edmund would say about that *'never.'*

EDMUND Le Conte was right to say so, but spectrographic investigation leads us to have definite ideas about stellar composition.

ALICE Let's leave stellar composition to Edmund and another day. I suggest Bed Time for us all.

6

P.A. You asked me to take over at Meteren when you were scared out of your wits. You survived till the day you were marching along that ashy grey road. Remember? – that silly old bugger standing at the salute on the side of the road. Quentin, who had died, was marching by your side.

GHOST OF STOKES That's right. Quentin was religious; everyone jeered when he broke down – shell-shock they called it – and didn't return from leave. Lord! I thought you were going to crack up you looked so scared. Eyes left! They say the old man always salutes troops leaving the Second Army.

GHOST OF CLIFF Silly old fool. You were a pious bunch. Left, Right, Left, Right.

GHOST OF KEEN Even now the slog along that road makes me tired. You were glad to be going out of the Salient. They had to amputate my legs. At first they thought they would save my arms, but they couldn't. So I can march without fatigue and don't have to carry a rifle. Luckily that last arm did for me – I died. I can't help laughing when I think how funny I would have looked had I come out of the anaesthetic. I wouldn't still be marching, marching, marching with you on this long dusty road. They say it turns to star-dust. At the end of the journey –

P.A. 'We shall have a. . .'

GHOST OF KEEN

'A ___ for you and a ___ for me
There's a ___ for you and me . . .'

ROSEMARY Pox? Not bloody likely!

QUENTIN (*laughing*) How coarse you are.

GHOST OF CLIFF Fancy you knowing dirty jokes like that! You must have had shell shock! No shell left.

P.A. This is a long march. 'A long, long trail a-winding into the land of my dreams.' They didn't say it was going to be a land of our nightmares. The Fifth Army, wasn't it?

GHOST OF STOKES And yet another? Will the line stretch out to the crack of Doom? That fifteen-inch Howitzer cracked, on its side, tossed into its crew's gun-pit. That scared him, didn't it, P.A.?

P.A. It still does. Psychoanalysis they call it now. Not a pretty name for a not-pretty thing. It's dark; clouding over, only it's not star-dust. 'Sir! Sir! Sir! You'll write to my mother, sir? Won't you, sir? Won't you? 'Oh *shut up damn you.*' 'Why can't I cough? Sir! Why can't I cough?' 'Because – blast you! – your thoracic wall has been blown off!' 'I don't know enough medicine for Thoracic Wall, I'm not qualified.' The gunners know how to operate on the Thoracic Wall.

GHOST OF KEEN On arms and legs too! A bit rough perhaps; they work fast though and without anaesthetic. Their Name Liveth For Evermore. It is carved into marble with Hypersthesia. That's why I laugh for evermore. Ah! Here you are – I thought you'd never come – come in padre – come in and tell us the latest funny story. Make us laugh for evermore! Quoth the Chaplain General, 'Evermore!'

P.A. You are becoming light-headed. Quieten down!

GHOST OF KEEN Only light-armed Kerns, aren't they? Gallowglasses are the heavy-armed – don't run over me Tanks! – don't run over me. Sir! Sir! Why won't my arms and legs crawl? Why won't they crawl? 'Shut up damn you! You're upsetting my sleep!'

P.A. He got through it all right, but kept on dreaming and fell in love. In his dreams she was a most beautiful girl. Unfortunately it was a real image and she was only a girl.

QUENTIN So he woke up.

P.A. Yes; you could call it that. The medico called it being 'conscious'. Of course they didn't tell him what being 'conscious' would be like. This is certainly a dark, *dark* road. There! There's the other Lot.

THEA 'Men Who March Away', aren't they? How steady they are. No songs, no drum beat, nothing. Where are they going? Away? Earth's vain shadows flee, I was told.

PADRE Don't shake your locks at me. I did not tell you where the shadows fled or how to live without a cloak of darkness!

GENERAL Nor did I. The approach march was to be in cover of darkness. The yet more glorious day was the day of victory.

P.A. So we lost after all? They were the *best* dragon's teeth; they were certainly the most expensive. We shall know the cost later.

7

P.A. We are to meet in the kitchen in future.

ROLAND Are these the 'servants' quarters'? I suppose we are lucky to have anywhere at all to meet. Our new lords and masters appoint us our proper station. By the way – has Rosemary decided finally to throw in her lot with them? Does anyone know if she has married him? – Man, I mean.

ROBIN Who decides that? Rosemary, or Man? Holmes, you ought to know who is the perpetrator of the crime.

SHERLOCK No – I am only the detective; the rest I leave to the Courts. If she has disappeared I could try my skill, such as it is. If she is merely absent in mind we could enlist our psychoanalyst. The last I saw of her she was wearing all the trappings of our ruling classes.

ROLAND I am not sure what our ruling classes wear now. They used to wear very expensive clothes – as Alice can attest – but even that was not always showy or obvious. In fact, not so showy or obvious as the skivvy's clothes Alice is wearing now – those thick black stockings and sensible shoes – they look like Rosemary's cast-offs.

TOM She's jolly pretty even now, aren't you my sweet?

ALICE Don't!

WATSON Don't be upset. What he says is quite true you know, even if he does express it a bit roughly.

SHERLOCK If it were a criminal assault my services could be useful.

MORIARTY My dear Holmes! Aren't you a bit out of date? This woman, Alice, may be in Wonderland, but Wonderland is not Victorian England. Nor was Victorian England for that matter, as you at least should have known. *That* was a figment of imagination, a work of fiction.

ROSEMARY Did I hear my name?

(*Silence falls on the group*.)

ROLAND (*breaks the silence*) That was a man's world.

ALICE A man's world is and always has been a figment of the imagination. Love and all that – compare that with childbirth and maternal death. Rape, blackmail, robbery.

P.A. It is not all murder and death and blackmail.

ALICE I didn't say it was, but I do say that a woman's world is a far more sombre one than that discerned by the man.

ROBIN Without wishing to enter into a contest in the gloom and depression stakes, I must say that the world in which we live presents much the same factual appearance to all of us though never the same to any two individuals. I can't say that I have an immediate impression of being more fortunate to be me than to be you. I loathed most of my experience at school, and when I left it was going into the army which I feared in prospect, retrospect and at the time. We make our own world, live in it and according to taste love what we have made.

ROSEMARY No; you blame others for it. Alice, get me a handkerchief.

ROLAND You didn't need a handkerchief.

ROSEMARY No, but I needed to remind her of instant obedience to me.

ROLAND Do you not have to obey the occupying power?

ROSEMARY I did – for many years which I spent learning to make the occupying power obey me.

P.A. This depended on your being in a position to seduce whoever or whatever it was. Roland could bear witness to that.

ROSEMARY Rubbish! Alice was in a better position than I was. Are you telling me that it was because of my position of superiority that she just had to go and fetch my handkerchief?

P.A. Yes, she is sexually dominated by her masochistic cravings.

ROSEMARY There was a time when I was most impressed by these verbalizations – I see they are now inadequate for talk. Even short words like 'fuck' only mean that man is busy impressing someone with his manly superiority.

P.A. Now *you* are wanting to impress me with how much I don't know. But I know that single word as I know elaborate constructions, elaborate vows of love and fidelity. I am sure Roland and Robin, like me, are familiar with marvellous triumphs in peace and war.

(*Man comes in and takes Rosemary's hand protectively in his. She pushes it away impatiently.*)

ROLAND He's right. Robin must have heard of the series of victories culminating in the victory in two great wars. Yet what is Man doing here?

ALICE He's told us. All done by chocolate. I must wake up.

ROBIN He's trying to hold her hand.

P.A. And failing.

ROLAND Men and women do fail. Even Ludendorff said that August 8, 1918, was a black day for the German army.

P.A. On that black day a friend of mine was called upon to surrender. 'I'll be damned if I do', he said, and was shot through the heart; he died instantly. And that – at the age of nineteen – was that.

ALICE Was it?

ROSEMARY Yes, it was. Their name does not live for ever more, whatever lies you care to tell about it.

P.A. I can see that it could be a lie if you said it. Maybe not if Alice did.

ALICE I thought you were a scientist.

ROSEMARY I thought scientists spoke the truth and believed in facts.

P.A. I wouldn't waste my capacity for belief on facts – I only believe when there is no fact available.

ROBIN You mean that when there is nothing factual you fall back on beliefs – like the Christian religion and such rubbish. No wonder psychoanalysis is such a tissue of lies.

P.A. No, I don't mean that. I mean I am careful to choose what I know and what I believe and, to the best of my capacity, not to mix them up. Because I do not take to be true what humans tell me are the facts, it does not mean that I fall back on 'believing' a lot of twaddle as if I had to keep my mind full at all costs. Or the reverse – empty – like a kind of mental anorexia nervosa.

ROLAND I thought anorexia nervosa was supposed to be mental.

P.A. Not by me. It is reputed to be a fact like all these masses of psychoanalytic theories which are not facts at all though their representations, like the pages in a book, are facts. They fill a space as paramnesias fill an amnesia.

ROLAND Then you must be a liar and a fraud.

P.A. No; a few psychoanalytic theories or formulations are typical of the kinds of thing in which I believe. From my vertex they are not facts; they are beliefs of mine.

ROSEMARY Were those facts when you said all that about 'masochistic cravings'?

P.A. No, they were attempts at formulating a particular instance of belief. If I were an artist I would try to formulate it in terms of painting or music.

ROSEMARY I would like to hear you sing it –

P.A. I doubt it – any more than you like my verbalization. And you remember what the dormouse said about drawing a treacle well.

ROSEMARY No, I don't. What's all this about a dormouse?

ALL (*except Man*) Not know the Dormouse? Well! Not know *Alice*?

ROSEMARY I'm very ignorant. The only Alice I know is my maid.

P.A. Anyhow, I cannot sing it or draw it even in the way I might draw treacle.

ROSEMARY I think you must be crazy. I don't understand a word you say. Or perhaps *I* am crazy not to understand.

ROLAND & ROBIN Not crazy.

P.A. Nor was Alice, nor Lewis Carroll. But I think he gave a fine representation of it – even a remarkable expression of psychosis.

ALICE I hope you are not going to make out that the Alice books are psychotic. I loved them. They are still favourites of mine.

P.A. I am not concerned to 'make out' anything. Although I often have to show people things which are ugly and frightening, it is not because I want to say how beautiful they are or to make people afraid of ugly things. If I could draw your attention to something you would at least have a chance of forming your own opinion.

ROSEMARY Is that what you meant by 'seductive masochistic impulse'?

P.A. I don't want, if I can avoid it, to obstruct you forming your own opinion.

ROSEMARY I don't want to interfere with yours. I'm not sure that you could survive if I allowed you to see me as I am.

ROLAND Oh come now! I think you are most attractive and beautiful.

ROSEMARY Bloody fool!

MAN I think you are a bit hard on him.

ROSEMARY So were you and your pals. Chocolate bars indeed! I don't know how Alice put up with him.

ROBIN Roland put up with you too you know, and Alice is still putting up with you.

ROSEMARY She has to – till I've done with her.

ALICE Oh please . . . !

ROSEMARY I can manage now. You can't imagine what a difference it makes now I'm not just *playing* at having you as my maid. Your 'masochistic impulses' are just juvenility, Mr Psychoanalyst. Like sex. Men and women strut about thinking that physiological and anatomical maturity is the same thing as being fully developed.

P.A. I don't. If I can demonstrate what people think and feel they can revise their opinions.

ROSEMARY From what I know about people, they are filled with admiration not only of you and what you can show them, but also of the entrancing spectacle that the psychoanalytic mirror reveals.

P.A. I certainly present them with a distorted image; even such portraits as I can paint in scientific terminology are imperfect, but psychoanalysts are not the only ones who fail and I think I am sometimes right. I even believe – note what I have said about belief – I am more often right than wrong. 51:49 is my formulation, borrowed from the language mathematicians use.

ROLAND Why borrow theirs? Isn't it likely to give an impression of mathematical precision?

P.A. Of course not. It is the nearest I can get to an artistic formulation of probability. I am not taken in by it as mathematicians are taken in by theories of probability. I thought you would be upset when Rosemary called you a bloody fool. Since your last remarks I think it is probable – 49:51.

ROLAND I don't blame her. In fact, I can see she was right. At least I know what terrible disadvantages she has had to contend with.

ROSEMARY Disadvantages? What on earth are you talking about?

ROLAND I thought you said your mother was a prostitute. I'm sorry if I was wrong.

ROSEMARY I said she was a whore, but I never said anything about disadvantages. In fact she was the best of mothers and brought me up in the best way she knew.

ROBIN Did she teach you her . . . her . . . prof . . . trade . . . profession, I mean?

ROSEMARY Of course not. I could learn that for myself any time I liked. I asked her why she didn't marry one of the fine gentlemen that some of the kids told me she went out with; she didn't deny it, but I could see she was terribly shocked.

ROBIN She must have been shocked at your finding out she was a whore.

ROSEMARY Of course not; but she was shocked that I could think she would *marry* a man who went with whores. She was strict and religious and disapproved utterly of men like that. You're blushing, Roland. So are you, Robin! Anyone could see you went with whores – in the good old days when men were *men* eh? And what about our psychoanalyst friend? Is he blushing?

ALICE Too hard-baked; a lifetime of façade.

P.A. True. One does get hard-baked and I am now too rigidly disciplined at being well-disciplined to be easily ashamed. But a girl once surprised me when I started psychiatric practice by saying she thought I was decent.

ROBIN Yes – I can see that might shake an old reprobate like you.

P.A. You are pleased to be facetious, but you would be surprised to find how often it is supposed that because I am a psychoanalyst I am both an old reprobate *and* know nothing about real life.

ROSEMARY Not only psychoanalysts. A friend of mine was brought up in an orphanage – one of the best and later to become famous – which was started by a parson who was not only admired but revered. He scared the wits out of my friend who was a well-developed child by mauling her about and pawing her.

ROBIN We've all heard of parsons, high-up members of parliament and others who don't live up to their professions.

ROLAND And artists who do.

ROSEMARY Liars all. All impotent. All pretending they are what they are not. All ever-so-holy, ever-so-wicked, and all amateurs. Whatever they pretend, they *are* amateurs.

P.A. Bunglers – particularly at being amateurs.

ROBIN Even Man pretends – with a couple of million soldiers behind him – that he has only chocolate in his holster.

P.A. 'pretends' he isn't just a sugar Daddy.

P.A. In short, we are human and pretend, because we walk on our hind legs, that we are 'superior' and that this is a superior kind of superiority.

ROLAND I have heard the same claims for the possession of a central nervous system. A biologist friend used to tell me that he thought man was one of nature's mistakes which would be discarded.

ALICE Discarded by whom? Women?

ROLAND I wouldn't rule out men if I were you.

ROSEMARY I know you two have discarded each other; you don't admit it but prefer a hypocritical life of pretending to love each other. That bit of self-deception may explain why you are both now in the servants' quarters and I, the 'skivvy', give the orders.

P.A. I doubt it. But you are giving me a clue about the 'truth'.

ALICE Don't psychoanalysts believe that truth is sacred?

P.A. We do *not* devote ourselves to the truth. There is a theory that a psychoanalyst and his analysand may, if disciplined, achieve a temporary addiction to truth. There is a belief – note I do not call it a theory – that in the exceptional circumstances of the consulting room this exercise would develop a resistance to 'mental ill health'.

ROLAND I knew an artist who had a fetish about truth and really tried to be true to nature.

P.A. So do we – true to human nature.

MAN I would never have guessed; I've heard that psychoanalysts devote themselves to fighting like wild cats about which tribal psychoanalytic theory they should inscribe on their banner.

P.A. True. In this we resemble what we study. Even soldiers claim to be loyal to some particular national group.

MAN And are sometimes traitors. We shoot them.

ROBIN With chocolate?

ROSEMARY (*restraining Man*) *Darling!* I'd love to see you shoot them, but *not* just now in my kitchen. Later sometime.

ROLAND 'Darling'! Did you hear that?

ROSEMARY My patience is nearly exhausted. Roland! Alice! Get back to your jobs and don't let me hear you quarrelling.

MAN Sweetheart, I cannot bear to have them offend you. *Do* let me have them shot.

ROSEMARY I'd love you to; but not now – later. Besides, Alice makes a good servant. Her training has been ideal. Of course I didn't

realize it when I was in her shoes, but now she has to look after mine it's delightful. If she becomes unsatisfactory she can find another job.

MAN There isn't another job.

ROSEMARY (*pensively*) *No;* isn't it splendid! She adores me.

P.A. What I called a sado –

ROSEMARY Oh shut up! I don't know what job I could get for you. Tell Alice to get my room ready.

P.A. Certainly. Are we to meet again? In this kitchen?

ROSEMARY So long as you behave yourself. Man may intercede with the authority – is that right, darling?

MAN Yes, if you wish it.

(*The room empties except for Holmes, Watson and Moriarty. They whisper.*)

SHERLOCK (*admiringly*) *What* a woman!

WATSON What a *woman?* Surely, Holmes, you are not forgetting . . .

MORIARTY Not he! He's remembering. I think I could use her.

SHERLOCK (*angrily*) *You* could not.

MORIARTY Like you, Holmes, I have my methods.

8

ROLAND This is the right day, isn't it?

ROBIN I think so. No one else has turned up, so –

ROLAND Let's take a chance while we can. Shall we say anything to the women? I wouldn't trust Rosemary – she's 'darling'ing him already.

ROBIN I've had that stuff too often. What about Alice?

ROLAND We hate each other. No good – she's under her maid's thumb.

ROBIN Enough for blackmail?

ROLAND The conditions for blackmail don't exist.

ROBIN Murder is quicker.

ROLAND Murder is effective, but rough.

ROBIN Of course it's rough.

ROLAND I meant rough in the sense of 'approximate'.

P.A. May I join in? It sounds an interesting speculation.

ROLAND (*whispers hurriedly to Robin*) Don't trust him an inch. (*to P.A.*) Do. We were wondering how on earth you manage to do your – to join us. No secrets here.

P.A. That's true. In fact I was thinking as I was coming here how things have changed in that respect. One of the war aims of the Allies was 'open covenants openly arrived at'.

ROBIN Since these covenants have become so openly arrived at, lying has achieved a new dimension.

P.A. Its quality has improved too. The expert liar, as contrasted with the amateur or untrained liar, is at a premium.

ROLAND (*with ill-concealed hostility*) Have you found the demand for your services much increased?

P.A. No; there has always been a high demand for my services.

ROBIN Fifty minutes a session, five times a week –

ROLAND – for ever!

P.A. That is about it. But the demand changes.

ROLAND Can you give me an idea how?

P.A. At first people used to think I was just a simple, obvious fool –

ROBIN – and then they thought you were a bigger fool than you looked. Aren't you?

P.A. I am usually aware of hostility and contempt. If it is obvious it requires – as now – no interpretation, because you and I are both aware of it. Interpretation would be redundant. But in the old days – were you going to say, 'the *good* old days'? No? Then we can proceed. – In the old days men and women used to lie freely and elegantly; there was gradually built up a kind of Empire of Hypocrisy. Although the 'British Empire' seemed to contract, the 'empire of the mind' did not. I am no poet, but I succumbed to the temptation to compose a patriotic anthem, almost a New World symphony, using the theme – 'borrowed' of course without acknowledgement – 'My Mind to Me A Kingdom Is.'

ROLAND How very apposite. Just right for a psychoanalyst!

P.A. Alas, no.

ROLAND & ROBIN Really? How was that?

P.A. His Satanic Jargonieur took offence; on some pretence that psychoanalytic jargon was being eroded by eruptions of clarity. I was compelled to seek asylum in fiction. Disguised as fiction, the truth occasionally slipped through.

ROBIN Surely you are being sarcastic?

P.A. I know it must sound like that, just as serious psychoanalytic interpretations are thought often to be jokes. God and Devil are frequently not taken seriously.

ROLAND Do you mean to say you take them seriously?

P.A. Of course I do – I am a psychoanalyst.

ROLAND Quite. I thought psychoanalysts didn't take religion seriously.

P.A. How could I possibly be concerned with people without taking seriously one of their outstanding features?

ROBIN I thought psychoanalysis was all sex.

P.A. Since psychoanalysis is a human interest you would naturally assume, without having to be told by a psychoanalyst, that it

was sure to be sexual – 'all sex', as you call it. As psychoanalytic theories are about, or purport to be about, human beings, you would feel they should resemble real life, real people. If so, sex ought to appear somewhere in the theories.

ROLAND But not everywhere.

P.A. Yet you both seem to be surprised that religion is a part of the discussion. Art and science must also be part of it. For simplification we can reduce the *discussion* to manageable proportions and divide the *talk about* the human animal into those main categories – science, religion and art.

ROLAND Why do you say 'talk about' with that peculiar emphasis?

P.A. Because we should remain aware of a distinction between 'talk about' something and the something itself, 'the thing-in-itself , the ultimate reality, the noumenon we can never know. Religious people talk about God and seem to believe that He can, and did once, become 'incarnate'. Isaiah spoke as if he were sense-ible of Him.

ROBIN All that stuff is incomprehensible rot as far as I am concerned.

P.A. Even 'talk about' something may be beyond your comprehension, let alone the noumenon. I would not claim to understand psychoanalytic talk about psychoanalysis, let alone the ultimate reality of which psychoanalysis is only the 'phenomenon'.

ROBIN Well, you are the first psychoanalyst I have heard of who believes in God or God incarnate.

P.A. I did not say I believed in it, but certainly I cannot imagine doing anything else or using such capacity for belief as I have for any purpose other than for facts.

ROLAND You mean you believe nonsense, and what is nonsense that is what you believe?

P.A. Already you are mis-representing and mis-understanding me to say I believe in a particular form of religious non-sense. I do not. I would subscribe to this belief in the doctrine dogma of God incarnate if it were also understood to include belief in the Devil incarnate. I can believe in a god incarnate if it is understood that this same God Incarnate is the Devil Incarnate, and that the Devil Incarnate is likewise god incarnate. In spite of my inadequacy I like to be as precise as I can and am using capital letters and lower case deliberately, because I think it is more likely to convey my meaning.

The *feeling* that you understand is significant. I *believe* it is an important feeling. Sometimes I think I *know* it is an important feeling. But I do not mean the same thing by those two similar statements. The more I *feel* I know, and the less I *know* I know, the more exact I think I am being when I say I believe, and the more accurate I feel it is to say I *believe* – because I have no senses, and no senses in common, that are involved. Robin, if he likes, can mis-represent me by using the ambiguity and flexibility of conversational English to say I believe nonsense. I want to use that same conversational phrase to say I never *believe* anything unless it is *non sense.* Further, I want to borrow these words from hostile and contemptuous debate to make communicable to others what I believe.

ROBIN Why not borrow more suitable words?

P.A. I would – if I knew any. Incomprehensible though they be, that is the easiest and simplest and most comprehensible means I can find without resorting to neologisms – and they have a bad reputation in psychiatry.

ROBIN And using ordinary words in an extra-ordinary way also has a bad reputation – not only with laymen, but also psychiatrists.

P.A. Anyone who aspires to the initiative in matters which are ordinarily thought of as spiritual or religious or artistic is in for trouble with his contemporaries. The fate of the reputation of outstanding artists, scientists and religious leaders would be more comprehensible to us ordinary human beings if we could conceive of the domain more widely, in the way that the domain of mathematics has had to be widened – almost to the point of notoriety – to accommodate new kinds of figures and their manipulation. Here comes –

ROLAND 'The Devil Incarnate.'

ROSEMARY (*dressed to go out*) Tell Alice I want her. And I want the car brought round. (*She goes out*.)

ROBIN Oh, I don't know. She's not bad as mistresses go, do you think?

ROLAND She hasn't got into her stride yet. Where has she got all her smart clothes from?

ROBIN Man – where else? He's a pretty damned fool anyway.

ROLAND Hmmm . . . I'm not so sure. He's handy with his gun don't you think?

ROBIN Yes – so is she. She has no chocolate 'in the holster'. She fires live ammunition.

ROLAND These bloody women do. They don't care at whom they aim either. It's we men who have to be loyal and find bodyguards for them. Anyhow, Alice is getting a dose of it now.

ROBIN If you ask me she likes it.

ROLAND Maybe; but so far Rosemary has just been playing with her, beginning to find her feet. You watch – Alice will soon discover it's no game.

ROBIN Here they come.

ROSEMARY I shall want you to be here when I get back. When? How should I know? (*Goes out.*)

P.A. The doctrine of Incarnation has a family resemblance to the idea of transmigration of souls. Hullo! Where has *he* sprung from?

(*A priest enters.*)

ROLAND Can I do anything for you?

ROBIN Who do you want?

PRIEST Oh, no one in particular thanks. I heard someone mention incarnation and it sounded so interesting I dropped in. Do you mind? I'm from Ur – Ur-religion, not to be confused with Ur of the Chaldees, though similar.

ROLAND All religion is similar as far as I'm concerned.

PRIEST I was about to demur, but of course you are right – depending on whether you illuminate the similarities –

ROLAND – or darken the obscurities. Job got ticked off by the Highest Authority for darkening counsel. My sympathies were, on the whole, with Job.

MORIARTY Job had the right idea. If our P.A. friend was right to talk about the Devil Incarnate – and I think he was – Job may well have been on my side.

P.A. You are one of the figments of imagination.

MORIARTY All the best people are. Like God and the Devil. But what a time we all have! We rule the world of reality, as you scientists call it.

PRIEST We are well able to see the power of these figments of imagination – or objects of awe, superstitious awe. We had a very pretty religious ceremony, and still do, in the flourishing sacramental use of drugs in the attenuated religion that flourished in Tenochtitlan, and even today coexists with the products of nuclear fission. Of course we have not had quite the triumphs which we had when we buried

the Royal Court of Ur in the Death Pit. But we hope to convert the uses of nuclear fission to a part in our services. We may yet achieve a triumph of piety with a real holocaust. Hiroshima was a trial run.

ROLAND I don't think I like you. Where did you get your dog collar from?

PRIEST (*looking down at the collar beneath his chin*) This? I don't really know. I had a dream and when I awoke I found I had this round my neck. Quaint, isn't it? I rather like it, so I kept it on.

ROBIN I don't like this fellow. He gives me the creeps.

ROLAND He reminds me of Rosemary – I don't like her either.

ROBIN I thought you were soft on her when she was your maid – before the war. I don't like your psycho friend.

ROLAND No friend of mine. I think he's a spy.

P.A. I'm sorry; shall I go? In a way you are right. I spend most of my life spying – not so devotedly as this man here (*indicating Priest*) but I suppose you could say I carry out one kind of spying. Only to help though.

ROBIN Who?

ROLAND Or what?

MORIARTY This is a job for Sherlock Holmes. Or perhaps Mycroft.

P.A. Or even me. But I suppose you would not accept my judgement.

ROLAND Would you accept the criminal being inserted as the investigator and judge?

P.A. Yes; I actually bring them into the investigation. At least, I do when they offer themselves.

ROLAND I bet you never get a conviction – except the kind that convinces you.

P.A. Surprisingly I do, though sometimes it is forestalled by an execution. The analysand executes himself.

ROLAND You mean the patient commits suicide?

P.A. That makes a long story short.

ROLAND The actual event is equally brief; a decapitation is the soul of wit.

P.A. Unfortunately not. The analysis can be very long.

ROBIN Isn't that always the case?

P.A. In the story I have in mind it had to take a long time because it always requires time to achieve success.

ROBIN I see – the victim bungles everything including, naturally, his death.

P.A. Sometimes.

ROLAND Why all the mystery? Cut out the dramatic suspense and come to the point.

ROBIN Give him a chance. I'm interested even if you aren't.,

P.A. Mystery is real life; real life is the concern of real analysis. Jargon passes for psychoanalysis, as sound is substituted for music, verbal facility for literature and poetry, *trompe d'oeil* representations for painting. Real self-murder is not observed, and accidental suicide passes for the real thing which is planned, worked out in detail economically to create real effect. For this the patient – a good name for him – has first to suffer, in collaboration with psychoanalyst or family, to achieve success, to be worth murdering. The danger of death does not become acute until it is clear to every beholder that a resounding success is at hand. Then comes the not-so-blind Fury with the abhorred shears. This kind of man or woman resembles a self-murderer only superficially. 'Ay, in the catalogue ye go for men. . .'. Shakespeare was not deceived by the counterfeit; it would be a 'brave' psychoanalyst who thought he could not be deceived. But there are such people amongst us.

ROLAND Rosemary?

P.A. I have not so far observed anything that aroused in me a sense of being in the presence of such a murderer.

ROBIN You mean you would expect to feel a murder was about to be committed?

P.A. With such a patient I would expect to be aware of being in the presence of an unmistakably real emotional storm centre of a catastrophic kind. I consider my experience to be adequately sensitive to the 'direction' of the path the storm would be likely to pursue.

ROLAND Either you are being very modest or psychoanalysis is not much good.

P.A. Neither. Psychoanalysis is a fine instrument; psychoanalytic experience makes poor capacity for some things greater than yours.

ROLAND Thank you; you *are* complimentary.

P.A. I did not expect you to like my opinion, and your contempt is not lost on me. If I were prey to depression I would despair of your impenetrable complacency. It brings home to me how impossible it is for me to get the help of a critical attitude. It would help if I could

rely on the purifying effect of austere criticism. I cannot. Fantastic admiration and complacent hostility, both are available in quantity and both are so much mental rubbish. I do *not* value either your praise or blame.

ROLAND Do you think I value yours?

P.A. I know you do not; in my opinion you cannot. It was the hundreds of cultured, educated, well-meaning 'yous' which constituted a liability that England could no longer support but sank under the weight.

(*Rosemary enters unexpectedly and unnoticed. She sits and listens.*)

ROLAND I thought you people were supposed to be impartial.

P.A. In the practise of my job I am; even when I am not engaged in my profession I retain habits of impartiality. Whatever the contingent circumstances, my natural impulse would incline me to justice rather than injustice. But that is not what you mean when you speak of impartiality – you mean partiality to your views. It is not natural to me to be partial to your views as far as I have reason to know them.

ROSEMARY Now shut up, both of you.

ROLAND (*coldly furious, to P.A.*) I'd be interested to know your views about *her.*

ROSEMARY I said *shut up!* I'm not a lady nor a psychoanalyst and I lay no claim to impartiality. I am the mistress of this house and I mean to be obeyed – or I shall have to use a language which you will understand even if you didn't hear it at school or in the mouths of women of your class.

ROLAND You'd be surprised.

ROSEMARY Get out – quick! (*The men go. Alice comes in.*) Fetch me my slippers. And be quick about it. (*Alice curtseys and goes out.*) She's a stupid idiot; but she's learning in spite of her upbringing.

(*The room darkens.*)

9

Figures slowly become discernible.

MORIARTY Hear that, Holmes?

SHERLOCK I would have been deaf indeed if I didn't.

MORIARTY I thought perhaps you were too high-class to be able to tune into that wave length.

SHERLOCK I learned a lot more than you think from Irene.

MORIARTY Adler? I always thought she was a lady.

SHERLOCK Then you've got another 'think' coming to you. Broaden your ideas, Moriarty. More things are wrought by crime than are dreamt of in your morality.

MORIARTY (*shaking his head regretfully*) *You* and Mycroft are indeed a sad loss to crime. You would both have done well in the world I have disgraced.

WATSON General practice is a wonderful training – you would be surprised to find how truthful people become under the impulse of impending disaster. It's better than any 'cure' or religion I know. What's-his-name Psycho wants to cure people; parsons want people to believe in a good, kind god that looks after them.

PRIEST Rubbish!

MORIARTY You surprise me. I thought you wanted people to believe in the goodness of God.

PRIEST In the words of Sherlock Holmes, 'Then you've got another "think" coming to you'. I am just a 'general' priest; as Watson says about general practice in medicine, it's a wonderful training – if you can stand it.

P.A. I am only just a general, run-of-the-mill psychoanalyst. That is a wonderful training.

PRIEST Don't misunderstand me – it has been a commonplace of

religion that life itself is a wonderful training for what comes after. There's nothing new about *that.*

WATSON It is original if it is not only 'commonplace' but also 'believed'.

SHERLOCK My dear Watson! What do you mean by 'believed'? I don't like meaningless terms. I am a scientist.

MORIARTY He *thinks* he is.

WATSON You 'believed' in Irene Adler.

P.A. I didn't, don't and never will do. I think she is an idealized figure. That is not a belief. 'Idealized figure' is a technical, scientific term which I use to think with. I also use figures of fiction – imaginary figures. Even mathematicians use imaginary figures, imaginary numbers.

WATSON You must do a funny kind of mathematics.

PRIEST I suppose you would think the Trinity and 'Mono' theism a funny kind of mathematics. But you are unacquainted with the religious domain in which these mathematics, though difficult, are at least serviceable.

P.A. There are people who inhabit a state of mind in which they can find a use for neologisms, new mathematics, new arts.

ROLAND Good God! Nouveau art now.

ROSEMARY Get out, or learn to lie at my feet like a good dog.

WATSON Bark when you are bittern to.

SHERLOCK Hush! What's that booming noise?

BOY I don't hear any booming noise. That noise I hear is a bird.

MYCROFT Boy, your ears are too sharp! Or you too would wonder like brother Sherlock.

P.A. I don't hear it either.

ROSEMARY Too old – deafened by years of jargon. Blinded by facts and concepts and psychoanalysis. I had a friend who was a marvellous cook until she took a cookery course. After that she couldn't even boil an egg!

PRIEST I had a friend who was so holy he thought he was God and could think of nothing but that everyone should devote themselves to worshipping him. He even grew to think that God was interested in religion.

MYCROFT Old Moriarty thinks God is exclusively interested in stamping out crime.

ROSEMARY Roland thinks I make him lie at my feet so as to make it easier for me to stamp *him* out.

PRIEST 'How beautiful are the feet of them that preach the gospel of peace.'

ROSEMARY That is *not* what I use my feet for.

P.A. You would be surprised to hear how many erroneous ideas there are about the proper – and only – use for feet. All different; all obscuring more than they illuminate.

PRIEST That is true of what people call God. The psychoanalysts are the worst.

P.A. With respect – *no*.

ROBIN Aren't you always proving that God is a father figure?

P.A. I often attempt to show a particular person that he believes in God, and sometimes that he believes in a *particular* god – like a father, or money, or even psychoanalysis. The analysand can make up his mind if I am correct – that is his affair, not mine. My beliefs I likewise wish to keep to myself or, at most, share with a particular chosen person.

ROBIN Yet you expect others to expose them to you!

P.A. I do nothing of the sort. I let it be known that I am available if anyone is disposed to discuss his ideas or expose his personality to me in my presence.

ROBIN (*doubtfully*) It sounds all right.

P.A. Unfortunately 'sounds', 'sights', sensuous impressions, and our interpretations, desires and memories of them are all we have.

ROBIN Isn't that enough?

P.A. It has appeared so – up to this hour and minute. But whether that is enough we can discuss in accordance with your and my greed, or lack of it.

ROBIN Why greed?

P.A. What alternative scale of measurement do you suggest?

ROBIN Religious, artistic or scientific integrity.

P.A. That seems to me to be pushing the answer back to a more distant version of greed.

ROBIN Do you mean religion is just greed?

P.A. From what you think you learnt about yourself and religion so far, what is your impression?

ROBIN I asked you yours.

P.A. Mine is of no importance whatever to anyone but me. Yours

is of no importance whatever to me – except in so far as you want analysis. Then your ideas have a limited importance if I am to be sufficiently correctly informed to make an interpretation.

ROBIN Is that all?

P.A. Disappointing, isn't it.

ROBIN Why do you think I want analysis?

P.A. I don't.

ROBIN Then why are you behaving as if I did?

P.A. You are right to ask and to object since the conditions for psychoanalysis do not exist. Maybe I am falling into a trap contributed by my predilection for a psychological response – a hazard to which my profession makes me prone.

PRIEST You would make a good parson.

P.A. I could not even talk about religion except inadequately.

PRIEST There is more to religion than that.

P.A. Just as there is more to psychoanalysis than theories or talk about it.

PRIEST What?

P.A. Talk which is a prelude to it and talk which is psychoanalysis itself.

ROSEMARY Who decides which is which? You? Some institute? A royal charter?

P.A. Facts, I suppose; just as ultimately facts decide whether the sun goes round the earth or vice versa. I do not know what sort of fact is regarded as confirmatory.

PRIEST What standards do you use?

P.A. I used to believe that the army authorities told the public the truth about a battle till I went into action and compared the facts as known to me with the facts as announced by Army H.Q. For a long time I thought I knew the 'facts'. Later I inclined to the commonly expressed view, 'you can't believe a word you hear'. Poor authorities; they could not even say who had won the war!

(*Man enters and takes a seat near Rosemary. He appears confidently possessive. She is complacent.*)

ROSEMARY Tell Alice to fetch my shawl.

ROLAND (*furiously, sitting up*) Who won Helen of Troy –

ROSEMARY Lie down!

ROBIN (*to Man*) What, no chocolate? (*Man ignores him and looks at Rosemary as if there were complete understanding between them.*)

ROSEMARY (*to Man*) Tell Alice not to bother – she can go to bed.

ROBIN I feel acutely uncomfortable.

P.A. There is some emotional storm disturbing us. Leonardo might have drawn a sketch of turbulent water; verbally it would require a Shakespeare to do justice to –

ROBIN Yet you can feel it?

P.A. I know it, as I know you know it.

(*Rosemary and Man withdraw together. Roland gets up and dusts himself.*)

ROLAND That bloody bitch! I could . . .

MORIARTY Allow me – what you need is a criminal act.

SHERLOCK Don't be a damned fool. I know Moriarty; don't listen to him.

MORIARTY Why not try the parson since Sherlock is prejudiced against me?

PRIEST No – not God or Devil at present.

P.A. Theology perhaps? It might provide breathing space before action.

MORIARTY (*mocking*) Shall we go and see the little dears have fun? Or perhaps we could listen from here.

P.A. Real fun requires a prelude of years of discipline as well as theories or dogma in art, science or religion.

ROLAND Oh, shut up! This is what discipline has brought us to!

P.A. Discipline, plus or minus: Lack of it and too much.

ROBIN How can it be two opposites at once?

P.A. In classical logic perhaps not. In reality – well, look at Leonardo's notebooks. Intuitionist mathematics may show the way.

ROLAND By that time someone will have died a violent death.

PRIEST Many millions already have. The barrier between these warring forces will be the first to be destroyed.

P.A. And what next to the first?

PRIEST Not the warring forces. They will be refreshed and renewed for further destruction.

ROBIN 'Methinks I see a mighty and puissant nation. . .'

PRIEST Not of human animals I think.

MORIARTY Microbes perhaps or – what did Berkeley call it? – ghosts of departed quantities, Newton's nascent increments.

P.A. Berkeley made fun of these objects whichever way they were growing, less or more; even the object that did not exist, the

object so small that it was the ghost of a departed increment, or what I describe as the increment of a 'ghost' coming into being according to the laws of change whether crescent or decay. All this is easier to formulate if it is talk about the decay or growth of a corporeal object, or a use of the language appropriate to corporeal objects for a purpose for which it was not intended – incorporeal objects, thoughts, minds, personalities.

ROLAND Has this talk got anything to do with our present state or is it a substitute for it, just to take up time?

P.A. It may be 'nothing' out of which something comes; the increment of a 'ghost of a departed increment', or the disappearing, declining something which is destined to disappear – or both.

SHERLOCK It can't be both – that's absurd.

ROBIN What about you and Moriarty? Are you figments of the imagination, ephemera which will entertain a child and then be forgotten? Or can you be ghosts of departed increments which are now ideas that are increasing by increments, destined to develop, like a grain of mustard seed in a famous story, and overtop the trees?

PRIEST What about the author of that story?

ROBIN As far as I'm concerned, 'it is a tale told by an idiot, full of sound and fury signifying nothing'.

P.A. What about the author of *that* story? How long before, in the words of the motion for debate of a certain dining club, 'The works of Shakespeare be not read'?

ROLAND That was a joke.

P.A. Suppose what was spoken in jest may have included some truth?

ROLAND Like Man's holster; it depends on whether it contained a gun or a chocolate bar.

P.A. It also depends on whether the contents of the holster are displayed to a starving or armed congregation. Man may once have been the witness and victim of a blockade. What mental seed was sown by that 'fact'?

ROBIN Anyone can see now that that was *not* a victory. 'We have scotched the snake, not killed it.'

P.A. Perhaps. But can anyone see what the victory was – its past, present and future? Rosemary is now the mistress of this house; Alice is her maid. Tomorrow –

ROLAND You take it very coolly. I don't.

P.A. I don't suppose you spent time thinking what you and Alice were teaching your maid. Now you both have a chance of seeing what she learned and you did not. I gather you feel that you would still be unlikely to learn anything from 'this talk', as you call it.

ROLAND I mean to murder that bitch and her boyfriend.

P.A. You'll be wise to think, even if not talk, about how you mean to do it – before acting.

PRIEST I hope you are not inciting him to do this thing.

ROLAND I have heard you and your like make patriotic speeches.

PRIEST That is different.

ROLAND A man I was talking to had his brains blown out while he was speaking. Some person had taught him that that was meritorious and not murder.

P.A. Perhaps this is an instance where quantity of an action affects quality. Murder + increment becomes WAR; the ghost of departed increments becomes cowardice; 'quantities of discretion' do not become the 'better part of valour' but the worse part of cowardice.

ROBIN If you could tell me what were the smallest units of thought, the electrons or elemental particles –

P.A. – the genes of sexual activity? –

ROBIN – I could find a mathematics to match it.

ROLAND Sooner or later you'd have to do what bi-sexual animals do.

P.A. How soon? How late?

ROLAND Somehow I feel I've heard all this before.

MORIARTY Oh no! I've *never* heard people like you debate the ways and means of a 'crime passionel'. You've progressed.

P.A. In what direction?

MORIARTY Don't ask me – ask the parson.

PRIEST When I was padre to Agamemnon I used to conform to the dictates of my religion. I couldn't conform to the dictates of Zeus because he had a sort of Olympian democracy, and all the gods used to fight like humans. Indeed, they often took part in human activities. Nowadays God rarely takes an unambiguous stand.

P.A. So?

PRIEST It becomes essential to have a priesthood to supply correct interpretations of God's apparently ambiguous statements. The

ambiguity is not in God; it is in the formulation in which the priesthood represents the formulation which, in turn, represents the thing-in-itself.

P.A. I can see for myself that the priesthood consists of a lot of ordinary human beings. In my experience these ordinary human beings take ordinary good fathers and ordinary bad fathers; and from 'facts' of that kind derive pictures which are then put forward in the form of idols, poems, mystical formulations, as true, factually real gods and devils, Virgin Marys and furies.

PRIEST Sometimes these approximations are approximated to by God.

P.A. That is to say, God finds an ordinary human being like Jesus, and uses this ordinary –

PRIEST Not ordinary.

P.A. Well, extra-ordinary human being for purposes of incarnation, 'becoming flesh'. Is that right?

PRIEST That is not a bad summary of what a true priest might say if he wished to achieve a 'formulation' of Jesus. But no formulation can ever be anything but a substitute for Realization.

P.A. But this is all *we* try to show. We are not saying anything about God, or even God incarnate, when we say that a particular individual whom we are analysing is treating a father figure, which is already at a remove from an actual human father, as if this verbal image or idol *is* God.

PRIEST But that is precisely what you seem to say. 'Look, this God you worship is only some wildly distorted childhood view of your Dad. Therefore – God can't exist.'

P.A. Perhaps we do. But any analyst who talked like that would be *mis*-representing psychoanalysis – whatever he might be doing to the Ultimate Reality. A more nearly correct formulation would be, 'Your description of the god you worship may, at best, be a good model of your Dad – especially allowing for the fact that you were probably not much more than a baby when you first got that idea – but, however good or bad that model might be if you were trying to convey an idea of your father, it is quite unsuitable for providing me with an idea or a god which I can worship without insulting my intelligence.' This interpretation would not say anything about God, assuming He exists, but would represent

psychoanalysis in such a way that the analysand could believe in it without having to outrage his intelligence. This is different from saying something ridiculous like, 'You believe that that magnificent ballplayer is God, *therefore* God does not exist'. That is not even logic, let alone psychoanalysis.

PRIEST My complaint is that psychoanalysts themselves are worshipping an idea as if it were a god worthy of worship. That 'parody' seems to me to be indistinguishable from most psychoanalysis I have heard of or experienced.

P.A. You may have been unlucky. Perhaps these 'psychoanalysed' people you have met have also been unlucky – in their parson. Debased religion attracts debased psychoanalysis and makes both more debased.

ROBIN How is Man's chocolate bar doing?

ROLAND How is Man's gun furthering his love-making?

ALICE Both doing very well. That 'pearl of great price' is artificial.

ROLAND There's nothing wrong with the swine – *they* are real enough.

MORIARTY Swine usually are.

SHERLOCK How unlike, how *very* unlike the term 'love'.

WATSON Holmes, what you say sounds like our parson friend.

ROBIN 'Friend'? 'Comrade'? Haven't I heard those words before?

ROLAND I have heard the phrase 'pearl of great price' used by many – and (*looking at Alice*) of the pearl being artificial.

P.A. There is nothing new about artificiality. The term derives from uses in which man occupies some place in the chain. The pearls are artificial. In spite of Roland's observation it cannot be assumed that the swine are genuine – or the price paid for the pearls. The artificiality of the pearls, the swine and the price are all surprisingly well-matched sometimes.

PRIEST What do you think of the price of psychoanalysis?

P.A. My fees are dictated by what I need.

PRIEST Who decides what you need?

P.A. I do – who else?

PRIEST Then the fee is dictated by your greed, great or small?

P.A. Yes. What do *you* charge for your services?

PRIEST Nothing.

P.A. Someone has paid for your food or you would not have survived. Have you always been supported by the Establishment?

Who paid for the ceremonial at Ur? It seems that many paid with their lives.

PRIEST The king paid with his life for the bigotry of the doctor.

P.A. Was it his bigotry or his religion?

PRIEST He believed in his medicine; it was almost his god. He worshipped his king and queen – this side of what you would call idolatry. They told me he thought the king was dying –

P.A. – and you and your like told people he would survive, and if they went into the pit with his body and were buried they would go to Heaven.

PRIEST Heaven? Nonsense! That idea has only grown up during the last few thousand years.

(*Rosemary fades in.*)

ROSEMARY (*luxuriously, admiring her well-shod foot*) *This* is *my* idea of Heaven. I would hardly have dared to believe that I would live to call my mistress and hear her say 'Ma'am' to me when I gave her orders.

P.A. And does it come up to expectations?

ROSEMARY Yes, although there are one or two improvements which I mean to carry out.

P.A. What about Alice? What about Man?

ROSEMARY Man? I don't expect any trouble from him. But why Alice? I've got her where I want her and what happens to her from now on matters not the least – she can go and seek a psychoanalyst. You perhaps – if she can find enough artificial fees!

PRIEST What of God in His Heaven?

ROSEMARY He ought to be all right. It's His heaven. If he wants to be inscrutable that's his affair. I'm not interfering like a psychoanalyst – or even a priest. Let him get on with it, *I* say. I didn't interfere with Chalcas or Juno or Jehovah, and I'm not starting now. This suits me and if it doesn't suit Alice or you or this psychoanalyst, that's your affair. I enjoy being smartly dressed and I like feeling that you all have good reason to fear me.

P.A. 'The glass, the cruel looking-glass.'

ROSEMARY What's that?

P.A. A poem I remember. I was not thinking of you and your appearance so much as of how you reflect the England I lived in and how it then looked to you. Not a flattering portrait, but true as far as appearances go.

ROSEMARY They go a very long way.

P.A. We – particularly I – have wanted in psychoanalysis to nourish an instrument, analogous to a mirror of the physical world, which would make it possible for each of us human individuals to see himself.

ROLAND So far it only seems true to analogy in that you see what you want to see.

P.A. I fear so.

PRIEST God made man in his own image. Man was not only quick to return the compliment, but it does not appear to be a flattering reflection.

P.A. I thought that as a priest you would consider the human world reflected an unflattering image of God because of the defects of the mirror; it would not have occurred to me that a priest might think the reflection unpleasing because of its truth.

PRIEST I do think it is due to the defects of the mirror; but I can see that the judgement of the mirror image is unwelcome – both for what it shows and for showing it. Who is to say God is correctly judged by his creatures?

ROBIN (*to Roland*) I give up. I vote you and I go into committee of ways and means.

ROSEMARY I shall give you both my photograph. You can all meet here next week. Now, good-night.

(*They dismiss.*)

10

ROSEMARY (*alone*) She was a good mother. If she hadn't taken up with whoring she could never have given me bread. Nor would I have learnt the art of how to make sex pay without paying the price of gonorrhoea and later the ravages of neuro-syphilis. Poor Mum! But . . . How happy, how cheerful she was! I wonder why? Does it tickle to feel the spirochaetes as they spire and burrow in the convolutions of one's brain? She certainly used to laugh immoderately as she heard the bombs crash amongst the palaces and the filthy, crowded streets of London; till at last . . . I wonder who it was who released the atom bomb that brought peace, the blessed meek-eyed Peace whose reign had been so long delayed by these filthy men? I wonder what blackguard sired me? I sometimes think my profound morality and sense of duty must have derived from him. How else could I have had such strong ideas of what was pure and godly and of good report? I could never have become such a smooth hypocrite without it. How she would have enjoyed it! How it would have warmed her heart if she could have seen how her little girl would turn out when she apprenticed me to service – so as to save me from ever depending for my bread on the dangers of whoredom. She used to tell me tales of things she knew about men – very frightening some of them were too.

One day the police came and took away the corpse of her friend who had been battered to death. It was exciting; they caught the murderer. Some of my friends showed me bits out of the paper. 'What is a sexual partner?' I asked Mum one day. 'Wherever did you hear words like that?' she said. 'Oh, it was in a piece of newspaper I bought my fish and chips in', I lied. She didn't believe me and I'm sure she could never have understood what that clever arse of a psychoanalyst said

'sexual partner' was. But *she* could have told *him* that was what happened to your girlfriend when a respectable public school aristocrat bit off your nipples and thrashed the last spark of life out of you! I heard her screaming. Not for me! I said. Old 'chocolate bar' and his friends can rape this country – so what? Let them eat cake! He can think himself lucky to have the privilege of licking my feet and passing his winnings over to me! Love? The God of love my shepherd is, His goodness faileth never. Well, He's not done so badly for me. Let's see how Rosemary's skivvy, Alice, gets on worshipping at His shrine. I could tell that parson fellow a thing or two about God? Perhaps he learnt a bit since Ur. I wonder if P.A. knows about sexual perversion – I'll ask him.

It's getting darker and darker. The Dawn in Britain . . . When? How? They say it's always darker before the dawn. Alice thinks I'm in love with Man; perhaps she's right. I'm no more in love with him than I am with her, but I'm no less in love either. Love is like honour; Falstaff didn't think much of it. Perhaps women regard love more importantly than honour, and men the other way round – like picking up and battering down whores. Dictionaries should state masculine or feminine. Love (masculine) . . . ; Love (feminine) . . . ; Honour (masculine) . . . ; Honour (feminine) . . . ; I suppose we could leave it to Priest or P.A. or Leonardo or Moriarty or Sherlock to fill in the definitions.

How dark it is! 'Lord, with me abide.' I had no idea I was so religious. I must be feeling cold.

Alice adores me; that's clear from what I can make her do. I haven't been taught how to be a goddess, but I can make a better job of it than she can; better goddess than I ever was a skivvy. I had better not make any of *her* mistakes. I have to provide her with food and lodging; not too much or too little. How easy to say, but how much is 'too much' and 'too little'? So far I've only gone by exactly what she gave me – she's wearing my skivvy's outfit. She's pretty and the darned black stockings, carefully repaired old rubbish of mine, look quite nice on her. She's a fool – compared with me. What if she learns? I saw Roland looking at her intently the other day. So far I've got Man where I want him. I could sack her of course; but I don't want to lose my maid. There are still things she can teach me. I could teach her a thing or two about being a whore, but goodness knows what she might learn. She probably knows about V.D. But – it

makes me laugh when I think of it – she didn't know how to stop Tom from overpowering her. Maybe it would be best to get rid of her. If she leaves too late she won't be any worse off than my Mum. It *is* dark – and I'm sure it's getting colder. I could send for her – what then? I could tell her I'm cold and leave her to 'get on with it'. Why should I tell her what to do? She could use her initiative. . . . Suppose she has too much? Moriarty says Lady Macbeth sparked off a conflagration. Am I falling asleep? I get such queer, jumbled thoughts. It's *cold*. I must get into bed.

No wonder I'm cold. Banquo felt the dagger Macbeth saw – this is worse than Alice's Wonderland, Alice's attic. I keep falling asleep and having the gweirdust qualfactions of Mayqueen me mother toady today. Is that Rosemary sinking? Spirochaete, spirochaete/where have you been?/Up the puss octo puss/2C the Queen./ Ashes to ashes and Dust to Dust / If the booze don't get you the sex urge must.

ALICE Did you call me, Ma'am?

ROSEMARY Yes, my feet are cold. You're cold? It's your job to keep warm; I might need you.

* * *

PRIEST (*alone*) He's a fool of course. But you can never be sure with these fads. Who would have thought that tomb robbing would become so popular? And so respectable – even aristocrats engage on it; very scientific of course; Lord Carnarvon, like his scientific cover Howard Carter, defied the Curse of the Pharaohs. But the curse still exists to keep these interlopers on the hop. How Moriarty would laugh! I must be going to sleep – what's Moriarty got to do with it? Oh yes, I know – 'Curst be he who disturbs my bones.' Shakespeare? Did he write that doggerel? Who is to say that psychoanalytic shamans, frauds and humbugs have not some dangerous truth concealed in the humbug? Whether to take arms against the sea of troubles with the poet and by opposing end them; or be ended by them like the omnipotence of Canute, ended by his own scientific addiction? Shall I take up with psychoanalysis and the scientific method, or with psychoanalysis and religion? Really it's unending. Only yesterday I was having to decide between Bernard de Sahagun, Montezuma and the Pope. It went on and on till by the time I had persuaded the Supreme Court – in the name of religious tolerance for Heaven's sake! – to legalize our Aztec communion wine, human sacrifice (which was so

picturesque and amusing) was in eclipse. I remember it was amusing to see Palinurus so completely fooled, and his boss Aeneas likewise, that the fleet came near to being wrecked by the Sirens and their rocks. Horace, although he claimed to have escaped, must have been nearly drowned by Pyrrha. He did not fail to hang up his dripping weeds as a tribute to God. The 'scientific black-guards', as Santayana called them, failed to recognize the significance of the costumery painted on the wall of the tomb of my follower in Tarquinia. God works in a mysterious way his wonders to perform. This psychoanalyst here – who would guess that he of all people should retain enough modesty to respect, even be awed by, God? The glory of the God of psychoanalysis is declared by the fearsome, inartistic architecture of Cinematic grandeur! All that stuff of Queen Shub-ad – I told her she *could* take it with her to the tomb and she did. Will you? won't you? will you? won't you join the dance of Death? Archbishop Havelock Ellis, and his forerunner and prophet Krafft-Ebing, wrote a piece about it. How impressed they were by their discoveries, and how their discoveries impressed school children! But am I impressed? Perhaps; but it may be unrealistic to imagine that anyone living so near what he serves would be impressed. 'The Heavens declare the glory of God'; but the Krakatoa committee of the Royal Society of the death pit at Ur did not understand the language in which they clothed the glory they had felt. Who knows? 'Ils gisent la sans voix . . .' sans everything. We are too minute to contain grandeur. The meek shall inherit the earth, so perhaps the microbes, waiting in the wings to devour the flesh that a bountiful God will provide for them, are ready for the call to take over the earth.

I do not know or feel impelled to revere the matrix, DNA, helix from which God is preparing to emerge. It is curious that we do not worship the stone from which the Michelangelo will call us out. We priests have been opposed to stone images; even the stones we call precious are deprecated as objects of adoration. Why? The mistress of this house sees herself as an object of adoration in the setting taken from the 'maid' – whom she dispossessed. She is engaged in dispossessing Man, who has himself participated in gaining possession of the 'jewel' set in the precious sea. What is that but another 'stone'? Is this psychoanalyst any more than a tomb robber about to stage a grand 'resurrection' with a Vatican in which another vicar is to display his effulgence? I had better ask him when I see him next. I could

confront him at our next kitchen meeting – Rosemary permitting. The probability is that he would not know or – hullo – here we are! – or are we here? If so, where? Must be going to sleep . . .

The skivvy here – Alice, they call her – important once – had important relatives like the Trojan women before Troy fell. Alice was the mistress once – not bad-looking now. I caught her blubbing about something – she said it was a cold – as if I care – or anyone else . . . It's the job of the down-trodden to be miserable. I'll ask the P.A. what he thinks; I expect he'll say he cures them. How? How do you cure the rich? I wonder if he has an answer to Shakespeare's question about the diseased mind – he's sure to say something like 'get married', or 'go on a cruise'. *My* answer? Get rich – on the winning side. Funny how none of these people sees how important the winning religion is. Queen Shub-ad thought she was going to an improved life; she would have been surprised – and the rest of the Court too – to discover that they were to become Museum Exhibits and the Priests, Curators! . . . must tell Rosemary never to allow anyone to cremate her if she wants everlasting life. Horace's recipe was to find a poet and then, like Lollius, be pickled for ever – stuck in a chunk of immortal verse like a fly in resin. Shaw hoped Doughty-wise progress would achieve for him a place in the halls of literary fame. Seven pillars of whizdom come in Urth as in the rubbish dump in Zig-ur-wrath to come. It's becoming what passes for light in this somnus-forsaken house, and Lethe-wards had sunk. It spreads aloft but not below if the nectar doesn't flow. Come in Alice, come in. Take off those ghastly rags.

ALICE No.

PRIEST Yes – or I'll rip them off.

ALICE Don't! Look – I'll have to darn that.

PRIEST I don't give a darn – take that stuff off!

ALICE No. I'll call the . . . call the . . . (*Weeps.*)

11

PRIEST Where's the P.A.? I've had a horrible dream. God! I've forgotten it already!

P.A. It's not a dream. We are just going to start our weekly meeting.

PRIEST How did I get here then? Have I been walking in my sleep? It feels a bit like that. (*To Alice*) You have torn your dress, haven't you?

ALICE Where? So I have. More darning. *She* is very particular.

ROSEMARY I don't care in the least – so long as you are neatly turned out when I want you.

ALICE That's what I meant; I didn't mean –

ROSEMARY That will do. Go and darn it.

ALICE (*submissively*) Yes, Miss.

MAN Don't let her be insolent, darling. Dismiss her if she argues.

ROSEMARY She won't argue with *me.* Well, who's going to start?

PRIEST I wanted to ask P.A. something, but I have forgotten it . . . Rosemary . . . forget it! Who's next?

ROLAND I was thinking about Man's chocolate bars. Would you think them much use in war?

MAN Of course, most powerful in war. In peace people don't know how to use them. The division which was supposed to be defending this area surrendered without firing a shot.

ROLAND That was because it was starving and its commander knew that the rest of your army had landed in overwhelming force. You could hardly claim that to the credit of your chocolate bars.

MAN I do; not a particularly brilliant example, of course, but if

our commander hadn't used that weapon we would have had endless trouble. Our mistress, Rosemary, is brilliant.

ROLAND She didn't have command of your hordes; she depended on their victory.

MAN When your lot had surrendered she knew how to *use* our victory. Brilliant, I call it. You saw how she just sent her mistress out of the room to smarten herself up.

ROBIN She has *you* where she wants you too.

MAN It is possible.

ROSEMARY I spent years learning to do much with little. Alice will learn – the hard way – after I have finished with her. Pity she hasn't got a brat as my Mum had, but I expect Tom or Priest will see to that.

ROBIN You are a bit coarse aren't you?

ROSEMARY No – realistic. I don't bear her any ill will; she can come for my cast-offs when I have done with them.

ROBIN Your cast-off man too?

ROSEMARY (*angrily*) I wouldn't go out of my way to keep any trash I've had hanging round me.

ROBIN Does that include Alice?

ROSEMARY Alice is right where she is – while I am satisfied. When I'm not she will have to go. Where? Where did my Mum have to go? I don't know or care. At present she's quite pretty; what you men are good for I've no idea.

ROBIN We had to fight.

ROSEMARY You had to win and that you failed to do.

ROBIN We can still try.

MAN I doubt it – and don't forget I am taking great risks allowing these meetings which Rosemary encourages.

ROBIN Who could know?

ROSEMARY You, Robin, the P.A., Priest – even Alice. Tell lies and you don't even have to spy.

ROBIN You're right. You put ideas in my head!

ROSEMARY Be careful what you do with those ideas. I had to keep my mouth shut –

ROLAND In free England? Nonsense!

ROSEMARY Free England?! Roland, you must be a fool.

P.A. Being aware of facts has, I am sure, had an effect on me

analogous to that of food on my physique. The experience is 'like' being changed – as one ultimately feels changed if one survives.

ROSEMARY That begs the question. Priest believes one survives even after death; don't you?

PRIEST Survival after death is a belief which has undergone many transformations. May I ask to which belief you refer?

ROLAND Alice has changed since she became a servant in her own house. Rosemary has changed since she became the mistress here.

PRIEST Alice worships Rosemary; I have known many women who have been god to other women. In Ur of the Chaldees –

ROLAND You are surely not going to maintain that in those barbarous days there was a standard *we* should emulate?

PRIEST *Those* barbarous days? I have lived through many civilizations, yet I wonder if I shall survive this. I daresay there is some saving quality even in today's barbarism – 'civilization', you'd call it.

ROBIN I don't call the 'saving quality' civilization.

MAN You are prejudiced since I and a couple of my friends used you for shooting practice. We only ringed you with heavy-calibre bullets – they weren't explosive. *And* we weren't incompetent.

ROSEMARY (*to Priest*) What about God? You were saying . . . ?

PRIEST I wondered why Robin and Roland imagine religion or culture were backward in those days. I have always believed in God and I have always worn the costume appropriate to the prevailing fashions.

ROLAND In my school days we sang a song about the Vicar of Bray.

ROBIN So did we; I thought it stupid and not half so funny as the author seemed to think.

PRIEST It wasn't funny and it was certainly stupid. As I began to be aware of God's consistency and constancy I tried to be constant and consistent myself. I would lack respect for my contemporaries if I stuck rigidly to one appearance when fashions had changed. I should feel I was disturbing the peace; so I wear the prevalent –

ROLAND – religion! This is the most frank concession I have ever heard.

PRIEST You are too hasty, my friend. I do not consider that these 'vestments' are religion.

P.A. It may be easy for you, who seem to have some gift of

immortality, to know religion from within. I and my friends here have to do arduous and austere labours before we can appreciate what seems to you to be so simple. The very skill with which the great artist makes something clear may mislead the reader. Virgil's eclogues, particularly the Fourth, have been interpreted in the light of subsequent events to foretell the birth of Christ. Yet it seems more likely to refer to Augustus Caesar's heir. When I was a small boy I used to think Palinurus was treated outrageously by Somnus; it did not occur to me that Virgil might *believe* that God could behave as Somnus did.

PRIEST 'Not cricket!' in short. You must have found it difficult to believe that God was not as serious about cricket as you were.

P.A. I loathed the game, but some have adored it and 'worshipped' the god who was captain of the school team. That I think is natural – at the time. Our problem arises not because these ideas are wicked or wrong, but because they are active achronically and are the fount of action. Therefore we think it advisable to display the 'god' in whom the person believes; it may make it possible, by comparison with other ideas, to moderate the force of the primeval fount.

ROLAND How do you know that you do not, by exposing such an idea, render it still more powerful? Or conversely, undermine faith in God?

P.A. Alas! We cannot be sure that the individual does not in fact use the analytic experience in just that way.

ROBIN So you admit that psychoanalysis can do harm?

P.A. It does neither harm nor good; but the person may use the experience for whatever purpose he will. After all, if a surgeon heals a thief or murderer he makes them more efficient, but not more moral.

ROLAND Nobody expects him to do so.

P.A. Believe me they do! The analyst is often held responsible for the behaviour of a man or woman who has at some time been to a psychoanalyst.

PRIEST We have the same difficulty with religious people.

P.A. Do you help your believers to see what kind of god they follow? Or do you assure them that they are good people who are supporting the true God?

PRIEST Of course we try to show them what gods they follow. People try to serve both God and Mammon.

P.A. Has it any effect?

PRIEST In the course of the centuries, yes.

P.A. 'In the course of centuries'? There may not be centuries available. That is why we regard analytic procedure as essential if people are to understand what beliefs they hold and by which they are held.

PRIEST Do you find they understand – more quickly?

P.A. Sometimes I think they do, but not often. Nevertheless psychoanalysis enables the psychoanalyst to learn something and even to pass it on. There are occasions when a resistance is surmounted with astounding speed; a number of facts display their relationship for the first time. It is almost a revelation.

PRIEST You use a term which is part of our technical equipment.

P.A. I thought you would notice that. I wish we could make clear both the verbal fact you mention and the psychic reality to which it corresponds. The concentration of meaning would require the concision which can be achieved in music or painting, but would my analysand undergo the work necessary to understand if I could achieve such precision? Audiences rarely listen to music or look at pictures; still less do they think it worth while listening to what an analyst says.

PRIEST These difficulties have been familiar to the religious for many centuries. Music, painting, poetry, vestments gorgeous and austere – all have been used as auxiliaries.

P.A. I have found that the auxiliary can easily be transferred by the receptor from the periphery to the centre. Messages intended to convey profound truth – *The Iliad, The Aeneid, Paradise Lost*, *The Divine Comedy* – have all in turn become famous as gorgeous settings for the precious 'stone' which is outshone by its attendant splendour. Krishna warned Arjuna that he might not be able to survive the revelation of the godhead which he, Krishna, was prepared to vouchsafe. Dante has only rarely found a reader able to discern the vision to which he points in Canto XXXI of the *Paradiso*. Milton's mind was over-shadowed by a doubt whether he could pass beyond the 'evil days' on which he had fallen; it was indeed his tragedy.

PRIEST The most profound expression of despair known to us was, 'Why has thou forsaken me?'

P.A. This discovery is one which all are afraid to make. A theory that the human animal is not going to call on God to do for him what he must do for himself in loneliness and despair cannot be

formulated; any formulation is a substitute for that which cannot be substituted.

ROLAND Do you suggest that *that* psychoanalytic interpretation is the explanation of Christ's reported call on the Cross?

P.A. You show that I have failed to make it clear that I attach the utmost importance, in the practice of analysis, to the presence of analyst and analysand at the same time and in the same place in conditions in which the consciously discernible facts are available to both people. These are the *minimum* conditions, not the maximum. Only *then* does psychoanalysis become an activity open to the two participants. You suggest that I am making a statement about events reported to have taken place almost two thousand years ago; if you believe that to be the gist of my remarks, what might you not say about my opinions when I am not present to defend them?

ROBIN I don't see why you are angry. Roland's mistake seems to me to be natural and understandable. I had not observed that he was misrepresenting you.

P.A. As I see the situation I would be lacking in proper feeling if I were not angry.

ROLAND That's your opinion.

P.A. That is what I said. Whose else should it be? Yours? Well, why not? I hope I am not doing anything to obstruct your freedom.

ROLAND Your answer is hostile and I can detect, even though you may not, impatience, sarcasm and irony in it too.

P.A. I shall not deny or confirm your observations; I think you want me to be so impressed by the facts that you observe, that I would not dare to make an interpretation at all.

ROSEMARY Like your interpretation of Man's holster.

P.A. I still think it would be wiser to interpret it as containing a gun than to accept his offer to interpret it as containing chocolate.

ROBIN & ROLAND So do we.

P.A. We have many facts available; if we interpret each one in isolation, the facts and the interpretations do not amount to much; taken together, the 'gist' can be interpreted. The Mathematical sum cannot be mathematically expressed, yet the 'gist' can be.

ROLAND What is your definition of 'gist'?

P.A. I have none, because a definition would add to an already overwhelming vocabulary of formulations that seem to be precise

where no precision exists. If you listened to my talking you could probably feel that the 'gist' of what I meant when I used the word 'gist' was a constant conjunction of your impressions. Your interpretation of my communications might be something you could formulate.

ROLAND Can you give me an example of something – an interpretation say – which expresses the 'gist' of an idea?

P.A. I was called to see a patient who was suspected of being 'schizophrenic'. As I approached his bed I was aware of a flurry of movement. When I reached his bed he had hidden himself beneath a blanket so that only one eye was visible. With this eye he observed me intently. He maintained silence for weeks – it may have been a month or more.

ROLAND Yes, but can't you give me the 'gist' of your definition? I don't want to be rude, but our time here is very limited.

P.A. That is why I said 'intently'. Sometimes, as in this instance, the gist of an experience may take a long time to grasp. An eye seen in isolation conveys nothing; seen for some weeks as I saw it, 'intently' is a fair summary of what I saw – the 'gist' of the experience. Psychoanalysis may convey the 'gist' of what two people are doing if both are satisfied that the name 'psychoanalysis' conveys enough meaning for immediate needs. But what I want to communicate to you would require other conditions and time which you will not spare.

ROLAND Go ahead then. What about your dotty patient?

ROBIN Have we time to discuss dotty patients?

ROSEMARY Yes, I'm interested.

ROLAND These aren't the days for pursuing interests.

ROSEMARY Not for you perhaps. When I was the servant here I never had time for anything that might have interested me. You can think yourself lucky that I allow you and the rest to participate when I am following my interest. Go on P.A. Alice – you may stay in case I want you; it may do you good.

P.A. One day, after I had given many interpretations apparently without effect, the man suddenly said, 'I want help'.

ROBIN I suppose you thought that was the result of your interpretations.

P.A. The only result that I *know* about was that I felt hopeless; the minimum conditions did not exist for psychoanalysis as I understood it and as I had been taught it. My faith in the interpretations was being eroded to a point where I could hardly summon up enough

interest to persist. But I reminded myself that my duty was to the patient.

ROLAND It sounds most laudable.

ROSEMARY Never mind him – go on P.A.

P.A. I wondered if my interpretations were some use after all. I suppose this showed for when I asked him what help he wanted he at once shut up. My heart sank; I felt I would have to go on for weeks, months, years, and then maybe he would repeat his remark.

ROLAND What about your definition? How many months before you get *that* out?

ROSEMARY Alice, I can see now what a terrible pair you and Roland were as master and mistress. Were all your governing class friends as bad as this? I prefer to have you where I want you.

MAN Shall I shoot him?

ROSEMARY No darling – not yet.

ROLAND Darling! My God – not yet!

ROBIN Did you hear that? Shoot chocolate bars!

MAN I didn't say I always wore chocolate bars.

ALICE Rosemary, don't –

ROSEMARY Alice, this is not a game. I want a servant who knows her place. That will do for to-night.

(*They disperse.*)

* * *

(*That night. Roland and Robin whispering.*)

ROLAND It's grim.

ROBIN We had better do him in.

ROLAND And then? We must plan ahead. Rosemary is a traitress.

ROBIN Not a traitress – a realist. Hullo! Who's this?

ROLAND I'm going to sleep on it.

ROBIN Who are you?

CLYTEMNESTRA If you had learned your lessons in that school of privilege where you and your fellow loafers made no use of the opportunities spread before you, you would not now be asking that question.

ROBIN I don't know what you are talking about –

CLYTEMNESTRA Don't dare to boast of it to me. A king once learned the unwisdom of believing that a mother could forgive a father's insufferable treachery in so easily sacrificing his daughter. I

had to wait, but I taught him what a mother's love was – maternal love turned to marital fidelity.

ROBIN You are just a bad dream.

CLYTEMNESTRA If you want to wake from it you had better be careful how you speak to me. I won't give you a chance to learn the lessons Agamemnon failed to learn. Don't you want to live?

ROBIN Not much – only long enough to display a father's love.

CLYTEMNESTRA A father's love! Why, you have not even learned of God the Father's love for his only begotten son. Your saints rotted your mind. You should have used it to think with – not to fool around on a cricket field.

ROBIN I didn't, you blood-stained bitch! Take your hands off my throat.

ROLAND Wake up you fool – what do you think you're doing?

ROBIN Sorry – must have been dreaming. It was frightful . . . a murderous woman . . . I think . . .

ROLAND Go to sleep. Rosemary has upset you. I'll settle her hash later.

ROBIN You didn't make her pregnant did you? The woman in the dream had some grouch about the classics – I think.

ROLAND Don't – it's bad for you. Go to sleep.

ROBIN What dreams may come?

ROLAND Shut up, Hamlet!

12

ROLAND Our weekly meeting again?

ROBIN You have been warned – by the boss. Sometimes I think my mind is going.

ROLAND I shouldn't worry too much about that – you haven't got one!

ROBIN I have the most frightful dreams. Last night I dreamed of wandering through a field of cowslips and the scent was heavenly. It grew dark; a woman clouted me behind the knees and made me drop to the ground because she had severed my muscles with a sharp axe; she said I ought to have known they were primroses. I asked where she had learned her classics, but she threatened another stroke with the axe. She said I ought to have known it was botany – not classics. What was classics? What was botany? That's just what I said. Didn't she know it was zoology, I wanted to ask, but she sliced off my left side with a limb I think. She seemed very absent minded.

ROLAND You've got Rosemary on the brain – sharp but not very sensitive. Sh! Here she is!

ROSEMARY What are you talking about?

ROLAND Robin was mentioning that he wasn't sleeping very well. I wondered if he was having bad dreams.

ROBIN I didn't remember any.

ROSEMARY Perhaps they weren't dreams. My dog sometimes yelps and his paws twitch as if he were having a dream – chasing rabbits perhaps. Do you think dogs dream?

ROLAND Of course they do.

ROSEMARY Do you think they think? But here are the experts. (*To Priest*) Do dogs have immortal souls? If not, why not?

PRIEST We used to regard them as unclean animals.

ROSEMARY Couldn't they be washed in the blood of the lamb? Or are lambs unclean beasts? What do you say, P.A.?

P.A. This is not really my department; I am only concerned with the way individuals think. Whether they are right to think or not is the concern of people who know the facts.

PRIEST You surprise me. Surely it is a matter which concerns you if a man comes to you because he thinks he has a bird's claw and not a hand.

P.A. It concerns me that he *thinks* so. It concerns me that you think you have a hand and assume that a baby has a hand. But I rely on embryologists who tell me that the flesh and bony structure called a hand was not always like that, but is a transformation of a mass of cartilage and fat which it was in infancy. Falling back on my present-day knowledge as a doctor I assume that I can safely compare the one statement with another and use my anatomical and physiological ideas as a standard or norm. If a man says he has an eagle's claw where I think he has a hand, I may wonder why he has one idea rather than another. He is free to think he has a claw and to go to see an ornithologist or a physician or surgeon; that is *his* concern. It is my concern if he says that he has an *idea* that he has a claw and also believes it is a hand. If he wishes, I am prepared to discuss these conflicting ideas which cause him discomfort.

PRIEST Have you no qualms? No misgivings?

P.A. Many. They are 'facts' with which I am familiar: I am familiar with doubt and some philosophical theories about doubts. I know what it is to say, 'I do not know', or, 'I am uncertain', and to find someone even less qualified than I ready and eager to claim 'certainty' and to be received with enthusiasm. In the practice of psychoanalysis it is common to meet with those who say it is rubbish and proclaim knowledge of the truth. You and others who think like you often claim Divine support for their view.

PRIEST You and others who think like you often claim scientific authority for *their* view – sometimes in direct opposition to a religious view that there is a God.

P.A. Perhaps the resemblance that your experience bears to mine springs from the fact that both schools of thought are supported by mere human beings. A 'scientific view' only means one which claims loyalty to truth.

PRIEST Similarly, loyalty to God should be indistinguishable from loyalty to truth.

P.A. 'Should be' – so easily said; so difficult to practise. Man was offering just now to shoot Roland and Robin in the service of our hostess – Beauty, as I may not inaccurately call her.

ROSEMARY Damned fool!

PRIEST Is that a religious or scientific expression? A poet once said, 'Beauty is truth, truth Beauty'. Many disciplines claim allegiance. 'Ay, in the catalogue ye go for men.' Many gods have been put forward as worthy of the devotion of mankind.

P.A. Perhaps I may claim the Licence of a Fool in the court of Beauty.

ROLAND Look out! You'll qualify for Man's bullet!

ROSEMARY I have told him he is *not* to shoot – yet!

P.A. Thank you – so far. I think that the devotees of Art, Science and Religion are agreed in principle. Whichever one of the main divisions of humanity claims our adherence, we claim to follow truth. In principle – agreement. In practice – the particular, the precise – disagreement. The 'individual' often conflicts with the general. He may seek membership of the group or category of discipline because he wishes to seek shelter, as Freud said, under the cover of a famous and prestigious name. In time no doubt the fraud will declare itself, but it may then be too late. For example, Man may terminate the discussion with murder – perhaps I should say 'shooting', not murder.

MAN You had better.

PRIEST Surely you are threatening him!

MAN I don't need to – and indeed I am surprised at my moderation.

P.A. You do not need to be – when you are armed with a gun and with the 'authority' it confers. I have long been aware of my vulnerability even when power was in the hands of men and women of my own group.

PRIEST I wouldn't minimize my danger at any time. My changes of allegiance have been likened to those of the Vicar of Bray because I do not put my trust in a god that conforms to human rules of permanence and stability. I do mistrust the impermanence and instability of whoever and whatever is the current fashion in gods. I do not know the 'language' in which they should be dressed or addressed. Even

Milton confessed an inability to find some phrase by which, 'without blame', he could Hail the Heavenly Light.

P.A. You claim experience not only of your feeling but of some 'source' which is outside and independent of you. Although I have no such experience I do claim to detect in myself, and sometimes in others, sources that do not require any arcane or esoteric reality such as I understand you to mean by 'God'.

PRIEST To say, 'what I mean', is an adequate phrase when it is employed, as here, in discussion about God. But it is not adequate to the religious experience itself. There is no scientific or aesthetic or even religious experience which can provide any human with a method of address to God. *That* reality, the Godhead, has to provide the approach to Himself which the individual must use.

P.A. I am concerned with the human mind or personality; in that domain I can only, with some difficulty, formulate descriptions of objects which are comprehensible in terms employed at various times during the individual life. It is not inappropriate to say that a small boy 'worships' some hero of the playing fields, or that an adult 'worships' golf, bridge, the stock market, or some article of food or drink.

PRIEST That can easily be seen to be false.

P.A. Not easily at all; it may require years to achieve even this limited aim.

PRIEST But don't you think that when you have demonstrated all the multitudes of 'false gods', there may yet be discernible 'God' that is not false?

P.A. Certainly. I have no difficulty in accepting that such a possibility could exist. But as far as my limited capacity enables me to achieve the truth, I have not experienced the reality of which you speak. I remember my mother asking my father if he had ever experienced what a poet said – 'Sometimes a light surprises the Christian while he sings' – and his reply, after a moment of thought, that he had not. I remember the sudden onset of tropical night, the lamp-lit room and the frighteningly solemn and incomprehensible conversation. Why were they sad? Experience has not answered.

PRIEST Your instinct was right in supposing it was 'about' God, but that it was not God.

ROSEMARY Bedtime; Alice, bring me my milk.

13

In the attic. Robin and Roland whispering.

ROLAND If we don't do Man in, he will do us in. You heard him ask Rosemary, 'shall I shoot him?' Completely cold-blooded. We might have been vermin – and he meant it.

ROBIN So what? Of course he would have done it. And if *we* shoot *him*, what do you think would happen next? We should be killed.

ROLAND I know that, but we would have taken one of the swine with us. It would be no worse than living as we are.

ROBIN Nor better. We mustn't be premature; we must plan.

ROLAND Lucky we don't give a damn for them. Let's talk again later. In the meantime we can think.

ROBIN They can't bug our minds. What about P.A.? Or Priest?

ROLAND P.A.'s a gas bag; and Priest's no good till someone wants to know who has won – he'll be on the winning side.

ROBIN There won't be one. Good night; they have won already.

ROLAND They have won. I have not lost – yet. Sleep, but not too well.

* * *

(In Rosemary's room. Rosemary kicks off her shoes and watches complacently while Alice picks them up and puts them together on the rack.)

ROSEMARY I think Man will shoot Robin and Roland. Do you mind?

ALICE Well, no, I suppose not, but –

ROSEMARY But what?

ALICE I can't help thinking sometimes of when we were married.

ROSEMARY Of course I feel sorry for them, but when I think of the old days I loathe the memory. I like it this way. I'm glad you and your crowd can't possibly get the upper hand now. I admit I wouldn't like to see them shot – not to watch it.

ALICE He might make you watch. I don't put it past him if he thought we loved them.

ROSEMARY He might think you did. That's why he asked me if I would like them shot. Anyhow, you may go now. (*Coldly formal*) Good-night.

14

ROBIN Here we are again.

P.A. We haven't carried further the discussion about doubt, especially as opposed by adherents of the virtues of certainty.

PRIEST I see Roland shaking his head. Have we exhausted its interest?

ROLAND I *am* interested, but the present position in which we find ourselves doesn't seem to demand discussion. Man, though he has claimed to be a supporter of the chocolate bar approach, spoke at our last meeting of the merits of shooting. How do you discuss with a gun?

P.A. War is a change from the debating chamber to the field of battle where a gun is only an instrument. The instrument is of no consequence – the motive force or person is.

ROLAND Too true. In fact the motive force is Man and the lady to whom we are indebted for permission to use this room.

ROSEMARY I am glad to do what I can, but I do not pretend to enjoy your sarcasm, Roland.

ROBIN (*aside to Roland*) Pipe down.

ROLAND I was not aware of being sarcastic.

ALICE Whether you are aware or not doesn't matter so much as what Rosemary *feels* aware of. If she feels you are rude –

ROBIN *She* will press the trigger.

ROLAND I shall not dream of letting my thoughts wander.

P.A. But you cannot explore, literally or metaphorically, if you cannot stray from the beaten track.

MAN Surely it matters who has beaten the track and to what areas you are meaning to stray.

ROLAND Such as?

MAN You might be proposing to explore the possibilities of violence. You and Robin may be considering murder.

ROLAND Where on earth do you suppose Robin or I could get the idea of shooting anyone?

ROBIN (*uneasily*) Aren't you being a bit provocative?

ROSEMARY (*pointing her toe and admiring her ankle*) Alice, you haven't cleaned my shoes properly. Do them again.

ALICE (*obediently*) Yes, Ma'am.

ROBIN (*to no one in particular*) That brings it home to you how things have changed.

ROLAND It is wonderful how much one can learn – even shooting; metaphorically of course.

ROSEMARY No whispering! What are you two muttering about?

ROLAND I was saying it is wonderful how much one can learn – literally of course.

P.A. It is impressive. As Anatole France said about honesty, integrity and wisdom, only bigotry and ignorance are more powerful.

ROSEMARY I have been thoroughly educated – whether 'well' or not.

MAN I feel I have learnt something; I have some experience of seduction and intimidation.

P.A. The active principle of both is the stimulation of one part of a personality against another.

ROLAND Or one section of a community against another.

P.A. It leaves open the question as to where the victory will fall. I suppose that is the crunch in any decision. It looks as if the person or thing that announces the theme for action is not as powerful as the executive who transforms the idea into fact – the sovereign power in a group is one name for it. But what is the sovereign power?

ROSEMARY That can only be decided by practice and in particular circumstances. Here it might be Greed.

ROBIN Or perhaps war or murder.

P.A. Or a state of want or starvation. Péguy, discussing the French summary of Liberty, Fraternity and Equality, considered equality to be of a lower order of precedence vis-à-vis liberty and fraternity.

ROLAND Of course we are all equal here.

P.A. We have the opportunity to mobilize the impressions of several people, not just one; to bring to bear several different powers of discrimination to assess what information our senses glean.

ROBIN Assuming, of course, that the judgement of the individual is not vitiated by the presence of the rest of the group. In that case the combined wisdom of the group could be less than that of the individual members composing it.

P.A. Unless the experience of the group promotes growth of health and strength of the individuals. Perhaps these group meetings might have that developmental generative force.

ROLAND Or they might simply generate jargon. How can you be sure that each individual does not contribute to the riotous and undisciplined proliferation of cells – like a cancer?

P.A. If we could go on with the experience here, we might see what stimulates growth and what structure the growth displays.

ROLAND I do not feel optimistic about the nature of the productions of this group: two members of a defeated army, one member of a force successfully mobilized to destroy a nation, a woman from a subjected class – I refer to Alice – a priest representative of a discredited discipline –

PRIEST I might be thought to represent a discredited hierarchy confused with religion itself; or to be a verbal representation of a force which has never yet been subjected.

ROLAND Which of your many religions are you referring to? I thought you prided yourself on being a sort of Vicar of Bray.

ALICE You are wrong, Roland. I may, as you think, be subjected; Rosemary may be exalted. But this does not represent the truth about womanhood –

PRIEST Or religion. I have not claimed devotion to any one of the polymorph collection of human or saurian 'religions', but I am devoted to religion even if I misrepresent the reality to which I am devoted.

ROLAND I'm sorry – I must be stupid.

P.A. That is a *mis*-representation liable to generate *mis*-understanding.

ROSEMARY I don't think so; 'stupid' is adequate as a descriptive term for Roland.

MAN I would prefer 'bloody-minded'.

ROBIN That comes well from you who have suggested murder in an actual meeting of our group.

P.A. He may be giving evidence of the change of which he said he was aware and attributed to the group.

PRIEST I think he is displaying change, but I do not attribute it to the group.

ROLAND I think you are meaning God – vox populi, vox Dei.

ROSEMARY Are you changing too? If so, I shall have to reconsider my statement that you were stupid.

SHERLOCK Don't. 'Stupid' is the right word.

MORIARTY I thought I recognized one of my flock – stupid, criminal and a figment of the imagination.

WATSON Poor Roland! *I* am usually dismissed as stupid and imaginary. What says Alice? Will you answer for 'womanhood'? Do you think you are a real woman?

ALICE I know Roland too well. He *has* changed, though he is still like the husband I knew – ghastly!

ROLAND Was I really as bad as that?

ALICE Worse – far worse. You are in fact a fictitious and flattering version of the blackguard you were.

WATSON Those are strong terms.

ROSEMARY Rubbish. I know Roland and I don't think Man's suggestion of shooting him at all inappropriate.

ROLAND My God! What collection of Hell Cats have I stirred up?

PRIEST No doubt the God on whom you have called will answer your question.

P.A. I think the language you are using is inadequate. The vast vocabulary of psychoanalysis affords me no better choice. I doubt anything could be adequate; the conjunction of opinions is not referable to the thing-in-itself, the ultimate reality, the *real* Roland – even one real aspect of the real Roland.

ROLAND P.A. seems sure about himself.

SHERLOCK He reminds me of my brother Mycroft, but not so bright or as ornamental. I may be prejudiced as we are members of the same family.

P.A. Which family? Your Mother's, or one of the children of Imagination?

ALICE Imagination is a vicious old bitch; she used to torture me in my childhood.

ROLAND Very affecting reminiscence. I think your resemblance to her would be apparent anywhere!

ROSEMARY Roland, you have not improved.

ROLAND And whose fault is that?

ALICE & ROSEMARY Hopeless!

MAN Shall I shoot?

ROSEMARY No; not yet.

PRIEST Maybe a spell in Purgatory would do him good. It is often growth-promoting.

P.A. It may promote cancerous proliferation.

PRIEST Of course; the religious domain with which I am most familiar has produced or aided in the growth of some of the most malignant specimens I have ever known. Charming too – rosy-cheeked, cricket-loving. I recall one in particular; the last time I saw him he was padre to a battalion at Ypres.

P.A. I knew him. His bonhomie grew flat towards the end.

(*Robin and Roland remain dimly visible; the rest are gradually enveloped in obscurity, dark and deep.*)

ROLAND Shooting would be too good for him and too noisy for us. Rat poison used to be kept in the medicine chest. It is, after all, a kind of medicine.

ROBIN Arsenic preserves the evidence of the crime. So does tannic acid.

ROLAND We don't need to consider the disposal of the remains till we have some to dispose of.

ROBIN Oh yes we do. I don't want to dispose of myself as well as him. So we must consider how we get rid of him.

ROLAND Get rid of him first, say I.

ROBIN Don't be a fool. You say I'm too cautious; *you* are too precipitate.

ROLAND What about the women? That skivvy is clearly a force to reckon with. Anyone who can become boss as she has done –

ROBIN Is she a traitor or a potential tool?

ROLAND That is hard to say. I wouldn't like to go to her for help. Sex is an unpredictable force.

P.A. May I join in? Freud suggested that the human race was a complex construction for providing the germ plasm with a means of locomotion.

ROLAND Let's talk about it later – it's an idea. It is getting lighter and noisier – do I hear voices?

PRIEST Why not discuss it with the rest of the group? They are the ones I hear. Or are they? I see a puissant and a mighty nation mewing its youth.

ROBIN What's the time? My watch doesn't mark the centuries – only hours.

P.A. Mine only marks fifties. What about yours?

PRIEST Mine marks centuries, but only on geometric scale. We need universal or extra-galactic time.

ROLAND Only seasonal I fear; 'thus with the year seasons return'.

ROSEMARY I have a lady's watch which Alice gave me. It marks beauty – the kind that's in the eye of the beholder.

PRIEST Mine is for spiritual beauty beheld by God.

ROBIN Masculine too, I understand.

ROLAND Only as seen by men.

ALICE A cup of tea, Ma'am?

P.A. One more scale – ali-metric, the human animal's alimentary canal. There would seem to be a number of different times from alimetric, geo-metric, stella-metric, galacto-metric, to extra-galacto-metric. Hitherto we have resorted to geo-metric scales but it is now becoming obvious that they are inadequate for the purposes for which we require them.

ROBIN That would be an explanation for experiences of the inappropriate such as pain that is incommensurate with the physical importance of the physical injury.

PRIEST Would you say that intense pain in your gastro-intestinal system was telling you, 'time for dinner'?

ROBIN It would tell me it was time to stop eating.

P.A. The body language needs interpretation – time to stop eating or simply 'the time'? If the latter, 'time' for what? Alimentary or medical activity? Like hieroglyphic script, it has this peculiarity of polymorphy or poly-valence. What about a term like 'polymorphous-perverse'?

ROLAND Well, what about it? You should know!

P.A. 'You should know' seems to be an intrusion from outside the system of human knowledge. I feel it doesn't 'belong', as a comet might not be regarded as intra-galactic. It may belong to the human psyche; Freud discovered many intrusions from the domain he called 'unconscious'. Although I need look no further than the human unconscious for this intruder, I think it would be unwise or bigoted to rule out the possibility of intrusion from a domain of which we know nothing.

PRIEST I think psychoanalysts are presumptuous and bigoted to exclude a Godhead.

MORIARTY Godhead! Another figment of the imagination.

WATSON I don't see why you scoff at figments of the imagination; for all you know the greatest power of all is indistinguishable from one of us.

MAN I believe in God anyway; I have evidence of his goodness.

ROLAND I believe in the Devil; I have evidence of his cruelty and wickedness.

P.A. I differ. Evidence is a function of the senses; that cannot lead logically to the 'truth' of God – only to the truth of the reality that is *not* God.

SHERLOCK Good! I have already said we figments of the imagination are far more 'real' than your dim and shadowy realities. Can you imagine anything more impossible to believe in than my creator Conan Doyle? Fantastic!

MYCROFT Well done! But aren't you being rather triumphant? A kind of Frankenstein Monster?

SHERLOCK Well, aren't you triumphing over me? Can you tell me who or what created the Monster? Who was Frankenstein? The Monster is alleged to have killed Frankenstein.

P.A. The death instinct killed Eros; the same instinct is inseparable from birth. Birth and death refer to directions of the activity.

ROLAND Somebody – Man has already said it – is going to get shot.

ROBIN Something is going to be born that 'commends the ingredients of the poisoned chalice to our own lips'. Initiation initiates definition.

P.A. What an ugly monster it is – always proliferating. Massacring the infants was an ineffectual precaution and now it is too late to murder thought or thinker. A thought without a thinker is certain to pro-voke a thinker to father it sooner or later. What saurian engendered thought? Is there not a danger that someone will give birth to thought, or even miss out the intervening barrier between thought and action and give immediate expression to robbery and murder – the two unacknowledged parents through whom innocence and sin came into the world.

PRIEST I doubt it. Your view is coloured, almost dictated, by the

laws of your kind of communication. The unknown thoughts require a poet, like the heroes still dwelling in everlasting night of whom Horace spoke.

P.A. The poet is more likely to disappear into the unknown night than to save his Eurydice. In psychoanalytic language of a sophisticated 'level', the unconscious would overwhelm the conscious, the contained would be lost inside its container, the blood would be lost in the capillaries, the living person or thing would bleed to death in its tissues, the rational would be lost in the irrational, the –

ROLAND Oh, for heaven's sake!

ROBIN Yes, I get the idea – you haven't got to repeat it.

PRIEST Hosea is swallowed in wantonness, chastity lost in harlotry –

SHERLOCK What! You too?

HIAWATHA I can claim no special merit just for doing what is known to be so easy –

WATSON Holmes, you complained after a brilliant piece of detection that I, like everyone else, believed the discovery must have been very easy – *after* you had explained it.

P.A. Freud wrote an outline of psychoanalysis when he was eighty-two; this 'Outline' seemed simple and therefore easy. So it is – for anyone who has spent the previous eighty-two years doing the work. The good mother, of whatever sex, ultimately qualifies to be vulnerable to loss. The product becomes capable of independent existence; the mammal does not 'need' the saurian; The human animal becomes redundant and is replaced by its successor. Where is the new idea to enable us to lead Moloch to join his praise and adulation to that of the proud and happy parents?

MYCROFT 'As the Saurian lay a-thynkynge, a-thynkynge, a thynkynge, Prettily lay the thought in its shell of saurian brain'.

MORIARTY My progenitor lay concealed in Paradise. The person best qualified by temperament and aesthetic skill unfortunately squandered his powers by hailing holy light. Despite the fact that he expressed the logical confusion into which he was getting, he did not cut the Gordian knot by directly hailing devilish darkness 'of confusion and blackest midnight born' – a great pity. One cannot fail to mourn the loss to lies, deceptions, evasions by his unfortunate defection. The greatest disseminator of culture has always been the thief and robber; he has put down the mighty and over-gifted and

wise, and exalted the humble and meek and intensely viable sinner. To whom do we look for progress? The wise? The Good? The beautiful? Perish the thought! Even Mycroft owes his chief merit to sloth.

> Hail ignoble sloth and leave ornithology
> to the birds and other angelic monstrosities
> Blithe thou never Overt. Hail! I say, sordid
> Spirit – gin and bear it . . .

MYCROFT I had no idea that you were among the poets!

MORIARTY My *dear* Mycroft – have you never read 'Ruin Among the Lovers'? My favourite pastime.

MYCROFT You're drunk.

MORIARTY Me? Drunk? I never touch the stuff. I assist it to *circulate.* Smuggling, as another poet says, keeps the prices down; so it is best for the poor when the gentlemen go by. Who do you think made the mistress of this house available to the cow-man? Who gave the mistress of this house a chance to find her true calling? She would never have found for herself the joys of being a skivvy or being raped. Why, she even tried to stop Rosemary . . .

MYCROFT I certainly think she would do better than that fool Holmes – I doubt his taste in women – although she would not be anything like as effective as you, Madam, if *you* got on my track!

ROSEMARY Very seductive – but I am not a figment of the imagination.

MORIARTY I can see that you are the real thing.

P.A. Figments of the imagination are often more powerful than many real things; men and women are not so powerful as the idealized figures that other men and women have about them.

ROLAND If you mean figments of imagination, why not say so instead of calling them 'idealized figures'? Why don't you talk English instead of that barbarous jargon?

P.A. Because 'English' already has an established meaning; it is saturated with meaning. So I have to use words which are unsaturated to indicate that I am not referring to the preconception. Unfortunately the 'unsaturated' expression almost immediately becomes saturated jargon, as you call it – and I cannot help having to use what is thought to have the familiar meaning, or to be expressing a platitude, or to be meaningless, or to be throwing more light on the 'craziness' of the speaker than illuminating the darkness, or to be just 'poetic'.

ROBIN I begin to see why Milton used to bore me to tears – although it was better than maths.

ROSEMARY Or Latin.

ALICE '*Quantum mutatus ab illo Hectore qui redit exuvias indutus Achilli.*'

PRIEST Or '*Dies illa, dies irae, calamitatis et miseriae . . .*'

P.A. Or 'envy and gratitude'.

ROLAND I don't see anything remarkable about that.

P.A. There isn't anything more remarkable than there is about what you and Robin would say alone.

ROLAND Are you trying to say that we say or do things alone that we don't say or do in public?

(*It grows dark. All fade except Roland and Robin.*)

ROLAND Are you sure no one can hear or see?

ROBIN Of course not. In this attic at night we are safe.

ROLAND What do you think that bloody psychoanalyst meant?

ROBIN *You* are suspicious! Knowing what I know about P.A.'s you can be sure he, like the rest, has sex on the brain.

ROLAND I'm not so sure; I think he's a spy. Anyhow I don't want to be accused of sexual practices. This is as bad as my late lamented public school where they didn't have to go through long years of psychoanalysis to be told what two of us were up to if we were alone together in the dark.

ROBIN But we aren't two boys.

ROLAND And this is not free England in peace time. You heard what Man said about shooting; and that bitch Rosemary said –

ROBIN 'Not yet.' Death will come anyway. What of it? Those two aren't likely to be the people to decide. I might get pneumonia – very likely in this blasted hole. While looking out for one thing you can trip over something else and break your neck. Montesquieu said so years ago. A fellow trying to escape was captured in flight because his braces burst and he couldn't run holding his trousers up. If he hadn't been so fussy about sex he could have run without his trousers.

ROLAND You're as bad as P.A. What's this got to do with living in defeated England?

ROBIN Sex! I have an idea. This Man is sweet on Rosemary – how can we burst his braces?

ROLAND I don't know what you mean.

ROBIN You learnt less at school than I thought. Think it out – we'll discuss it further.

(*It grows darker. Only Robin is left.*)

ROBIN I wonder if I can trust Roland. He's stout-hearted but so stupid. So far he has kept his mouth shut; but he gave me away at Munden – not by saying something, but by coming. You'd think a countryman would know a lark doesn't land *at* its nest; it has the sense to know that sometimes it pays to walk. 'It is the lark that sings so out of tune. . .'Juliet was urging him to behave like a fool . . . It's an idea.

(*Fade-out still further.*)

ROBIN God! What's that?

ROLAND I wish you wouldn't start like that! You've woken me up. What's the matter?

ROBIN I must have been dreaming. I thought England, our two farms, had been taken over.

ROLAND That's not a dream. Wake up!

ROBIN I thought . . . What was it then?

ROLAND How should I know? *You* said it was a dream.

ROBIN You're being stupid. I remember – in the dream you *were* stupid.

ROLAND Oh, shut up and go to sleep. You'll wake the house if you go on like that.

ROBIN Am I to sleep or wake up? You are being idiotic. Oh, he's gone to sleep again. I think it's getting light. The appalling prospect of another day. Yet sometimes I wonder if it's any worse than it used to be, if I have forgotten what it was like. It's quite pleasant plotting how to murder that Man and his woman. No good plotting without practice . . . but would practice be pleasant?

15

ROSEMARY Alice, you can go now. Tell Roland to come up to me. (*Alice curtseys and goes out.*) That girl is becoming a nuisance; I must get rid of her. What will happen to her? How should I know and what do I care? Ah . . . come in and sit down, Roland; I want to talk to you.

ROLAND What do you want?

ROSEMARY I don't want you to get into bed with me, if that's what you are thinking. You once seemed to think that because I was a servant I would be honoured by your dishonourable intentions. What I want to talk about is Alice – I am not satisfied with her. I won't trouble you with the reasons, nor why I do not want her to suffer more than she has to. She does not realize what danger she is in. When I dismiss her – as I am going to – she will be without means of support. I can do nothing for her. Do you understand?

ROLAND She is nothing to do with me. You are thinking she is still my wife.

ROSEMARY I was not thinking any such thing. It is a long time since I thought she was your wife, or even concubine. (*Roland makes a sudden impatient gesture.*) Roland, this automatic is not loaded with chocolate, nor am I loaded with sweet feelings for you. I should regret it, but I shall shoot without hesitation.

ROLAND I know you have no feelings of concern for me, but –

ROSEMARY You are hopeless. I was about to tell you I have no feelings for Alice. You may go.

(*Roland goes out.*)

ROSEMARY It's getting lighter. Light or dark – what does it matter to me? Am I such a fool that I do not know Man's name? Menelaus, Cupid, Hector, Astyanax . . . But what of the night, the void, the infinite? And now, the marriage feast begun, will Poverty be

the bride? I saw the world when it was young and beautiful. I have only to close my eyes to see it again. And Man loves me, dotes on me. I am part of the spoils of war. Alice is part of the spoils of *my* war. Am *I* to mourn Adonis? Or Alice, or Roland – that bastard who thought he could get his skivvy cheap as spoils of the war waged by the upper classes of Britain? *Great* Britain they say! And now this murderous lout thinks he is going to pick up a conquered woman. He would be grovelling at my feet if I were not fussy about the kind of trash I collect on my shoes. I felt sorry for Alice, but when I remember that she married Roland I think she must be such a fool that I cannot be justified in pitying her. That's God's job – not mine. The priest, servant of God, acquired some sense in the last thousand years, rubbed off on him from Minerva. Helen of Troy – that's what they called me then. Before I was called Helen I was nameless, the unrecognized vegetation, the goddess of futility and vegetation from which the mammalian parasites sprang and on whom they still depend.

P.A. What of the micro-cellular plants – bacteria? Will they not feed on the rotting remains of the mammals when their brain children grow up and give birth to a light brighter than a thousand suns?

ROSEMARY I thought you believed in mind.

P.A. You could call it that. *I* call it that because I have to talk to human minds and I can't do that without believing they exist.

ROSEMARY Sometimes I almost think you are intelligent.

P.A. Alas! I am. You can't believe the trouble I've had with intelligence – mine and other people's. Intelligent people – Arjuna, Meister Eckhart, Jesus, Plato, Socrates, Aristotle, Saint Augustine and the rest – want to *know* God. They have been warned that, Icarus-like, they would singe their waxen wings and . . . *fall*.

ROSEMARY *You* don't know the trouble I've had with 'intelligence'; even sex is religious. Poor Minerva used to complain of the same thing.

MAN What about Beauty?

ROSEMARY Humans confuse beauty with religion and sex. Always worshipping women or sex or wine instead of God.

MORIARTY Ah! I wondered if you would stumble on the importance of a Figment of the Imagination. (I've told the printer to use capital letters as a sign of respect.) It's one of the things that Sherlock and I – and even poor old Watson – agree about. Only the greatest

human beings have been able to recognize these figments of imagination.

P.A. Jesus used to complain about the adulterous generation who were clamouring for a sign.

MORIARTY Satan, like William Blake but unlike the author of *Paradise Lost*, had the ability to see how he dominates the story.

P.A. That was hidden by the beauty of the verse.

ROBIN No, the beauty of Paradise Lost made the truth last long enough for someone to receive the message.

P.A. Don't you agree that the longevity with which those formulations were endowed was a consequence of beauty? Then work had to be done to recognize the truth.

ROBIN You are going round in circles.

P.A. 'Circles' are a poor visual image.

ROBIN Perhaps I should have said you are going round in a helix –

ROLAND And should have kept your mouth shut.

ROSEMARY Roland, I told you you could go.

P.A. You might as well talk to D.N.A.

ROBIN What's that?

P.A. Doubt, Nature, Art.

ROSEMARY Art, Nature, Decay. You've got the order wrong.

ROLAND I had to use my arts to prosper the crab-apple before it became an apple fit to eat; fit to be turned into natural manure.

P.A. As Confucius said, 'ground in the mortar of the mind'.

ROBIN My Latin master taught me Livy's parable of the members of the body; he never taught me what the parable meant, any more than Livy taught anybody its meaning.

P.A. What does Coma Berenices mean? It is hung in the sky large enough to be seen, yet its meaning is only in part visible to the astronomer – not the part visible to the poet – though once I knew an astronomer who saw both. Millions have had the wit to be terrified by comets.

ROBIN I understood that psychoanalysts were supposed to make profound interpretations.

(*General murmur of agreement with sarcastic overtones.*)

P.A. No more than astronomers viewing Coma Berenices are supposed to 'see' a country far beyond the star. It is common sense

to see nothing in Coma Berenices. You assume I am talking ordinary conversational English – nothing profound. Why then do you sound aggrieved? I had a patient who was a good mimic and used to sound just like a man engaging in a conversation. But it became clear that he couldn't understand a thing he or I said. Changes occurred when I interpreted his 'remarks' in light of Kleinian theories – notably those grouped together as *derived* from projective interpretation –

ROLAND Are you talking English now?

ROSEMARY Get out!

ROLAND Gladly.

MAN Shall I shoot?

ROSEMARY No. It's interesting. I don't use P.A.'s language, nor that of Priest. I use Alice.

P.A. I would say it is what anatomists and physiologists and possibly Freudian psychoanalysts would call 'sex'.

ROBIN I thought you would call yourself a Freudian psychoanalyst. Or are you a Kleinian?

P.A. I can recognize and would like to acknowledge my debt to Freud and to Melanie Klein, but they might be affronted by such attribution. I would acknowledge my debt to others, but I am aware that many would think such an acknowledgment more a liability than an asset; they would not wish to be thought my mental forebears. Nor do *I* wish to wear the plumage of the peacock when my true colours should be the feathers of the sparrow.

ROBIN Not even Lesbia's?

P.A. Your interjection sums up the dilemma beautifully.

ROSEMARY I don't know what you are talking about.

P.A. It would not become you to assume the garb of Andromache.

PRIEST What did Queen Mary whisper when she did not dare, in audible English, tell her admiring throngs to cheer?

ROBIN Something she had learned from her nautical husband I believe. Don't you want us to cheer?

P.A. No; cheers are interpreted.

ROBIN Always?

P.A. I interpret such evidence as my senses and my insight provide, but I am not impelled to make it public. In the practice of psychoanalysis I accept tacitly an obligation to try to make my analysand aware of what his insight and 'out'sight tell.

ROBIN Why?

P.A. Because I accept him, provisionally, as needing to hear what his senses have to say.

ROBIN Do you think *we* want to hear what you have to say?

P.A. Occasionally people want to hear something to confirm what they know – be that good or ill. They only rarely want to hear the truth – be it welcome or not. Fewer still wish to know what it will cost. But the psychoanalyst is expected to meet their needs.

ROBIN Is he any worse off than anyone else?

P.A. Probably better off – for those few hours he is given the chance to convey the truth.

ROBIN How do you know they want it?

P.A. I don't. I draw attention only to what the man or woman *seems* to me to want. If they think my comment illuminating they can continue in their way, or decide to change course. It is their choice.

ROSEMARY What do I want?

P.A. As far as I have had an opportunity to judge, a mate who could provide you with the means to gratify your desires.

ROSEMARY Love?

P.A. I do not recognize the need for that word to describe your relationship with anyone.

ROSEMARY Andromache?

P.A. No. Alice may fulfil the part since Roland declined to be her Hector.

MORIARTY Wouldn't you be Hector to Alice's Andromache?

P.A. I have not the courage necessary for the part.

ALICE You sadden me, but I think you are right.

WATSON How can you tell? I have known some ordinary people who behaved with extraordinary courage.

P.A. I know what you mean. I have even had courage attributed to me. But I remember no occasion on which I was not a coward at heart. Even in my prosaically unheroic role of psychoanalyst I always fear to give an interpretation.

ROBIN For fear of being murdered?

P.A. That is usually a remote contingency.

ROBIN But it exists?

P.A. As well as other possibilities. To confirm the accusation sometimes made against analysts that they do not attach importance to the environmental factors, I find that any rational explanation that

is 'reasonably' proffered has only ephemeral effect. Environmental factors leave virtually no lasting lesson in the recipient's mind – no trace.

ROBIN Then what does have a lasting effect?

P.A. Anything which stimulates, mobilizes, creates feelings belonging to the love ↔hate spectrum.

ROBIN I don't know what you mean – it sounds like jargon. I find it difficult to see what differentiates your statement from other jargonese statements.

P.A. You are right – and I don't know what to do about this difficulty when I am 'talking about' psychoanalysis. If I were practising psychoanalysis with you I could try to demonstrate an emotional experience you were having and say, 'What you are now feeling is what I call "hate", or "love", or some subdivision between the two'. *Here* I can elaborate what you have called 'jargon' by this rather long-winded story – 'construction', as Freud might have called it –

ROBIN 'Might have called it' – there you go again. You're so cautious. Why don't you say right out what you mean?

P.A. Because it would not be the truth I wanted to convey.

ROBIN You make me think psychoanalysis must be very difficult if you can't talk plain English.

P.A. You are right; psychoanalysis is very difficult: so is plain English. If I could talk it, it would not be 'talking' what I want to 'say'.

ROBIN I give up.

SHERLOCK If I were able to play my violin, and you could listen to it, the problem would be settled in no time.

P.A. *If* you could play it . . . *if* I could listen to it . . . *if* it would be settled in no time . . . *then* we should pass on to another problem.

ROSEMARY Alice! Put out my evening dress. No, no, not that one. Wait; I want you to dress me.

ALICE Yes, Ma'am.

P.A. (*to Priest*) She has got her where she wants her – beneath her feet.

PRIEST And now – she doesn't want it.

P.A. I'm not so sure; I think she does. What was Shub-ad like?

PRIEST The Queen? Not at all a bad sort. She was quite upset at the King's death.

P.A. That's where you came in with your little beaker and large store of fairy tales; and, in due course, the British Museum.

PRIEST Don't forget the University of Pennsylvania and its large store of dollars. And Freud – don't forget Freud and that load of science beneath which is buried God and Art and Wisdom itself.

P.A. Death, you say, shall have no dominion.

PRIEST No I don't; that is not my view of death. Thoughts live until they find a thinker who gives them birth – and so brings death into the world and all our woe.

P.A. From your vertex is may *seem* so, but that depends on standing on the giddy precipice of 'seeming'.

PRIEST You resort to visual imagery to make your empty thoughts look full.

P.A. I agree it does make them seem full, but I think these formulations have content. I am talking about 'something' and I think it would be worth having respect for 'seeming'. I doubt the equivocation of the fiend that lies like truth.

ROSEMARY Bed time. Alice, have you put out my things? I expect my visitor about midnight. Let him in and then go to bed.

ALICE Yes, Ma'am.

16

Rosemary is greeting Man. Alice stands respectfully aside, takes his hat and coat, and is dismissed.

MAN Still got your maid, I see.

ROSEMARY I have made up my mind to dismiss her.

MAN I thought you would find her somewhat insolent.

ROSEMARY No, it's not that. She weighs heavily – dependent – as if she looks to me for help. (*Laughs.*)

MAN I love it when you laugh like that; there is a fascinating music in it.

ROSEMARY That's what Alice says. I think I find her fascination very agreeable – more now than I used to in the old days.

MAN I don't like her – or Roland. I don't know why you shelter them; I feel they are both dangerous.

ROSEMARY I think *he* is.

MAN You would be wise to let me shoot him – or have him shot.

ROSEMARY Well, perhaps I will. But not here please. I hate violence. Alice is going to have a baby.

MAN Does she love the father?

ROSEMARY Love? I shouldn't think so – you know what these poor people are. When she has had the baby we can get rid of her. It will be a good reason for dismissing her.

MAN Roland is the man I suppose.

ROSEMARY Heavens, no! She hates him. But let's talk about something interesting.

MAN Have you decided when we are to marry?

(*It becomes dark and their voices fade out. When it grows light Rosemary is alone.*)

ROSEMARY Marry? It's an idea. I wonder what the laws are now.

Of course I could always poison him when I've done with him. Tom could easily be blamed and I don't suppose anyone will be bothered to find out. But . . . shall I have established my position? I expect so; I'm not a damned fool like Alice or Roland. Sometimes I wonder . . . these people must have been some good once. Suppose the brat's a boy – she might take to him. . . . It's quite an amusing situation viewed from my position. How different the same vista is if one's position changes! I used to hate Alice – only a year since – now I almost like her. I was most solicitous when I asked if she was going to have a baby. Very different when she – blast her impudence! – was suggesting to me that Tom was 'a nice boy'. As if she cared! I feel sorry for her. She's in a hole – Tom couldn't give a damn; Roland hates her and is going to be shot . . . which reminds me to tell Man he can shoot him when he likes. I'm not sure though that I have much time. He has changed from his 'gentlemanly' ways recently. I don't put murder beyond his programme. Who's there? I'll shoot! What, no one? My nerve must be going. Where's my torch. (*Rings the bell. After a minute Alice appears.*)

ALICE You rang for me?

ROSEMARY Of course, who else? I thought I had better tell you, so that you can find another job, that I won't be able to keep you after the next two weeks.

ALICE Another job? There aren't any. Anyhow, I don't want to leave.

ROSEMARY I'm sorry, but Man was talking it over with me and won't hear of you staying. He seems to have taken a dislike to you and . . . well, what can I do? I shall miss you of course, but perhaps it will be much better to make a break.

ALICE Do you mean you trust *him?*

ROSEMARY No, of course not. Did you trust Roland – with me I mean? Or did you think I led him on? I wouldn't have trusted him an inch. I never understood how a girl with any sense married him.

ALICE I was young – and in love.

ROSEMARY My Mum warned me that if ever I was such a damned fool as to fall in love she'd chuck me out of the house. 'Do what you like, Rosie', she said, 'but don't come telling me you've fallen in love'. I'm telling you the same. I'm surprised you didn't learn it at your school. Now – you may go.

ALICE Is that all for the night . . . Ma'am?

ROSEMARY *Go!* (*Alice obeys*) Extraordinary! Fancy thinking I would be in love with Man – or her! She hasn't learned that love makes clear thinking impossible. I am sorry to think how I hated her; I never guessed I would be her boss. Not till that day when I was holding her wrists and she couldn't make me go. Still, I shan't make the mistake of letting *her* get up again. She's down – for keeps. I can't waste time on her – I have enough to do to keep Man in his place. It's asking for trouble to let him get the upper hand. No pregnancies – I can make him think it's his fault he can't make me pregnant. I shall be *terribly* upset of course – I mustn't overdo it or he'll persevere – terribly upset; but I shall be very brave about it. Yes – then he will have to keep in my good books. I shall forgive him, tell him not to mind. I shall keep giving him sly digs to remind him what a misfortune it has been – for Alice. It certainly will be a misfortune for her if I can arrange it. It is amusing, but not amusing enough. If only I could make her feel humiliated; but she gets too much pleasure out of it, as if it were a game she had volunteered to play, damn her! After she's had a dose of real starvation perhaps she'll have to come back to some job in my house. But she may be successful now she's rid of that man Roland – what a horrible idea!

It's so dark and cold, I hope I'm not going to need a man. I don't need Roland – never did. But if Alice thought she did, I might have thought so had I gone to *her* school. What a fate! Yet, now I *am* going to her school – the school for bosses. I must be going weak in the head; if I go on like this I shall 'fall in love' – with Man.

P.A. No, you are only falling in love with being seduced.

ROSEMARY You again? So you think I am being seduced?

P.A. No, I think you are in love with seduction. You made Alice fall in love with being seduced. She was starved and you were starved, so it was hardly surprising that you were both vulnerable – susceptible to the allurement of physical sex, she perhaps more than you, because in her 'bin', as you call it, she was starved of physical sex in a way which you couldn't experience in your slum. Neither of you knows the first thing about love.

ROSEMARY Excuse me, I do. I know a lot more about it than you do. I know what you and Roland and Robin and that boy thought they were teaching me. I learnt that their love was not worth much.

P.A. Yes, you may have learnt what 'worthless' love is, but that isn't love. In the catalogue it may go for love, as Shakespeare's

murderers went for 'men'. No doubt your collection of predators go for 'lovers'; your love may be of much the same predatory kind. You haven't said or done anything *I* call love.

ROSEMARY You are a stickler for good English. How do *you* define 'love'?

P.A. I don't. The word as I've heard it here is constantly conjoined with a number of characteristics, phrases, emotions, experiences, but that is only a part of verbal activity. 'Love', in so far as it relates to the past, is a ghost of a memory; as to the future it is a hope casting its shadow before. 'The thing itself' –

ROSEMARY Yes, I hoped you would get to it in time –

P.A. I must disappoint you. As a psychoanalyst I cannot aspire to success where the Saints, Philosophers, Artists of every kind have not succeeded.

ROSEMARY You can try.

P.A. I know what you mean, but it is not a domain in which 'effort' is applicable. I know ''tis not in mortals to command success' may be true of Love; but it is part of being.

ROSEMARY Do you think mankind will ever achieve it?

P.A. It has nothing to do with Past, Present or Future. 'It' has been, is, and will be. Psychoanalysis, or preaching, or painting, or music are not 'it' – they are 'about' it.

ROSEMARY I am tired and it is already day. Sometimes I see things too clearly, but . . . oh, he has disappeared! I must have dreamt him. But it doesn't feel as if I have slept at all. My eyes hurt as if I had been up all night at a party. (*Short laugh, instantaneously terminated.*) Why laugh? What's the joke? Belly – what are you laughing at? What's so funny? (*Sleeps.*)

* * *

(*Roland and Robin talking – no one else is apparent.*)

ROLAND Only two of us; it's not enough. If that bloody psychoanalyst could be relied on –

ROBIN You've said lots of times that you wouldn't trust him an inch.

ROLAND I wasn't thinking of trusting him. I said if f he could be relied on . . . he could hold one end of a rope for two minutes. One minute would be enough if he could be relied on.

ROBIN What are you afraid he would do?

ROLAND Do? Nothing – but even that is not certain.

ROBIN Well then?

ROLAND Talk when he shouldn't. He could be useful if he could be relied on just to shout, 'lie!', once – at the right time.

ROBIN It sounds simple.

ROLAND It is. Instead of which, he is sure to want to know why.

ROBIN He isn't as bad as that.

ROLAND He is quite as bad as that. Take it from me, people who ask, 'why?' are no bloody use at all. They set out to do things, become absorbed in what they are curious about, and forget what they meant to do in the first place. Give them a job, expect them to do it – and get let down for your pains.

ROBIN What do you propose to do about Rosemary?

ROLAND Nothing. She's no damn good – only a skivvy with the mind of a skivvy.

ROBIN You ignore the fact that this 'skivvy' is the mistress of the house, and the mistress of the house is her skivvy. That is not her lowest point – yet. She has further to go; so has Rosemary.

ROLAND She has got her hooks into that bastard, Man. She has even persuaded him to get mixed up with this 'talking shop'. That is a sign that he is on his way out, mark my words.

ROBIN He may be, but Rosemary is not as impressed with the social summit as you think.

ROLAND She is only interested in beautiful clothes because she can use them to feel how beautiful she is.

ROBIN But she will survive and we shall not. She will get someone's semen –

ROLAND Someone's syphilis or gonorrhoea.

ROBIN That's not the kind of fool she is. You may be, but she isn't. Did you ever succeed in making love to her? No – and never will. I bet she took good care you would never get into her. Aren't I right?

ROLAND Only because I was worried about Alice.

ROBIN You are hopeless.

ROLAND Dammit! That's the second time today that someone has said that to me.

ROBIN Was Rosemary the other one? Don't tell me; I bet she was. Even if she didn't say it, that was what she meant in language louder than any words.

ROLAND (*white with rage*) I'll teach the whole damn lot of you!

(*A shot is heard, soft and muffled. Roland falls dead.*)

ROSEMARY (*to Man*) Darling! You shouldn't have done that. You've quite upset me! He really –

MAN I'm so sorry; I thought you wouldn't mind.

ROSEMARY Of course I mind. Poor Alice. She'll blame me for not having saved him.

MAN Do you mind about her? Was she fond of him? Don't let it spoil our evening. I love you, I love you.

ROSEMARY It's no good. Can't you see I am very upset? I can't take it as if it's nothing. You must give me time.

PRIEST (*turns Roland's body with his toe as if to reassure himself who it is*) I'll get Tom to clear him – it – 'him', I mean – away.

ROSEMARY (*whimpers and pushes Man's hands away*) How awful! I wish it hadn't happened.

MAN (*disconcerted, releases her*) I thought you wanted –

ROSEMARY How dare you suggest such a thing! You can't love me to talk like that.

ROBIN Is he dead?

P.A. Quite.

PRIEST Quite dead. Well, well . . . his troubles are over.

ROBIN (*furious*) I thought you believed in a future life.

PRIEST Oh no. Quite a mistaken idea. Lots of people who have not studied the teachings of the Church make that mistake.

ROBIN Then what the hell do you believe in?

PRIEST Well, Hell.

P.A. Hell, like Heaven, is within you.

MORIARTY (*sniggering*) Ridiculous! Can't you see he's dead? What's all the fuss about? A perfectly simple murder – no problem. But you make it a fountain of lies, prevarications and self-deceptions.

WATSON What about you? Haven't you caused endless controversy – you and your demise at Reichenbach?

MORIARTY Doyle may have been a bungler, but nobody can say there are no real crooks in the real world. One of these days my human followers will achieve power even if they don't acknowledge their indebtedness to a 'figment of the imagination'. Where's your army, navy and police force? Man has just put a bullet through one English Gentleman and is in a fair way to make a servant into a 'lady'. I think her lack of principle shows great promise. She's even now

preparing reasons for throwing Man over with no more compunction than she has for Alice. She's not guilty –

ROSEMARY If you weren't a figment of the imagination I would ring your bloody neck.

MORIARTY If you are not careful you will become evil 'incarnate' and find your neck more wrung than bloody. Look what's happened to your late boss's husband. If he had stuck to agriculture he might not be mutton now!

P.A. I see you are a Platonist.

MORIARTY Never heard of such an animal.

PRIEST Plato said that every man should stick to his last and then the 'world' would become a heaven on earth; so far, hell holds its own.

MORIARTY I always thought he was a philosopher – he must have had more sense –

P.A. Sense, like cheerfulness, keeps breaking in – as Dr Johnson said.

ROSEMARY Is anyone going to remove that object?

ALICE I've told Tom; he's coming. I am upset. After all, I was married to him once.

ROSEMARY I've seen you and Roland together, even though you thought it was just a 'skivvy's-eye view'; it was never what I call love.

ALICE You have gone too far, Rosemary. You –

ROSEMARY You have gone too far; I am the boss now. Tell Tom to hurry up and be quick about it. I want that removed. And you and Tom can go and find another job.

MAN Can I help?

ROSEMARY No; I have had enough of your help!

MAN I'm sorry. You may want . . .

ROSEMARY When I want it I can ask. Just now I am upset. You are too rough.

PRIEST & P.A. Can I help?

ROSEMARY No, go away. You don't know what a woman is.

P.A. That's true.

PRIEST I have met them before. She reminds me of Sarah and Hagar her servant. They gave Abram a rough passage.

TOM You wanted me?

ROSEMARY Clear that away.

TOM Oh God – it's the master isn't it?

ROSEMARY Fool! Now he is upset. Yes, it's Mister Roland – take it away Tom – he's dead.

TOM However did it happen?

MAN I shot him. Bury him in the fields somewhere.

TOM But that's murder!

MAN Go and bury it away from the house. No, not in the garden; in the graveyard if you like, but be quick about it.

TOM I'll get a barrow – but it doesn't seem right.

ROSEMARY Take him with you now.

TOM I was only going to fetch a barrow.

ROSEMARY No! Take it out!

(*Tom, menaced by Man still fingering the automatic, shoulders the body with distaste and goes out. The automatic is not lost on Rosemary who turns disdainfully on him.*)

ROSEMARY Put that gun away. (*He hesitates.*) I said, put that gun down. (*angrily*) Give it to me! (*He goes out in a rage – without surrendering the gun.*)

(*Darkness falls – the scene is blotted out.*)

17

ROSEMARY (*at first only faintly discernible – by herself*) What a day! (*A shattered ghost of a beggar woman slowly becomes apparent. Rosemary sees her and is startled.*) Who are you? How did you get here? (*There is no response, but the figure is increasingly menacing.*) Get out! (*The figure slowly raises its hands as if it might clutch her.*) You won't frighten me with those tricks. Apparitions are not new to me. What do you want?

APPARITION I am glad you decided to be civil – without being terrified. It wouldn't do if you screamed.

ROSEMARY (*scornfully*) I am not easily terrified; not even though I thought my mind was going.

APPARITION It is. I have come to warn you. I am a friend of yours.

ROSEMARY Andromache? Lady Macbeth? Hecuba? These are friends I have seen before. I know you; you were fooled that day by the priest – at Ur. He turned up today too. I have a lot of friends.

APPARITION Dreams, apparitions, hallucinations may indeed be friends of yours – if you dare to admit the acquaintance. So far you have at least permitted yourself to admit my existence. You may be right to think that I am both the herald of impending disaster and a sign of that disaster.

ROSEMARY Aren't things bad enough without *your* arrival?

APPARITION I disturb your slumbers; you feel I am a symptom of a 'mind diseased'. Freud tried to turn these dreams to good account: you are not obliged to follow his example.

ROSEMARY The only Freud I ever heard of was a psychoanalyst.

APPARITION I don't mind what you call him – or me. You have been warned. Don't let me disturb your sleep – sleep well. (*Disappears.*)

ROSEMARY Gone! I must have indigestion.

P.A. Mental indigestion perhaps.

ROSEMARY Oh God – now you've turned up.

P.A. No, not God; only myself. I heard talking and came to see what it was. These are curious times, or I wouldn't have departed from the conventions of ordinary good manners. I have not come to get into bed with you – I heard what you told Roland when he came in to see you. Do you want me to go? I see you have a visitor.

ROSEMARY What! Another? Oh, I see – it's Priest isn't it? A full house!

PRIEST I heard voices so I came in because these are not ordinary times –

P.A. I have already explained the reason.

PRIEST Poor woman! The same experience as Hagar – oh, I forgot; you don't read the Bible or believe in God or anything so stupid do you?

P.A. Not quite as you do, but enough to have read that story in Genesis. Tell me more.

APPARITION (*re-appears*) You should not believe what either of these gentlemen has to say; they are no more reliable than Hosea. He thought himself superior too although he did 'admit' that God had told him to marry a whore. Hagar was contemptuous because she could conceive and Sarah could not. Oh, you've turned up, have you?

ROSEMARY Not another!

SCHOOLBOY Sorry! I heard voices and you know these are not ordinary times so –

P.A. Say no more. We *all* thought we heard voices and we *all* thought these were not ordinary times.

SCHOOLBOY We met before, Rosemary. I came to say I was sorry I was so rude.

ROSEMARY I remember . . . you thought I was a skivvy and you were too high-class to go out with me and visit my Mum. In fact, from your point of view – 'vertex', P.A. would call it – she wasn't quite 'top drawer'. She was a whore.

APPARITION If any of you are going to survive this 'unusual' situation you will owe it to Rosemary's Mum.

P.A. Scientists think that things and people should be called by their right names.

SCHOOLBOY Yes! I remember what fun we had in my school. 'Please, sir', we used to say in Bible class, 'what is harlotry?' I used

to love Bible class; it was the only bright thing on Sundays. 'When you grow up and know as much as I do', some old fool used to say. I hadn't the cheek to say, 'If only you were as young as I and knew as much about "harlotry" as I do, you would not be blushing beetroot red'.

ROSEMARY No one blushes now. What happened to you since those days when you dared – but not quite – to be seen out with a skivvy?

SCHOOLBOY I got killed – being 'heroic', you know.

ROSEMARY I was afraid you might. Shot? Or getting a dose of clap?

WATSON Or syphilis and G.P.I.?

ROSEMARY Oh, my God! All day and now all night as well.

PRIEST If you believed in God you wouldn't be so surprised about 'all day and all night as well'.

P.A. Or 'all Science and all Religion'.

ROSEMARY Why leave out 'Beauty and Art'? I felt the night was bad enough without bringing in God.

P.A. All of us feel that that tiny 'increment' of an 'increment' of an 'increment' of one third of human knowledge is more than we can stand. But what happened to Schoolboy? Sunk under the weight of Knowledge? Destroyed by the skivvy's Beauty? Overwhelmed by Venus or her disease? Or mathematics?

SCHOOLBOY At school I wrote some articles for the magazine labelled 'Sex on the Games Field' – a long and pretty accurate account of the biology master's lesson on the reproductive process of dandelions, both sexual and vegetative. I had an imaginary interview with the groundsman whom I asked about sex. He replied, 'I know nothing about sex, but them perky dandelions will certainly be the death of me'. Anyway, funny or not, that was the death of me. It was the title that did it, even though there had been a lot about Richard Coeur de Lion. The Head asked for me to be removed. My poor mother was broken-hearted; my dear Dad was furious but secretly thought it funny. In the end, as I was due to go into the army, they let me stay to the end of term; that was more respectable and it was hoped I would get bumped off, so all were satisfied – except my Mum. Even she was cheered up because when I *was* finally bumped off my C.O. said I was a good officer – which I wasn't – and that I had been put in for a posthumous

V.C. Luckily she died before the British Army and all its honours were no longer of any interest to anyone.

P.A. And did you have a future life?

SCHOOLBOY In a way, yes. I turned up in her dreams sometimes to say, 'Hullo Mum', and smile just as I used to. She would smile too and when she awoke her cheeks were wet with tears.

P.A. Did that upset you?

SCHOOLBOY Before I died it did, because I was afraid of what would happen if I were killed. I thought even my Dad might be upset.

ROSEMARY So you died a hero's death – that was something.

SCHOOLBOY I'm afraid not. You were right about me – I was too gutless to go out with you. A young friend of mine was killed in the war and that, though I didn't know it, was the end of me too. I never recovered; my courage and chivalry and hope were dead.

PRIEST What are you doing here then?

SCHOOLBOY I told you – I thought I heard voices and as these are not usual times I thought I had better come in.

P.A. Just curiosity?

PRIEST Fear of annihilation, 'everlasting death', perhaps?

P.A. Hallucinations?

SCHOOLBOY *If* they are hallucinations; but are the facts any better?

MORIARTY Facts, however terrible, are not so terrible as thoughts.

ROSEMARY Moriarty is a figment of imagination; Man is not. I prefer figments of imagination.

P.A. Figments of imagination have a way of becoming real. Robin is alive; Roland is not; Man killed him. The chocolate bar killed, or overlaid, suspicion; the real Luger disguised with the figment of his imagination killed Roland. Both were effective in their context. What mattered was the use which Man made of his capacity to talk.

ROSEMARY This is a vivid dream. I don't know if I have called out or not. . . . There's no one here. I almost wish I were in the sunlight that Sunday long, so long ago . . . I can't get up – it's too dark and too early. I haven't had a wink of sleep. Is the daylight any better? How am I to handle this murderous thug if he is what he calls 'in love' with me? Is that Alice sobbing? No; it's the wind. How quiet it is! There's that noise again – my face is wet with tears. Shall I go and see what it is, or ring for Alice? There was a time when I would have loved to get her under my feet, yet now that I have I am scared out of my

life! Let her weep . . . but she's keeping me awake. These awful people – they are bad enough without dreaming about them. At last it's getting light again. I used to hate having to get her tea. It was a nice life – for them. And now? Has Man got a boss? . . . That boy made me laugh about his scripture lessons! I wonder what happened to him. I dreamt he was dead – killed in the war. . .'Pack up your troubles in your old kit bag . . . the band sounded so grand. Where are they now? . . . Perhaps I have been hard on Alice . . . (*Sleeps.*)

18

Rosemary awakes. It is broad daylight.

ROSEMARY Nobody here? What's happened? What an awful night – I feel quite worn out. (*Rings for Alice; nobody comes; at last she gets up.*) Has she run away? Have they all run away? Perhaps Man and his thugs have been here and arrested the whole lot. In that case how did they miss me? Man may have told them to leave me – for him. He doesn't love me, not after what I said to him yesterday . . . was it yesterday? I don't even know what day it was. That young boy . . . ah, it's coming back to me – said he's been killed in the war . . . must be crazy . . . or did I dream it? That was no dream. What was it then? Alice! Alice!! Alice!!! . . . I'm screaming! Mad – and no one to talk to. Mad! And alone. This place gives me the creeps. It's haunted. I am haunted – hag-ridden they call it. Are those guns? No, trucks on the road. They are driving at me – through me – into my head – drumming in my ears! Cassandra, help me, help! Alice! Oh, there you are. Where have you been? I've fallen out of bed; must have had a stroke. Where's the doctor? No, I don't want a psychoanalyst – I'm ill. I need a doctor I say. No, *not* a mind doctor. I must get up or I'll go out of my mind.

ALICE Did you call, Ma'am?

ROSEMARY Oh shut up! Don't talk that 'Ma'am' nonsense to me.

ALICE I'm sorry. I thought you liked it.

ROSEMARY *You* liked it. You led me on. How could you put up with that nonsense? I *hated* being your skivvy and I hated you. Now you seem . . . I suppose it serves me right!

ALICE What serves you right? I was sure you liked it.

ROSEMARY I must be mad. How do I come to be mistress of the

house? What has happened? What . . . (*begins to be hysterical, and Alice becomes angry and frightened.*)

ALICE Calm yourself! What's the matter?

ROSEMARY Nothing. I want to get up. I must have had . . . had . . . a nightmare. It was very vivid.

ALICE What did you dream?

ROSEMARY (*Uncertain of the facts and afraid of saying something which might betray her, she plays for time and hopes Alice will say or do something which will give her a lead*) I had better sit in a chair. I feel so queer.

ALICE Here, sit down. Do you want a cushion? There's someone at the door –

ROSEMARY (*suppressing a scream with difficulty*) Don't let him in. That awful man!

ALICE It's only Tom. He won't come in.

ROSEMARY Are you sure it's not . . .

ALICE It's only Tom.

ROSEMARY (*relieved that she has not given herself away, but wanting someone from whom she could get help without making it clear what she is thinking*) Oh, he's quite harmless – quite a nice man really.

ALICE What do you want, Tom? Just wait a minute.

TOM Only came to say the job is finished.

ALICE Thank you – nothing else? I'm busy just now.

TOM Will that be all, Miss? (*goes off talking to himself*) She's a cool hand. Doesn't care what she tells me to do. They are all crazy. It beats me what has happened to the missus. And Rosemary! She was so dressed up she looked quite the lady. Must see what has happened to Curly. I could have asked the master about her, but now he's gone there's no one to ask except that German bastard and he's no good. Come on Curly lass – what's ailing you? Quite off your feed? (*He approaches her udders, but the cow lashes out at him*) Whoa there! I'm not going to hurt you. I wish the master was here to talk to you instead of me. Cows or women – they are all the same – lash out because they think they'll get hurt. The master would have said, 'Cowherds and robbers are all the same – to cows'. Poor Curly!

(*Fade out. Priest and P.A. are seen together.*)

PRIEST I had a queer dream last night – I suppose you would call it that.

P.A. How could I call it that? It wasn't my dream.

PRIEST To me all dreams are 'queer' so I thought you would call it that.

P.A. One of your prophets, Isaiah, who was the kind of person to whom you religious people pay attention – forgive me if I don't know what your brand of religion is –

PRIEST (*bows slightly*) I am flattered. May I congratulate you on your discriminatory integrity in not having 'labelled' me with a particular 'brand' of religion.

P.A. Let us leave out the introductory courtesies. I was referring to Isaiah who describes his contact with the Lord in matter-of-fact terms, precisely dated. Of course, we cannot know what happened, but we may have opinions. My object is not to discuss that past experience but to illustrate the unlimited possibilities when you say, 'a queer dream'; possibilities which are limited in this discussion only by my ignorance. The *experience is* not 'limited' by 'finite' considerations of our capacity, though our 'discussion' of it is.

PRIEST I dreamed of an explosion of vast, tremendous and majestic proportions. It was terrifying. It was black as night; not night that I might understand in the solar system, but dark night of the soul –

P.A. As described by Saint John of the Cross perhaps?

PRIEST I am not Saint John of the Cross, nor yet Isaiah; that itself contributes to the sense of queerness that it should be my dream.

P.A. I am familiar with reports of terrifying experiences described in terms of varying inadequacy – as you have just been doing. We are both aware of the awe-ful experience. Many are not; they fear 'going mad', some indescribable disaster, 'break-down', they may express themselves by bringing about disaster. We psychoanalysts think you do not know what a dream is; the dream itself is a pictorial representation, verbally expressed, of what happened. What actually happened when you 'dreamed' we do not know. All of us are intolerant of the unknown and strive instantaneously to feel it is explicable, familiar – as 'explosion' is to you and me. The event itself is suspect *because* it is explicable in terms of physics, chemistry, psychoanalysis, or other pre-conceived experience. The 'conception' is an event which has become 'conceivable'; the 'conceivable' it has become is no longer the genetic experience. Pre-conception, conception, birth – what a shock it must have been to know that a woman has a baby! How absurd to suppose that it could have any connection with intercourse! I have found those

who think it ridiculous that a woman could initiate an idea or have a thought worthy of consideration.

PRIEST Women are indeed very jealous and envious of other women. In an obstetric ward I have known the havoc created by the envy of unmarried nursing staff for mothers and expectant mothers. A doctor friend told me that an obstetric surgeon must be vigilant to see that he does not allow a nurse, sister or matron to usurp his function of seeing fair play. You are not suggesting that it is only men who are hostile to the creative woman?

P.A. Certainly not. Jealousy and envy are elements which do not conform to physiological and anatomical characteristics; the personality, or mind, does not have physical bounds which can be delineated by appeal to our physical form. Where we differ is not with regard to the corporeal and physical, but in your postulating God to fill in the conceptual gap.

PRIEST I do not think we would be likely to mind a conceptual gap; I am willing to agree to the validity of a 'conceptual' or 'theoretical' gap for purposes of discussion. I maintain that the 'concept' of God is matched by a reality of which the concept is but a shadowy and feeble reflection such as human beings fabricate within the limits of their finite minds. The 'Father of an Infinite Majesty' is a feeble verbalization intended to represent the ineffable and infinite by whatever experiential elements, memories, desires, hopes and fears are within our capacity.

P.A. I can see that. But why drag in Something More – God?

PRIEST I don't; those things which are 'dragged in', as you say, are flattening representations; two-dimensional substitutes for the non-dimensional which misrepresent more than they illuminate.

P.A. 'There plant eyes', as Milton said about the inner world.

PRIEST Milton's tragedy was Paradise Lost and – with due acknowledgement of his greatness – I do not think he was right in supposing that he ever Regained it. Blake saw that Milton was great enough to be able to depict his loss, but not great enough to find the loss of which he was aware.

P.A. I feel you are ignoring the fact –

PRIEST Excuse me, but I claim 'experience', as you'd call it, at least as old as Lilith and beyond, whereas your 'science' is a recent and already macilent growth.

P.A. At least a few thousand years I would –

PRIEST 'A thousand ages in Thy sight are like an evening gone; . . . They fly forgotten as a dream dies at the opening day.'

P.A. Which brings us back to your 'queer dream'. Don't you think our discussion may have thrown light on the multitudinous possibilities corresponding to your 'queer' dream?

PRIEST Just what I was about to remark. Our different, diverging and apparently contradictory views may 'appear' in the 'queer' domain to be more real than they are.

P.A. 'Litora, litoribus contraria.'

PRIEST Virgil was not meaning our debate.

P.A. But his phrase throws forward into the future besides illuminating the past.

PRIEST Where do you suppose that reality originates – only from the genes, the chromosomes, DNA, the double helix?

P.A. I don't know.

PRIEST That's the wisest admission you have made.

P.A. I could not aspire to a scientific inquiry without that basic admission.

PRIEST I could not aspire to God without a similar admission.

P.A. My objection to your people is that they claim an omniscient and omnipotent God.

PRIEST We aspire to a god made in our own image – that is well known; but because we keep company with people that have certain views I don't think we should be debited with those views.

P.A. It is part of my work to point out that all of us are victims of just that experience. Like it or not, of such is the kingdom of men.

PRIEST I don't quarrel with that.

P.A. We have come a long way from your queer dream without, I fear, penetrating the problem. Don't hold it against me or against those who, like me, aspire to know.

PRIEST I don't – so long as you do not claim that 'to aspire' is the same as 'to achieve'. At our stage of development that is arrogant. Let us agree to discourage the idea that we have arrived at the destination.

P.A. If *we* don't, some fact will – perhaps the explosion of which you dreamed. I observe that we are not alone; we can continue later. Good morning, Ma'am; I hope you are well.

ROSEMARY Thank you – very well. Where's Alice? I told her to be here.

ALICE Here, Ma'am.

ROSEMARY Sit down all of you. You two (*addressing Priest and P.A.*) have arrived at an agreement. I am glad –

PRIEST It is more apparent than real.

P.A. We have arrived at the same fence at the same time and that gives an illusion of agreement liable to obscure the fact that we are on different sides of the fence.

ROSEMARY Fence? What fence?

PRIEST Alas! It is invisible, impalpable, insensible . . .

P.A. Nearly inexpressible but for our borrowings from disciplines not our own.

ROSEMARY Then you are in agreement in 'acquisition'.

P.A. No. He steals or borrows from me: I do the same from him. We both resent each other and even ourselves as we have to collude with each other. Collusion, robbery, theft – what do we not owe to them!

PRIEST Bigotry, ignorance, intolerance – how much science owes to them!

P.A. How firm the foundations on which the Church must build!

PRIEST How persistently the scientists rob us of faith! How unsleeping must be our resistance to their attacks!

ALICE A plague on both your houses and may they soon perish.

ROSEMARY Hold your tongue, Alice!

MAN Shall I shoot her?

ROSEMARY Certainly not – you are too crude. She could be trained to do something useful, like dressing my hair. You may do it now, Alice, but I shall have to send you out of the room if you interrupt.

ALICE Sorry, Ma'am. I thought you objected –

ROSEMARY Don't think. Get on with my hair. And smarten that uniform I gave you.

P.A. Your left-off clothing – mental and physical. Allowing her to participate in intellectual discussion has worn thin the servant's clothing which you left her.

ROSEMARY Mind your own business.

PRIEST She has grown in insolence instead of profiting by the example you set her. Her frame of mind lacks servility. General Violence, who used to command the Armed Forces, saw to it that the troops conformed to religious truth. When that is relaxed military discipline becomes corrupt.

P.A. The mind is ill-disciplined when released from philosophical discipline. When you tried to substitute religious discipline, the executive branch, the Church, had to devote years to the planning of the City of God. Long before it was completed, even while the plans were being elaborated, it was discovered that it was being erected in the wrong places.

PRIEST True. Those who later became known as the psychoanalysts, the Romantics, got hold of it in – of all places – the unconscious; there, amongst its poisonous marshes and gases, the ruins of that wonderful structure were painfully put together to form a romantic ruin ready for the Inauguration – of arguments and controversies about its beauties.

P.A. Are you 'borrowing' or 'stealing'? I seem to have heard something like this about Port Royal.

PRIEST 'Psychoanalysis', like 'Port Royal', is a phrase which may be 'beautifying' something as foul and smelly as 'pourris'. Milton beautified the debate in Hell.

P.A. Farmers acknowledge their debt to 'manure'. Lord Acton horrified his contemporaries by saying that many a beautiful lady owed her safety to whores and whoredom.

PRIEST Men don't like that idea. Hosea owed his wife to the realm of harlotry. When 'Gomer first at Heaven's command' arose from out the azure main . . . Which azure? Heaven? Pornography? – some language is 'blue'.

ROSEMARY That will do, Alice – how does my hair look?

ALICE Beautiful, Ma'am.

ROSEMARY It's a waste of time as far as these two fools are concerned. Science and Knowledge seem unaware of Beauty. I think you have made my already 'beautiful' hair apparent. You certainly had a long and expensive training before you became fit to be my maid; even now you have much to learn. I know I am beautiful; now you have to say I am whether you like it or not. It used to be rather fun when Roland, although a booby, acknowledged my beauty; I never thought you would have to admit it too. (*Lowers her voice*) My trigger-happy admirer who thinks I bow to his gun will be in trouble if I am not very much mistaken. How? Oh, I have my means – not least his belief that I am in love with him and terrified of his friends.

ALICE Aren't you, Ma'am?

ROSEMARY Of course I am, but I don't allow myself to be stupefied by love or terror. That's the advantage of being intelligent enough to turn one's 'education' to good account. I learnt a lot when I was young and could see how to manage the wealthy and powerful and lust-crazed blackguards who came for my Mum. Even now I have nightmares when I wake up sweating with fear. Mind you (*looking down at Alice's feet*) I wouldn't be in your shoes. How are they, by the way? You gave me them as part of my uniform when I came into service with you. How times have changed! They suit you – I hope you look after them. What are those men talking about? The moment they notice us they shut up. Let's listen . . .

P.A. 'Worship', you say; I would prefer to use some less emotional term.

PRIEST The word is not emotional. It means exactly what I intend it to mean when I am, as at present, talking about God. I avoid using it in contexts such as 'worshipping' Man or our mistress here. If I did I would feel guilty of blasphemy or, at the least, flattering speech.

P.A. Who or what were you speaking of when you used it just now?

PRIEST God, as I have said. I would not consider my 'queer' dream as just a dream with a qualifying adjective.

P.A. Effusions of the unconscious –

PRIEST 'Unconscious' – what's that?

P.A. 'God' – what's that?

PRIEST I realize you think I know as little about God as you do, and perhaps I know even less about the unconscious, but I meant it seriously when I asked you about the unconscious. Do you know more about it than the usual theories of Freud and Melanie Klein and the rest? Do you know the extent to which qualified psychoanalysts are unconscious of reality, even the realities of psychoanalysis? Those I have seen individually and at their congresses appear to me only to be capable of grasping that narrow range of phenomena which fall, so to speak, within the rational band of the spectrum. Unless you can formulate your 'discoveries' within the range of rational, articulate speech you are not satisfied that you 'know'.

P.A. That is probably so; since we try to conform to the conventions commonly accepted by scientists as 'scientific', our formulations are vulnerable to the criticism that they are only rational

statements – common sense. Even so, they are challenged as being unsupported by evidence. We are criticised both for being platitudinous *and* incomprehensible – 'mad', as it is vulgarly called.

PRIEST I wonder if you have considered 'scientists', as you call them.

P.A. May I ask if you have considered Christian Scientists?

PRIEST Yes indeed, as I have also considered Christian Philosophers. I do not exclude consideration of any phenomenon, but we must consider how much time is available for 'consideration' between birth and death.

P.A. One of my objections to your school of thought is that it appears to encourage a belief in unlimited times such as life after death.

PRIEST Unfortunately we are debited with the views – usually mistaken – that people have about what we teach.

P.A. You yourself appear to debit me with views about psychoanalysis which I do not hold; it would be a part of my task if you were an analysand to elucidate your assumptions so that you could contrast and compare them with any other ideas you might entertain. In this respect I think our activity is different from yours. *You* aspire to tell others how and what to think: *We* aspire only to show what people think – the rest is their choice.

PRIEST Fair enough; I have no quarrel with that. But I have a quarrel with psychoanalysts who talk as if they are subject to no such weakness.

P.A. Fair enough – I reciprocate. We object to that kind of psychoanalyst. I would hope not to be of their number.

PRIEST It sounds ideal.

P.A. It is, but we are aware of the difference between the real and ideal. A few people have existed who have done more to help others to discriminate between the real and ideal than we have.

PRIEST I don't wish to deny you the credit for it; religion also has played an important part in fostering that awareness.

P.A. Scandals of the Church and scandalous behaviour of its devotees could, I suppose, be said to have taught people to discriminate, but that is hardly a virtue of religious activity, or an activity of which religions should claim to be proud.

PRIEST Scandals of psychoanalysis are not different. All should stand in penitential awe before the throne of our Maker.

P.A. You are talking of matters which are known to me only by repute. A psychoanalysis affords an opportunity to compare and acknowledge superiority when seen.

PRIEST It contrast painfully with analysis as I know it.

P.A. Reality often involves pain when brought near the ideal, whether scientific or aesthetic. I am usually sensitive to this pain; I hope to be sufficiently tolerant of it to avoid recourse to 'holier' (more scientific, more artistic, more wealthy, more aristocratic) 'than thou'.

PRIEST In aspiration we seem to be not so far apart – 'so far'.

ROSEMARY *How* they talk!

ALICE Yes, don't they.

P.A. I see the ladies are listening. Perhaps it is rather rude not to include them.

PRIEST Or 'superior'?

P.A. People of different sex find it easier to resolve their anatomical and physiological differences than their differences in outlook. After all, the physical can be subjected to tactile and visual and olfactory investigation and resolution.

PRIEST Dogs can be observed using their olfactory inheritance for that purpose.

P.A. True; but that path of solution is easily followed and its destination soon reached. Believing, as I do, that there is a mind –

PRIEST And as I do, a soul and a spirit –

P.A. – the mental differences present goals and problems which are far more difficult.

PRIEST Wasn't it Napoleon – who could hardly be said to be religiously inclined – who compared the physical to the spiritual, the material to the moral, very much in favour of the spiritual?

P.A. No, Emerson – nothing like such an impressive witness.

PRIEST In any case the idea expressed is important, not who said it.

P.A. Emerson certainly claimed great power and importance for ideas.

MORIARTY So did Anatole France who claimed high prestige for the supremacy and power of bigotry and ignorance.

P.A. In *Thaïs* I think.

MORIARTY But where did the idea come from – France or the imagination?

P.A. *His* imagination – the unconscious.

PRIEST *If* unconscious you cannot be consciously aware of its origin, the generator.

P.A. I don't deny the possibility of some generator force any more than I would deny either the force of, or the search for, the Quasars of which we hear so much.

ROSEMARY (*to Alice*) They both ignore the force or presence of yourself and myself.

ALICE P.A. seemed to admit surreptitiously that 'the ladies' were here.

ROSEMARY Fucking idiot!

ALICE Probably both idiocy and fucking, but that is not the same as admitting the presence of you and me.

ROSEMARY True. He's busy getting a pedestal for me to get onto, or a servile function to fulfil. You should see what goes on in the psychoanalytic dovecote when feminine intuition obtrudes. Watch them.

ALICE I know – 'celibacy of the clergy' and 'professional integrity', they call it.

ROSEMARY Impotent bastards!

ALICE Put that way it doesn't sound so grand. Look out! Here's your boyfriend.

MAN (*bows coldly to Rosemary, ignores Alice*) I have come with news for you. I think the rest may fade out.

(*The scene becomes dark.*)

19

It is light again. Man and Rosemary are alone. She is attractively and expensively dressed.

MAN I have come to let you know that I have decided, after long and careful consideration, to make you my wife.

ROSEMARY I am amazed.

MAN I thought you might be, but I have gone into the matter most carefully; I have not only had good reports of you but from my own personal observation I have concluded that you are satisfactory and will therefore be married to me at the beginning of next month.

ROSEMARY (*furious but not speechless*) If you kneel at my feet and bring your face conveniently near to me I shall condescend to give you the hardest smack on the jaw you or anyone else has had.

MAN Rosemary, don't, I beg of you, do anything so foolish. You know I don't waste words – by the way, did you see to it that Tom disposed of that silly English fellow?

ROSEMARY Are you daring to threaten me? Who do you think –

MAN Oh come; don't waste words. So far from threatening you I have told you we are to marry and the details are being arranged. Threats and love and all those sorts of things are all right amongst the vulgar. Surely you can see it is out of place here?

ROSEMARY Indeed? And is sex also only for the vulgar?

MAN That is nothing to do with us. Of course I shall use you for sexual purposes – I have gone into that and you will do, but don't imagine that I am talking the silly juvenile nonsense of animals like P.A. I got over that *many* years ago.

ROSEMARY Love too?

MAN Don't be silly. I have arranged and that is enough.

ROSEMARY Blast your damned impudence!

MAN I have some other matters to arrange. You will be sent for in half an hour. All your possessions will be packed. I take it you want to keep your maid; she will be sent for likewise. Now, good-bye. (*He goes out.*)

ROSEMARY Alice!

ALICE What's he going to do?

ROSEMARY It is what *I* am going to do, believe me. If I cannot deal with him I am much mistaken. Bring me the automatic – fully loaded.

ALICE Yes, Ma'am.

(*Rosemary sits brooding in silence. Alice returns.*)

ALICE It's gone! Everything has been taken away!

(*Fade out. Man and Priest are alone together when it becomes light.*)

MAN I have sent for you to let you know my arrangements. As you are doubtless aware these meetings have served their purpose –

PRIEST They were indeed becoming unruly. I thought that Rosemary no longer had the disciplinary hold she used to have.

MAN No, no – she never had. Just a sexual grasp on her maid and that is of no consequence. A little re-organization will sort it out. I shall confer authority on Rosemary to enable her to keep order when I have married her.

PRIEST Congratulations.

MAN Congratulations? I don't think I understand – oh yes, of course. She was a fairly obvious choice from what I have seen of her ability to make the best of such facilities as were available to her. She might not be able to live up to increased power and prestige – that does sometimes happen. I am not unhopeful. However, I shall not waste time on the past. I want you to be a religious overseer. You must not be obsessed with the past; it is your weakness. You must adjust to the present and future. I give you the chance; if you don't succeed it will be sad – you will be dispensed with.

PRIEST Like Roland, you mean. Are you threatening me?

MAN *That* is an example of your obsession with the past. I don't threaten; I state a fact. You wear the Past as if it were a decoration. It has no importance, though its debris can still be seen and felt impinging on the present. I'll arrange for that kind of rubbish to be looked after so that it can be swept up and discarded.

PRIEST How will you dispense with the debris of 1054?

MAN It would take too long to explain. It's an example of the way visual trash hangs around; there is nothing to see, but that trivial

little explosion continues and some people devote time and generations of lives to sweeping up detritus. Now it is being collected into books which soon no one will read – and that, for the time, will be that.

PRIEST For the time? – so you do think it has a future.

MAN That is what I am saying; the past is past; it is of no consequence except as debris for collection and disposal. I shall appoint you –

PRIEST I see; as an authority like a –

MAN No, no, no. Not like an anything. There you go again – obsessed with the past and with being 'just like' the past, or a man, or a bishop. You are like a child saying, 'Look – aren't I exactly like a grown up!' The result – no chance of 'becoming' anything, the mind so stuffed full with 'memories' there is room for nothing more. You must clear your mind of cant.

PRIEST That has been said before.

MAN Still harping on the past – 'before'. You see what I mean? I can't waste time. Meet here in half an hour.

PRIEST The same half hour? Half an hour from Now? That means that we shall not meet together.

MAN Yes, it will be the same. Every half hour will be different from every other half hour – your half hour, Rosemary's half hour – but 'the Time' will be the same.

PRIEST Roland too? He's dead you know.

MAN I know – I shot him. Now he's dead I have an important job for him.

PRIEST How can he do a job if he is dead? He can't do anything.

MAN That is his qualification. *You* would be able to do almost anything if only you'd shut up thinking you are important and trying to 'look like' an important person.

PRIEST Yet you tell me to take an important post.

MAN You may not be as incorrigible as you sound. Here! In half an hour. (*Disappears.*)

PRIEST Where's my watch? Gone. Of all the impossible orders from the most impossible of men! As it is Rosemary's half hour and Roland's half hour, it will have to be my half hour. What a meeting it will be! If I ran my diocese like that . . .

(*It slowly blacks out and grows light again, revealing Man alone with P.A.*)

MAN You will have to do a different job. This arrangement of your mistress's has become redundant.

P.A. I thought you would find that. You should not have shot Roland.

MAN (*opening his eyes wide*) It was essential that he should be shot to become available for my purposes.

P.A. He is dead.

MAN That is the first essential. I require him –

P.A. You'd better be quick – Tom has buried him and he must be discomposed.

MAN You are a prisoner to reality, buried in 'facts'. It is inevitable that you should have a prejudiced view.

P.A. My view is scientific.

MAN That's what I mean. Scientific outlook; limited outlook, obscured by facts. *You* are scientific; your religion also. But enough of this – I want you as the leader of a department of Truth.

P.A. That is what I have always meant by Science.

MAN Not as far as my observation goes. You are devoted to the *idea* that you are devoted to Truth –

P.A. What truth can I be devoted to if it is not truth as I see it?

MAN Your dilemma is indeed painful; *your* pain, not mine.

P.A. You sound as if you don't care.

MAN I don't. In half an hour – here! (*Disappears.*)

P.A. (*soliloquizing*) 'In half an hour. Here.' Where is here and what clock do I use? The law of the excluded middle . . . I thought there could be some alternative to an extreme course; physically I know of no alternative to presenting myself – being or not being. That is, *if* I am right in assuming that the vertex is topographical. Suppose it is typographical – I could be one type or another . . . so many occasions in my life where I have found out what 'it' meant. Which 'it'? Do I choose to be or not to be? That fellow Shakespeare put words to the emotional problem that is still not solved. Has Priest the right idea that this life is a time of testing for a future? Suppose there is no future – I think it unlikely that there is an existence which I shall have to lead, and therefore be prepared for, *after* the next half hour. I shall have to consider a law of the excluded beginning. Logically this means that from the physiological vertex any object would be a figment of imagination. Not even that; if it excluded a beginning it

would also exclude imagination which is necessary for its 'figment' to exist. The law of an 'excluded end' would seem to be tacitly believed by artists and, in fact, human beings in general. I am supposing that 'classical' logic is the only kind of logic. But suppose reality does not obey any of the laws laid down by the human animal – not even the 'logic' to which not only human thought, but also the universe *not* included in human thought, is supposed to conform. Is there an ultra or infra logic which does not fall within the spectrum of human logic, the logical spectrum analogous to the visual portion of the spectrum of electro-magnetic waves? 'Geocentral time' is up – 'half an hour' is over. Is it geotemporal or sidero-temporal? Galactic-temporal or ultra-temporal? I shall call it Quasi-scientific time, measured in quasi hours. When I want to indicate something of which I *know* nothing but of which I want to talk or even think, it clothes itself with a meaning and I lose my nothing, my alpha or beta element. My variable becomes a constant.

Wake up? Go to hell! Oh, all right – time to get up? Quasi hell? It is the lark that sings so out of tune? Hear it not, Duncan. The wild ass can stamp o'er his head but Bahram's sleep cannot be broken; that great hunter shall sleep no more and therefore Cawdor shall sleep no more, Aeneas shall sleep no more . . . Palinurus! . . . I'm not a damned Dormouse . . . then don't twinkle like a bright and steadfast Star! The war was over last July – it says so in John Bull. We won! Officially! Oh, come in Equivocator . . . that's good news. Gos-spel! Oh, it's Man. Why did *you* act it out? Why did I only dream it? Which is worse – that you cannot wake me up, or that you only act it? Is it the sleeper only who poisons his dreams with his mental excrement? Or he who cannot dream of destroying the world but has to transform his dream into a bomb that poisons us with his atomic debris? 'In half an hour' this thug says he expects my answer, and I fool with pretty intellectual Quasar time. I am honest; I think; I am concerned with quasi morals. There is no special science but science. Yes, but I do not know which science, which truth. 'Couvre-toi de flannelle' is less impressive than 'Couvre-toi de gloire', but that kind of glory is comfortable after its kind; so is 'flannelle'. 'Oh my, I don't want to die, I want to go home', we used to sing. That was true; we hoped that the ugly reality would not penetrate the joke armour-plate. The armour-plate of a tank was penetrable; we were bewitched,

bemused, 'probability'-dazzled cowards. 'Probably' we would not be killed; 'probably' we would survive to inhabit a new heaven and a new earth – 'après la guerre'. I did not know I loved life so much. I survived to foot the bill; fight a war and spend the rest of life paying the bill for all those shells and tanks and bullets and the state of mind used to provide an armour more impenetrable than 'gloire' or 'flannelle'. '*Ante Agamemnona multi*' . . . I remember, am still penetrated by the memory of brave men whose name did not 'live for evermore'. 'With whatsoever emphasis of passionate love repeated' the echo of their name is faint at last, 'soft as old sorrow, bright as old renown'; it fades and dies. Why do I mind this grizzly, victorious lout? It is not death I fear, but the shame of knowing a few, only a few, of the multitudinous shabby failures. There goes the bell again! Telephone? Alarm? Come in Equivocator – the anarchs of the world of *Après la Guerre Fini*. From that warfare there is no release – *après la guerre fini*. Come Phorbas! Come, come. As torrents in summer suddenly rise, though the sky is still cloudless . . . Mene huic confidere monstro? Not bloody likely! Ecce deus . . . ecce homo . . . take your choice. Sleep or wake – : you pays your money and you takes your choice'. Oh! It's you is it?

MAN No. Go away – and send Alice.

(*P.A. fades out.*)

(*Alice appears.*)

ALICE You want me – sir?

MAN Yes. Pack your mistress's things and meet me here in half an hour.

ALICE Is she going away? Where to?

MAN Mind your business. Be here in half an hour – I can give you your orders then. You have nothing to pack. Go!

ALICE But . . .

(*Fade out. Alice alone in the darkness begins to cry out, her calls becoming more terrified, wilder, angrier and more animal-like.*)

ALICE Rosamund . . . Roseamund . . . Rosie! Rose . . . Herose! Here-rhose! Heeee . . . rose from the dead!

VOICE *Stop it!* (*Silence; then the savage, wilder howls begin again – now unmistakably animal.*)

ROSEMARY Hush! Oh hush! What's the matter?

ROBIN It's Roland – that is his howl. I would know it anywhere.

He's calling his mate – there it is again! That's Alice – tigerish, but that's her, I know.

(*The bloodcurdling duet becomes distant, blends with a storm and stops with a sudden decrescendo.*)

* * *

ROSEMARY (*in full daylight, alone*) I can't stand this bloody place.

MAN The priest is ready to unite the happy pair.

ROSEMARY Don't I have any say in the matter?

MAN None. Bow your head modestly as if in prayer; follow me exactly.

ROSEMARY But . . . (*she is struggling to protest but he hushes her peremptorily.*)

PRIEST'S VOICE (*droning as if in religious* incantation *of congregational prayer*) England-have-won-the-toss-and-have-chosen-to-bat. Ah-men. Ah-setting-the-field-as-if-for-a-fast-bowler. Ah-wonder-who-it-will-be. In-heaven-as-it-is-on-earth-because-there-is-no-turf-on-the-pitch-which-is-worn-and-will-almost-certainly-crumble-long-before-the-day. Dies illa, dies irae, calamitatis et miseriae.

MAN (*whispers, hoarse with excitement*) Keep your head down! Don't watch – pretend you can't hear a thing. England are coming in to bat. I think it's Kitchener and . . . Kipling! No, it's . . .

PRIEST'S VOICE . . . the weary at rest. Rudyard has ceased from Kipling. He has started his run to the wicket. From outside the main entrance . . . Here he comes and is just going round the bend! Look out! He's using an atomic bomb instead of a ball, and . . . Here is a list of the Glorious dead who batted into the third day after all and have come direct out of the computer, the Holy Boast of our civilization. Quid nunc? These are they who come out of great fibrillation and here endeth the Christo –Semitic era and beginneth the post-fissile quasi-epoch. I only am escaped alone to tell thee. What a marvellous day it is! Clear, silent, desolate. There is nothing to see but these gigantic boulders; I stand on top of one and look towards the horizon, a hard brilliant line that separates this brilliant desolation from utter blackness which is absolute – not so cold, so unfriendly as the googly. There is no sound; the silence is as absolute as the vision when there is no beholder. No sight, no sound, no feel of primrose sward, no sun rejecteth no beholder;

absolute negation, no affirmation. What's yet to come is still unsure. Man is a discarded experiment like the mammals, like the saurians, like fire, like sparks that fly upward, like troubles when there is no mind to experience them.

MAN I thought we were done – for that time, but it was a dud after all. Now then, are we all present and correct? Read the roll, Sergeant Major, and reply, 'adsum', all of you – that is, if you are here. No cheating, no lying, no delusions, illusions or hypochondriacal hallucinations. Where is the Sergeant Major?

ALL We are all minors here now, sir.

MAN Oh yes, of course; quite right. What, *you* here?

PRIEST'S GHOST No, sir. I'm the ghost of the Boast you knew.

MAN Will *you* be acting Miner major? Call the roll!

PRIEST'S GHOST The Roll will be called up yonder in the Heavenly Kingdom.

P.A.'S GHOST What Time Scale?

PRIEST'S GHOST Sidereal Time of course; at Zero Infinite.

P.A.'S GHOST I don't understand.

MAN No one has asked you to. Is Widdecum here?

VOICE No, I'm his uncle –

MAN Uncle Tom Cobley? Pleased to meet –

ALL No, you damn' fool.

MAN I'll have you all bombed if you are impudent.

CROWD (*chanting*) We are immortal. We are evil. When man dies his Evil lives after him. His Evil is immortal.

ALL SOULS For though the body dies the soul shall live for ever.

CROWD (*chanting*) Arse 'oles inspire.

MAN *Very* funny: I'll have you bombed!

ALL SOULS What! No cakes and ale?

MAN You're dead – shut up!

ALL SOULS Our name is forgotten for evermore, but we have not happened yet and we shall live after you when you are dead and gone.

MAN My evil shall live after me. Where's that mistress of mine roaming? Come here!

ALICE Surely you aren't going to obey him.

ROSEMARY Didn't they even teach evil in your holy school? Not even scandal?

ALICE We only read the school for scandal, but we didn't really practise it.

ROSEMARY At *my* school we practised it. Yes – I am going with Man. And mind your own bloody business.

ALICE You aren't in love with him!

ROSEMARY Of course not; I wouldn't let anyone put those blinkers on *me.* Roland couldn't teach you anything – he went to a Public School. You'll catch a spirochaete in your next job I shouldn't wonder. And tiny little spirochaetes with their soft inaudible mouths will eat away that brain of yours; they are delicate feeders –

ALICE Are you going to give me to the troops for my livelihood?

ROSEMARY Why not? I gave my mother; that's why she tried to bring me up properly, but thanks to Original Sin I never got taken in. I was tough. Love this murderous blackguard? I should say so! You watch – he's coming now. If you keep your head down you will see the lovelight soften my eyes and dissolve his common sense; it has not softened *my* brain. *Watch* – and pray if you like. Hulloh, *dar*ling! Oh, it's you is it?

P.A. I heard you say, 'watch' –

PRIEST – and 'pray' –

P.A. & PRIEST So I came.

ROSEMARY So long as you don't join in I don't mind.

P.A. & PRIEST You're not going to give yourself to that brute! He's an enemy!

ROSEMARY He won didn't he?

P.A. He and his never stuck to the rules of war.

ROSEMARY The rules of war! What do you know about war? You mean *your* rules. Leg-before-wicket, swing together, the halter is round your neck! What Rules – Britannia? The Waves? Even Canute knew better than that!

MYCROFT No, no child – microwaves.

ROSEMARY And who may they be? Scientific bunkum. What do you know about the waves emitted by my feet when I chose to make them twinkle, twinkle on the hard, hard slum pavements of my street? I have seen the natural, unspoilt louts and blackguards of my slum follow my heels, threads of invisible steel hooking their eyes and dragging them helpless at my feet till I chose to release them. Love! You don't know what it is – none of you.

P.A. Your beliefs are expressions of great confidence in your powers; how you come to such 'beliefs' and what evidence has convinced you that they are 'facts', I don't know.

ROSEMARY I *do* know – and your doubts do not impress me.

P.A. You think I doubt the truth of your impressions. I am saying that you have not told me what evidential support there is for those beliefs.

ROSEMARY I feel it; I know it.

P.A. Your feelings are one kind of evidence. But don't make the mistake of acting as if you had a different sort of evidence. Alice *feels* you love her, but the feeling leads her to suppose facts. She thinks she can depend on you; she can't. If she cannot depend on herself she would be unwise to depend on anyone else.

ROSEMARY Me, for example.

P.A. For example, yes.

ROSEMARY I agree. My principles would not allow me to think otherwise; the same principle which would not allow either loving or being loved by Man. I depend on my hooks –

P.A. And on his eyes to provide you with 'material' into which you can insert those same 'hooks'. In other terms – my psychoanalytic terms – sex.

ROSEMARY (*yawning*) How interesting.

P.A. Not in the least. Usually sex interest has died by puberty, leaving only a mental vestige which cannot be relied on any more than you could rely on your vestigial tail to support you if you tried to hang by it from the branch of a tree.

ALICE How ridiculous!

P.A. I gave a ridiculous example to illustrate a ridiculous dependence.

SHERLOCK I thought the whole of psychoanalysis depended on sex.

P.A. In the practice of psychoanalysis I depend on ideas.

ALICE If *that is* not hanging by a vestigial tail I would like to know what is.

P.A. Man, as a thinking animal, has reached the end of the road.

SHERLOCK What road?

P.A. The road which is taken by all experiments that have to be discarded.

MYCROFT Aristarchus had to discard his heliocentric theories.

P.A. No, he died before the instrument makers caught up with him. After they had made telescopes and mathematical theories, which later were recognized as mental instruments, Copernicus found Aristarchus and his theories were right.

MAN No he didn't. It was a German who used a telescope to discover the satellites of Jupiter but was denied the credit.

ROSEMARY Darling, how clever you are! Come and sit by me.

MAN Later. Where's that priest? Get on with the roll-call.

PRIEST Irene Adler

REPLY – and grey mare

PRIEST Tom Pierce

REPLY – the grey mare is mine

PRIEST Robin

REPLY – it is not; it's that Coventry woman

PRIEST Moriarty

REPLY – she's a whoore

PRIEST Miners

REPLY – it's hers

PRIEST Roland

REPLY – it's not

PRIEST All souls

REPLY – it's hers

MAN Whoore or no whoore, Missus Brune will now sing a song.

ALICE

> 'It's sung to the moon by a love-lorn loon
> Who died for the love of a lady.'

ROSEMARY Alice, don't be sentimental. By the way – how's Tom?

ALICE I know nothing about him.

ROSEMARY (*slyly*) Alice, Alice! I'm shocked. Didn't you once tell me he was a very 'suitable' man? Oh well, love dies alas! Tell Man he may sit near me – if he dares.

ALICE He's just coming over – don't look.

P.A. 'Taught by the heavenly muse to venture down the dark descent and up to re-ascend though hard and rare.' I wonder . . . she may be tough enough and so may he, but he is no Horace to survive the storms of Pyrrha, and she is quite as tough as Horace's golden-haired lass.

MAN (*solicitously*) How are you dear? Not feeling nervous?

ROSEMARY I don't think (*looking adoringly at him*) I should ever feel nervous with you by my side.

ALICE He shot him, the bastard!

ROSEMARY Which bastard are you referring to dear?

MAN You shouldn't be so familiar with your maid. I love you for it, but it is dangerous to encourage the lower classes. Servants must serve, not aspire.

ROSEMARY Darling, I shall remember that – always. Alice, go and see Tom.

ALICE Yes, Ma'am.

MAN That's better. You should get rid of her.

ROSEMARY I would miss her here; she has been with me so long I almost think of her as part of the place.

MAN I know, but she should know her place *in* this place.

ROSEMARY How wise you are! I always remind her of her rightful place in the house if she ever shows signs of forgetting it. I hope you will remind me – I am sure you will – of *my* place in the house if I ever show signs of forgetting it. When is our wedding?

MAN When you like. I have told them they must all be ready waiting, including the priest.

ROSEMARY Oh, is it to be a real Church wedding? How thrilling!

MAN Well . . . yes. A modern Church wedding. Not the old-fashioned kind. We start with a roll-call to see that they are all present and correct.

ROSEMARY I don't see anyone yet; there were one or two but they have disappeared. Oh, of course dear – how clever of you to arrange for us to have a little quiet time together first!

MAN Where is everyone? Many hours have passed and yet there are a mere handful of people – I told them to be here for the wedding in half an hour.

ROSEMARY Alice – go and fetch them and be quick about it. And bring Roland.

ALICE He's dead.

ROSEMARY So what? I knew he was dead years ago. Fetch his ghost. You can weep for him if you like but that won't bring him back to life. It may flush him out of your eyes.

MAN Call the roll!

ALL SOULS (*in raucous unison*)

Shall we gather at the river?
The river that flows through Paradise.

P.A.

When the roll is called up yonder I'll be there.

THE DUCHESS Wrong! It should be:

The Happy gate that leads to Ware
Love is like sunshine in the Air.

ROBIN Wrong:

Love is like sunshine in the bier.
Oh drink to me only through your tears
And I'll not ask for beer.

ALICE Wrong:

Colonel left in the Knuts Harding, D.S.O.

GULL Left tight, left right – Halt! Left turn!

TOM Well, what brought you to enlist my man? Private Harding, D.S.O., reduced to the ranks for being sober and orderly in your sobriety.

GULL Pardon me sir . . . related to the Duchess.

TOM Oh, that's different . . . promoted to the vice-president of Licensed States of America.

HARDING To *be* vice-president or the *state* of vice-president?

TOM No, no –

GULL Left turn! Quick march! Left right left right. Dis-miss! Sentenced to All the Known States of Psychoanalysis for Eternity.

HARDING My sentence is more than I can bear. Born and bred in a state of sin, entangled in the barb of frivolity, alcohol and fraternity, I shall rejoice in joholity Evermore.

THE DUKE OF SHEHOL My *dear* Colonel! My *very* dear Colonel! I envy you with all my heart. Can I offer you a port? No? I apologize – you are allowed nothing but champagne. In heaven I don't need it for the port is any in a storm.

HARDING There is nothing like champagne. It is either sham-pain or it . . . isn't. The middle excluded again –

THE DUKE OF SHEHOL Poor fellow! Excluded for ever. These Extremists! I myself am bred extremely – no middle – too sexual. I regret it, I really do. I would give anything to be in your place. Or nearly everything . . . not my halo of course.

MAN What chaos! Tell them to stop it – at once, Rosemary!

ROSEMARY (*rouging her lips*) Alice – tell them to stop it.

(*Redoubled noise.*)

TOM Man is condemned to live on the fruits of Victory. Here – for the term of his natural life, amongst the English in everlasting freedom.

MAN My prize is more than I can wear.

ROBIN Lucky swine – I always wanted my hair long. This din is fearful.

ROSEMARY (*shouting, almost screaming to make herself heard*) I do so love that hymn, 'Shall we gather at the river'. It used to make me giggle to see the country bumpkins exchanging sly jokes – nothing sly about this though!

MAN (*pushing his fingers into his ears to prevent being deafened*) No.

PRIEST Partners find their ghosts for the Resurrection Blues!

MATHEMATICIAN It is absurd to exclude the middle.

P.A. You might as well say there is either a noise or there is no noise. It only means that either the listener can hear or he can't. It tells something about the personality that hears or does not hear; nothing about the environment of the personality. If I cannot see a tumour because I have no X-ray negative, or cannot interpret the negative, that doesn't mean there is no tumour because it is excluded.

ROSEMARY Thank you, thank you, darling, for . . .

MAN For what?

ROSEMARY This wonderful party. It is lovely; so gay, so happy! Everyone is enjoying it marvellously.

PRIEST All ghosts take the partner who stops in front of them when the music starts – stops I mean.

MATHEMATICIAN It can't do both; it stops, or it does not.

P.A. It is heard, or it is not. Like the music of the spheres – thanks to radio astronomy it is audible to ordinary people who think it is noise or interference.

ROBIN Or denial, or defence, or Kleinian rubbish, or psychoanalysis.

P.A. Some can listen to it and transform it – Mozart, Leonardo, Praxiteles, Bach –

ROBIN Or the Beatles, or Rossini –

MATHEMATICIAN Or Riemann, or Aristarchus.

P.A. You are admitting that the significance of the excluded middle is the excluded 'exclusion', the excluded 'person' or 'thing'.

MAN Nothing is excluded here. Is this your ideal?

P.A. No, not mine, but I don't therefore exclude its existence.

MAN But surely you can see – or hear – from this outrageous rabble, that you cannot allow *everything?* Something must be excluded – or do you British like this muddle? This isn't a marriage – it's a riot.

ROSEMARY *Darling* – it's lovely. 'Lap me in soft Lydian airs' is all right for Alice, but what has it brought her to? Send her to me at once to do the 'lapping' for me.

ALICE Tell Man he must go; this is no place for him without his guns and armour.

(*Rosemary signals to Man to go.*)

MAN Go? Why, what has happened?

PRIEST Time for the Resurrection Blues. The Dead will fall in on the right while the Roll is called. Spirits rejoin their partners later for the dance of death.

SPIRIT (*recognizing a friend*) If thou beest he? But oh, how fallen! Quantum mutatus ab illo Hectore . . .

ACHILLES . . . and he walked stiffly into the shadows.

ROBIN What a crowd! All the best people – too highbrow for me.

ROLAND I'm surprised you think so. These are not that kind –

ROBIN The bands have started to play. There is . . . I'm sorry, I have quite forgotten your name. You look more beautiful than ever. May I?

(*The pair dance slowly away into the distance.*)

ALICE Who are they?

ROLAND Do you still not know? It is your party.

ALICE No, it is Rosemary's.

ROSEMARY No, it is Time Past's party.

PRIEST *That* is P.A.'s party.

P.A. No, my party is not times past. Always the mistake of thinking the past is owned by psychoanalysis; the past is owned by Regret.

Regret is a guest at a psychoanalytic party but is not the host; nor is psychoanalysis the domain of Regret. Regret is so vain that it is regarded as important and treated with deference in religion.

PRIEST Centuries have passed since all was vanity, and Vain Regret took the place of God.

ROLAND Why can't you make up your mind?

ROSEMARY Typically masculine! Men are always making up their minds, yet they think they can look down on women for making up their faces. I don't know of any woman who makes up her mind to be such a mess as the mind is when a man has finished making it up. The years men spend on psychoanalysis and education and religion! All as futile as eye-shadow! They end up each time worse than the last.

ROLAND What would you have us do?

ROSEMARY No idea. I let my mind make me up. I suppose you think I haven't a mind?

ROLAND I always thought you have one of the most acute minds –

ROSEMARY Oh, don't be such a fool! Have enough respect for your intelligence and mine not to descend to flattery. The band has started a new tune – oh, I love this; let's join in.

SOPRANOS

Sum-mer suns are glow-ing over land and sea,
Hap-py light is flow-ing for you but not for me.

ALTOS

The bells of Hell go ting-a-ling-a-ling
Far over land and see
The loud, uplifted, alcoholim go single-im-a-ling
For new but not faugh mer-ley.

TENORS

Oh death where is thy sting-ai-ling
Oh greve thy vick-tau-rhee?

ROLAND Where's the grammarian? At his funeral?

ROBIN Don't let that Boche hear you – he is hostile to Arians.

PRIEST This band is lovely – that is the great advantage of being tone deaf.

ROLAND And colour blind. If you could distinguish colours you

would not be able to see me because my kind of visibility does not lie within the spectrum of human ocular vision.

PRIEST I have never been interested in human ocularity except as a blinker used for excluding the 'ghost' that one doesn't want to see. Now and then some fool like Arjuna, or Socrates, or Dante, or Meister Eckhart, or Juan Yeepes y Alvarez –

ROLAND Who on earth is Yeepes Yip-i-addy-i-ay-i-ay?

PRIEST He is not on earth.

ROSEMARY What on earth are you two talking about?

PRIEST The Kingdom of Heaven is not 'on earth' and nor is the place that chap from Hippotades was in when Augustine wrote *The City of God*. Plato knew that; Socrates was not so wise.

ROBIN '. . . as if of hemlock I had drunk', said Keats.

PRIEST He should have tried peyote; the Aztecs knew better.

SHERLOCK Even they had to wait till the Supreme Court recognized the Native American Church –

PRIEST Which recognized the Holy Spanish Church of Cortes, the Holy Catholic Church. As I was saying, Plato did not lack wisdom to the point of drinking hemlock.

SHERLOCK Nor, I gather, did you take the draught you offered the Court assembled in the Death Pit at Ur.

PRIEST There is no evidence.

SHERLOCK *That* is the evidence. My business is facts and I have to respect all kinds of evidence including negative evidence –

P.A. Which you have to interpret. I interpret – lo not dispense – facts.

SHERLOCK I do not argue against your vertex. I only argue against the favouritism you show for one fact rather than another, and one vertex rather than another.

PRIEST So do I. God is not mocked, but you behave as if you do not have to bother with God because you cannot be confronted with a particular category of a fact. Isn't this music hellish?

P.A. You give a perfect example of applying a religious category appropriate to religious categories of localization.

PRIEST I do not. Like you, I have to use topographical terminology to describe categories and locations when I am discussing, as here, a subject which has no known locality. One prophet said, 'The Kingdom of Heaven is within you'.

ROLAND Psychoanalysts deprecate these Kleinian statements.

ROBIN Good lord! Don't say you have psychoanalysts in Heaven.

ROLAND You rush to conclusions. I didn't say I was in Heaven – or Hell. I did say I was dead.

ROSEMARY I never regarded physical death as a necessary qualification for being dead.

PRIEST The classics are dead.

P.A. It has become a sign that a person or theory is dead when it is called a 'classic'. Classic Art, Classic Religion, Classic Science are states of those activities and people when they have reached the stage where no one regards them save as objects. This music –

PRIEST Not music yet, surely? Should there not be some structure, some sign of mental discipline about it?

P.A. If that is what you think, should there not also be some discipline to which religion conforms? In psychoanalysis, though we do support the idea of 'freedom', we also preserve a mental discipline – a rigorous one.

ROBIN Where is the line between licence and freedom?

PRIEST There has always been discipline in religion. Dogma is a succinct statement of religious law. Terms like 'dogmatic' are employed in an undisciplined manner by those who use dogma as a pejorative comment on a scientific statement. We are familiar, from personal experience, with 'life-preserving' religious experience, but we do not and cannot impose that fact on others who have no such experience.

ROLAND The band is playing a jazzed-up version of 'For though the Body dies the Soul shall live for ever'. Do you call that blasphemous?

PRIEST No; it gives a sombre note to a boringly hilarious evening.

ROBIN Aren't you being intolerant of hilarity?

PRIEST I think it would be boring without that tincture of solemnity which the reminder of death gives.

ROBIN Why? What is solemn about death?

P.A. Nothing; but people think so if they suppose they are doing something for the last time. I suppose one would think it doubly solemn if it were felt to be the first. Women have more reason than men to fear death as they know they can die in giving birth.

ROSEMARY Reason has nothing to do with it. If it had, many people would fear pregnancy who don't.

P.A. You mean they do not consciously express it.

ROSEMARY 'The unconscious'! Were you afraid Man was going to kill you, Roland?

ROLAND I meant to kill *him* before he could kill me. I was sure that I should not be left to live for long if I was successful.

ROSEMARY Were you afraid of a future life?

ROLAND No. This 'future life' is no worse than many times I have lived through – periods which were 'future' before they had occurred. The whole of my life had been future at some time. I hope *this* is going to come to an end; once is enough. What does P.A. say? – if this infernal music leaves him able to think.

P.A. 'Infernal music', you call it; are you using the term 'infernal' as pejorative? Or topographical, that is, music appropriate to the region our priestly friend calls Hell?

PRIEST 'Hell' is not a term of religious topology.

CHOIRMASTER Now – All toes only. Starting at page 2, piu, piu poco animato. 'The more we are together.' One, two . . . The more we are together, together, together – no, no! All toes together – poco sostenuto; the froth-blowers' anthem.

BIG TOE I can't find the place.

CHOIRMASTER You are not supposed to – this is not a solo item. This is All toes. You wait for the double bass to come in. Page 3 opens with a crashing bore marking your entry.

ALL TOES Entry? I thought it was the exit.

CHOIRMASTER All toes – exeunt – the entry is through the mouth. T'other end of the anatomy if you want The Way Out. Aut, aut, aut-ishoo! sneezes only!

ROSEMARY Oh, The Blue Danube! What a beautiful tune, I used to think. I once overhead a beautiful young man talking to a beautiful young girl; those two beauties were flushed with grievance because the dance, which glittered like Heaven to me, was 'so *bo*ring!'. 'So *bo*ring!' they repeated over again. I went up to my attic and prayed God to make me good.

MAN Whatever did you do that for? *I* should have killed them. Perhaps you thought that if you were a good girl God would let you go to dances too. So you shall; I will take you.

ROSEMARY This dance frightens me. I think we are dead.

MORIARTY So you are – as only human beings can be. Requiescat in pace – as if they had ever done anything but bore all figments of imagination as they read us without comprehension. I used

occasionally to appear in their dreams. That man Roland used to come alive sometimes, enough to shriek with terror and wake some of his fellows. Why, Rosemary, what's the matter? You look quite faint. Just as I thought you were almost interesting. Catch her you dolt!

MAN Here's a chair. Where's your maid?

ROSEMARY I'm all right – it's hot in here, isn't it? I think I would like to sit down.

MORIARTY Sit down? just as she was coming to life. They think they are going to break down if there is a chance of hatching out: Conan Doyle cracked up when he felt his shell of sanity was breaking. What a tough prison of sanity they grow at any sign of reality! Newton had to support his fragile shell by being Master of the Mint just like any blathering Big Business construct. To be like everyone else – 'sanity', they call it!

MAN (*to Rosemary*) Are you better, dear?

MORIARTY No, you fool – far worse. She is finding her way back to the slavery of mistresshood.

ROSEMARY What's that? I'm hearing voices.

MAN Of course; the room is full of people talking. Shall I tell them to go?

MORIARTY I thought only fragilities like Macbeth had to break up the party. She has no more stamina than the usual day-dream – probably less because she is a desire of Alice's; what P.A. would call a 'sexual' desire.

PRIEST Queer what a hullabulloo was made when Freud decided that some desires could be particularized as sexual. We had recognized the obscurant qualities of Desire years ago. Even Arjuna was unable to tolerate the desire which he almost succeeded in satisfying.

ROBIN 'Desire' is a name given an impulse when it is wished to obscure a precise feeling by generalizing the particular.

PRIEST I didn't know you had a philosophical bent.

ROBIN I haven't. All I wanted was to live in peace and quiet and run my farm. Then a farm worker desired to blow his brains out and did so. Filthy mess he made, too – made worse by coroners and psychiatrists and psychoanalysts, and now invading Germans.

SHERLOCK How do you know 'they' are to blame? If 'they' had not noticed 'the mess', do you suggest someone else would not have done so?

P.A. I think all the explanations, by all the different specialists of all the different specialities, including my own, are 'rationalizations'; that is, 'reasonable' explanations – scavenging.

PRIEST And are correspondingly suspect. When no reason is available, reason itself is called in to show that the unwelcome but observed facts conform to the limits of the human mind and to laws made by the human dictator.

P.A. Logic is set apart in the human pantheon as if thinking can be judged as being in accordance with 'logic'; which is as convincing and ridiculous as all the other standards that have ever been set up for awe, veneration, adoration.

MAN Liberty, Equality, Fraternity – set them up and forget them. Load them with honour and they can be sunk without a trace. Some crack-pot poet or philosopher or saint is bound to give rein to his insatiable curiosity and unearth the forgotten god from his mound of worthless adoration.

PRIEST The god comes to life and upheaves the dead rubbish beneath which he lies buried. The autistic wisdom begins to hatch out of its shell, however stony, unyielding and safe the prison provided to contain the explosion.

ASTRONOMER The cataclysmic explosion can be felt in the periphery of the galaxy. Who is ready – someone always is – to darken council with his knowledge, his reason, his logic to prove that these stupendous upheavals, ineffable explosions are comprehensible and therefore don't exist?

P.A. And that the trivial, miniscule, undiscernible births are biological events which are analogically, and therefore really comparable to, relativistic protons in the physical world.

ASTRONOMER Why 'therefore'?

P.A. Because 'analogy' is a word, and a word is a symptom of mental activity – a fragment of theory.

ASTRONOMER That does not mean that there is a realization that approximates to the theory.

P.A. I agree. There is no 'evidence' of any link between the theory and the realization to which it is supposed to correspond. I am not sure that I need to suppose 'direction' in the way theories of causation presuppose, in this instance, that a 'big bang' set off an 'expanding universe', or that the violent expansion of the universe continues to cause 'perturbations' in the sensitive receiver we call the human

central nervous system. If the human CNS is capable of sensitive receptivity of a high order then it may betray events of great power though we remain ignorant of the genesis.

ASTRONOMER What do you mean by 'ignorant'?

P.A. I mean that an event might be powerful enough to stimulate the parasympathetic, but not powerful enough to cause the parasympathetic in its turn to stimulate the cortex. I have to use these anatomical terms to speak about the mind; they are in fact meaningless or inaccurate unless the recipient of these communications can tolerate their reception. Students of the heavens had to become sensitive to the evidence of heliocentric phenomena and tolerant of what their receptors conveyed before they could achieve comprehension.

PRIEST *You* use language of science and language of religion, but if I use it you claim that I am being unscientific. 'Heaven' is a word which should be used with due respect for its history as part of religious thinking.

P.A. You also should use these terms with respect for the scientific truths to which they relate. 'The Kingdom of Heaven is within you', was a statement made by one religious thinker, and should be respected no matter what the 'vertex' of the thinker. Such statements not only give coherence to past conjunctions, but also display conjunctions and coherences which were not suspected at the first adumbration. 'Man's inner world' is a succinct statement recently made, drawing attention to conjunctions of what we would call a similar kind of domain of mental phenomena.

MAN Shall I shoot him?

ROSEMARY Not yet – though I can hardly bear it. Does this waltz go on for ever?

MAN Only till we are totally exhausted.

ROSEMARY The din is getting worse and worse. It penetrates me; it will burst my ear drums. Funny to think . . .

MAN Why do you stop? What were you going to say? I see your maid is dancing with that fellow Roland.

ROSEMARY I thought you had done for him when you shot him. She dances well – I wonder where she learnt. I think one of her remote forebears must have been of good family. She has grace . . . I feel I am going to faint . . .

MAN I'll call your maid – you there! Come and help your mistress.

ROSEMARY I feel awful; I can't even faint.

MAN You have to be tough; you are dancing as well as ever. I felt upset when I first killed a man and saw how surprised he looked. He never realized he had been killed. Shooting isn't at all bad when you get used to the shock.

ROSEMARY It's a 'shock' to dance with someone – as if you didn't realize you would be 'danced with'. I suppose P.A. would say it was 'sexual'. Priest would say it was religious, like Saint Paul being 'converted'.

MAN Saint Paul was a Jew; he said he was a Roman citizen.

ROSEMARY A Christian, surely? If this waltz goes on I shall die; I'm utterly exhausted.

MAN Your feet are dancing all right.

ROSEMARY They are dancing *me*; I don't mean it to happen. Look at Alice – she doesn't mean it any more than I do.

P.A. Death is not a disease any more than birth. Disease is constantly conjoined to both; so is life – and human beings are liable to think one causes the other.

PRIEST Only because scientists have replaced God by cause.

P.A. I have heard religious addicts talk of a First Cause. Whether scientists or priests, they are restricted by the human mind which clings to ideas such as god; the variable is substituted by a constant and then venerated as Constant.

PRIEST That could be rewarding to a mathematician.

P.A. But I don't see the advantage of substituting God for god, although I can see the value, in some circumstances, for substituting 'G' for 'g'.

PRIEST It is only a sign to denote something to which it is wished to draw attention. No one suggests 'G' should be venerated; we think there is some thing which is worthy of veneration.

P.A. I include the human mind as something worthy of respect.

PRIEST Respect is not veneration.

P.A. You are talking about vocabulary. But I do not discuss grammar, although I am familiar with the supposition that I only play with jargon. In fact I recognize a reality beyond the word 'veneration'; similarly there is a realization that approximates to the

word 'respect'. If 'respect' could be measured against a spectrum it would show a different wave-length from that of 'veneration'. I do not venerate this music, but I do respect the noise that makes it difficult to think.

PRIEST

> 'Be shellèd eyes with double dark
> And find the uncreated light.'

P.A. 'I blind myself artificially', said Freud when he wished to investigate some dark phenomenon of the human mind.

PRIEST

> 'Shape nothing lips, be lovely dumb
> It is the shut, the curfew sent
> From there where all surrenders come
> Which only make you eloquent.'

Not grammatical – but excused as poetry.

P.A. I do not 'excuse' my silence but when I want to hear my patients I have to be silent. I listen too for more than is said.

PRIEST More than the words?

P.A. Yes, but not only more sound. I listen for something in addition to the sound or the well-known meanings of the words which may not be what is heard by the physiological, sensory apparatus.

PRIEST What is that?

P.A. That is what I expect to find out by being aware.

PRIEST I likewise advocate awareness. I object to the fact that you exclude certain categories of sense and so distort the evidence on which wisdom must rest.

P.A. Yet you quoted Hopkins with approval. Is that not selecting, and therefore undermining the basis for wisdom?

PRIEST No. I assume that more than enough sensual evidence is available for physical needs, but, like the noise here, too much to obviate the screening and marking of evidence needed for spiritual life.

P.A. How do you know what is needed and what is dispensable? I think something must be relevant to psychoanalysis, but if I claimed to be studying or worshipping God I would find it difficult to claim relevance. Even in the limited sphere of human personality it is hard to suppose I can exercise my capacity for discrimination effectively.

PRIEST Yet all psychoanalysis seems to stress certain alleged phenomena as worthy of more attention than others.

P.A. True; but our aims are related only to the practice of psychoanalysis. I may be wrong in thinking that religion relates to something assumed to be far more extensive, 'all-embracing', whereas psychoanalysis relates only to the human mind. That, I think, is more than enough.

PRIEST But – enough for what?

P.A. Studying and helping the development of the human mind. You, like Man, are engaged on tasks which appear to require decisions on whether a human being should retain his life or not.

PRIEST So are doctors. You psychoanalysts are concerned with no less than the life and death of the mind – does that include the spirit?

P.A. Not if I understand what you mean by 'the spirit'. What a man does with his mind is no more the job of an analyst than restoring a broken leg – which is then used in pursuit of robbery or murder – is to do with the use to which the patient is going to make of that leg.

PRIEST Or that saxophonist is going to make of his emphesematous lung. It is deafening – do you advocate listening to his playing?

P.A. If he were coming to me for analysis and it was the most direct way of his keeping me informed – yes. If he is concerned to make noises or weave patterns of sound, I do not consider it any part of my profession.

ROSEMARY Only if he deafens you?

ROBIN Or if it is a ritual? Or a religious pattern?

ROLAND A requiem for the dead – me, for example?

P.A. None of those. If he is deafening you, you could call for the protection of the police. If it is a ritual, I suppose it would be the job of the priest. If, instead of a saxophone, he were weaving a requiem with a lethal weapon, I would consider it the concern of the armed forces.

ROLAND A fat lot of use that would be in this country.

P.A. It would depend on whether I had the sanction of the appropriate authority. I would not psychoanalyse anyone unless I had sanction – permission. In this country the armed forces have been disarmed by superior forces, so I could not call on them to intervene against anyone choosing to make a pattern with a gun.

ROLAND Suppose he wanted a psychoanalysis with a gun?

P.A. I have had the experience.

ROLAND I'd like to see *you* analysing a gun!

P.A. I would not analyse any inanimate object, but I would try to analyse the man *behind* the gun –

ROLAND And suppose he replied with bullets!

P.A. I would hope to have made many interpretations before he had been forced to make his meaning clear with a gun. The interpretations would have had to have been such that they would have seemed worth hearing.

MAN I am glad you don't think you can analyse the gun. I often think it's the only defence we have against you people. I have known psychoanalysts who could not be prevented from outraging common sense.

P.A. Common sense can resort to common arms; by the time a nation has been reduced to armed force it is too late.

MAN We had no choice. What were you doing to allow things to come to such a pass? I don't remember any psychoanalytic appeal to redress grievances.

P.A. We are concerned to redress a particular form of grievance, but it takes time for us to gain ability sufficient to make a rewarding contribution.

MAN From what I have seen and heard, that is likely to take several centuries or even millennia.

P.A. Who knows? Change is often catastrophic. Bernard Shaw said it was only politicians who believe in change which is so gradual that no one detects it.

MAN Or it takes place so quickly that it is unobserved.

P.A. Or senses are so dulled or rudimentary that great changes are unobserved. A fetus is not likely to know it is growing.

ALICE Can a fetus commit murder or suicide?

P.A. A fetal idea can kill itself or be killed, and that is not a metaphor *only.* Metaphors can be the ghosts of ideas waiting to be born, and not only, as Berkeley said to Halley, 'ghosts of departed quantities'.

BANDMASTER (*ringing a bell and using a loud-hailer*) Time, ghosts! Time! Time to be departed. All change! Out increments! Out! Fall in by your Rights! Quick . . . march! Dead . . . fall in! By your

coffins . . . Quick . . . dead! Quick . . . dead! Loves me . . . loves me . . . not. All change at Purgatory!

MAN What's this?

LEADER OF CELESTIAL CHOIR All change, you bastards! All change!

MAN This is a dismal hole.

ROSEMARY Why have we got out here?

MAN We had to. Arrived. All change.

ROSEMARY All change? Surely not; where are the others? Where is that bloody maid of mine?

MAN You told her to get lost.

ROSEMARY Did I? She *would* obey if she knew I didn't mean it. If this is Purgatory I don't think much of it; I thought Purgatory was religious.

MAN No, the religious place is a dogma; this is scientific.

TOM What is this gloomy hole? Why are you looking about in that curious way?

P.A. They are having an occulo-gyric crisis in unison.

PRIEST In harmony would be better. You can mow them down more easily. I can hear the stutter of the Lewis guns even now.

ROBIN I can't. The damn thing has stopped again. You fool! Don't wrench it like that. It's *not* a number one. I suppose it's the only stoppage for which you know the cure. How quiet it is here! Not a sound . . . Yet I see old ghosts look in on the battle. I say, you chaps, it's awfully good of you to look in on me like that! It is so quiet it might be a morgue. I vote we have a group discussion. Do we have a vote here?

P.A. Of course; you can have as many ineffective votes as you wish. Effective votes to the left; all others to the right – so they can cancel out properly.

MAN That is nonsense.

P.A. No, it is Non Sense.

MAN It sounds mad to me.

P.A. You have forgotten all changed here, and what was nonsense has become Non Sense. The Laws of Nature are now the Laws of Un-Reason. This is the post Big Bang Era.

ALICE What was the Big Bang? I don't remember it.

MORIARTY It has not been discovered yet. The scientists, when they have caught up with the technique, will have to engage on

a journey of autismological discovery. Of course archaeology has changed too and has to relate to a spiritual science or spiritual curiosity. Priest may know who his successor will be – some young, inquisitive, post-bang dinosaur. I don't know who is taking over from me yet – no child of Irene and myself.

SHERLOCK So that is what happened to Irene Adler!

MORIARTY Really, Holmes! Didn't you know that? We didn't marry in church, but we married. The Big Bang separated us.

SHERLOCK For the time, I suppose?

MORIARTY No, there is no Time as you used to know it. I never set much store by it – or any other figments of Reality.

ROSEMARY I must say that you have a very high opinion of yourself when you are only the ghost of a figment of reality.

MORIARTY You forget that you are only a figment of imagination of a figment of the imagination of a lie after death. I have never been a figment of reality, and change presents none of the difficulties you seem to be having. As for P.A., I would hate to try to analyse *his* status. He was real to start with and has devoted himself to the reality of other realities even more banal than himself.

ALICE You are being rude.

SHERLOCK If you had been rude to Rosemary you might have done better.

MORIARTY I don't understand your scale of measurement.

ALICE Nor do I.

SHERLOCK It is the same as the scale against which I measure your distance from Roland. Your score, by that scale, was better with Rosemary than it was with Roland.

TOM What a dismal hole this is.

ALICE You said that before. How long do we have to wait here?

MYCROFT There is no time for figments of imagination, dear lady. You haven't forgotten real life yet.

ALICE I wish I could; that would be Heaven.

BANDMASTER That's the next stop. First Class passengers only. Supplementary tickets from Saint Peter.

P.A. I trust that the saint has no prejudice against psychoanalysis.

SHERLOCK You don't have to go first class. After all, I don't.

P.A. In my experience it was easier to appreciate both heaven and hell when in contact with them.

ROBIN What Heaven and Hell? I always understood them to be topological terms.

PRIEST No, religious.

PHYSICIST No, figments of imagination.

P.A. No, what I call definitory hypotheses depending on the vertex.

ROSEMARY My! You haven't changed a bit!

P.A. It certainly sounds as if I were lacking in mental flexibility. That is what I suspected about being dead. I never anticipated the possibility of experience after death; either I am not dead, or I shall have to revise my views.

PRIEST Let me recommend the less dogmatic approach, not least because you may be unfamiliar with dogma and its uses.

P.A. I have usually considered dogma to be the analogue of the so-called 'laws of nature'.

PRIEST I believe it to be a formulation of the 'thing itself.

P.A. You claim, with the mystics, that you have direct experience of God. I should have thought your organization would have considered that heretical; a psychiatrist would suspect megalomania.

PRIEST There are opinions which question the claim of any human animal to aspire to such experience. Dante only claims such direct experience as a mortal being can have.

MYCROFT Do you find your Deity more convincingly real then myself or Falstaff?

PRIEST I had never heard of you till recently, and Falstaff is only credible as a human is credit-worthy. My experience of God is ineffable, whereas the credibility of human beings and their various representations and creators only *remind* me of God.

P.A. I do not understand, still less know, the experience of which you speak. Does Man remind you of God?

PRIEST His violence and murderous propensities are reminiscent at many removes of the violence of God. A great religious poet once said, 'The Heavens declare the glory of God'; if that is taken to include the violence of the heavens I would say that that came nearer to 'God' corresponding to my experience. 'Who shall abide the day of His coming' is a phrase which expresses *my* feelings of awe and dread which seem to be more appropriate to the God I know than to more agreeable ones.

ROSEMARY Don't you believe in a loving God?

PRIEST Yes; but I do not recognize the feeling you seem to be experiencing when you describe it as 'love'.

P.A. It is notorious that you and your organizations are opposed to sex and even teach sex as if it were opposed to God.

PRIEST It is notorious that it is notorious, although even a superficial knowledge of what we teach would make it clear that we do not.

P.A. Are not your clergy supposed to be celibate?

PRIEST We consider that sexual occupations are not compatible with the work to which clergy are supposed to devote themselves. Psychoanalysts and physicians are not supposed to practise sex with their patients.

P.A. That is not the same as commending or even advocating total abstinence.

PRIEST You enjoin total alcoholic abstinence.

P.A. I don't, but I can and do see characters with whom such totality might be wise. I might hope that in the course of the experience of psychoanalysis the individual would become able to have an opinion of his own, and that those options would be more an asset than a liability. But *my* preferences, if I let them obtrude, may be his bane, so I do not consider formulation of such ideas to the patient as part of the psychoanalyst's function.

PRIEST But you are suggesting it by being a psychoanalyst.

P.A. I am sometimes asked if I advise psychoanalysis; I incur hostility because I say it is no part of advice I am qualified to give. I agree that merely being what I am suggests something to the patient, but I think it my duty to demonstrate to him that impulse of which he is often unaware.

PRIEST Has not Jung said this?

P.A. He said he agreed with Freud's description of the transference; he talked also of archetypes and a collective unconscious. I don't see why he should not call the Oedipus figure an archetype if he wants to, or say that an equivalent of the Oedipus figure exists in every human being. But I do not see any need to augment Freud's facts and theory; if I saw a better way of demonstration I would not hesitate to use it. The postulate of a collective unconscious seems to me to be unnecessary. I would not say that because two people see a mountain, *that* is evidence of a 'collective eye'; it is simpler to say

both people have eyes that function in a similar manner. I would not use an expression which might risk an increase in ambiguity – which is bad enough at best.

TOM I'm bored.

ROBIN Oh shut up! We all are.

PRIEST 'Collective boredom'? Hullo! Who is this?

ROSEMARY ? ! ! !

ALICE Awful-looking specimen.

ROSEMARY Specimen of what?

TOM Reminds me of someone.

ROBIN Don't say it's a bore!

P.A. I hardly recognized him – it's my ghost.

ROBIN I thought so.

GHOST OF P.A. I died at English Farm and I've been working through Purgatory since. I feared I might become like P.A.

ROSEMARY *I* don't think you're a bore; you look rather interesting.

GHOST OF P.A. No, I'm cold. How the wind whistles through me! If only I could be clothed with flesh and blood – that would warm my old bones.

P.A. It wouldn't. I have taken mine off to be a figment of imagination.

GHOST OF AUSER Aren't you . . . ?

P.A. No, I'm P.A.

GHOST OF AUSER You reminded me of – ah, there you are! I thought I might find you here.

GHOST OF P.A. When you knew me I was a ghost of myself – at Berles-aux-Bois. I loved you, but I couldn't save you.

GHOST OF AUSER Never mind, old boy. You were wonderful! Sorry I lost my tank, but there were a lot of them and they shot me through the heart. What's this dismal hole? Seems to be some sort of Transit Camp.

PRIEST That's what *you'd* call it. Some people think they are Stations of the Cross.

GHOST OF AUSER (*cheerfully*) Really? I thought that was a Roman Catholic idea.

PRIEST No – they borrowed the name from a Jew. It's named after him.

GHOST OF AUSER What's that queer get-up you are wearing? Fatigue dress?

PRIEST You might call it that.

GHOST OF AUSER (*to P.A. and Ghost of P.A.*) Well, how's things? How have you been getting on? It's jolly nice seeing you again – I hope you are glad to see me too.

P.A. I am indeed – but truth to tell I've always been afraid of meeting you.

GHOST OF AUSER Afraid of meeting me – whatever for? You were one of the bravest men I ever met! I wanted to get a V.C. – one better than you.

GHOST OF P.A. You only saw me wearing my Hero dress. I was afraid you'd see me – as I saw poor Gates.

GHOST OF AUSER Ah yes, I heard about that – broke down or something didn't he?

P.A. No, poor chap, he went sane long before the war was over; he couldn't bear the truth *and* being in a minority of one at the same time. It was pitiful – lying there in a ditch blubbing. He took to drink; even that couldn't save him from reality. It used to get him by the throat and blind him.

PRIEST I tried him on a stiff dose of religion but he had never been inoculated.

P.A. 'Religio Medici. t.d.s. as ordered' – but no one ordered it. I doubt it would have saved him anyway.

ROSEMARY Quantum mutatus ab illo Hectore qui redit exuvias indutus Achilli.

PRIEST I'd forgotten you knew Hector.

ROSEMARY He was a friend of my friend Paris.

ROLAND I remember it was said you were the party that burned the topless towers of Ilium.

ROSEMARY Yes – now it's the topless style of Saint Francisco. I no more launched a thousand ships than the London Scottish sank the Emden.

GHOST OF AUSER I heard that joke – I thought it rather funny. Like the surrender of the gunners of the Territorial Division to the artillery of the 7th Division when their guns fired too short because of worn barrels. You are very good-looking.

ROSEMARY Thanks! So I'm told – or used to be when I was younger. Luckily I was reconciled to having an ugly soul – more

serviceable. It has to be tough, like the sole of a boot. Alice, give me my shoes. There, you see how pretty they are? But the life and soul even of a party shoe has to depend on the life *and* sole of a . . . You're not attending. Where have you gone?

GHOST OF AUSER Sorry, I thought I saw a friend. I thought he had been killed at Ypres.

ROSEMARY Ypres? Never heard of it – unless you mean Wipers.

GHOST OF AUSER (*vaguely*) Yes, I suppose so. I was never there of course – before my time.

GHOST OF P.A. Even now he is as bright as old renown. No one ever heard of him, but *I* knew what we had lost when that brave, cheerful lad was found lying there – dead.

GHOST OF AUSER Old man Horace was wrong for once. I was not at all 'sweet' – dead or alive.

P.A. Ask my ghost what spectacle was presented by those of us who lived to grow old.

GHOST OF P.A. Do you think I was any better *before* English Farm?

P.A. On consideration – no; nor after. The actions of the just – the generous man – stay just; the mean man stays mean. Whatever the dress in which we clothe our 'selves' the structure lives longer than the character we hang upon it – the 'glories' of our blood and state.

GHOST OF AUSER I wanted to ask you – did we win?

(*A long, long silence.*)

20

ROLAND You've been crying.

ALICE And God shall wipe away all tears from . . .

ROLAND Come, wake up!

ALICE It would be nice if there were a God.

ROLAND Perhaps – if He were an improvement on the ones who have won adulation, the famous ones of old.

ALICE That reminds me of the dream I had last night. Terrible! I can't remember it, but I know it went on all night.

ROLAND 'In the silence of the sleep time, when you set your fancies free' – a song we had at school. I think the fancies were supposed to go somewhere . . . I forget.

ALICE 'Music, when soft voices die, vibrates in the memory.' I can't remember who wrote it –

ROLAND It doesn't matter.

ALICE Do you think there is a life after death?

ROLAND I hope not.

ALICE I feel depressed.

ROLAND You were crying in your sleep.

ALICE (*wiping away her tears*) I don't think that's crying – not weeping 'boo-hoo', but crying 'peep-bo'.

ROLAND I've got to go to Munden this morning –

ALICE I dreamt something about Munden, I think . . .

ROLAND Poor Robin's cowman's suicide upset you.

ALICE (*shuddering*) *That* wasn't a dream! Perhaps Shakespeare and Homer were right; it would be awful if we dreamt we were alive when we died.

ROLAND Who knows? These poet crackpots often had something.

ALICE If they had discipline, even the discipline of versification –

ROLAND Farming for me! I'm off to Munden. Goodbye; sweet dreams.

ALICE No, no! Don't let me go to sleep again. Rosemary! Rosemary!

A KEY TO A MEMOIR OF THE FUTURE 139

A MEMOIR OF THE FUTURE
BOOK THREE:
THE DAWN OF OBLIVION

1979

A Memoir of the Future was first published in 1991 by Karnac Books, London. It consisted of revised and corrected versions of three previously published books – *The Dream*, *The Past Presented*, and *The Dawn of Oblivion* – together with a revised and expanded version of *A Key to A Memoir of the Future* (1981).

The Dawn of Oblivion was first published in 1979 by Clunie Press, Strath Tay.

A Memoir of the Future
Book Three:
The Dawn of Oblivion

Q Can you give me . . . oh it's you is it?

A Alas! yes.

Q I don't see why you say Alas!' I don't mind meeting you! Why . . .

A I thought you were going to ask what it's about.

Q Oh no. I read the last one.

A Splendid! Did you like it?

Q No. Is this as bad?

A Worse.

Q How interesting: I must get it.

A I said 'worse'.

Q That's what made me want it – I don't see how it could be.

1

EM-MATURE This book is a psycho-embryonic attempt to write an embryo-scientific account of a journey from birth to death overwhelmed by pre-mature knowledge, experience, glory and self-intoxicating self-satisfaction. I was spared any knowledge of the courtship of my sperm with my ovum, but many years later was given to understand that my ancestors had a long and disreputable history extending to the day when an ancestral sperm, swimming characteristically against the current, lodged in a fallopian tube to lie in wait for an unknown ovum. The history of my ovum appears to be virtually non-existent. My sperm impetuously penetrated a Graafian follicle before my ovum had time itself to escape penetration. I cannot vouch for the truth of these tales which became known to me through scientific hearsay many years later. I admit responsibility for what I have experienced, but not for the distortions of scientific sense. I acknowledge dependence on sensible and experienced transcriptions; I cannot promise communication of pure non-sense without the contamination by sense. I shall not repeat my apology for having to borrow the language of experience and reason despite its inadequacy.

My earliest experiences were of something touching what I later heard was 'me'. The changes in pressure in the fluid surrounding me varied from what Me called pleasure to what Me called pain. My optic and auditory pits at the age of three or four somites received sound and light, dark and silent, not usually increasing beyond nice and nasty, but sometimes making Me feel more inanimate than animate.

PRE-MATURE Get on with it – when were you born?

EM-MATURE Don't hurry; I was coming to that.

EIGHT YEARS You always are, but do not arrive.

EM When I was only three somites old –

TWENTY-FOUR YEARS That's not an age.

EM Don't talk about matters you don't understand. If you had some respect for your fore-bears –

EIGHT YEARS You've spelled it wrong.

EM When I spell it, it is right; when you spell it, it is wrong.

EIGHT YEARS That is not how it seems to me, looking at it from my side of the barrier.

LEONARD Shut up both of you and look at this drawing.

EIGHT YEARS Not bad – what is it?

EM I see a great light.

TWENTY-FOUR YEARS Open your eyes and you will see it is darkness of the womb.

MILTON The formless infinite – the void.

EM The light is too intense.

TWELVE YEARS 'it is eye. Be not afraid. And 'e did 'it 'is eye. And Em was afraid. Ha, ha, ha!

EM What a dreadful oscillation of pressure!

THIRTY YEARS Who is talking words you don't understand now?

EM Caught in a web of whirling waters.

LEONARD Hair! Water! If you only looked you would 'see-what-I-mean', but –

FORTY YEARS No – only hair, water, words –

FORTY-TWO YEARS No; if you listened you would only hear 'repetition compulsion' psycho-ese.

P.A. Psychoanalysis?

EM Stop! Stop! I can't bear it. I am blinded, deafened!

KRISHNA I told you so; wait till you are Arjuna.

EM It's quieter now. Gametes quarrelling. Post-natals at it again. Give me Silence. 'Shape nothing lips.' 'Be shelled eyes.' Stoma-you at the other end – keep closed. 'A sealed tube'? That can't be right. Suck! What?

FOUR SOMITES Come on, wake up! Think!

TWENTY MONTHS Think? You can't think! You haven't even got a central nervous system.

EM You're a fool. Even Four Somites had the sense to want to suck. I admit –

TERM You didn't. You made a fuss about being woken by me and my young co-hairs.

TWENTY MONTHS I sucked an erection.

TERM You made a fuss when my erection wanted me to suck it.

TWENTY MONTHS Rubbish! I objected to being fobbed off with a thumb. No milk, no amniotic fluid – nothing! Le Néant, the Void, the Infinite! Too late – here's Eighteen.

EIGHTEEN YEARS 'There will be too much of me in the coming by and by.'

INFANCY Now shut up, all of you. I'm senior here. Since you can't suck my nipple or penis and have a grouse about my thumb, I have arranged to suck a nipple.

SOMITES We don't want a nipple! We want an erection!

EM I don't want your borrowed erection. It nearly squeezed me to death and drowned me. Luckily I had the intelligence – wisdom – to become erect myself. I may borrow a case or sheath as an exo-skeleton temporarily, but –

TERM No, don't! If you borrow an exo-skeleton you will never get out of it. I swallowed the erection and now it is part of *Me.* It's my endo-skeleton. *I* am an erection. *I* am independent.

EIGHTEEN YEARS Hark at it! What conceit! What pride!

TWENTY-FOUR YEARS If it weren't for pride and conceit you would still be grovelling about on your belly. You owe Term a debt.

EM I may be grovelling around a bit, but if I don't bite the woman's heel, call me *Serpent!*

EIGHTEEN If I don't bruise your head, call me *Heel!*

ALL I don't know what you are talking about.

P.A. You think it's *about* something. It has already been said by Shakespeare – 'It is a tale told by an idiot, signifying nothing.'

TWELVE YEARS Shakespeare? I haven't done Shakespeare yet.

P.A. Soon you will have *done* Shakespeare, and when you have realized he is the greatest man who ever lived you will be *done* too – and you won't recover. Shakespeare has been so well *done* he has never recovered either.

EM I shall be so well and truly born I suppose I shall never recover either. It is terrible to dream I may become like Term one day. If only I could be sure to be told by an idiot I would be reconciled to being *Nothing,* but –

EIGHTEEN YEARS You will be well and truly educated; never able to draw out again. I look like being educated by one of those solidified nightmares on the Ypres Canal.

EM Long before my time or yours, when I crawled in that primaeval slime, I was a nightmare and did as nightmares do in nightmare land. Then I was taught and learned to call it 'only a nightmare'.

EIGHTEEN YEARS It took me a hell of a night time to learn I was wide awake.

TWENTY-ONE YEARS I nearly learned that Peter Pan had been our Commander in Chief, but sweet peace came and put me to sleep again and taught me it was 'only' a dream. P.A. turned up and untaught me it was 'only' real.

P.A. I did not. I thought you might learn something if you could have some respect for Somite Three and the others, Peter and Pan. You seemed to think they were 'ugly' and 'nasty'.

TWENTY-ONE Weren't they?

P.A. It's a matter of taste. After all, you have taste buds – why not respect them and what they tell you?

TWENTY-ONE I did not like the taste of a nine-inch Howitzer.

TWENTY-FOUR Nonsense; you thought you would be killed and feared penetrating the barrier between life and death. It was Somite Three who thought an erection was a 9.2 How.

EM I don't know when the amniotic pressure made my optic pits hurt; the stars were so brilliant, I kicked out.

SOMITE EIGHTEEN Nonsense! Even I don't know where my feet are; you are getting beyond yourself.

TERM You had to depend on your fetal membranes to get beyond yourself when you had no feet.

EM Your fetal membranes, as you call them, are a nuisance as it is impossible to break through them. I cannot reach you because of them. Who or What are you?

TERM I knew till you butted in. I am *mind* and my mental membranes make me able to reach far beyond my feet. How and What and Who used to help.

EM Now you have muddled me. I shall be *body;* for ever I shall gird at your mind.

MIND Hullo! Where have you sprung from?

BODY What – you again? I am Body; you can call me Soma if you like. Who are you?

MIND Call me Psyche – Psyche-Soma.

BODY Soma-Psyche.

MIND We must be related.

BODY Never – not if I can help it.

MIND Oh, come. Not as bad as that, is it?

BODY Worse. You got us into this air. Luckily I brought some liquid with me. What are you doing?

MIND Nothing; it must be my phrenes, that diaphragm going up and down. I'm breathing in air – fluid, not liquid. What did you bring that wet stuff for? Beautiful odour.

BODY You could not know about the odour if I had not the liquid to hold your atoms with. Typical of Mind – all words and no content. Where did you find them?

MIND Borrowed from the future – you are borrowing them from me; do you get them through the diaphragm?

BODY *They* penetrate *it*. But the meaning does not get through. Where did you get your pains from?

MIND Borrowed – from the past. The meaning does not get through the barrier though. Funny – the meaning does not get through whether it is from you to me, or from me to you.

BODY It is the meaning of pain that I am sending to you; the words get through – which I have not sent – but the meaning is lost.

MIND What is that amusing little affair sticking out? I like it. It has a mind of its own just like me.

BODY It's just like me – has a body of its own. That's why it is so erect. Your mind – no evidence for it at all.

MIND Don't be ridiculous. I suffer anxiety as much as you have pain. In fact I have pain about which you know nothing. I suffered intensely when we were rejected. I asked you to call me Psyche and promised to call you Soma.

SOMA All right Psyche; I don't admit that there is any such person other than a figment of my digestion.

PSYCHE Who are you talking to then?

SOMA I'm talking to myself and the sound is reflected back by one of my fetal membranes.

PSYCHE Your feetal membranes! Ha, ha! Very good! Is that your pun or mine?

SOMA It's the only language you understand.

PSYCHE It's the only language you hear. All you talk is pain.

SOMA All you respect is pain or lack of it. The only time I can get anything over to you is pain – talk from the hills.

PSYCHE Plain talk through your stoma. Excuse me if I borrow to talk to this idiotic nipple a moment – there! An erection at once!

SOMA Thanks to my liquid evacuations. Who is that?

PSYCHE I bit it.

SOMA It had just bitten me. Bite it again! That's me – not it.

PSYCHE It can't be. I put my foot in it – was it your stoma? You have confused me again. Pain, Feet – all mixed up. Why can't you take your choice?

SOMA I do. If you had any respect for my 'feelings' and did what I feel you, you wouldn't be in this mess.

PSYCHE I am in this mess because I was squeezed into it. Who is responsible – your feelings or your ideas? All that has me is yours – amniotic fluid, light, smell, taste, noise, I'm wrapped up in it. Look out! I am getting absorbed!

SOMA I'll pi you out when I've absorbed you. All piss, shit, and pi-ety. You can idea-lize it – get a good price for it no doubt. Bless me – I'm getting absorbed too. Help!

PSYCHE That's what comes of penetrating in or out. I'm confused.

SOMA That's what comes of not penetrating – you break up or down.

BOY Let's leave them to it. Boys and girls –

2

GIRL

Golden boys and girls all must
Like chimney sweepers come to dust.

BOY We are not dandelions. I'm bored. Let's play in the garden.

GIRL No, that's kiddish.

BOY It's not. What's kiddish about it?

GIRL Oh nothing – it's silly. Silly boring old garden. Jennifer is coming.

BOY *Her!* How awful. She's a slob.

GIRL She's not. You shouldn't say awful things like that. I'll tell Ma!

BOY Sneak! It's not awful; you're a sneak.

GIRL I shall tell Ma you called her a sneak!

BOY Oh, you liar – I didn't say anything of the sort.

GIRL You did! What did you say then?

BOY I didn't call her what you said.

GIRL Jennifer's my best friend. She says boys are awful. I'll tell Ma you made me cry.

BOY Sneak!

GIRL I don't sneak. She will see my eyes are red and she will ask you what you have been doing to make me cry. I shan't tell her and then you'll catch it! You know she doesn't like it if you make me cry. She'll tell Dad and he'll be furious.

BOY Oh! You are a . . . are a . . . little beast!

GIRL Now I *shall* tell Ma! I wasn't going to say anything till you started calling me those awful names.

BOY Cyril knows what a sneak you are. (*Girl puts out her tongue*

at him.) Ooh! That's awful! You know Ma said you should *never* do that. If you tell Ma I shall tell her you put your tongue out at me. I'm going to play the piano.

GIRL No!

BOY Why not? It's only my exercises. You know I have to do them every day.

GIRL I'll tell Ma you wouldn't play with me.

BOY It was *you* said you wouldn't play.

GIRL Only because you call me names. And why aren't you doing your exercises? Ma told you to do them first thing after breakfast.

MOTHER (*both children fall into a sulk as she enters*) Why don't you two play in the garden? It's such a lovely morning.

BOY Don't want to.

GIRL (*brightly*) I'm waiting for Jennifer.

MOTHER That's good, but why don't you play in the garden till she comes?

BOY (*to himself*) Well, why don't I? Anyhow, I don't. Girls always want to play. Jennifer isn't a bad kid if only she didn't team up with my horrible sister. I hate girls – you always get the worst of it.

GIRL (*to herself*) I don't want to play in the garden. Why did I say I want to? Jennifer hates it too. I wish she would hurry up. She's better than a boy anyway. I suppose . . . *if* there was a decent boy – unlike my horrible brother . . . he lies face down on the floor and wiggles. Told me to try it because it was lovely. Humbug – nothing to it.

MOTHER (*to boy*) Not going?

BOY (*crossly*) Oh, all right.

(*He and Girl go out.*)

P.A. They don't really hate each other – 'they' all hate learning – it makes them develop – swell up.

CONTAINER It distends me.

MOTHER Let's see now . . . what have I forgotten? Reminds me of something. Helen perhaps . . . or my mother when I said I had forgotten to say my prayers before cleaning my teeth – luckily she used to forget to ask if I had cleaned my teeth. I remember her sweet, gentle voice. 'Child of the Devil, child of the Devil; go and say them and ask his forgiveness.' I did not dare to reply. 'What! Ask the Devil for forgiveness? – for not praying to him?' She would not have allowed such pert – what is the phrase now? – answers. I suppose we are more enlightened now. And more comfortable perhaps.

Will these two look back nostalgically on their present freedom? And guiltily, as I do now, wonder what mistakes *they* are making? What of the children of our imperial family – did the great ones of our time bring them up wrongly? Pakistan? Amin? Indira? Bangladesh? Does God sometimes think He made a mistake to allow the human animal to reproduce . . . or do the viruses roam freely already seeking some cadaver of the vanished races? They shall inherit – our nebula? Or our earth? Well?

GIRL Mummy, Jenny has a super idea – can we go skating? She says the ice is super. She says it is fabulous. Oh, thanks awfully. Of course we will take him. Can I have some money? And could I buy some skates? Dad won't mind – in fact he said he wished I would learn to skate.

MOTHER Yes, I heard him. And I remember your answer. 'Oh no! It's so *boring*. Need I go?' Do you remem . . .

BOY That's a long time ago. Besides —

GIRL We shall be terribly careful.

MOTHER (*to herself*) Is it déjà vu? Why is it so familiar? (*Aloud*) No, I'm very sorry, but you can ask your father when he gets home tonight.

GIRL Oh, Mummy! That's too late. Jenny wants us to go with her now! Tomorrow she can't come.

BOY I said it would be no good asking.

MOTHER There – I was sure you wouldn't ask for anything so silly.

GIRL But he has! He wants to go – don't you?

MOTHER (*laughing*) I expect you put him up to it. No; I'm sorry Jenny – another day perhaps. Now run along to the garden.

GIRL But it's so boring.

(*Mother goes out.*)

BOY Let's have an otter hunt.

JENNY What's that?

BOY Well, *you* catch Tibs because Tibs doesn't know you – she won't come to us. Then I'll get one of those really large pots from the gardener – his shed I mean, because he would never let us have one. Then while you stroke Tibs I shall put the pot on her and —

JENNY Won't that be terribly cruel? Our cat would hate it.

BOY Oh, Tibs won't mind. Anyway it's only for a moment and then —

GIRL I shall get a croquet mallet and –

BOY Smash it down on the pot and that sets Tibs off to a good start and we have to catch her before she gets up a tree. You have to be jolly quick though.

JENNY While you're chasing Tibs, the gardener will be chasing you.

GIRL Oh no – he doesn't mind – he won't know anyhow. He'll only tell Dad when he finds out, and Dad is sure to think it couldn't be us and will beat my brother.

BOY Thanks awfully! Jenny, get Tibs – she was asleep on the wall just now. Come on – we'll break in and she will break out. Do her good – she's always sleeping!

TIBS (*soliloquizing*) It is nice to stretch in the sun. Not that there is much. When there is, that B'yrrh-Lady sends those damned children out into it. Why couldn't she keep them in her womb? Can't blame her if she chucks the devils out *at once.* No wonder the sun becomes darkened. There's one of them. Oh child, get out of the way and let me feel the warmth. Oh, it's you is it Jenny? As bad as the rest if I knew you better. Still – 'tickley-tums' if you must make that ridiculous noise instead of purring. If she could talk a sensible language like mine she could hear the difference between a purr and a growl. Now she has to hold me in her arms! Oh dear! Oh dear! But I wouldn't give her kittens anyway. Ah! Here come the little devils. They must think I'm a fool if I don't know what they are up to – Jenny as bad as the rest. I am scared inside this pot I admit. I can't help running – all four of me. Stupid oafs! Woops! Up the tree and claws out. Lucky for them I didn't get my claws into *them* instead of the tree. Nice and warm again; and there they go, little . . . little . . . anyhow I can lick my paws in peace. The hell hounds always behave like a fetus – omnipotent, as old as God and as all-knowing, impossible to teach. In fact they remind me of Grandma who tried to shoo Grandpa's hat off the chair because she couldn't tell the difference between a hat and a cat. These devils can't tell the difference between a flowerpot and a pregnant pot. 'What a pot!', the Boy said to his aunt. In fact it was the only scientific observation he had made, but his Mummy said it was rude. That's what she said to the Girl when she used to stand in front of her 'betters' and say, 'Lavatory, lavatory, lavatory', to find out their reaction. A cat may not look at a psychiatrist without being called a

'Reaction-type'. My sperm-mate, Tom, who lives in the looney bin, tells me they all start in a looney bin and all return to it after a brief spell of making a hell on earth so they won't miss what they have left before they go back to it. It really is enough to make a girl laugh. In the childhood of the race, at least the Egyptians respected animal containers for their content. Blockheads all – I suppose it is understandable that they want to keep their blocks and consult them. The only time we understand and meet is digestion time and that language penetrates – in both directions – the barrier of sense; the sense that is born then is common. Even so, some aristo-c-rat or psychophilo is sure to pounce on it and give us all pollutocracy. Muscle – stretching time – ah! Wait till the Great Cat Ra catches them.

MOTHER Did you have a nice time?

BOY Not bad; is there any cake? Oh, supper – I don't want supper. Can't I have cake? Jenny can run! Can she come tomorrow?

MOTHER If her parents let her. Did you race each other?

BOY Not exactly.

GIRL She's not *your* friend anyway. She's coming to see me.

BOY Anyway I don't like her – she's soppy. Can Cyril come?

GIRL Cyril! *He* is soppy if you like. Do you know what Jenny told me? She said –

MOTHER Please, please! No more quarrelling tonight.

BOY Here's – I wasn't quarrelling – Tibs. Can I give her her milk? Please!

GIRL No. It's my turn. Tibs doesn't like you. Mummy, he chased Tibs till Tibs had to run up the tree.

BOY Ooh, what a whopper! I never did and Tibs loves me – don't you Tibs? What's that tapping the window?!

TIBS (*soliloquizing and licking her whiskers*) The tree and I understand each other – though he is rather rooted in the past.

TREE (*soliloquizing*) I live on earth and water, and even my leaves and branches when they break out feed and feed on air.

TIBS That's what I breathe and smell.

MOTHER Bed!

BOY Gd-ni . . . (*sleeps*) Tibs, you are a spoiled cat. No, it's no good you saying you are a *Tiger. If* you are a tiger you are really a spoiled tiger – a cat that has been spoiled and has turned into a pussy cat. Cyril laughs when he says 'pussy'. He says it's a gross word.

Now don't you turn into a gross cat Tibs. That's German. I hope I'm not getting afraid *of* an unspoiled great Kat. Tiger . . . Tiger . . . we learnt in school – burning bright. Please sir! Its eyes sir – what dread hands question mark and what dread feet? A stop sir? Yes sir, a proper pause. *If* the wine don't get you the women must. It rhymes with dust.

GIRL Shut up and go to sleep.

BOY I am asleep. *You* shut up. Where's Tibs?

GIRL Never mind – she likes sleeping on my bed. Where's Cyril? I don't care. I don't like him.

* * *

BOY Come on! There are guns in the field behind Prime's Field.

CYRIL Where? Can we get near them? Look! Soldiers! Hundreds of them.

BOY Let's watch. We'll go to the guns later. Look! There are more – thousands – Leicesters, the North Midland Division. They are moving in. There goes the bell for Prep. What a bore! I want to watch. Won't it be awful if the war is over.

CYRIL I know. I really feel sorry for the Germans. They are sure to get licked. Can't we join up?

BOY No. They'll turn us down for being too young.

CYRIL Well, I'm eighteen, so I can join at the end of term. You look it.

BOY I know. A woman gave me a white feather because I hadn't joined up. I felt a terrible fool.

CYRIL Good Lord! What cheek! What did you say?

BOY I didn't say anything. I felt such a fool.

CYRIL You ought to have smacked her face.

BOY I couldn't. I felt I ought to have joined up myself. I feel such a fool wearing a school cap. A woman made my father feel a fool. 'But your boy is wearing a school cap!', she said. I should feel such a fool going to a recruiting station. I feel a fool *not* going.

CYRIL Take your cap off. I know – get a bowler hat – they'll never know.

BOY That's what Miss Tommy said. She looked so smart. She looked me up and down – I knew she thought I was a soft idiot. 'I thought you were captain of school!', she said. Well, I couldn't answer

that. I couldn't tell her I felt a fool. You know Tartarin de Tarascon? I thought that was funny when his conscience tells him, 'Couvre-toi de gloire' and someone says, 'Couvre-toi de flannelle!' I feel a fool either way. You are lucky to be joining up. I wish I had *been* captain and left. Here's Prep started. We'll talk after Lights Out. (*Sleeps.*)

3

SOMITE THIRTY Get back into the Amniotic Fluid.

TERM Get out into the sun! Glory! The fields are bathed in light. Moonlight! Don't lie snoozing in bed.

SOMITE THIRTY Keep warm in bed. Your King and Country want you – you stay in bed.

BOY (*stirring uneasily*) What? Lucky devil – he will win a V.C. What did you say – flannel?

TERM Oh get lost! I can't lie here all night.

BOY Sit Jessica. The moonlight sleeps on the bank . . . That awful Repetition – I shall have to learn it first thing.

CYRIL Sh, sh, you're making an awful row. Go to sleep.

TWENTY-FOUR YEARS Lights out and stop talking now please –

SEVENTY YEARS That's better. If only one could rely on their always going to sleep.

SEVENTY-FIVE YEARS Unfortunately they never do. Sometimes they all speak at once and it is a perfect Bedlam.

P.A. I think it might someday be possible for them all to be awake and carry on a fairly disciplined debate.

ROBIN I doubt it. I sometimes think it saves my sanity that most of them are usually asleep. It's bad enough when it's only two or three talking at once.

ROLAND That's only because they all talk a different language.

MAN I shot you so you would lie down and stay down – and out. And silent. Your friend Robin too – years ago. I don't want any ghostly voices around. Anyone would think it wasn't bad enough with religious nonsense inventing a future life and angel voices to add to the tumult.

ROBIN I can't see that's any worse than P.A. and his crowd inventing minds and characters and psycho-somatic disturbances.

ROLAND Doctors are as bad – new diseases and expensive new cures and specialists to go with them.

MORIARTY As one who has waged war against religious nonsense much longer than –

P.A. Oh, come – you are a creature of fiction yourself!

SHERLOCK HOLMES But *not* religious fiction. Scientific fiction is entirely superior.

DEVIL I am religious, but I certainly do not consider that I am fictitious. I do not of course hold with the ridiculous theatrical costumes in which I am supposed to appear in gardens of Eden and such primitive landscapes. In fact, I have always been most punctilious about my dress. I defy anyone to say they have ever seen me in anything but unobtrusive clothes, quietly and beautifully cut, and manners to which no real lady or gentleman could possibly take exception. Excuse me – you were about to say?

P.A. I confess I had supposed you inhabited the unconscious.

ALICE At my school we certainly were taught that the Devil existed, but none of us believed it was true.

DEVIL My dear lady – I hardly know how to apologize for my lack of perspicacity. I remember your school very well. I frequently gave away the yearly prizes and used to address you at the close of a ceremony which I was vain enough to regard as a particularly pleasing annual tribute to my services. Very charming, if I may say so, you all looked. Your Headmistresses – I knew all of them very well – were gratifyingly deferential. I even donated a fund for a prize to the most promising pupil – for the promises which were most unlikely to be kept. It carried a scholarship – a university scholarship – for Moral Philosophy. No, no thanks – I never touch sherry. I find it induces a somewhat genuine geniality.

ROLAND Now I understand why your face is so familiar – at our Prize-giving Days! You were responsible for all our sexual troubles I suppose?

DEVIL Certainly not. Sex, like sherry, often produces perfectly genuine feelings of love and affection. I relied on various religious teachers and moralists to inflame moral hatred for those harmless and agreeable practices –

SOMA My department.

DEVIL Quite so; as my friend P.A. was saying –

P.A. Excuse me: *not* your friend. I do not even believe in you.

DEVIL You amaze me. I would have thought by this time the facts would have compelled you to catch up with Priest – he at least believes in me.

P.A. I do not waste time believing facts or anything I *know*. I save my credulity for what I do *not* know.

DEVIL Like God?

P.A. Certainly. Both you and God I leave to Priest and his religious department.

ROLAND But . . . I suppose you would say you do not believe in men and women because they are facts which you know.

P.A. Certainly – I know some men and some women. I know they have minds as well as bodies.

SOMITE THIRTY Somitically speaking I know a lot that I cannot make clear to you but that is factual enough to me. I have to borrow articulate speech from Soma.

SOMA My difficulty exactly. I cannot make anything clear to Psyche unless I borrow a bellyache or headache or respiratory distress from somitic vocabulary for any of these post-natal structures. I believe in mind and personality as there is no evidence whatever for anything but Body. And when I manage to make somebody aware of a bellyache the probability is that they immediately drag in a 'cure'. As for my message, God knows –

DEVIL God knows! Is Soma also among the religious?

ROSEMARY You know that as well as I do. Some of the healthier and most well-nourished bellies I know are to be found amongst the religious. The Celibates look particularly pregnant.

ROLAND I know women who look pregnant. Sometimes they are.

P.A. I *know* pregnant silences – I don't have to believe in them. Seventy-five was speaking of all talking at once as a bedlam.

PRIEST Milton spoke of Pandemonium.

DEVIL That was before Reason took the chairmanship.

P.A. And Bedlam – only because Reason was such a bad Chairman. The so-called *laws* of logic were a prescription for Chaos. They left no living space at all for vitality. Even today it would be still-born if it had not found refuge in what Alice would call craziness or –

DOCTOR Manic-depressive psychosis, or hysteria, or schizophrenia, etcetera, etcetera, etcetera – and quite right too.

P.A. Or the Royal College of Physicians, or the Royal College of Surgeons.

DOCTOR Or the International Psycho-Analytic Association, or the Church.

DEVIL

'Go it Justice, go it Percy,
Go it Eustace, go it Mercy.'

I love to hear it – it's music to my ears! All dead – and all so lively.

P.A. All Institutes are dead and therefore conform, like all inanimate objects, to laws and bye-laws which are comprehensible within the limits of human understanding. However, as they are composed of people and individuals who are liable to develop, the Institution begins to yield to pressure.

TERM So did my uterus; I had had enough of it – the fear of having my life squeezed out of me compelled me to compel it to yield to my counter-pressure.

ALICE And nearly lost me my life. When you did squeeze out – or I squeezed you out – I remained alive, but I often asked myself whether the life with which I was left was worth living.

ROSEMARY Poor old thing – get me my shawl. You make quite a good skivvy even if I feel the draught sometimes. Better a shawl – which I can discard – than a mistress that I can't.

P.A. Better a science you can discard than a religion you cannot. I have no more difficulty with a scientific theory than an insect has with the form it bursts out of. Some of us, I admit, have ideas like exo-skeletons.

DOCTOR Or brains like alimentary canals emitting facts where ideas might be hoped for. Or even 'flights of ideas' when thoughts, articulate thoughts, were necessary.

P.A. I think the problem is pressing when the 'articulations' are so rigid that the individual does not think, but has a psychical osteo-arthritis – to borrow some of my medical friend's terminology.

DEVIL Or, to borrow a perspicuous phrase from my priestly friend, a spiritual bigotry where tolerance should be.

ALICE Or licence where laws should rule.

ROSEMARY Alice, you have ideas beyond your station in life. I shall have to get rid of you if you interrupt with Socratic ideas.

ALICE I thought that this was a practical world – like Aristotle said.

ROSEMARY For goodness sake speak English – not like a skivvy. Socrates! Aristotle! We shall be having Kant or Descartes next.

PRIEST Pascal was very intelligent even though he had not the sense to avoid mathematical indecencies.

DEVIL Mathematics! As bad as music. Pythagoras might have caused great trouble by making a ritual to serve to marry the two. Luckily nobody had the wit to understand him.

P.A. The carapace was too rigid to allow for the development of that marriage. Desargues helped and drew a pretty little picture which many a mind ogled in an inviting way.

DEVIL Pascal – though not one of my favourites – did well till the Church had him under control.

P.A. If the psychiatrists had got hold of him they would have had him in a strait jacket of the pattern that they themselves wear. Nowadays we would confine him in one of our theoretical constructs.

DEVIL Really! I admire your perspicacity. So many of you seem to find it impossible to know a constricting construct when you are faced by one.

SOMA Not even when it's all round them. I have known oscillations, transmitted in a liquid medium, become unrecognizable when transmitted in air – a mere change of fluid!

SOMITE THIRTY I have known post-natals unable to learn because they are unable to be curious, having lost their sense of smell – the only really effective mode of exercising curiosity as any animal knows, except these domesticated, educated, cultivated creatures that have 'forgotten'.

ROLAND You sound like Gilbert and Sullivan.

SOMITE THIRTY Never heard of them.

ALICE Can't bear the stuff. Bach and Mozart for me.

DEVIL I am sure P.A. will recognize the warring musical sects as psychoanalytic theories in a new costume. How Dryden would have laughed!

P.A. He did, does and will do in future, I am sure. It is not quite so amusing to people like me, who are still conscious, awake and aware of the medium which surrounds us, as it is to God and the

Devil. By the way, how should I address you? Your Satanic Majesty? Your Id-iocy?

DEVIL (*bowing politely*) Take your choice. I am not fussy as they are in The Other Place. Bigotry and Intolerance are simply the medium in which I flourish. We weave it into a thin veil on to which our demonstrations are projected for identification.

P.A. My God! You are not a Kleinian, are you?

DEVIL You are not by any chance addressing me, are you? Are you one of the people whose God is the Devil? I do not cultivate theories; theories are a symptom of gregarious animals when they function as members of a group. I am special, individual, a victim of disapproval.

MAN Poor devil; it must be very trying, but rather agreeable. At least you appear to thrive.

DEVIL I had to fight for my right to be curious. I had to overcome my morals.

SOMITE THIRTY *You* had to? My sense of smell, my only guide and provider, was of short range in the water on which I relied and had my being. I passed it on to Soma.

SOMA I turned it to good account when I found myself in a gaseous fluid; it was a shock at first. Some never learned how to smell their way through all that gas to food.

THIRTY YEARS I admit that even when my nose led me to discover a durian I was scared to eat it.

SOMA Still, I got through that intellectual – or was it moral? – barrier to what P.A. would no doubt call your mind. Let me acknowledge my debt to gastro-intestinal greed –

DEVIL And, I hope, to my powers of seduction.

SEVENTY-FIVE YEARS Don't you think Somite, Soma and you youngsters owe something to what I have been doing all my life – besides growing older. To me it seems as if I owed and still keep on owing something to all of you.

SOMITE THREE That's the first time I have heard you admit that you still owe me something.

SEVENTY-FIVE YEARS I think it is probably the first time I have got through to you. Even now I can't imagine how anything I say is sufficiently perspicuous to make the journey from here to my fish-like origin, although I have often had 'echoes' of messages from my gills to my conscious mind.

FOURTEEN YEARS Your *what*? Never heard of it.

SEVENTY-FIVE YEARS That is more than I can say for you. I have lost my capacity for shame, thanks largely to being perpetually bombarded with memories of my past association with you.

FIFTY YEARS Oh, I wouldn't say that. After all, you and P.A. between you kept Fourteen awake with your probings. Why can't you let the past sleep in peace?

PRIEST I don't think a little guilt and remorse does anyone any harm.

P.A. A little perhaps, but not the quantities with which you and your friends pollute old age.

TWENTY-ONE YEARS Pollute old age! *I* had plenty to regret, plenty to mourn. I thought I would never survive the shame of having lived beyond my friends who were dead by the end of August 8th.

ROBIN I remember – that was the famous victory, the breakthrough – Ludendorff's 'black day for the German Army'.

ROLAND I remember that. A marvellous sight as you and I looked back along the Amiens–Roye road in the bright sunlight and saw it crowded with the reserves.

TWENTY-ONE YEARS Too late, blast them, too late! Years too late! They should have been there on November 20th – Cambrai – in 1917.

FIFTY YEARS The staff had to learn their job. That victory would have been the biggest disaster ever, had the reserves been there to get through – and be captured.

P.A. Now we know what we did not know then, that our Governors had not learned their job. At least the army learned; the civilians never did.

TWENTY-ONE YEARS Nor have you since.

FIFTY YEARS Well, why didn't *you*?

TWENTY-ONE YEARS I tried. But Oxford, good food, marvellous colleges, the incredible excitement of Iffly Road crowded with us all going to see the Varsity play Newport, seduced us. 'How will it seem to you forty years on?'

SIXTY-ONE YEARS I think you were seduced into forgetting. Perhaps it was better than those poor chaps of whose death we spoke in whispers – unable to stand Parson's Pleasure, the Parks bathed in sunlight, Magdalen Tower and Great Tom rolling out the curfew. The war they survived; it was the peace that finished them off. Even now I remember a little rat of a man – Mons Star and a few more

meaningless baubles – 'Oo yer shuvvin'? 'urryin' to a war?' The heavy, uneducated sarcasm of the under-privileged still smarting at his lack of appreciation, his inglorious, undistinguished nothingness. It should have been me, but I had been so pampered, so praised that I almost – not quite – believed the luxury deserved.

P.A. It may have saved your life more than once. Ultimately your unbelief rescued you from *that* quagmire – sunk without a trace in your own exudate of complacency.

TWENTY-THREE YEARS I reached a very low ebb. I was so nasty that not even my parents could preserve the illusion intact. I suppose you think it was psychoanalysis?

P.A. I think it helped. Luckily it was not the only source of Truth.

TWENTY-THREE YEARS What else?

P.A. The world you live in – that is, if you read it and not only books.

NINETEEN YEARS I was not reading books. I had forgotten most of those I had read.

TWENTY YEARS I had almost forgotten to read – certainly forgotten how to understand what I read. I wonder if I knew that printed words had a meaning.

FOURTEEN YEARS I thought *Paradise Lost* had a meaning.

FIFTY YEARS You must have been pretty bright in those days.

FOURTEEN YEARS I can't be rude enough to say I think you stupid; or untruthful enough to say I think you clever or wise.

SIXTY YEARS I do not remember Fourteen as clever or polite.

FOURTEEN YEARS I do not remember anyone thinking anything about me except perhaps that I was unprepossessing and gauche. Possibly not my mother, but I didn't count her.

FIFTY YEARS Why didn't you count your mother?

FOURTEEN YEARS Mothers always think that sort of thing.

SIXTY YEARS Do they? I have seen some that do not. Perhaps they disguise their true feelings, but I don't think so.

EIGHTEEN YEARS Weren't you pleased when you were decorated for war service?

TWENTY-THREE YEARS Too late! Besides, I knew too much. I remember Lord Helpus, as we called him, saying to Twenty, I always tell my son John that if you see a man with more than two rows of ribbons he is tolerably certain to be a waster'.

TWENTY YEARS I remember. I only had one solitary ribbon which

I was afraid I would have to prove – I knew I could not. 'Coward! Coward!' my thumping heart would tell me. At Anvin when I felt the air trembling and throbbing against my ears . . . a bombardment? Twenty and more miles away? I felt no better when that old hand Trapper said, 'It's only a trench raid'. I thought it must be all Hell let loose.

TWENTY-THREE YEARS You were both right – it was only a raid and it *was* all Hell let loose.

TWENTY YEARS My pounding heart – surely, I thought, Lord Helpus and the others can hear it?

HEART You heard it – why did you not pay attention to what I was trying to knock into your thick phrenes?

TWENTY YEARS My mind was making such a row – screaming 'Patriotism! Apache! Brigand!' I couldn't hear myself – I suppose it was me? – thinking.

THIRTY YEARS Too much anatomy and physiology to listen to your guts.

SOMITE THIRTY-TWO I could have told you that more than two rows of teeth meant you could be certain that you were a shark, greedy and in love with your food.

FIFTEEN YEARS Couvre-toi de flannelle!

TWENTY-THREE YEARS Couvre-toi de plumes blanches.

EIGHTEEN YEARS Those bloody girls in Kingsway!

TWENTY YEARS They gave me one in March 1918 when I was on leave.

SEVENTY-FIVE YEARS I remember – wasn't it after you had been to the investiture?

TWENTY YEARS Yes; but that time I knew they were quite right. I was going back to the Front in an hour or so when I had changed back into uniform. 'But', said the almoner, 'Isn't your boy wearing the cap of a famous regiment?'

HEART If the cap fits – wear it. Let you and your damn silly mind go back to the Front, but why drag me in? I didn't enlist 'for the duration.' I was furious when you told me to stop thumping.

SEVENTY-FIVE YEARS You were always thumping – if not with fury, then with fear. Later it was love. Rabbits always 'thump'; it's like trying to interpret a motor car horn – it tells you nothing and leaves you to imagine something is going to happen to someone, somewhere, sometime.

HEART If only you listened to me and learnt my language – why, even your cardiologist told you that!

TWENTY-FIVE YEARS Too late! Too late!

SEVENTY-FIVE YEARS You are as bad as the Brain-fever bird – remember?

SIX YEARS Very well – funny your knowing. 'Brain-fever, brain-fever, brain-fever' it used to sing.

SEVENTY-SEVEN YEARS Ah yes, cuculus varius, you mean.

TWENTY YEARS Do I? You're as bad as our Army Intelligence Officer. When I came out of the Third Battle of Ypres and hardly knew whether I was alive or dreaming, he asked me if I had noticed when the alluvial changed to the cretaceous. I couldn't even laugh. Like all staff officers he thought how stupid we combatant officers were.

HEART So you were.

'So
We go
To face a foreign foe.'

Quite appropriate to a musical like *White Horse Inn*. You would have done better in a musical – in the audience. Leave fighting to the soldiers – not schoolboys.

EIGHTEEN YEARS You should have seen Kitchener's piercing eyes following you around.

TWENTY YEARS You should have heard what Curzon said about Kitchener. My parents did.

TWENTY-THREE YEARS You should have heard what the soldiers heard Curzon say about the common Tommies in the bath house. 'Why, their skins are quite white!'

TWENTY YEARS I saw them before they had washed the 'alluvial' off. They weren't pretty even when their faces were as white as the cretaceous. And the cold . . . !

TWENTY-THREE YEARS And the warmth! Those nits! Do you remember an inn, Miranda? Do you remember an inn?

TWENTY YEARS No; she was doing war work – handing out white feathers!

THIRTY YEARS Oh, for heaven's sake! Can't you give it a rest?

EIGHTEEN YEARS It didn't –

TWENTY YEARS And doesn't –

TWENTY-THREE YEARS Give me a rest.

THIRTY YEARS Well, put a sock in it.

TWENTY YEARS Luckily we couldn't have fires and couldn't be warm enough for the little devils to feed. But the cold, the blue cold and the dangerous cretaceous view! When I opened my tin of bully beef I found a huge chunk of gristle that filled half the tin. Aghast that my day's rations had gone, 'Fray Bentos never did that to us', I said. 'You can't expect a vast wealthy American firm to bother about us', said Shorty. I admired the icy cretaceous in front. If that sniper fires I hope it will be a good shot through the forehead and out at the back with the brains which are such a useless chunk. Poor Edwards – I hope he didn't know anything about it. I hope it was only I who saw the mess bulge out and interrupt our conversation. He didn't even finish the sentence. 'Can I retire now sir?' 'Where's your tank? You're no bloody use to me without it.' But that was at the 'grand canyon' – no release from Villers Pluich. There was no one to ask anyway. That damned decoration! Why couldn't they give me something useful – like guts?

THIRTY YEARS Are you talking in your sleep? What's the matter with you – shell shock?

TWENTY YEARS No, sir; yessir, I mean ter say, y'know. Not really. I'm all right. Tell me, Eighteen, have I any soft bloody brain stuff behind my right ear?

EIGHTEEN YEARS No. Shut up. How do you expect me to fight if you talk like that? I want a V.C. – not a V. Pluich.

TWENTY YEARS It's cold; I wish it wasn't so cold. What about a nice cosy group session?

THIRTY YEARS It's a pity that Twenty can't make up his mind that he will survive the war, or has survived being born.

FORTY YEARS How could he possibly know unless you leaked it back to Twenty-two and told him to pass it on to Twenty-one to pass it on to Eighteen?

TWENTY YEARS I couldn't pass it on to Eighteen – he was so busy thinking he was going to win the V.C. or some such damned nonsense. Besides, I knew I would be far more likely to get a hole drilled in my head – if not then, in the next few months. Had I known I would soon be at that ruddy Salient again I think I would have arranged for one of those nice Boches to drill a hole through my skull and let me out like the Lossiemouth captain's brains. I had neither brains nor guts from then till August 8th 1918.

EIGHTEEN YEARS Nonsense. I was so terrified that I would run away I could hardly think of anything else. If Twenty had told me I could not run away – even if I tried – I would have felt much better.

TWENTY YEARS If I had known what I know now I would not have dared to tell you. I wished I could feel as enthusiastic as you seemed to be.

EIGHTEEN YEARS You were afraid that you would want to seem as brave as I hoped to appear to be.

TWENTY-ONE YEARS Twenty did, and was so busy 'seeming' to be brave that it nearly killed me. If you had had more sense you would have got a soft job at the War Office, but *now* look what you have done – I have to go into action at that terrible place Sequehart.

TWENTY-TWO YEARS What was wrong with Sequehart? I remember your telling me how beautiful it looked with the sun rising behind the slender spire and how you took those two crew members back because they were too gassed to walk. You remember? You described it so vividly it brought tears to me eyes. Such bravery! Such self-sacrificing compassion for those two poor chaps!

TWENTY-ONE YEARS Shut up! I was scared out of my wits and you know it. I do not see that that is any reason for being so very un-funny about me. If I had known you would be sitting knocking back brandies in an Oxford club, being facetious, I would have . . . I would. . . .

TWENTY-TWO YEARS No you wouldn't; and you would not have had the gall to be claiming 'compassion for your men' – you make me sick.

TWENTY YEARS So you do me. I think you're a nasty bastard.

TWENTY-TWO YEARS I can hardly disagree. Still, I didn't do so badly in view of recent fighting.

TWENTY-FIVE YEARS You did. You just cribbed that idea out of your testimonial from that Oxford don who thought he had better be kind to an ex-gallant officer.

FORTY YEARS Ex-officer and ex-gallant. The ex-es have it. I declare the ex-es elected unanimously.

TWENTY-FIVE YEARS Oh my God – not really? Is there no future?

ALICE 'And from that warfare there is no release.'

4

FORTY YEARS What's that? What did you say?

ALICE Oh nothing, nothing. It was Rosemary.

ROSEMARY I agree – nothing! Nothing at all. I was just interested in your debate. Do go on.

TWENTY-FIVE YEARS I have forgotten what I was saying. These women butted – I mean – 'said' something.

ROSEMARY Ah – these women! Always our fault!

ALICE I see your 'gallantry' remains unimpaired.

TWENTY YEARS Where would you have been if we had not fought?

MAN And won. Don't forget you won too!

ROLAND We did our best, you sneering lout.

MAN A girlfriend of mine taught me how to sneer. She said she had learned it from an English soldier who threw his cigarette butts on the ground to see smoke-crazed German women fight for them in the dust.

ALICE Gallant as always.

ROSEMARY Alice and I keep our butts for –

ROBIN Please, please! Don't be vulgar.

EIGHTEEN YEARS I used to think my old school was marvellous.

TWENTY-FIVE YEARS I had almost forgotten how quaint you were. 'The distant tape and the runner beside.' How it brings it back to me! But 'Où sont les neiges d'antan?' They don't come back – only slush.

EIGHTEEN YEARS 'His own name over all!' It is too sad to think about.

P.A. That is a common fallacy, though it is a habit to which a psychoanalytic intercourse seems prone. But that is not the aim which the analyst pursues.

FORTY YEARS What is his aim?

P.A. That depends on a great many factors, notably on whether he has a disposition compatible with the work he does, his age and experience –

FORTY YEARS Are you referring to his training?

P.A. In part. I do not mean to restrict it to his analytic training, or even to his university, school or home training. All those are important; but I have in mind the need to distinguish between experience of knowledge imparted by others and knowledge derived from the analyst's ability to turn what his senses tell him into nourishment.

FORTY YEARS I don't think I understand.

P.A. As an example of what I mean, I take your last statement. In so far as you *do* understand, I suspect the 'thing' you understand will contribute to your growth. In so far as you *don't* understand, I suspect that it cannot and does not lead to growth.

FORTY YEARS You are very cautious; why do you say you 'suspect' that it does or does not? Or am I being pedantic?

P.A. Not at all. I *try* to be precise and therefore 'suspect'. I cannot *know* because even if I do not understand I may be able to turn that fact to good account by learning that there are some things which I do not understand; whereas if I were an intolerant man I would dismiss the experience before I had time to learn from it.

ROLAND Then I can't have learned much from war, because if I had gone through all this palaver before I pressed the button of my machine gun – well, I wouldn't have 'gone through all this palaver'; I would have been shot like your Lossiemouth captain before I had thought a single word.

P.A. That is why you went through a machine gun course at Grantham so that you could automatically press the button in a crisis *without* going through all this palaver. But you must sometimes have waited, when your patrols were out, to see if it was friend or foe. That would be knowledge acquired, and for it to be 'automatically' available you must have made it your own.

ROBIN I vouch for it – Roland did a lot of 'swotting' on that course.

P.A. Well then – you must have gone through the palaver beforehand. You must be capable of going through it at *some* time. If you had got drunk instead, you would have been unable to press the button when you were 'sober' and under fire.

ROSEMARY How extremely interesting. What is the button?

P.A. I am sorry – we are boring you.

ROSEMARY You are not sorry; nor am I bored. But –

ROBIN But what? Or is that a secret between you and Alice?

P.A. If it is, I might suggest a psychoanalytic interpretation. But this is not a psychoanalytic occasion and therefore the minimum conditions for a verbal, audible interpretation don't exist.

ROBIN Something sexual, I bet.

P.A. A sexual situation affords the conditions for a sexual interpretation, an analytic situation affords an opportunity for a psychoanalytic interpretation.

ALICE What *is* a psychoanalytic interpretation?

P.A. It must be perspicacious and perspicuous. That is –

ROLAND These long words!

P.A. – an expression of a scientifically accurate insight which is phrased in a language comprehensible to the listener. It must be believed to be true by the analyst, and his formulation should be in terms that would penetrate the barriers of the listener's incomprehension.

ALICE Oh, I know – that would get through my thick feminine skull.

ROSEMARY Well, I *don't* know!

P.A. You both give an example of the difficulty I am talking about. Alice, hostile, 'thinks' I am an obtuse male; Rosemary 'remembers' my learnedness. Both – feelings, and ideas remembered – produce an obscurity.

SOMITE TWENTY-FOUR I've got a stomach ache.

ALICE At lasts – something I *do* understand; I have the advantage of knowing pregnancy.

FOURTEEN YEARS Neither of you knows how painful it is to have an idea.

TWENTY-TWO YEARS You? I didn't know you ever had an idea.

FOURTEEN YEARS I and my friend Thirteen have had ideas – even religious ones.

PRIEST I remember; Thirteen's god was the school swimming captain, and Fourteen used to believe in the school rugger captain.

FIFTEEN YEARS I was – still am – most impressed by Ruskin. Poor Ruskin – I didn't know then what a hell he lived in.

DEVIL Nothing to do with me; must have been your god. He kicked people about, but I didn't.

SIXTEEN YEARS I can't imagine your kicking anything about; you always wore morning dress.

DEVIL You cribbed that idea from Beerbohm.

FORTY YEARS Did he? I had forgotten he read about poor Soames.

SIXTEEN YEARS I read a great deal; I also played hard.

PRIEST And prayed hard.

SIXTEEN YEARS I may even have done that, but no answering god replied and I gave it up. The devil wasn't much use either.

SEVENTY YEARS Poor devil! Blamed for everything but perhaps he, like the rest of us, had to learn. There are plausible grounds for believing that he exists. He and his trainees –

DEVIL Always ready to learn from Adam and Eve.

SIXTEEN YEARS Seventy owes something to me; his body is in good order considering that he still totters around.

SEVENTY YEARS Sixteen is not one of my favourite characters.

SOMITE TWENTY-FOUR Nor mine; such an ugly character!

ALICE Oh, poor soul – not as bad as you make out, surely?

SOMITE TWENTY-FOUR You are prejudiced. If I had known I would grow a soul I would have remained a fetus.

TWENTY-FIVE YEARS If I had known I had such an ugly somitic ancestor I would not have tried to cultivate a soul.

EIGHTEEN YEARS I don't think I knew your somitic friend, but I had my suspicions and thought a soul would be an asset, not an excrescence.

TWENTY-FIVE YEARS We all make mistakes. Knowing what I know now I would certainly not choose to be intelligent. Wise perhaps, but *not* intelligent.

SEVENTY YEARS That's something you can pat yourself on the back about. I cannot honestly say I feel wise.

TWENTY-FIVE YEARS Perhaps your honesty is overdeveloped – more pathological than benign.

SEVENTY YEARS No, I don't think so. In real life it gets worn off as fast as it grows.

FORTY YEARS You are too personal, Twenty-five. You've learnt that from P.A. He is always being personal.

FIFTY YEARS Not personal – specific.

P.A. I have great respect for the individual. Do you think that is wrong?

FIFTY YEARS No, but it is not in keeping with the growth of the

Herd. I can see P.A. will be in serious trouble if the Herd develops faster than he does.

P.A. If the development of the Herd is incompatible with that of the individual, either the individual will perish, or the Herd will be destroyed by the individual who is not allowed to fulfil himself.

PRIEST Surely it depends on whether the Herd develops an intolerance to the individual or the individual to the Herd.

P.A. Some of us think that the development of the individual needs careful supervision.

PRIEST Of course; we are all agreed about that. The disagreement arises when the agreement is to be translated into action. The executive has to decide *what is* to be taught, *what* is to be believed, *what* is to be painted, or musically or aesthetically created.

DOCTOR Or whether the mother or the baby is to live. 'Do not strive officiously to keep alive' is what I was taught.

ROLAND Am I being 'officious' if I strive to keep myself alive?

ROBIN Or cowardly? Or suicidal not to?

P.A. Whether it is better to take arms against a sea of troubles . . .

PRIEST Who or what decides?

P.A. It appears to be the individual that decides whether to preserve life.

PHYSICIST Nowadays, thanks to us, *one* individual appears to be able to decide whether he *and* people 'not him' are to live or die.

P.A. It appears – to us – to be the case. But is what appears to 'us' to be regarded as identical with fact? Priest and others seem to think that we psychoanalysts claim to know. I regard any thing I 'know' as transitive theory – a theory 'on the way' to knowledge, but not *knowledge.* It is merely a 'resting place', a 'pause' where I can be temporarily free to be aware of my condition, however precarious that condition is.

PRIEST John Bunyan described that state in a number of pictorially vivid phrases.

SCHREBER So did I.

ROLAND Whoever is that?

P.A. Oh, only a poor devil of a paranoiac.

ROBIN A what? Crazy, you mean?

P.A. I suppose I do, though I think Freud suspected that what Schreber wrote was worthy of attention. I slipped into the prevalent mental slough. One cannot avoid instinctively conforming to the

quagmire – whatever its defects – in which one has survived so far. Bunyan tried to scramble out; so did Schreber. Both thought that Valiant for Truth, though they did not call him that, would help. Schreber, I suppose, thought he would be safe if he was a judge or a psychiatrist.

PRIEST Or psychoanalyst? Heaven? Or the 'Law'?

ROBIN 'To be'? Or 'not to be'? Shakespeare, like Bunyan, said it. Extraordinary how these old buffers wrote it all down. Of course they can't have known what they were talking about.

ROSEMARY 'Of course.' Like women they would not know. I at least had the intelligence not to have children because I had some respect for the pain in my belly. And some respect for my belly. So had you Alice.

ALICE (*deeply distressed*) No, no, no! Would God I had died for thee oh Absalom my son –

ROLAND That was said by a father.

ALICE I thought I was marrying a father. But a father would have known that I might lay down my life for a son and that he might have to lay down his married life for a daughter. Hopeless, hopeless, hopeless.

ROLAND I am sorry – I know it's no good, but I *am* sorry. It was not my fault I survived the war.

MAN You thought you were winning.

ROLAND You thought you had won. But you did not.

DEVIL Allow me to settle it for you. I can't bear to see you quarrelling. I have a nice chain reaction here which one of my scientific friends will gladly teach you to realize. Temporarily, however, I must limit your freedom by using the reaction to chain you. It is only temporary and then – pouff – it will all be over without even a whimper. No one will even hear a bang.

ROBIN I'm afraid.

ROLAND I don't like this theatrical pose.

ROSEMARY It is so seductive, so intelligent.

ROLAND You bloody women.

DEVIL Don't quarrel – tell me when you are ready and I will do what I can do for you.

PRIEST Or just 'do for us'.

DEVIL (*bows himself out*) At your service. . . .

ROBIN For God's sake don't exasperate him.

ROLAND For God's sake don't worship him.

ALICE I thought you did – especially when you professed to 'worship' me.

ROLAND I have not forgotten; I was scared of bloody women. Even the first man I saw spread-eagled in the shell hole we shared was not bloody – only faintly green parchment stretched over bones.

P.A. The sight impressed you, lying with him on the brick-dust-stained earth – that insalubrious place, the ghost of Wieltje village.

MAN Our 9.2 Howitzers dealt with that.

P.A. So I understand. As for Roland, I thought you had shot him several times.

ROSEMARY No one can deal with Roland. I tried to dissuade Man from trying.

ALICE He did for me.

ROLAND I died for you; but you thought I was being sentimental.

ROBIN I liked you, but you always thought I was too much of a coward to be allowed to share your body. All the same, if I hadn't made you duck – more than once I may say – you would not be alive today.

ROLAND Thank you – for nothing.

ALICE You only saved his corpse and sent it back for me.

ROLAND Not so much honouring thee but giving it a hope that there it might not withered be. Alas, I was no rosy wreath.

P.A. I remember a woman whose man came back to her after long years of war when she had prayed to God to bring him back safe. But his leg had been amputated so she quit. He thought she would love him as a wounded hero.

ALICE How like a man! If she had had a baby by him *he* would have quit her; if he blushed, which I doubt, he blushed unseen.

P.A. I know a man who was always a deathly white. He was so ashamed that people would see his blushes that he killed himself.

ROLAND Another of your bloody silly stories.

P.A. No, only a fact. I haven't the imagination to invent a story like that. Alice reminds me of a man who didn't blush, but was seen to blush by himself. I did not find out why because, as I say, he killed himself – more efficiently than Man's efforts with Roland.

ROLAND Sometimes I think these debates amongst ourselves are most menacing because they are so private – the same family. Why can't we get together? Not only are we all the same human family,

though artificially split by man's art into individuals, groups, nations, but –

ROBIN According to Priest not 'artificially', but by God's command linguistically, religiously, aesthetically and in every this – that way for building a ramp which would –

ROLAND Enable them to storm Heaven and the throne of Heaven's King.

ROSEMARY How bizarre!

ALICE Even Man thinks that by murder, contrived by the instrument of masses of disciplined murderers, men would reach the throne of Heaven. Victory! with a capital V.

P.A. Wee, capital wee-wee.

ROLAND Ghastly pun – even for you.

P.A. What is a ghastly pun for me may be the first step in a new language.

ROBIN What's fun for you is death to me, as Toad is said to have remarked. What is your new language? It reminds me of puns, as the ideograms of Chinese were 'articulated', though articulating was not the correct method of cohering those elements.

P.A. You mean not correct in accordance with the scheme of the inventors of the 'ideogrammatic signs'. But the articulations, though 'false', enabled Fenollosa to enable Ezra Pound to enable future generations to further the knowledge achieved. Artificial or God-made, these divisions into individuals, into seconds, years, millennia, make it extremely difficult to form a meaningful junction between one ideogram, individual (person, race, nation) and the next. There is a screen, a caesura, a resistant material between one particle and the next.

ALICE Unless some person paints on a piece of glass, like Picasso, so that it can be seen from both sides of the screen both sides of the resistance.

ROBIN Which 'like a dome of many-coloured glass stains the white radiance of eternity' so that we – minute individual particles that we are – may discern what we think is a meaningful pattern projected against the glass. I agree with Roland – 'Why can't we get together?'

P.A. No reason – in so far as we know that the same person created all of our characters and we should therefore be free to get together and write a single book sired by 'us'.

ROBIN If it's a book, it has to be split into pages, chapters and so forth. I don't want to lose my identity, swallowed by all you crowd.

ROLAND You wouldn't. How do you know that our being swallowed up in a group – which would mean all of us – would not be indistinguishable from perfect freedom? It would be our fulfilment.

ROBIN How do you know it would end in a Pauline freedom? If I had a Shakespearean vocabulary it would be very helpful. Victor Hugo had an enormous vocabulary and was able verbally to paint a visual image of rose petals scattered by the wind over the surface of a pool of water, like an Armada dispersed by the storm. According to Heredia, Anthony saw, in the pools of Cleopatra's eyes, a fleet in flight. All that has been dealt with – not so overtly as in the undergraduate dining club known as *The Shakespeare,* but just as effectively – by the glorious memorial tomb of Shakespearean Scholarship. Now no one dreams of Shakespeare and I could not mobilize even four thousand words with which to express what I want to communicate. If Shakespeare could not survive –

ROLAND Or Pythagoras, buried under his triangle –

P.A. Or Freud buried under his oedipal triangle, or Melanie Klein under a mass of evacuated identifications –

ALICE Or a mass of Kleinian Theories treated to 'introjective projections', or even what *I* say interpreted, diagnosed, relegated to the lavatory bowl as psychotic distortions by virtue of the neologisms of psychiatry. Time that antiquates antiquity; the neo-news allowed to calcify in the realms of oblivion until the mental archaeologists scrape the arteries free of their horny integuments and display the dead jargons of the past to be admired, re-diagnosed, re-interpreted and re-interred.

P.A. James Joyce tried to break out of the mental ossifications in which his tender shoots of animation were enclosed by the Clongowesian wrappings of Roman Catholicized semitic Zeus.

PRIEST Zeus was a juvenile vulgarian anyway. Truth always has to break out of the wrappings of the latest Enthusiast who wants to bring his pet mummy to life.

P.A. And in doing so dresses it up in the latest fashions of embalming technique. 'Mother' becomes 'Mummy', God borrows the costume of Old Nick, and his son is tricked out, swaddled in his grave clothes. But man only destroys man because he has not yet discovered that minute, ineffable particle which transforms the inanimate and

makes it perceptible, distinguishable, noteworthy, because it is alive. 'Though the body dies' the virus shall live for ever. The present is already concealed in Oblivion. Whose finger is on the button?

ALICE My clitoris is passed by unnoticed by your mouth, 'blinded', 'glutted' by your penitential penis. What you don't know is knowledge; once you know it, and once it is known by you, you are too full of knowledge to be able to be curious.

ROSEMARY Even if his alimentary canal can learn no more he opens his eyes wide to take in what his belly can't. Then his eyes are so stuffed with Beauty that he cannot see me. Not even Homer had the wit to see that Helen of Troy was not just an ecto-dermal proliferation.

ALICE They are all the same. I have known no person, clothed in the trappings of the woman's body, that was not imprisoned by those same trappings and unable to break through them to meet her . . . her . . . why, I used to think I could talk, but this same capacity for articulate speech is more an opaque screen than a link which enables me to communicate with something not me.

P.A. Perhaps you could project your ideas on to your resistance; then someone not – you could read the trace left on the resistance.

ROBIN You mean she might use the delay to think some sense before she opens her mouth again?

P.A. No, I don't. I think it might help you if you could use the hindering obstacle to think; but from what I know of you it is far more likely that you would fill the silence with just such a damn silly remark as you just made.

MAN Shall I shoot him?

ROSEMARY No. (*to Alice*) Man is a dear, but he has such a one-track mind. Useful enough for bullets, penes and other guided missiles, but no good without either a single track or a guide.

ALICE The boy scouts and the girl guides – as we used to say at school.

ROSEMARY I didn't know you were such a dirty-minded lot at your school.

ALICE Oh yes, we knew quite a lot. Of course we had to hide it from the staff.

VOICE Of course.

5

ALICE What was that? Did you hear it?

ROSEMARY No – I hope you aren't hallucinating, or I shall have to get rid of you.

P.A. I should be careful what you do with your voice. Here – suck one of these psychoanalytic pills – slowly. Just let it dissolve in your mind. You've swallowed it! You shouldn't have done that. It won't do you any harm just a bit of heart ache. But it will spread through your system and be excreted harmlessly by your mind – like cinnamon, or whisky. It was probably the Future casting its shadow before; sometimes it is disguised as the Past casting its memory forward.

ROSEMARY Thank you; I am most grateful. Do you know what gratitude is?

ROBIN 'A lively expectation of benefits to come.'

ALICE You are cynical. What is guilt then?

P.A. Ah yes! – the Cynics.

ROBIN No, she asked about guilt. Guilt is 'a lively apprehension of rewards to be inflicted'.

P.A. For being able to laugh at dirty jokes in school-like, 'It is I. Come forth! And 'e came fifth – and 'e did 'it 'is eye.'

ALICE Oh my God!

ROSEMARY Isn't it awful? Now it has become respectable and is called Psychoanalysis. It hardly makes one anxious to follow Roland's suggestion and become unified.

ROBIN If we could come together we could still preserve our identity – like the hills on a map in which all the same levels could be joined by a contour –

P.A. All right if we could link Somite Three here with all the other

Somite Threes. Of course, the auditory and optic pits would have to put up with being linked.

DOCTOR The post-natals may want to keep their distance from the pre-natals – and vice versa. We must assume that the pre-natal crowd can adjust to a change from a liquid environment to a gaseous one, the olfactory elements easing the change by bringing mucus with them so they go on functioning even after birth.

P.A. Some of these post-natal people complain of too much fluid. They call it 'catarrh' or 'influenza' and rush off to someone to 'cure' them. You must be familiar with that demand.

DOCTOR Yes indeed, but I would hesitate to tell them they were complaining of too much cure – being drowned in cure.

P.A. Your somitic friends would complain of being immersed in your intellectual, cerebral evacuations – a rarefied, abstract ocean of theory in which they could not taste or smell. If somites could write, the book would be 'On the Interpretation of Reality' and the theories would all be what we call dreams. We complain both of the unpleasant warmth of psychoanalysis *and* its arid abstractions.

DOCTOR Poor old body; poor old mind. It is hardly surprising that they do not get on well together and look down on each other, especially if we remember that one is derived from the other. In fact they may derive from a biological atomic plutonium breeder.

P.A. If it is true that living matter derives from the heat engendered by the reaction of oxygen with protoplasm, then I can see that brain substance might derive from the 'decay' of involuntary muscle, and the mind likewise from the energy released by the degeneration of athletic ability.

DOCTOR I knew some intelligent, 'brainy' people who played games for Oxford; they seemed to remain brainy *and* athletic.

P.A. Fortunate people! If only one could see how they did it one might solve the problem of how to produce more energy than beef. I would think I was in reality becoming a psychoanalyst if I could *become* more energetic by *being* more energetic. It might enable others to start that reaction. Melanie Klein seemed to do that for psychoanalysis.

BION What! You don't mean to say you are a Kleinian?

P.A. You remind me of Sir Andrew Aguecheek – 'And if I thought he were a puritan I would . . . !' Your excellent reason, sir?

BION I thought you would appreciate an experience which we could share together.

P.A. That reminds me – we were talking about linking the different 'levels' of mind as contours portray a mountain on a flat surface. How would you contrive to link your third somite with me? Rosemary was saying that when she was Helen of Troy –

DOCTOR Yes, I heard her – poor paranoiac! She must be as mad as a coot.

P.A. – nobody wanted progenitors whose ancestors were less than ectoderm. But she would be insulted if I said she *looked* like an embryo of thirty somites, or that she had a character like that.

SEVEN-WEEKS EMBRYO If I had thought I would turn out like Helen of Troy I would have drowned myself in amniotic fluid. Luckily Six Weeks appreciated the difference and passed it on to his mesonephros. No wonder Rosemary was tired of people who could only see the progeny of her ectoderm. I'm not sure I want to be jammed up with Six Weeks though.

P.A. Beauty is in the eye of the ectoderm – as soon as the shell has developed it wants to become permanent. No wonder we are all insects at heart – just as well some of us developed an endoskeleton.

ROLAND What is wonderful about that? I have always had a spine and even my penis was often erect, but I can't see that I am better for it.

DOCTOR You would if your lack of spine got you into a prisoner of war camp or a flabby penis had kept you out of marriage.

ALICE I never discouraged an erection of nipple, clitoris or penis.

P.A. Hmmmm . . . nor do I, though I see plenty who do. Sexual maturity is often thought to be the end of the journey when in fact it is another beginning.

DOCTOR What more is there besides sexual maturity?

P.A. Terms like 'sexual maturity' ought to be used precisely for physical maturity as in adolescence. By being allowed to spread, it disguises the absence of passionate love that is not only physical or mental, but a development of the fusion of both.

ROSEMARY Sounds interesting.

P.A. It is intended to. If you are right about it, the sound may travel through the liquid medium and reach the auditory apparatus within you.

ALICE What about the pits?

P.A. Whether it is the pressure of sound waves which are subsonic or infra-visual they could reach the auditory and optic pits. Unfortunately, Doctor may be so blinded by his psychiatric training that he would not interpret them correctly when they bounce back to his mind. So many won't see or listen because they say they are visual or auditory hallucinations, or chemically generated feelings of pugnacity, or fear born of the adrenals – as if that made them unworthy of attention. Freud listened to and quoted his great teacher Charcot. If others did likewise they would repeat their observations, however compulsively repetitive they seemed to be, until a pattern became discernible in the chaos of chance. Look at your facts. Respect them even if you do not like them. The mists may clear and reveal a pattern which is so disagreeable –

PRIEST Or so blindingly brilliant, as Arjuna and others found –

P.A. Or so deep a void, so black, so astronomical a hole that you regret the price you have to pay.

VOICE What price is that?

ALICE What echo was that?

ROSEMARY It makes me shudder.

DOCTOR It bounces back from the hole and its sides.

P.A. We probably learn the price too late.

ALICE Too late for what?

P.A. For us to mend our course. Too 'late' or 'early' as measured against a scale of time which is relevant only to our ephemeral existence, not the millennia of millennia needed to plumb the nearest confines of reality.

ALICE Shall we get together?

SOMITE THREE Delighted – but let me remind you that the rest of you have spent all your energies trying to get rid of me. Were it not for my persistence –

GERM PLASM *Your* persistence! *Mine*, you mean.

SOMITE THREE I nourished you and provided the conditions for your survival.

ALL ANTE-NATAL SOULS Had it not been for our parental care and your capacity to make the best of it, which we learnt from you, none of the post-natal crowd would exist.

ALL POST-NATAL SOULS Let us agree that there are certain basic fundamentals of character and environment – Choice and Chance, as

Yeats put it – which cannot be extinguished without our own extinction.

SOMITE THREE All I say is –

SEVEN WEEKS All we say is –

P.A. All I say is, do not forget what we owe to all of us – though I do not find a belly-ache or strabismus helpful.

ALL ANTE-NATAL SOULS We do not find it helpful to have to choose 'pains' as our only method of drawing attention to our existence. We do not find Depression or Paranoia helpful to our struggles.

P.A. If I may speak for All Post-Natal Souls, we don't find it helpful to have to be depressed or mad before we get attention.

ROLAND I suppose germ cells had to go on proliferating though I can't see why they should carry it so far as to give birth to a mind. Still, now it has happened I'm all in favour of making the best of a bad job.

ROSEMARY It sounds sensible – though I'm not sure what the *best* is.

ALICE Is anyone? Or is it just *more* cells till there is no room for even the cells to generate.

MAN With co-operation from the rest of us I think I could arrange to have the button pressed.

ROSEMARY I am afraid. I think Post-Natal Souls may get together and a mind will be generated.

ROBIN Like maggots in the warmth of a rotting dung heap. What does –

P.A. I think it is too late to stop a mind developing. The only question is, how to make the best of it. I gather it would be as well for it not to obtrude into notice too much. What does Priest think?

PRIEST Shall we form a small committee – P.A., Robin, Rosemary, Alice and one other.

ALICE Good idea. I suggest we include Priest as he has a truly extensive experience. The others would contribute on occasions when their special gifts would be illuminating.

ROBIN We can speak for others who are not committee members; I know Twenty has a good deal to say.

P.A. Ought we to co-opt him?

ROBIN No, I think I could put it in more uninhibited – if P.A. will excuse me – terms; perhaps more mellow language.

P.A. Right – let's start. I remember how I felt when I was Twenty-

one. We had just been ordered up the Line; I was terrified. I did not like the prospect at all. The orders were that we must not allow the enemy any rest, but carry on the pursuit now he had been beaten and a great gap torn in his lines by our victory on August 8th. Unfortunately I had been decorated for gallantry. Twenty-one knew I was terrified and hadn't the courage to get the doc to invalid me out. I knew I had not the courage for 'heroic' deeds. Besides, I had 'flu; my runner was given a bottle of phyz to dose me with. No one knew what I was suffering from so it was called p.u.o. – pyrexia of unknown origin. I hoped my death would be painless and sudden. The infantryman by my side had a hole in his belly. We looked at him coldly. 'He's a gonner – why waste time looking at him? Come on – zero hour.' I scrambled out of the trench and started walking forward. I inhibited – as I learned to call it later – any whisper of fact to burst through my p.u.o. A grey-haired man with his legs worn round his neck like a scarf wanted me to 'help' him. It was annoying to be expected to disentangle his neckwear. Besides, I was busy. '*No* – stretcher bearers coming!' I knew they weren't; only regimental stretcher bearers help. Why did I tell him that? I had been taught – disciplined – so that in just such a crisis I would not have an unfamiliar, unthought-out problem to solve in inadequate conditions for its solution. As a doctor I now understand; as an influenza-sodden tank officer, 'S.B.'s coming!' I lied. 'Kamerad kaput!', yelled the little Boche as he ran towards me, his bottom wiggling furiously as he tried not to fall. I could tell the hideously disarticulated old Tommy to go to Hell – 'S.B.'s coming' – but I allowed the horrible little Boche to drag me to his cubby hole. No discipline – I knew he would murder me. I entered; in the dark another Boche with his legs wrapped round his neck for scarfwear. 'Kaput?' He dragged me to touch – Kaput?' I did. 'Yes, kaput.' He burst into tears. I told myself, 'Now – damn fool – get *out*.' Only then I snapped out – out of the hole, out into the air, out into the sense to carry my Smith and Wesson where I had been taught to carry it.

PRIEST You would not have felt any better if you had been a parson. I remember our pink-faced, jolly, card-playing padre and how scornful you were – you and that red-faced, non-conformist private – because he would not come up and bury the dead. Poor Smith! He was so rigorous mortis that we could not force his arms into our grave; we were in a hurry too.

P.A. He preferred bridge with the colonel in H.Q. mess.

ROLAND Oh, don't be so hypocritical – so would you if you had been able to play bridge and hadn't been commanding a tank.

P.A. True. I was not scared – I was nothing. I thought I would be court-martialled. I was surprised that I told such an articulate, coherent story that I couldn't detect a chink of falsehood in it – and my men were so grateful and so full of admiration. I was amazed that I could not believe a word of it. All lies and so completely factual that even now –

ROLAND Well, what happened?

P.A. I caught up with my leading tank. I knew the long-range naval guns must get us. 'Get out!' I told them, 'and walk behind till it gets hit'. I set the controls at full speed and got out myself. It raced – for those days – ahead so we could hardly stumble up with it. And then – *then*! – the full horror came on me. Fool! What had I done? As I scrambled and tripped in my drunken influenza to catch up with the tank, in the shadow of which I had ordered my crew to remain sheltered, my ice-cold reality revealed a *fact*: The tank, in perfect order, with guns, ammunition and its 175-horse-power engines, was delivered into the hands of the enemy. Alone, I alone, had done this thing! My pyrexia left to rejoin its unknown origin.

PRIEST How did you get in – by beating your hands on the cold steel doors?

P.A. I was in; I did get in. A high-velocity shell struck; without thought I shot out of the hatch as the flames of petrol swathed the steel carcass. Are you hurt, sir? No – fell on my arse. Are you all right, sir? Of course! Why? Home – quick!

PRIEST Do you really remember this? It sounds most unlikely – but I cannot claim to attach so much importance to what you scientists call facts.

ROLAND Both Robin and I regard facts as facts. If I did not remember to sow corn and harvest 'facts', the crew you 'saved' would not have anything to eat. Nor would the rooks be blown cawing across the evening sky.

ROBIN I remember P.A. and his doctor friend as boys driving Curley to Munden when she did not want to be separated from her calf. Poor unintelligent animal! No one had told her about 'Separation Anxiety', but she knew all about the way *not* to Munden.

P.A. My twelve-year-old hadn't heard of 'separation anxiety'

either, but 'remembered' not to be separated from my intelligently disciplined 175 horse-power acquired conscious/conscience! Even now I have to risk being heard by some damned psychiatric neologism-shooter.

ROBIN You speak with bitterness that I more usually hear conjoined with evacuation of hatred. In fact, if you hated psychoanalysts I would not be surprised to hear what I heard you say. As it is, I am almost shocked.

ROLAND If you were twelve years old I would not be surprised to hear that Curley had not arrived at Munden. I am shocked that as a psychoanalyst you are angry that your 'meaning' has not been driven into what you think is the right verbal pen.

P.A. I know, and have reason to fear that the 'pen' into which it has entered will imprison both me and my meaning – inescapably. You think this is all talk and that talk is nothing. I know – though I cannot prove – it is *not.*

ALICE I knew that my baby's noise wasn't all babel; it sounded Just like' talk; it was not.

P.A. It was a precursor, a prelude to talk perhaps, but now we do not know. We do not know if this conversation is 'just like' talk, a 'prelude' to talk, the thing-in-itself, fact, real. It may be 'It', what our lives have been leading up to.

ROLAND Curley was a good beast. She not only yielded milk for her calf, she produced manure – just what was needed to germinate the wheat. Manure – an essential condition.

ROBIN There is a lot to be said in favour of your tractors, but if I had to choose between the smell of manure and the smell of petrol fumes, I prefer manure.

P.A. Just as well that you did. But you didn't like the smell of my hate which was as out of place in our discussion as you think the smell of fumes is for wheat germ. Maybe that is only because neither you nor I know for *what* the fumes are an 'essential' condition.

ROBIN Surely you do not suggest air pollution is good for us?

P.A. I do not. You, I am sure, do not suggest manure is the ideal floor covering for social discussion. But who could predict that cow dung would one day nourish our social intercourse? Socrates pointed out that 'talk', like 'painting', is not good, not bad, but ambiguous. His talk was interpreted – diagnosed – as corrupting the youth.

Death, 'they' said, would cure the spread of those corrupt ideas. His body, as we know, turned to physical corruption. But what of his ideas? Plato caused them to be repeated.

ROBIN When Thirteen and I got together they excited us. Our admiration grew so that –

P.A. His ideas were buried beneath a memorial so deep they could not be heard. It is hard to determine the extent to which an idea survives, deteriorates or develops although apparently we can compare our present ideas with ideas we once had. The words in which we dress ideas disguise, as readily as they display, the meaning to which we aspire. Call ourselves what we will, whether Bacon, Truth, Poet, Newton or Bach, we all disappear. But ideas do not 'appear'; that is an attribute of 'things'.

ROBIN 'Ideas' are 'things'; maybe we have to review our ideas about ideas.

P.A. The germ cell has its 'minimum conditions'.

ROLAND The existing vocabulary of words or ideas needs augmentation. Institutions wear out; like things, they are inanimate and obey the laws of all inanimate objects; they are not alive. *Members* of 'institutions' are people; they may not subordinate their developmental qualities to the framework, the structure.

P.A. An idea, it seems, has to submit to the structure if it is to be communicated. You spoke of Plato's ideas, but they had to fall within the discipline of verbal artistry and could not be communicated –

PRIEST – till a soldier captured Constantinople and released the ideas imprisoned within; a soldier had to become operative. Even then a medi-aeval priest had to translate those ideas.

P.A. Erasmus had to break through a cultural prison wall at least as limiting as a wheat germ cell, or a pharaoh's tomb. Tutankhamun's ideas were enclosed within the preservative shells of Thebes.

PRIEST But before we blame the shell for the death of the idea we should acknowledge the 'preservative' function. We should not condemn the helical structure of the DNA molecule.

P.A. Nor need we glorify the structure and lose sight of our ignorance of that which differentiates the animate from the apparently identical inanimate.

PRIEST Socrates recognized God – the insensible, inhuman, a-biological God; God that does not obey the laws which he should obey to be comprehensible to the human All-Highest Complacency.

ALICE If I admit that I don't know what you are talking about I am confident that I shall be offered more words – disciplines, well-ordered artefacts – like 'love' and 'concern'.

ROSEMARY Or a disorderly, undisciplined, sexual 'love' reminiscent of a baby's love of food. There is nothing between. If, for want of anything to love or by which I could be loved, I find some transient experience on the way to it, like Alice –

ALICE Some psychoanalyst, psychiatrist, man, is sure to 'know' I am having a 'homosexual experience'.

P.A. So you are. That does not mean that you are not having an experience of which the homosexual component is a part. A letter of the alphabet might as well be treated as if it were indistinguishable from the whole of *Paradise Lost.* Yet a psychoanalytic interpretation is often taken as a whole of psychoanalysis.

PRIEST If I say a 'marriage' is a miraculous ritual it is believed a 'miracle' is the whole of religion; I know a 'miracle' is only a transient episode on a human soul's journey to factual Truth. I call it 'God' because it is less misleading than to call it 'Scientific' Truth – that is only truth modified to lie within man's comprehension.

ROLAND I am no poet or painter or musician; I hesitate to claim more than moderate adequacy as a farmer. But I was regarded as responsible – I had to be, though I knew I was not a chemist or meteorologist. I admired the great storm clouds when they towered above the fields of golden corn. 'Robin', I used to say, 'we shall have to use the scythes when this storm has laid the corn flat.'

ALICE I used to hate you all when you and your guns surrounded the last of the narrowing field to kill the cowering beasties as they tried to escape.

ROSEMARY Oh why? That's when we had a good meat meal.

ROBIN Pity they recovered from myxomatosis. What did your god think about that?

PRIEST It was not my function to tell God what to think. If I were a rabbit I would use my rabbity intelligence to use my god-given legs to run. As I am a man I use my teeth.

P.A. After a few hundred years of culinary experience no doubt; even that you left Alice to acquire, who in turn left it to Rosemary.

ALICE So – I retained my place on the top of the pinnacle of which Rosemary was the base. Priest and P.A. pushed me off to leave room for themselves. Well, I do not envy you your eminence.

P.A. You may not envy the kind of eminence which stimulates my envy, but you nevertheless have feelings of envy. The fact that I may not be able to define feelings, either yours, mine or those of others which are neither yours nor mine, does not mean that they do not, did not, or may not in future exist. They may at some stage become so obtrusive that it is possible to attach a name to them.

ROBIN Although I have been aware of the pressure of what I can now call sexual or envious feelings, I would have been outraged had I been told that I was sexual or envious.

ROLAND What other people can verbalize about my feelings, especially if I can't, is particularly exasperating.

P.A. That is one component of the practice of psychoanalysis which is constant even if not constantly perceived. Guilty feelings are unwelcome and even in infants easily evoked. It is difficult to give an interpretation which is distinguished from a moral accusation.

ROLAND Surely this is a defect of psychoanalysis?

P.A. Certainly; but when I agree, you and others are therefore liable to assume that it is psychoanalysis only that suffers from that weakness, whereas I believe that this is a fundamental experience. It is this fundamental experience that underlies Plato's dialogue between Socrates and Phaedrus which is being revived here – a few hundred years later – in this discussion.

ALICE Do men agree with the dismissal of Xanthippe? Do you consider the presence of myself and Rosemary an excrescence? Is our sexual equipment the only worthwhile contribution to the discussion? Or are we tolerated rather than welcomed as servants? Often it is called 'love' when what is meant is that we serve your lust.

ROLAND Robin and I have often discussed this. I have never felt that sex should be abolished; even when I have been aware of what a damned nuisance those impulses are, I have not felt easy at their facile dismissal. 'Perverse', 'homosexual', 'lustful' – I am sure P.A. can supply a great number of denigratory expressions, all of the highest scientific respectability.

P.A. I thought Alice was expressing contempt both for the being who requires his or her sexual urge to be fulfilled, and for the person, male or female, who 'serves' to fulfil them – whore, pimp, womanizer, homosexual – especially when money is clearly in close attendance.

ROBIN I do not like to think I would need to resort to a prostitute, or that a woman was 'prostituting' her beauty or her gifts. Nor

would I like the man who seemed to be using his money or his looks to seduce women.

P.A. What is involved is a capacity for judgement and discrimination. That is something primitive and fundamental, sophisticated and a part of highly developed society. Fish smell a difference between the noxious or dangerous, and the development-nourishing 'thing'. So does the amphibian. So does the animal that lives, like man, in a gaseous fluid.

ROBIN Are you seriously suggesting that we are like fish, frogs, reptiles?

P.A. I am quite serious, but this is not a scientific discussion; I am speculating with the freedom of a social talk. I confine scientific speculation to scientific meetings; here I claim freedom from the discipline imposed by scientific thought.

ROBIN But it sounds to me as if you were discussing scientific matters.

P.A. That is one of the problems of verbal communication. Speech is ambiguous; its ambiguity is the more dangerous for being disguised by its apparent precision.

ROBIN You mean that psychoanalysis, as most of us always have suspected, is couched in apparently scientific terms, but is in fact jargon?

P.A. I think the criticism is just, but I fear to make the admission as it is usually assumed that I am conceding superior 'truth' to other disciplines.

ALICE Disciplines! That is not a word which spontaneously springs to my mind when I think of psychoanalysis or psychoanalysts. They seem to me to claim the merits of unobstructed emotions, be they sex or rage or what they are pleased to call love.

ROLAND The ones I meet usually seem to be a depressed and anxious – not to mention 'dull' – lot.

P.A. We have the right to feel.

ROLAND Last night I dreamed a dream –

6

ROBIN How truly Bunyanesque of you!

ROLAND Don't be a bloody cunt. Do you want me to tell you the dream or not?

P.A. Do go on –

ALICE Well, really! Are we supposed to listen to language like that? It is not even sexual – as P.A. would agree.

ROLAND All right, Xanthippe, darling. Socrates' complaint is comprehensible if we are not allowed to discuss naturally and spontaneously.

ALICE I have no objection at all, but surely it is not necessary to talk like that. Yes, I know – you are going to say 'like what?', but I shan't repeat such . . . such . . . language, though you are trying to make me use the words. You know very well what I mean, but I have to think of Rosemary. I am sure she agrees.

ROSEMARY Oh yes, Ma'am, I do. My mum was very particular how she brought me up. When I asked her what she and her gentleman were doing – I had come into the room innocently because Patricia our dog was barking so loud – Trixie we used to call him because it sounded less girlish if you see what I mean – him being a dog and not a bitch if you will excuse the expression, Ma'am –

ROBIN Oh God-all-fucking-mighty-do get on, will you.

ALICE There you go again – is it necessary to be blasphemous to make yourself clear?

P.A. He is speaking rhapsodically – not with social or scientific precision.

ROLAND Robin will agree with me that he is being no more blasphemous than I am when I say 'bloody cunt'; bloody is only a quick

way of saying 'by Our Lady' – which is sacred. Go on, Rosemary, for Christ sake.

ROBIN Oh Cripes!

ROLAND 'Schoolboy' for Christ. Anyhow, *please* get on.

ALICE Now he has become sufficiently civilized to say 'please', go on, Rosemary.

ROSEMARY Oh yes, Ma'am – my mum was always most particular and wore a crucifix all the time because she told me I should never forget Our Lord, especially when the gentlemen came to see us. That was how I found out that she *only* had high-class gentlemen like lords to see her though my friend Faith – she was called that out of Faith, Hope and Charity –

ALICE I won't ask you two what you are thinking because I can see it in your faces.

ROBIN There must be something wrong with the small muscles of our faces, Roland.

ROLAND 'Myasthenia gravis' no doubt. But Rosemary's story is so exciting I can hardly wait to hear.

ALICE Then why don't you two fucking bastards shut up and let her get on? Can't you control your face muscles? See – I can talk that stuff as well as you can.

ROLAND I am sure P.A. knew you always could.

ALICE Go on, Rosemary – don't take any notice of the ugly faces they make.

ROSEMARY That's what my mum always used to say to me. 'Rosemary', she says, 'don't you take any notice of what people say. You may as well be killed for a Lion as a Cockroach' – now what was I saying? – forgotten – oh yes, Faith and me used to have many a laugh about the gentlemen my mum knew and we used to watch and laugh till one day Trixie flew at the gentleman because he thought he was being cruel to my mum. I was frightened because my mum was so pale and she told me that if it hadn't been for Trixie the gentleman would have beaten her to death with a leather stick he had.

ROLAND P.A. would call it 'pure phantasy'.

P.A. Not only phantasy, but phantasy certainly.

ROBIN Do you mean you don't believe it happened?

P.A. I mean that I do not doubt it was a real phantasy and a real fact – in so far as I am capable of knowing what a fact is and

of respecting the factualness of a fact, however 'realized'. Phantasies sometimes burst through into articulate words when the individual is 'off his guard', as when he is asleep; they break out also when the individual is conscious and fully awake. Sometimes they break 'in' to articulate speech, conventionally acceptable art or music, and sometimes into conventionally acceptable 'behaviour' – in this instance unacceptable muscular action. Sometimes the 'acceptable convention' has to stretch, alter, to accommodate the thing that 'breaks through'; sometimes the 'conventionally acceptable' crushes the 'outbreaking impulse'. Usually it is a compromise between the two. Just now Alice allowed her ears and lips to be degraded by 'bloody cunt' and 'fucking bastard'; the rest of us have had to allow ourselves to be limited by being polite and saying 'please'.

ROSEMARY – the gentleman had to run away.

ALICE He was lucky. Or was he?

P.A. This language, which clearly we all know though we have forgotten it, are forgetting it, and hope in future to forget it, makes an unrecognized – an unrecognized archaic and still vital – contribution to our intercourse.

ROLAND And was once, is now, and in future will continue to become more and more refined – or should I say 'refained'? – into a virtually meaningless 'prettiness' or meaningful ugliness.

ROBIN Like a pretty man, boy, girl or woman – nothing deeper than the skin.

P.A. Or more disturbing than a dermatitis if our scrutiny went beyond appearance to the underlying reality.

ALICE Or more disturbing than blasphemy and sex if we allowed our scrutiny to go beyond spirochaetes, mummification and the beauty parlour. Helen of Troy, Cleopatra, are more than mere shadows of the past; they could be the shadow cast before by the Future we do not know.

P.A. Out of the rotting syphilitic remains of human flesh –

ALICE How elegantly, how poetically, you express it!

P.A. – may the warmth engendered by the decay give rise to a new form of life.

ROBIN Like cockroaches from dirt and neglect, or compost out of a silo.

ROLAND Who or what is to take the place of the silo?

P.A. The effect would be similar if the human race had to expand

on a world too small for it – the 'pressure' would increase. With our individual birth the mother's womb would be the silo in which pressure built up till the child burst forth or the mother got sick of carrying such a load of amniotic fluid, fetus, meconium and junk. But now it is the Birth of Mind. 'Mary McSweeney confined in Mount Joy' – 'The Birth of a Nation', as some wag scrawled on the wall beneath the slogan about Mary McSweeney.

ALICE I remember that old chestnut. At the time I had no doubt that the 'joke' was typically one that could be seen by a man.

ROBIN I thought it was quite witty. Mary must have done something to precipitate incarceration. It cannot be a man only who initiates a pregnancy.

ALICE Blame. Blame. Blame.

P.A. Blame, or I would rather call it Guilt, is one of the fundamentals, one of the basic assumptions, as fundamental as the sacred 'bloody' and the non-sexual 'cunf – it is neither masculine nor feminine. I don't want to know your birthday because I am sure you will tell me a date which does *not* outrage ideas of genital intercourse, midwifery, surgery. What I want to know is, when was your character or personality born? Did changes of pressure on your optic pits cause you to become luminosity-aware?

ROBIN It certainly seemed to me that Alice and Rosemary showed distinct signs of being aware of the words 'bloody cunt'.

ALICE I understand that when the police came to restore order at one of the Ivy League schools, these great big tough he-men retired in disorder when greeted by the innocent shouts of 'Mother Fuckers'.

ROLAND It would seem to bear out P.A.'s suggestion that these archaic terms hide or disguise or preserve some powerful germ of vital development in a way that is not true of 'bloody vagina'. Yet a vagina is a real and important canal. So is a penis.

ROBIN Hide or conceal, you say. You might as well say a breast or penis or clitoris 'hides' an erection. But there is no such thing as an 'erection'; it is an invisible state made manifest by 'erectile' tissue.

ALICE Any mother knows that, even if she had never suckled a baby; or father, even if he had never nourished a penis. But why is it that so few men and women are at ease with an erection?

P.A. Some deficiency in our mental growth. The infant potentially is a parent; the parent potentially is, but is not capable of becoming,

an infant. In that way it sounds as if developmental processes are directional in one direction only. It seems to me we need to develop a capacity to use a screen, a resistance, a caesura, as Picasso could use a plate of glass. Look on *this* side and see a delineation of a psychosomatic disorder; look on *this* side and see a soma-psychosis.

ROBIN You remind me of the early days of studentship when a small black cat used to appear in our courtyard, do its evacuations, cover them up neatly and disappear. It was called Melanie Klein – Melanie because it was black, Klein because it was little, and Melanie Klein because it had no inhibitions. Today one could compare a tiny germ of Rhodesia with the independent Rhodesia; then it was tiny, white and inhibited; what it is today I do not know. But tomorrow Africa may be black, huge and uninhibited.

ALICE I do not see what this has to do with our discussion.

P.A. Perhaps this is a constant feature of the present. It is difficult even under discipline to know our past history, impossible to perceive the present while we experience it, and only vaguely as through a glass darkly to perceive the future which casts its shadow before.

ROLAND Not only the group but the individual, not only the individual but the group also.

P.A. I remember that song which we all disliked so much that we did not sing it. 'Rule Britannia! Britannia rule the waves. Britons never, never, never shall be . . .' skivvies? Butlers?

ROBIN No; as Alice would say, only 'civil servants'. Say please, please. *'Good dog!'* – as the clever pet was put through its trick. 'Die for your country', and he would lie on his back; the biscuit casting its shadow before was too much; his tail wagged phrenetically.

P.A. Britannia was a repulsive old dame even when clothed in masculine garb. Wider still and wider were her boundaries set, till at last the weight of greedy spoils became too much to carry on her poor feet and she rebelled against crushing them into the cosmetically beautiful, but inappropriate to old age, shoes of youth.

ROLAND I remember your sister trying on your mother's shoes and shuffling around saying, 'Aren't I just like Mummy!'

P.A. I remember. Do you think groups, and the individuals, pursue an helical progress?

ROBIN I think there is a pictorial similarity.

P.A. Pressure on the optic pits; demands on visual acuity aided by telescopes and microscopes till the poor old cerebral hemispheres

sink under the load of spoils won for them by curiosity. As the schoolboy joke of contextual examinations had it: 'Who said, "My punishment is more than I can bear"? Answer – "Agag, when he was hacked in pieces: 'It is not the prize that counts, but the running for it.'"

ROLAND That may be all very well for rabbits and tortoises, but you try telling that to a real rabbit or a real tortoise.

ROBIN Have you tried? You might ask a plant what it thinks of herbivores. Human animals are both carnivorous and herbivorous – greedy beasts.

P.A. We talk as if there were some force or power which creates an almost infinite variety of animate and inanimate objects. When we are talking about *us* – as we are here – there is an advantage in talking in this way. An inescapable fact is that we tend to wonder, and tend at the same time to refrain from wondering, if it is true or not; that is to say, if the image that we bring will find a real image there. We shall have to consider what a *real* image is, but for the moment I suppose that my image of myself is real. If I meet a Not-me which nevertheless reminds me of Me, then I am likely to wonder what this object is. If it is a nice object, then, Narcissus-like, I have the pleasure of discovering what a nice person I am. If I do not like this Not-me, then I do not like its reminding me of Me; I am outraged. I do not like looking-glasses, sheets of water, novels, psychoanalysis –

ROBIN 'Sheets of water' you say. Would you include sheets of amniotic fluid?

P.A. Certainly – any liquid. I would go further and suggest that sheets of reflective fluid of any kind become objects of dislike.

ALICE You mean the fluid does not have to be liquid but can, as at birth, be changed to a gaseous fluid?

P.A. Quite so. But, liquid or gaseous, the fluid can be constantly changing from calm reflecting state to turbulence.

ALICE When I took my astronomical course we were familiar with conditions for observation.

P.A. Right. It is commonplace for obstetricians to find a fetus is sucking its thumb. Presumably the fetus has an ideal opportunity for 'observing' its thumb.

ROLAND Presumably? May I ask who presumes?

P.A. We may all ask or not as we choose. 'La réponse est le malheur de la question.'

ROSEMARY Please translate.

P.A. I understand it to mean that the question's misfortune is that it is liable to be answered. Your curiosity and that of Trixie was aroused by your mother and her gentleman. In so far as it made you question 'gentle-manliness', its misfortune was that it was answered. You have never quite recovered from wanting, and fearing, to experience a similar 'gentle'ness.

ALICE Oh, nonsense! You are putting ideas into her head. Now she's spawned off all the bits and pieces which are so small that it is impossible to see how they could cohere even if the environment were right – which it isn't. But your idea would make her try it. You are corrupting her youth.

P.A. I hope you are wrong and that I am right. It seems to me that it is as well for her to be aware that unobserved beneath the calm and mirror-like surface of her character which makes it easier for you to see your reflection as her lovable mistress, there are storms that rage. One of the advantages of the 'real' Mediterranean is that Homer, Virgil, even you and I, can see reflected in it something which, however calm or turbulent, reminds us of ourselves.

ROBIN You sound as if you wanted to teach us to 'semanticide'.

P.A. Alas; language – though I try to speak it articulately, precisely and to the point – is, as used by me, a distorted, distorting and turbulent reflecting surface.

ROLAND Our army ditty was:

> Ashes to ashes and dust to dust
> If the wine don't get you then the women must.

P.A. In fact it is both.

ROLAND Both? How do you mean?

P.A. I suppose the simplest way I could explain it would be by falling back on Desargues's theorem.

ROBIN Good God! You aren't serious, are you? Even in the mathematical Tripos I found Desargues and Conics impossible.

ROLAND Conics are chronic.

ALICE Punning is a very low form of life.

P.A. Life fundamentally is really 'low life' – cock-roaches, and 'bloody cunt' and swimming in a sea of amniotic fluid and meconium, and now psychoanalysis. Even the fetus is involved with *non-fetus.* One cone intersects another cone. Here the eyes of each of us can be described as sweeping out an area of space more or less cone-

shaped. But these cones intersect other cones whose focal origin is different. These points of intersection could be pictorially depicted by resorting to geometrical figures. That is an over-simplification which, as Robin said, is complex enough to make any further description redundant. However, I do not see why the universe in which we live should oblige us by being comprehensible to us mere human beings. This is true of our own bodies and minds in which we have to live. Even if we don't trouble with the 'universe', the *not-us,* we find that merely trying to know who 'f am involves an intolerable amount of discovery of what we have never been able to tolerate and which, as likely as not, we are right not to tolerate.

ROLAND You remind me – Britannia reminds me – of the mother who on her death-bed collected her children because she wished to confess that she had never loved her husband, their father, and had been constantly unfaithful and promiscuous. The eldest, recovering first from this stupefying information, announced, 'Well, I don't know about you other bastards, but I'm going to the movies', and they all fucked off.

ALICE Very amusing. I regret that my facial muscles do not express my entertainment.

ROBIN I expect you are not perceiving how amused you are at being not-amused.

ALICE Though I said it was 'very amusing', I did not expect you to believe I meant just that.

P.A. Though you do not call it psychoanalysis, you interpret naturally and expect others to interpret your behaviour, including the language you talk. These diagnoses, interpretations, are intrusions, outrages perhaps, on your privacy – our privacy.

ALICE If you are right, that seems to me to be one more reason for behaving in a reasonably civil manner.

P.A. Certainly. But in reality, as far as I am capable of perceiving reality or truth, the more I am aware that reality is not civilized or reasonable or considerate of our feelings or ideas. This applies to you and me; we are not polite, civilized, considerate *only. So,* in so far as we achieve 'civilized' character, our capacity for lying, murdering, robbing, being in *rude health*, 'fust in us unused', as Milton put it.

ALICE Milton certainly did not mean what you say he meant.

P.A. I am ready to believe that Milton did not mean to mean that. It requires, at least, considerable training to achieve any idea now of

what Milton meant – or Nietzsche, or Newton, or any other great figure of the past. In the present we do not have to bother because there are not perceived to be any great figures. In fact we are learning to regard them as figments of our imaginations.

ROLAND I remember the fashion for 'Father Figures'; the mental landscape was such that one could not see one's genetic father, the air was so thick with Father Figures.

ROBIN I smell a Father Figure; I see him in the Air; I will nip him in the Bud.

ROLAND Call me Buddy – so much more friendly.

P.A. Technical terms are not safe from de-value-ation; hence my resort to spelling out the word in a hope that the return to that childhood learning difficulty might re-inforce my communication. Must we keep our technical terms in constant repair? The bloody cunt which is *not* anything to do with anatomical sex, not masculine, not feminine, not haematology, not religion but could be said to be sacred, has nevertheless an almost universal – western at least – comprehensibility. It made Alice angry; even articulate. It degrades the user almost as much as the recipient.

ALICE Then why use it?

P.A. I am not advocating or deprecating its use. Since it is there it seems wise to acknowledge or respect its presence as one should respect any other fact, whether we like it or not.

ROBIN I can see Alice's point – why go out of your way to look for the unpleasant?

P.A. If it were only a matter of pleasant or unpleasant that would depend on the character or person, and on his or her likes or dislikes. I suggest it also involves *is* or *is not*. If it *is*, then the individual should respect the *is-ness* or *is-not-ness* of it. You think these 'things' are so rare that it is perverse to go out of our way to find them. I say they are so universal that it is perverse to make great mental detours to avoid being aware.

ROBIN But who uses language like that?

P.A. I do, for one. So do you. So does Alice.

ALICE I beg your pardon – I don't.

P.A. But you said 'fucking bastard' a little while back; you reacted as to the manner born to Roland saying 'bloody cunt'. If it were a foreign language I would say you must have been born to it, lived it, loved it as your very own favourite language. I agree with

you that you spoke to it as if you had forgotten it and didn't want to be reminded of it.

ALICE Only because you chose to drag it up into the conversation first.

P.A. Like the police, asked to intervene in the Ivy League dispute. Like Robin – equally ignorant. But the fact that you are and wish to remain ignore-ant is your affair. Robin, did you never march through a village of innocent, clean English men and women singing –

> 'When we go out with noise and shout
> We'll be buggered if we'll be buggered about,
> We won't be buggered about!'

ROBIN Oh, the army!

P.A. Or your very select private Public School.

7

ROBIN The army and school – that was a long time ago.

P.A. Then, no doubt, you'd have said it would be a long time before you would grow up and use the awful language those great big authorities – starting with your parents – used. But if as a baby you had not been so angry and inarticulate, *that* is the 'cuntish' language you would have talked. In fact I do not believe there has ever been a time when your mental turbulence did not surface gems of this obscene 'water' – amniotic fluid, social freedom – call it what you will. What language does Alice spontaneously use when the alarm clock wakes her and she wants to sleep some more?

ALICE I admit your point. I still wonder what good it does to talk such language or about it.

P.A. Though forgotten, the archaic thing lives and contributes its vitality to an otherwise sterile talk. I remember a dignified board meeting at which the chairman started a long and highly involved address urging members to 'be more circumspect because so much offence was caused by . . . er . . . er . . .'. 'Oh, Christ – Bish been saying 'fuck' again?' The chairman inclined his head in shamed acknowledgement that the surmise was correct. The contrast of the 'civil' communication with the direct primitive phrase was most impressive; the primitive tapped reserves of vitality spread through the somnolent, but well-behaved group.

ALICE I am glad you acknowledge that the group, however somnolent, was well-behaved. I do not think this discussion would be improved by our free exchange of terms like 'fuck' and 'buggery', 'bastard' and . . . and . . .

P.A. We will spare you the embarrassment of demonstrating your familiarity with the vocabulary. But I do not want us to lose sight

of this almost universally comprehended speech. It hardly requires translation. I can see that the speeches in the United Nations Assembly might well be enlivened if the 'freedom' was extended to include freedom to choose, without limitation, *how* to express as well as what matter to express.

ALICE I should prefer a civilized and decorous assembly.

ROLAND So would I, but the 'fundamental basic thing' would not oblige by being confined within the rules of debate. Those rules may be all right if our object were to achieve the politeness of polite conversation. But this is not the object of a United Nations Assembly, and I don't think it is the object of this discussion. I wonder if P.A. could enlighten us about the object, not simply of psychoanalytic debates, institutions, 'scientific' papers, but of psychoanalysis itself.

P.A. I would if I could but I am not sure that there is any adequate way of doing this, short of experiencing psychoanalysis itself.

ALICE Do you use terms like 'fuck' and 'buggery'?

P.A. Sometimes; it depends on what I want to communicate and what I think the listener capable of hearing. A child of ten or twelve would be likely to snigger if he heard me use one of these terms. If I asked, 'Why do you snigger?', I don't think he could answer, but from my experience I would expect the response to be unmistakable signs of guilt. 'Guilt' is fundamental, basic, sharing the primitive qualities which Freud attributes to the id. If the id could speak, that is the language I would expect it to use.

ROBIN How does this apply to the practice of analysis? I take it you do not talk to the id, because that is only a theoretical term.

P.A. Even theories and theoretical terms are supposed to remind us of a reality. I have no doubt that one 'talks to' an experienced person; the matter of psychoanalysis is such that analyst and analysand cannot afford to neglect the total sophisticated capacities of which both are capable. The psychoanalyst has a lifetime of experience, including the experience of technical psychoanalytic training; the analysand, even if only a young child, has a considerable body of experience to fall back on. It is certain that the psychoanalysis will fail if the analysand does not respect the knowledge, character and wisdom of the analyst – and vice versa.

ROBIN Doesn't that presuppose some mutual acquaintance with each other? I thought it was important that the analyst should not know the analysand.

P.A. There is substance in the idea, but the idea must be modified by common sense; applied in extreme degree it would mean that psychoanalysis could only be carried out between two people who had neither race, nationality, language nor culture in common. The other extreme would mean that the two knew each other so well that there was no topic which could be discussed profitably. In practice some rough rules can be formulated; close blood relations who know each other well, or husband and wife, would probably not find the psychoanalytic interchange rewarding.

ROBIN I listened to some married friends who were both enthusiastic psychoanalysts, and I felt that if I had to listen to them 'analysing' each other for long I would go mad. If *that* is what analysis does for you, heaven save me from it!

P.A. I sympathize with your dismay. But psychoanalysis does nothing for anyone, any more than do morphia or strychnine or human speech. Most people can turn these facilities to good account, but there are many pairs who would use them and other components of the universe in which we live in ways which you and I might not applaud. Loeb and Leopold appear to have used their chances – even the chance which could be used for homosexual love – for purposes of committing the 'perfect' murder. In the upshot it was *not* perfect although they appear to have been gifted and living in a universe which afforded ample opportunity. The institution of marriage is supposed to offer the legal conditions for a hetero-sexual pair to fulfil themselves. Whether they choose to utilize those conditions for mutual psychoanalysis, mutual masturbation or mutual anything else, is their affair. One, or other, or both may wish to avail themselves of the institute of divorce to 'correct' the prior decision to marry. But what choice they make is their own private affair. The fact that you or I would not decide to live as they do is a matter of no importance whatever – except to you or me.

ROLAND But do you never give any help?

ROBIN Suppose they come to you for help.

P.A. Naturally I should hope that I was the sort of character who would want to help them; but I would like to have the discipline to confine my efforts within the limits of my capacity.

ROBIN It sounds like, 'Find out what you can do and do a little less'.

ROLAND You could hardly advocate '. . . and do a little more'.

P.A. I think there is something to be said for differentiating *knowledge* and *wisdom* – at least for purposes of this discussion. Then I would say that whatever *knowledge* each of us has must be augmented by *wisdom*. However intelligent, the chance of survival is decreased if the character cannot rely on being wise.

ALICE Is it not also true that the wise person's chance of survival depends on intelligence?

P.A. Certainly. Part of the problem is that intelligence, as a capacity for collecting knowledge, needs to be distinguished, isolated – defined for purposes of this discussion – from wisdom. In real life the problem cannot be solved as simply as it can be conversationally. 'Acts' do not arrive clearly labelled. Projected acts are not like a medicine in a bottle.

ALICE Do you remember Prince André in *War and Peace* feeling in the course of a discussion as if an inner voice said, 'That is sooth; accept it'.

ROBIN Yes, it impressed me when I read it.

ALICE Did you ever read *War and Peace,* Rosemary?

ROSEMARY Oh no. I saw it, but it was too thick and learned for the likes of me. Mum always used to say, 'Now don't you go and read those trashy novels', so I never did. Not that I thought a big book like that was trashy.

ROLAND 'Another of those damn thick, square books, Mr Gibbon? Scribble, scribble, scribble!' Upstairs and downstairs and in My Lady's chamber. There I met an old man who wouldn't say his prayers – so –

P.A. These nursery rhymes say a lot. Some analysts study them; so do children, and they understand them. Or, rather, the archaic chord is struck and vitality is released. If we could strike the chord, the vibrations thus initiated could penetrate the barriers which at present act as obscuring screens – the need is for screens sufficiently resistant to catch and display the meaning without destroying it by denial or 'acceptance' – 'No' or 'Yes, I know'. I want to display not a psycho-somatic disturbance only, but also the soma-psychotic disturbance that is there; those who wish to see, do.

ROLAND Do you suggest that the old man should say his prayers?

P.A. I knew a young man who would not say his prayers because

he was sure that he would be laughed at for being 'converted' out of fear of going into battle.

ROBIN I was. But I had also come to have such a contempt for the act of praying – as I had been taught to practise it and seen it practised – that it would outrage any respect that I had for myself if I did it.

ROLAND Do you think there is any kind of prayer that is not an outrage on one's common sense? Obviously the athletic 'knees bend' exercise could not satisfy any person of integrity. What does P.A. think?

P.A. It is not my department. I have ideas about it like any other man, but I would not like it supposed that because I set up as an expert on psychoanalysis my expertise extended to religion and other disciplines – painting, music, literature.

PRIEST Is that not somewhat cowardly?

P.A. You and others might think so but I do not. Even in my own limited field I am not unfamiliar with a cowardly shrinking from expressing a truth that I know will be unwelcome. One takes flight into doubt – "'What is truth?" said jesting Pilate'; Bacon himself did not wait for an answer because he knew he might be killed if he did. Physical death is a hard price to pay – especially for those of us who, from training and observation, believe in the obliteration of the body. I believe also in the obliteration of one's respect for the truth; it is not simply by physical methods – alcohol, for example – that one can destroy one's capacity for discerning or proclaiming the Truth.

PRIEST I believe in moral, religious death. Truth can be nourished; it can be allowed to die of neglect or be poisoned by seductions, cowardice too often repeated. But Truth is robust; 'facts' cannot be killed even if we do not know what they are. The fragile human respect for the truth cannot be as easily disposed of as often appears.

P.A. I hope you are right. I cannot, however, say that my knowledge of myself or others provides me with food for hope. Religion itself gives evidence of the great force of power, bigotry, ignorance; and psychoanalysis is shot through with error and the defects of us humans who try to practise it.

PRIEST You are being extremely self-contradictory in claiming that it is a science *and* is true. It must have a point of reference outside itself. You cannot believe in Truth any more than you can 'believe in God'. God is –

ROLAND – or is not.

P.A. No. 'God is, or is not' is only a human formulation in conformity with human principles of thinking. It has nothing to do with the reality. The only 'reality' we *know about* is the various hopes, dreams, phantasies, memories and desires which are a part of us. The other reality exists, *is*, whether we like it or not. A child may want to punish a table for hurting him when he suffers a contusion. But he may desire to punish himself for 'suffering' a contusion. He may ultimately be compelled to believe that, in addition to these facts, there is a table that is neither good nor bad, like it or not, forgive it or punish it. We may decide to punish our god, punish ourselves for believing in 'it' or 'him' or 'her'. It will not affect the reality which will continue to be real no matter how unsearchable, un-knowable, beyond the grasp of human capacity it is/not is. After all, we do not know much about the world we live on, or the minds we are.

ALICE I thought you psychoanalysts were supposed to have discovered all about us.

ROBIN Supposed? By whom? I do not 'suppose' I know either myself or my husband –

ALICE I didn't know you were married! May I congratulate you!

ROBIN *I* do not know whether you are 'married' or 'divorced'; in so far as those two words derive from the Institute of a state, they tell me nothing about the true relationship between you and your husband. But although I have no sensuous experience of, it I yet believe there is some reality underlying these words 'marriage' and 'divorce' beyond the meaning I know.

P.A. You say you have 'no sensuous experience', but is it not possible that while you have 'forgotten' the experience it has not, as it were, forgotten you?

ROBIN I don't know what you mean.

P.A. That is relatively rational and may be more acceptable than saying you have 'forgotten' being married and 'forgotten' what you meant; perhaps that you never knew what you meant. Some of these thoughts may now be difficult to entertain or formulate because you fear the reception they would get by the recipient; you might discover there was no recipient, or that there was one whose receptivity you feared. It is easier to feel there is an initiator *and* a recipient, and that there is some screen (caesura?) between. That is possible if you

believe it is between you and 'me' – a 'not-you' and 'you'. This is less alarming than believing you are now both the initiator and the receptor.

ROBIN Why?

ALICE Every question is liable to suffer from the existence of a potential answer which will kill it. The misfortune, the weakness of curiosity is the answer that finally will destroy curiosity itself.

P.A. 'Yes I know' – how lethal is that response! The wish to start exploration or discovery is destroyed. That response, made to yourself, crushes your curiosity or makes it take refuge out of sight, out of mind, out of social contact. The 'Yes I know' surface, the lifeless society, is all that is left.

ROLAND That was true of 'intellectual' culture in the school to which I was sent to 'learn'. In my time hobbies meant surreptitious sex: education meant answers to questions which no one had asked. Law and Order meant find out what they are up to and tell them not to. Sex meant widespread illegality – which did not exist. Hypocrisy meant religion.

PRIEST It sounds frightful.

ROLAND It was.

P.A. Forsan et haec olim meminisse juvabit. We did not believe it; now I know it is true.

ROLAND Tu Marcellus eris. Date manibus lilia plenis. . . . I did not know I ever learnt it. Had I known that it was all about that same wicked business of loving a man or a boy – 'sex', in short – I might have learnt it; but then perhaps I should not have remembered it. Education is a damned rum thing.

ROBIN . . . per varios casus, per tot discrimina rerum.

PRIEST

> 'What hours, O what black hours we have spent
> This night! what sights you, heart, saw; ways you went! . . .'

ALICE Time for supper and bed.

ROLAND All right, Martha.

ROBIN Or is it Xanthippe?

ALICE You would be the first to grumble if some of the ways I went had not led to the market.

P.A. Perhaps we all have to be busy with many things.

ROLAND The many things are all different.

ROBIN Why don't we meet more often?

P.A. Because we don't want to. This is true when our forgotten fishy, amphibian, terranean selves all meet in the same body at the same time – not consecutively or dispersed in space, but here and now in the same body. Draw the blinds. Where shall we make the splits and insert the inhibitions so that we may choose? When the universe in which we live clearly demonstrates the immense variety which chance –

PRIEST Or God –

P.A. I find it more adequate to say 'chance' – spreads before us, we have to choose. We choose to be responsible for our actions though we may not deliberate the problem. Choice, however, involves splitting the discriminated objects from each other.

ALICE Do we start as infinitesimal fragments, which cohere, or are we, as P.A. implies, a whole that is fragmented?

ROLAND Do you think we choose whether to be a fish or not?

P.A. No! I feel it more compatible with reality, as I know it, to say I have no say in the matter. The illusion of conscious purpose gives cause for belief – on inadequate grounds – in God, but I would resist any attempt to prevent Priest believing it, provided he didn't want to prevent me from choosing science.

PRIEST Could we agree that both of us support a search for truth, but our paths often appear to separate?

P.A. Lack of choice means that each of us still retains his fishy qualities.

ROBIN Fish out of water.

P.A. Not quite. When we abandon our liquid environment for a gaseous one we take our liquid with us. Like fish, we can still smell by cause of the mucus preserved in our respiratory passages by the glands that maintain our watery medium although we have moved into a gaseous one.

ROBIN I don't see what we are to do about it, or what it has to do with us.

P.A. You would if you caught what is called 'a cold'; or if your tears began to flow. The liquid environment which we take with us or manufacture inside is useful for making it possible to see or smell, or even to provide for the germ plasm which we produce when we transfer to a gaseous medium like air. But if it is overproductive, then the mucus makes us feel we are about to drown; we can't smell, we

can't see for tears, we can't find a repository for the superfluity of seminal or ovarian fluids.

ROBIN If all these generations of our human development are repeated in each individual, I can see it might also apply to the mind or psyche.

P.A. It is sometimes illuminating to think so.

ROLAND We could borrow from the cartographers and imagine that here we are aware of two dimensions and portray two only. Thus a mountainous district can be represented on a flat surface by contour lines. We 'read' the map; we 'read' the person.

ROBIN What are the elements which our suppositious 'contours' link? It would appear to be uninformative to link the same heights – physical tallness – with the character of the person. I do not imagine that the character displays patterns corresponding to the height.

ROLAND How tall was Shakespeare when he wrote *Hamlet?*

P.A. The question demonstrates the process though it does not – if it could be answered – illuminate a matter of consequence.

ROSEMARY We had to read Lamb's *Tales from Shakespeare* – terrible stuff. It put me off Shakespeare for ever – and Lamb. I thought the story of Roast Pig really silly.

ROBIN Perhaps we could join together, contour, all the ages or heights at which you thought Lamb silly.

P.A. She probably wouldn't remember.

ROSEMARY I remember I never thought him anything else.

ROLAND I wonder what Alice would think – but she has gone to bed.

P.A. We could say we know where she, geographically speaking, has gone.

ROBIN How would you speak if not geographically?

ROLAND I would like a rational answer.

P.A. Rational answers might all be placed on the same contour, but 'rational' means answers that conform to the rules of human thought. Suppose the universe in which we live does not oblige us by conforming to the limitations which are imposed by what is comprehensible to man. We do not expect a child to comprehend all of even the little which we are able to communicate. The wisest of us may be children in comparison with what the solar system alone can communicate – in so far as we know its language.

ROLAND That has been so often observed that it is a commonplace.

ROBIN True; nonetheless we may forget the meaning of the commonplace if it is a fact which we prefer to disregard.

ROLAND Is there any merit in contemplating a fact about which we can do nothing?

P.A. We may not be able to do anything about the fact, but we can do something about ourselves. Particularly we may be able to moderate our conceit of ourselves and our wisdom – our self-inflicted omniscience.

ROLAND Admitting our 'omniscience' – I am not sure that I do, for all that psychoanalysts tell us – can we do anything about it if it is our nature?

P.A. It is matter of opinion; you may not agree with my view that it 'does something' to the person who allows his attention to be drawn to a fact of his personality.

ROLAND I can't say that I have paid much attention although I remember plenty of beaks at school who tried to impress upon me the many unpleasant aspects of my behaviour.

P.A. I can't say anything about the episodes of which you speak, but I gather they were not psychoanalytic sessions.

ROLAND What is there so special about psychoanalytic sessions?

P.A. I doubt I could explain that without your submitting to an analysis. But I can say something about why you should not think it special. We use ordinary conversational English and it tends to give an impression that we are as care-less about what we say and how we say it as in any ordinary conversation. In fact we try to speak with care, precision and respect for the person we address. This is not so easy as you might imagine. It is not just a problem of vocabulary or English grammar – it never is a problem of 'just' or 'only' that which is being consciously and intentionally expressed. The important and significant thing is that which we are meaning and intending to transform into action.

ROBIN What are we immediately intending to translate into action here? I am not aware of anything except wanting to follow Alice's example and go to bed –

ROLAND Agreed. Everyone agreed? Let's go then.

8

P.A. When we were last together we 'solved' the problem of translating thoughts into action by going to bed. That was a precise solution of a precisely defined . . . what? It was apparently 'defined' by being terminated. But that act defined it – in the sense of ending the discussion. It occurred to me later that we were behaving as if we had become aware of human speech, as a child might become aware that grownups are not merely making noises with their mouths, but are communicating with each other or engaging in some prelude to communication. Such an 'event', now used as a free association, can be reviewed in the light of increased experience. The 're-view' can itself be turned to good account.

ROLAND I see what you mean. My complaint is that it does not seem to me that the review is turning our experience to good account.

ROBIN If your discovery, unwelcome though it may be, leads us to reconsider the wisdom of continuing the activity – in this instance, discussion – surely that is a gain.

ROLAND Maybe; maybe not.

P.A. Exactly – maybe; maybe not. That is a risk we have to take. It is the price that we pay for being responsible human beings exercising our freedom to choose. We may choose wrong. I am haunted by the memory of the young officer who, admiring me for what he considered to be my bravery, refused to surrender and was, inevitably, killed. His enemies had no choice except to kill.

ROBIN I remember a young fellow who *did* surrender. It seemed to me he was in a hopeless position and was right to surrender. He never recovered from the discovery that he saved his life rather than die for his country. I knew him when he was a charming young man – little more than a boy – but after his surrender his capacity

for gaiety was . . . well, I can only describe it as 'dead'. He never recovered; he became more and more depressed, introspective and withdrawn till finally he could not stand it and killed himself.

ROSEMARY One of my friends, not very good-looking, couldn't bear to think she would never find anyone to marry her when she wanted a baby so badly. She had an illegitimate baby and no one would speak to her.

ALICE The moral superiority of humans in the mass is wonderful to observe. As long as it is morally superior it does not matter how cruel the morally superior person is.

P.A. Cruelty is a very early form of love. The baby bites the nipple and proceeds to bite all the food it loves. It would soon find that the food would 'bite it back' again if it did not chew it; but it may be too afraid to chew it. Wrong either way.

ROLAND Gastro-morality; intestinal revenge; or if those fail there can always be the haemorrhoids that stand ready to prevent the export.

P.A. It had never occurred to me that the customs authorities were sociological haemorrhoids, but I see what you mean. Now you mention it, it seems clear that as far as speech and discussion are concerned there are many obstacles to passing wind if it carries ideas in the way that speech does.

ROLAND 'Sermons in stones' is an eloquent way of describing how even geological fact might convey a moral idea – metaphorically of course.

ROBIN Metaphorically my foot! Clearly you haven't been in a stone-chucking mob – no 'metaphors' about that, I assure you!

ALICE No metaphor about childbirth either. To 'express' a child from one's insides without the proper licence can be Death to one's repute even if physical death has been escaped. The converse is not true; a properly attested moral Birth can kill a woman in spite of the licence.

P.A. Are you talking about legal licence or licentiousness? It seems to me that the moral system, individual and social, requires overhaul but I do not think the old authorities are the ones to do the overhauling.

ALICE Who then is to do it? Psychoanalysts?

P.A. Psychoanalysts are trained to do psychoanalysis only – a considerable undertaking. I would not feel qualified by my training

to do more than that although like surgeons, engineers and other citizens, I am expected to carry my civil obligations as well as my professional ones. But I deprecate the idea that my expertise extends beyond that of psychoanalyst; it is hard enough trying to be an 'expert' in one's own profession. Yet we are constantly expected to be expert far beyond our professional domain, and are regarded with contempt if we fail to live up to expectations which we strive not to arouse.

ALICE Then – as I said – who is to do the overhauling?

P.A. Whoever did it would have to bring to the task –

ROBIN Psychoanalysis?

ROLAND Kleinian theory?

P.A. – as much devotion to their work as most psychoanalysts display in theirs.

ALICE The ones I know are devoted more to making a handsome income than relieving the suffering of their patients.

P.A. It is a matter of opinion. I can say only what I require to provide good shelter, food and education.

ROLAND As you say – it is a matter of opinion. Who decides what is 'good'?

P.A. I do, of course. You can hardly expect me to choose something less than good. Indeed I should wonder why anyone coming to me for analysis had a philosophy of losing, and why, if they had such a philosophy, they would choose me to help them lose.

ROBIN Yet the boy I spoke of did not surrender when the alternative was clearly death. Perhaps you think it was not clear – that he chose it under some misapprehension.

P.A. Such devotion was, and still is, beyond my capacity. In situations of great danger I always had a belief that I would probably survive. Had I realized – been compelled by some dreadful wound to realize – that such a belief was nonsense, I would have dodged the danger. Nobody told me – nor would I have understood them if they had – that war service would change utterly my capacity to enjoy life. Are we, even today, prepared to tell our children, or our children's children, what price they would have to pay if they served their fellows? Are we to tell them not to do it, that it might cost them too much? What would it cost them if they did *not* serve their fellow men? Socrates chose not to run away after his sentence by the court of fellow Athenians. When remonstrated with, he said it was his free choice. For *that* freedom he paid the price knowingly.

ROLAND Did he believe in survival after death?

ROBIN As Horace pointed out, many brave men had died before Agamemnon without any Homer to confer on them the immortality of verse.

ROLAND What sort of immortality is that – schoolboys complaining about their Greek preparation?

ROBIN 'Immortality', like psychoanalysis, is often mental 'flannelle' to make people's consciences sleep in the cosy warmth of self-adulation.

P.A. It does not last for long. With the best will in the world the authorities wanted returned soldier undergraduates to be comfortable. Haig wished ex-servicemen to be looked after. How was it to be done?

ALICE And the women? Or don't they matter? What should I tell my daughters – and their daughters – about childbirth?

ROBIN Tell them? Something – not nothing. At least tell them to respect their bodies and bodily urges and demands, and to respect their minds and characters. Then they would not think that any old lecher would do as mate for themselves or father for their children. Conversely, they should not suppose that any old whore would do, Hosea-like, as wife or mother.

P.A. The problem is not solved by choosing intellectual monsters for the parenthood of 'souls'. This discussion is appropriate if we are concerned only with discussion; it must not become a substitute for psychoanalysis.

ROLAND Isn't that exactly what the danger is here and now? How do we know that all this isn't a substitute for not doing anything? Unless of course discussing is itself doing something.

ALICE I suppose it is doing something when Parliament 'just' talks. It is not true, I hope, that the 'talk' finds no reflection in the bills that are passed, or that the bills that are passed are simply invented by the Parliamentary stationers. The ones I have seen might as well have been written in a foreign language for all the sense they made.

ROBIN The sense they make is decided by the courts of law that have to interpret them, and the various authorities who are supposed to translate them into action. After all, isn't Parliament just a 'talking shop'?

P.A. It is possible. The price of freedom is constant vigilance. This is true of psychoanalysis; the individual is not analysed, 'cured',

so that he can then go to sleep for the rest of his life. If that were all that occurred one could regard it as an exercise in 'good resolutions'.

ALICE Psychoanalysts I know have wonderful intentions and make many 'good resolutions' to put them into practice, but I cannot say I am impressed with the lives they lead as good examples of a fine philosophy finely practised.

P.A. I cannot say anything about other analysts; I do not even know if the 'analysts' of whom you talk are people who have been analysed. I know something of myself and can see how I conform to civilized behaviour. I hope that the failures I see will in time lead to something less sterile than 'remorse' and good resolutions.

ALICE I know I certainly have it frequently brought home to me that I do not conform to the behaviour I regard as desirable or even decent.

P.A. The hope is that psychoanalysis brings into view thoughts and actions and feelings of which the individual may not be aware and so cannot control. If he can be aware of them he may, or may not, decide – albeit unconsciously – to change them.

ALICE I don't see how that differs from what has been done by parents, teachers, saints, philosophers, for countless generations of prophets of one kind and another.

P.A. What I said – and I cannot say it any better – is a description which could apply to many time-honoured procedures. You would be right to assume from my description that there is no particular reason to attribute any primacy to a psychoanalytic approach. That is why most people do not put themselves to the expense in time and money to go to a psychoanalyst. The 'real psychoanalysis' to which we aspire is at best only a reaching out towards that 'real psychoanalysis'. But it is 'real' enough to make people aware that there is 'something' beyond the feeble efforts of psychoanalyst and analysand. I think it optimistic to suppose that we do more than scratch the surface in our struggles to achieve it.

ROBIN It reminds me of all the religious talk I have heard about God and Christ and Heaven and Hell. I have tried honestly to believe, but now – after countless failures to find any reality corresponding to what my teachers have taught me, countless 'backslidings' as they called it but, as I now know, unwelcome discoveries that there was nothing in the place that should house my goal, my prize – I lack the freshness, vitality and naïvety to start off on the psychoanalytic

scramble for 'cure', 'heaven', 'success' or the up-to-date name for 'wild goose'. As far as I am concerned, amongst all the competing 'cures' which my betters offer as superior alternatives, 'stone dead hath no fellow'.

ALICE That sounds depressing.

ROBIN I don't find it so; it is a relief not to have to carry this burden of credulity.

ROLAND You seemed eager enough to find out who had won the Calcutta Cup.

ROBIN It gave me pleasure to hear about these athletic triumphs; I am glad I no longer have to care whether 'England' had won or not.

ROLAND What about war? Do you not mind whether the country wins or loses?

ROBIN Of course. I have been trained to believe horrific stories about the consequences of defeat. Ought I to be able to tell, from what I know of the world in which I live, whether 'you won' or 'I won' or 'they won'? Perhaps I should include '*it* won' as one of the possibilities? In the world of power fashions the latest in patriotic wear is a rearrangement of red, white and blue in a pattern of stars and stripes; I am as unimpressed by 'capital' in a tasteful design of red hammers and sickles.

ALICE I wonder what Helen of Troy or Cleopatra would think of these fashions.

ROBIN They weren't fools. We could do with a woman with some guts today.

ALICE That is all very well, but do you suppose that any woman would be allowed to clear up the mess, leaving no place to wallow in?

ROLAND It doesn't matter whether it is a man or woman – the condition for breeding animate objects is the warmth generated by decay. If decay did not betray its presence by its stink, no ovipositor could find a suitable source of warmth.

ROBIN The ovipositor would have to have a nose.

P.A. Certainly; humans find it difficult to recognize and reconcile an evil smell with creative activity, whether it is producing children, blow-flies or ideas. There are both good and bad bad smells. A cheese can be fermented and that, to me, is unbearable, but the cheese is good. So are durians.

ROBIN I can see that – if you are dealing with nosing out physical food – but we are concerned with mental food. How do you recognize

the counterpart of a bad smell when in fact there is no sensuous smell?

P.A. We shall have to revise our views about sensuous experience or about the nature of metaphors, or both. Obscene language may be accompanied by a bad smell which we are too 'civilized' to notice.

ROBIN Perhaps I should try one or two on my red setter bitch. She has a good nose. Ought I to whisper it, or shout it, or say it in an enticing manner?

P.A. It is an idea. I suppose you should express your obscene word in an obscene manner. I suspect there are few truly obscene words – words of which the sound is internationally recognized.

ROBIN They have the same smell, awake or asleep, American or Chinese, dog or human. One's skin could have a different odour if one were in an emotional state in which obscenity only would be adequate.

P.A. The state of mind would have to be genuine; then our noses would satisfy our curiosity.

ALICE If any one of us were to utter a carefully pre-conceived obscenity that would not be a test of sincerity.

ROLAND Lend me your bitch and see what happens when my alarm goes off in the morning. I utter a silent obscenity when that clock suddenly shoots me out of profound sleep. What do you think it would prove?

P.A. Nothing; ultimately I would hope to find out whether there was some physically recognizable as well as verbally recognizable underlying reality which we are investigating, not just a vast mare's nest of thinking about thinking about thinking, which same 'thinking' did not exist but was a symptom of glandular activity.

ROLAND Does the adrenal gland start us thinking, or our thinking start the gland secreting?

ROBIN Why not so of other glands? The most obvious would be the sexual. Does the girl look pretty because a gland is operating, or is the gland operating because the eyes have seen a pretty girl?

ROLAND Does it matter which is first anyhow?

P.A. Direction matters, at least in situations of life and death. Suppose it is a carcinogenic germ that is betraying its presence by some thought pattern: That could help to initiate an appropriate reaction before it was too late, depending on whether thought or germ was the origin.

ALICE Do you suggest that a fear of cancer means there is incipient cancer? Clearly not.

P.A. 'Clearly not', as you say. It might – but only if it were part of a pattern of thought. Even if it were, the pattern might indicate a cancer in a precise part of the body – the breast. The *pattern* of thought would matter – not the component parts of the pattern. The facts do not cease to exist because they are used by the analyst. The free associations might be valid analytically, but dangerous if obscuring the facts. Psychoanalysis is only applying the principle of making the best of a bad job; the bad job remains bad, even if it is turned to good account.

ROLAND You said, if 'thinking' turned out to be a by-product of glandular activity it would be a mare's nest. Why should one deny the reality of thinking, or refrain from turning *that* to good account even if glands originated ideas?

P.A. I did not mean to suggest it was a 'mere' product of glandular activity. It does not surprise me if I betrayed such hostility to thought or its lowly glandular origin. I am too familiar with that kind of intolerance to suppose that I am free of it. I, like my fellow brothers and sisters, aspire to a messianic superiority to my fallible origins. Hatred of our origins seems to be inseparable from any advance.

ALICE Perhaps especially when we owe a debt to the origins from which we rise to 'higher things'. How beastly we are!

ROLAND And were. But how admirable we shall shortly become! It would seem to be an advantage if we could find out the conditions propitious to real progress.

P.A. Or if we knew the direction in which we were progressing. I sometimes doubt it.

ROBIN I thought you psychoanalysts had no doubt about it. You talk as if you were certain at least about your own 'progress' because you have been analysed.

P.A. 'Certainty' is a part of life as is 'uncertainty'. We cannot avoid either; they are opposite poles of the same feeling. I do not know what name to give the 'same feeling' – that is, the feeling of which they are opposite poles. Perhaps if I were a poet or philosopher I could. It does not help that I am thought to be a psychoanalyst because that is my profession.

ALICE There may be a confusion because of the ambiguity of language – if your 'profession' is psychoanalysis, it is assumed that

you 'profess' that you are one who professes or claims to be proficient.

P.A. That is true; I have to claim proficiency because I fear that if I do not someone even less proficient will take my place. In courting, if the man or woman did not 'profess' ability to be a husband or wife, what do you suppose would happen? Mankind would be denuded of all but the paranoid braggarts; Hell and Heaven filled with self-destroyed melancholics. 'Weep! Weep for Adonis.'

ALICE Or, 'Adore, adore with me my Helen-ly Beauty'. I prefer 'Venite adoremus Dominum'.

ROLAND If you cannot believe in a religious solution I at least cannot 'believe' in *facts*. Facts do not offer an outlet for a religious impulse – only for scientific curiosity.

P.A. Might they not be the same? The religious people I know certainly think they are concerned with the Truth and nothing but the truth. It is often difficult to retain a sense of awe in the face of what we are more likely to think of as humdrum daily trivialities rather than facts which deserve to be treated with respect.

ROLAND 'With respect' I could manage, but not 'with awe'.

ALICE I would have thought that 'awe' is more appropriately left to people who are religious.

P.A. I agree that we should respect the language we use and be careful not to debase it.

ROBIN Is there any fact which you know and regard with 'awe'?

P.A. Certainly – I know awe inspired by the light curtains of the Aurora, mountains –

ROLAND Not people?

ROBIN Do you make a distinction between individuals – precise, particular men and women – and their 'minds'?

P.A. Sometimes that distinction is relevant. Increasingly I am aware that there is something more than that which presents itself to my senses – sound, sight, hearing, touch. I have feelings that are aroused by something that I do not smell or touch or hear or see. My perceptions are not fine enough – blunted by the constant battering of sensuous reality. I shall not live long enough to reach *those* facts except in rudimentary degree.

ALICE If it is rudimentary, perhaps it is something you could and did experience when you yourself were a rudimentary character – in the womb.

P.A. Were you aware in pregnancy of a 'character' in your body?

ALICE Emphatically. One kick in the belly is not the same as another.

ROBIN I should be interested to know what P.A. thinks of maternal intuition. Do you think that paternally gifted psychoanalysts would be capable of such fine discriminations?

P.A. I am a prey to my prejudices. There may be contributions which paternal genes confer and others which derive from both parents.

ROLAND You seem to suggest that as a psychoanalyst you are compacted of the best of both sexes.

P.A. Would it were true. I hope that that desire does not obscure my inheritance of weaknesses. I have noticed a prejudice in favour of my patients and a related desire to share their excellencies.

ROBIN Counter-transference?

P.A. Do not forget that 'counter-transference' is by definition unconscious; it follows that I do not know the nature, in reality, of my counter-transference. I know theoretically, but that is only knowing *about* counter-transference – that is not knowing the 'thing itself.

ROBIN Presumably, knowing 'about' counter-transference is helpful. Isn't it inevitable that one learns much of which one has no direct experience? I learn about a trip to the moon, but shall certainly not experience it. It must have some value unless we are to believe that the process of education is unrealistic.

ROLAND I had a lot to learn about machine guns.

P.A. So had I; indeed I was taught and learned a lot which seems to me to be indistinguishable from what it has become fashionable to call 'brain washing', 'shell shock'; the fashions in nomenclature alter, but the reality does not.

ROBIN Do you think that 'education', 'brain washing', 'shell shock' are the same?

P.A. I do not say they are the same, but in some contexts it may be important to recognize the 'fundamental' meaning of what is said. When I was young I was taught that 'patriotism' and 'courage' were important. I believed that 'Your King and Country want you' was true – as did many thousands of others. When the more sensitive and less robust of my companions learned that the enemy did not want them, they 'broke down', became 'shell shocked'. As time passed it became clear that I had only to go into action often

enough and I would be dead. But my 'brain washing' school, training, resisted – and were sufficiently robust to withstand, with the help of a little flattering decoration or so – the increasing assaults of reality. 'Couvre-toi de flannelle' became more audible than the seductive whispers of 'glory'.

ALICE You decry glory, but is there not some reality in that?

ROBIN I was impressed by the regimental motto, 'Quo Fas et Gloria Ducunt'.

ROLAND I still am. 'Ubique', likewise, has that appeal of mystery and invitation.

P.A. I don't deny it. In a world at peace I am glad to be left with some reminiscence, some luminosity that penetrates the shadow and the darkness. However ignorant of ideas to come, the idea of glory withstood my cowardice. But just as it would be impossible to explain to anyone who had not been in action what it would be like to be a combatant soldier or a regimental stretcher bearer, so is it impossible to describe to anyone who has not been a practising psychoanalyst what it is to experience real psychoanalysis.

ROLAND Surely you do not seriously mean that an analytic session is comparable with going into action?

P.A. Comparable, yes. Imminent death is not expected, although there is that possibility. That does not weigh the anxiety – fear in a low key. One shrinks from giving the unwelcome interpretation.

ROLAND Is it not just fear that the patient is going to be angry at being criticized?

P.A. I don't think so; the patient may be angry at a critical comment, perhaps even murderously angry, but I do not think that possibility consciously deters.

ROBIN Is it some unconscious fear – the counter-transference of which you spoke?

P.A. It is. Though one is not 'conscious' of it – to obviate that is one reason why we think analysts must themselves be analysed – there is an inherent fear of giving an interpretation. If a psychoanalyst is doing proper analysis then he is engaged on an activity that is indistinguishable from that of an animal that investigates what it is afraid of – it smells danger. An analyst is not doing his job if he investigates something because it is pleasurable or profitable. Patients do not come because they anticipate some agreeable imminent event; they

come because they are ill at ease. The analyst must share the danger and has, therefore, to share the 'smell' of the danger. If the hair at the back of your neck becomes erect, your primitive, archaic senses indicate the presence of the danger. It is your job to be curious about that danger – not cowardly, not irresponsible.

ROLAND You must think highly of yourself if you are such a paragon.

P.A. I am trying to describe the job – not my fitness or otherwise for it. I have enough respect for the psychoanalyst's task to tell the difference between this social chat about psychoanalysis – or even a technical discussion of it – and the practice of psychoanalysis. Anyone who is not afraid when he is engaged on psychoanalysis is either not doing his job or is unfitted for it.

ROBIN An airman or seaman who is not afraid of the elements, afraid of the sea and the skies, is unfit to navigate. The line between fear and cowardice is faint.

P.A. Quite so. I would add, the line between daring and stupidity is similarly faint.

ROLAND How would you define it?

P.A. I would not. In practice, where to draw the line depends on the facts, including the facts of one's personality, with which one judges – the total capacity. Definition is only a matter of theory – useful for discussion and communication of ideas. In practice one does not rely on anything so ambiguous as verbal formulation.

ALICE I am always relying on verbal formulation. I have to tell grocers and butchers and fishmongers and others what I want. Rosemary and I understand each other, so there is no difficulty.

P.A. I can see that for your practical purposes it is adequate, but it may lead to misunderstandings in psychoanalysis.

ALICE There are plenty of those I assure you. Most people know I mean what I say.

ROLAND You are lucky. You would be surprised how few people on the farm do understand that. I suppose one should be surprised that there are some who do.

P.A. In analysis it is more complex. Although I have been engaged on this work for many years I am still far from refining my vocabulary and syntax to a point at which I can satisfy myself that I have said 'what I mean'. There is the added problem of perspicuity

because I depend on the analysand's capacity for comprehension to augment my inability to be perspicuous. Ideally, knowing what I have to communicate I could refine my vocabulary to a point where the words available are few, yet adequate to communicate fundamentals.

ROBIN Can you give an example?

P.A. If I wish to point to a primitive archaic feature of the analysand's behaviour I have to decide whether to say 'defecate', or 'shit', or 'urinate', or 'make water', or 'piss', or 'wet yourself. A child might be able to grasp the last expression, but not 'urinate'. A lady, unfamiliar with me or the freedom of medical terminology, might be outraged if I said 'piss'. You may remember the boy I once mentioned who could not say he had a belly-ache because he thought 'belly' was rude. He said 'body-ache'.

ROLAND Surely that is an extreme example of idiotic priggishness.

ALICE I suppose you are usually dealing with extreme instances, but it must be pretty clear that you have a very disturbed patient.

P.A. True. Anyone who finds time and money to go to an analyst cannot be doing so unless he is aware of his disturbance. But he may not be aware of the 'disturbance' which is 'disturbing' him. The boy who had a body-ache had consciously clothed the impolite nakedness of his spontaneous speech, but he had 'clothed' it so adequately that he could not himself penetrate the 'civil' language to the 'meaning' that underlay what he was saying.

ROBIN Applying what you said just now – what 'smell' were you aware of and what was the danger you smelled?

P.A. The immediate danger was that he would take flight if I said 'belly', or asked him if he had recently had a proper shit. What language? Constipated? But he was also afraid. What I needed to be able to 'smell' was which danger *both* shared. The danger of the tiger and the deer which approached close.

ROBIN The tiger could not have feared that it would be eaten by the deer.

P.A. Your instance is a good example of my problem. I could diagrammatize it thus –

Tiger { Something is going to be eaten up / Something is going to run away and leave nothing to eat } Deer

That describes a shared fear. Out of that shared odour – in the boy let us call it an 'odour of sanctity' – the analyst must find a way of formulating it to himself and then reformulating it in a way 'comprehensible', 'digestible' to the boy.

ALICE I see what you mean; it doesn't seem particularly frightening. Is that the only fear that an analyst has to contend with in the course of his practice? No doubt you have other examples of which you know but we do not.

P.A. Plenty. There are the more extreme instances of danger – as with the armed or murderously disposed patient – but even in the 'harmless' instance I have given, the boy was afraid that the psychoanalyst would tell his parents and other authorities about his 'private' sins which he feared would be exposed by the analyst – in the role of criminal investigator. A disturbed boy, or a boy in one of his disturbed moments, can tell his parents that he 'hates' the analyst and thereby arouse fear and distrust in them. Or he may accuse the analyst of having made sexual advances, or even of having assaulted him sexually.

ALICE Isn't that somewhat unlikely, especially in the instance of a well-known analyst?

P.A. There is no such thing as a 'well-known analyst'; an analyst is one who at one stage of fashion is famous, at another infamous; the barrier between 'famous' and 'infamous' is as slight as the verbal 'in'. It is unimportant – except to the psychoanalyst who cannot afford to be unaware that it is a 'built-in' part of his profession.

ALICE I think you are being a bit paranoid.

P.A. What is 'a bit paranoid' for you either is, or is not, 'paranoid' for me. If paranoid, the psychoanalyst needs to 'smell' the danger as well as know as much as his training and psychiatric textbooks can tell him. He and his family are in danger.

ROBIN I knew a man who maintained he could smell a rattlesnake in its venomous state. Jim Corbett had an uncanny flair for hunting out a man-eating tiger. I thought that was the intuition of a natural hunter.

P.A. We think it important to be able to transform these 'natural instincts' into conscious and rational thought without destroying the natural capacities. Usually the training we all undergo in the process of becoming civilized does destroy, or dangerously cover up, our 'animal' inheritance.

ALICE I have known many, who have been trained to be clever and polite civilized beings, who seemed incapable of wisdom or common-sense. I knew a man with a training at the 'best' school and university who was an unspeakable cad and bigot.

ROBIN I knew a man, with a similar background, who was unable to behave in a way appropriate to a comfortable home. There was nothing wrong with his intelligence.

P.A. It sounds as if you were not impressed with knowledge acquired in the course of organized training. Nor am I; that is one reason why it seems to me that it is a matter of urgency to develop psychoanalysis or something better.

ROBIN Do you think analysis is, or will develop into, something better? It is the same race, with its inherent weaknesses, that has to develop this 'something better'.

P.A. Its weaknesses – and strengths. I do not feel optimistic; or so pessimistic as to give up the attempt. So far I have been more inclined to persist than to give it up; so far it has seemed that the positive part of my experience outweighs the negative.

ROLAND Positive – negative . . . how do you establish that polarity?

ROBIN The question which has worried me – how do we determine direction?

P.A. It is apparently crucial; I suspect there is no absolute answer within the grasp of our capacity, but relatively we assume that the sense of progress towards the decay and degeneration of our capacities acts as an unconscious orientation. Most people seem to believe that our uncontrollable journey to the grave gives us a base-line on which to work and to which our standards are referable.

ALICE Most, but not all. Religious people often think that 'though the body dies the soul shall live for ever'.

ROBIN It's a nice idea.

ROLAND 'Nice' you call it? I think it perfectly horrible – one life is enough. I do my best to maintain my life and that of my family, but that has provided me with enough pain and anxiety to get on with.

ALICE What does P.A. say? Do you believe in religion and a future life?

P.A. I have no doubt of the 'fact' of religion as a part, perhaps an unalienable part, of human character. I have even seen a mouse assume what looked like an attitude of religious beseeching when

being tortured by a cat that had caught it. Is that a religious impulse? Or is it an attitude we have learned, from animals, to take when in a hopeless situation –

ROBIN – in the presence of cruel but playful God Cat. If God exists I would have no difficulty in believing that one of his attributes was devouring cruelty.

ALICE A belief of very respectable antiquity; because human beings have considered human sacrifice to be acceptable to God, therefore God is like that. Why not God the fountain of compassion that feeds the surgeon and physician? Maybe even psychoanalysts could drink at that source.

P.A. I do not think we could tolerate our work – painful as it often is for both us and our patients – without compassion. I see no reason for postulating an external source, independent of man, from which compassion flows.

ROBIN

> 'As, without sound or struggle,
> The stars unhurrying march,
> Where Allah's finger points them
> Through yonder purple arch . . .'

ROLAND 'Le silence éternel de ces éspaces infinis m'effraie.' The vast universe of Absolute Cold does not call to my mind anything so warm as human love. Give me my fellow men and women every time.

ALICE I agree. But, but . . . the Nazi concentration camps? Were they the unaided creation of men?

ROBIN You are not suggesting they prove the existence of God?

ALICE I am prepared to consider them evidence of a devil or Satan. I am not capable of considering the theology of a Satan, but as far as I depend on my private capacity I find much that is more comprehensible if there is a God *and* a Devil, and men and women who are inspired by both. After all, if the outward manifestations are the product of man, there could be some Power, incomprehensible by man's feeble equipment, which is responsible for the created world and for its being created in accordance with a Divine pattern. The fact that we have not yet discerned that pattern, that no great human scientists have claimed to have seen it, does not convince me that there is no such pattern.

P.A. I do not deny the possibility; my prejudice in favour of a scientific or 'factual' approach has not led me to any mystical experience. Perhaps one day in my room I might experience such an illumination. Even so I should expect it to have an endo-psychic origin.

ROLAND 'Endo-psychic'! Pardon me, but that is only one of the technical terms which darken counsel rather than throw a beam through the realms of darkness and brutish ignorance in which we labour to exist.

P.A. I am sorry to have used a term which disturbs your understanding of what I am trying to convey. Technical terms in fact save a lot of time in conversation between colleagues who are familiar with the language of which they are part.

ALICE Do colleagues understand the language? Sometimes the conversations in which they participate seem to become an interchange of jargon which floats off the underlying meaning; it becomes a mental slough like a skin that no longer relates to its parent snake.

P.A. If that is what I was guilty, of I apologize; we are open to that criticism and its counterpart – that we are talking a language which is universally comprehended and universally recognized as obscene. 'Bloody cunt' for example.

ALICE Do we really need that example?

P.A. Probably not; you certainly understood what I said. The danger that is never far from erupting is the hostility to jargon' when we try to use language precisely, when we try to be perspicuous, or when we use everyday speech with which we are all familiar. The latter vocabulary and syntax is so debased, so devalued that it is like a coin whose denomination can no longer be deciphered.

ROBIN Yet you talk.

P.A. Poor as it is and poorly though we use it, verbal communication is one of the latest and most astonishing discoveries. It is only a few thousand years old. So it is probably wise to confine ourselves to verbal methods when we attempt something so ambitious as mental maintenance or repair. It is a great improvement on physical violence.

ROLAND I am not sure that I agree. 'Faire entrer la sagesse par le cul' still has its advocates.

ROBIN So it has, as we have good reason to know. Witness Nazi Germany.

ALICE There is a danger that our concentration on Nazi Germany will distract us from observing its development elsewhere.

P.A. Bigotry and ignorance are two well-developed and ancient characteristics of the human being. In psychoanalysis, and in those who practise it, it shows up with startling freshness and vigour. I trust that our ability to detect will not become so jaded, our taste for it so surfeited, that we cease to be aware of it.

ALICE I am not jaded or surfeited, but perhaps we had better continue our discussion after a night's rest; a pause for digestion.

9

ALICE You say you have never had direct experience of a mysterious event; do you mean by that that you have not been in a room at the time when someone, not you, was under the influence of a mystical force?

P.A. I have had no evidence that either I or the other was passing through such an experience. I only remember two or three occasions when an analysand of mine actually claimed a mystical origin for the event. I have been more impressed when the individual was *not* consciously making such a claim.

ROBIN Why? Surely 'unconscious' claims are far more open to mis-interpretation.

P.A. Agreed – I do not wish to decry the events of which I know nothing. But I have been compelled to notice that 'fashions' in beliefs, in theories, in varieties of psychoanalysis and in psychoanalysts, are as plentiful as fashions in cosmetics. I suspect that the fundamental source of fashion, whether in people, religions, 'scientific' theories or holiday resorts is, or ought to be, one goal of our curiosity. As individuals we cannot hope to do more than reach some outlying, peripheral goal and please ourselves by claiming that it is ultimate truth; or alternatively fall into despair at discovering our insignificance.

ROLAND Most people with any common sense know that.

P.A. 'Most people with any common sense' are, in my experience, very few people indeed. Common sense is only rarely in fashion. 'Real' common sense, in contrast to cosmetic common sense, tells too many uncomfortable things. 'Eyes that have seen colossal storms and terraqueous convulsions' are not likely to be sought after if they reveal danger and the emotional state appropriate to it.

ROLAND Don't you think that psychoanalysis itself glorifies the

importance of a man's thoughts and feelings as a way of being deaf and blind to facts?

P.A. Yes; it can be used, chosen as a method of 'not choosing', inhibiting awareness of facts which we do not like and cannot do anything about. The danger of such use is that it blinds us to facts about which we might be able to do something if we had not decided to look the other way. Equally we may prefer to look outwards, to turn away from the spectacle of facts of our own character. We psychoanalysts are devoted to the assistance of those who choose to look inwards. As a private individual it is necessary for me to be as much aware as possible of the universe in which I live; professionally I need to be aware of what I profess to be aware of – the character which the analysand 'is', not simply what he 'is like'.

ALICE Most of those I know to be going for analysis are unimportant; sometimes I think their going to a psychoanalyst is about all they have to boast about. Yet when they have finished they boast of having been to such-and-such an analyst of whom I have never even heard. The only ones I know by name are Freud and Jung and Adler.

ROBIN And two of them were not psychoanalysts – according to Freud.

ROLAND I would hate to go to a psychoanalyst –

P.A. And would hate it still more if you got there. 'Insignificance' is not a discovery which anyone wants to make about himself and his affairs.

ALICE Do you include his analyst in the 'affairs' of which he discovers the insignificance?

P.A. It is part of the reality to which human beings should not be blind. Whether that discovery is achieved or not depends on the two engaged in the psychoanalytic research; they may prefer to discontinue the search before such culmination. Discovery is only transitory – on the way to another discovery.

ROLAND It sounds unrewarding. I was once told the meaning of the phrase 'virtue is its own reward'; I remember thinking it sounded like an elaborate practical, not-kind 'joke'. The reward of analysis appears to be – analysis.

P.A. All science, art and religion may come together, cohere, to expose a 'coherence' which is not in accordance with the predisposition of man. I do not see why he should not be another of Nature's discarded experiments.

ALICE You speak as if you 'personified' Nature.

P.A. I do, because it simplifies the communication of what I wish to communicate. It helps in talking to you and other friends with whom I wish to communicate, and who may also wish to communicate with me. This is not intended to mean that there is, in Rupert Brooke's phrase, a fishy god, 'squamous, omnipotent and kind', some Fate of whom we are the chosen children. This god of our fishy existence – assuming the embryologists are correct – may have wanted to turn me and my fellow fish into amphibians and finally to transform us into mammals.

ROLAND Finally? Why finally? This conversation, carried on by the indulgence of the very gas which has supported our existence may be a prelude to yet another transformation into the gas we use and abuse: 'spirit' or 'soul' we call it. Grandiose to the last. Homo sapiens!

ROBIN You are bitter about this harmless conceit.

ALICE I have seen much of this conceit, but I don't regard it as 'harmless'.

(*All fall silent. After a thoughtful pause of a minute or two . . .*)

P.A.

> 'Sceptre and Crown
> Must tumble down
> And in the grave
> Be equal made.'

ROBIN I didn't know you read the poets.

P.A. People frequently assume that I am devoid either of culture or of technical equipment – or both.

ROLAND You sound hardly used.

P.A. No; it is part of the analyst's profession to be familiar with the real world, whereas laymen think they can afford to be deaf and blind to these unpleasing components of real life.

ROLAND What solution do you suggest? Psychoanalysis seems to be available only for the wealthy, and even so only to confirm those analysands and their analysts in the belief that the world of riches is the best of all possible worlds.

P.A. I think this is the best of all possible worlds because I know of no other world that is possible. That is not the same as thinking, like Pangloss, that there is no way in which we could strive to improve

it. We consider the attempt to improve humans both worthwhile and urgent. I know no analyst who regards psychoanalysis with complacency, but unfortunately our discontent and the internal discussions and disagreements are easily mis-interpreted to express a belief that some body or institution is better. It is not my belief, but I *am* a critic.

ALICE I wish I didn't so often have evidence of the bigotry and bad temper of psychoanalysts.

P.A. So do I – I have plenty of opportunity to observe my own. And I have good reason to be familiar with the tension to which the practising psychoanalyst is exposed. It is understood that the work of doctors and surgeons must be responsible, arduous and trying, but it is not clear that psychoanalysts are exposed to the same stresses.

ROBIN You will admit that the lay public have difficulty in seeing what hardship there is in having a comfortable home, good food, an office which is easily and inexpensively maintained, and a not inconsiderable income.

P.A. I do not blame the public. It is foolish to nurse grievances about having to live in the same world as our patients. My impression is that my colleagues and I show considerable tolerance of characteristics of which we must necessarily be aware. A surgeon does not think a cancer pretty, or a physician admire a chancre's purity; still less does he think it necessary to contract the disease though Hunter was over-bold in his exploration of spirochaetes. A psychoanalyst is expected to be sensitive to psycho-neurotic or psychotic suffering.

ROBIN Don't we all suffer these pains?

P.A. In a sense, yes. The experience of a physician who observes suffering about which he can do nothing is similar to that of the psychoanalyst who knows how intense is the mental pain of a neurosis but can do nothing because his intervention would be resented as officious and self-interested.

ROLAND Wouldn't that diminish with the experience of the efficacy of psychoanalysis?

P.A. Probably – as it does when a general practitioner is known to be very skilful. But the psychoanalyst cannot fall back on a long history of therapeutic success. In physical medicine the triumphs are lost in the un-observed, unspectacular jungles of Public Health-pure water, pure air, untainted food. Who gives a thought to the solitary with his microscope, or the crank who deprecates smoking in a food market or other public place?

ROLAND If you want the doctor to be honoured he should also be recognized as the source of the knowledge that enables the addict to inject his veins with heroin.

P.A. I did not mean to be advocating honours. Perhaps, if I were to do so, I should also advocate 'dishonours', statues erected to the Marquis de Sade for his services to cruelty.

ROLAND Are you then opposed to 'honours'?

P.A. 'Honours', as part of institutional organization, is not a matter on which I am qualified to speak. I do not remember anything in the course of my experience with small groups which provided me with material for interpretation. Even a social conjecture becomes hazardous if, when I am speculating or privately discussing a few speculative phantasies, it is assumed that it carries the force of a scientifically derived formulation. But I *would* be prepared to express an opinion in a psychoanalysis and to be held responsible for what I said. In that context there is evidence that a patient must respect himself. If this sounds too obvious I can only regret that I have to use words which have become debased and for which there is little respect. Here it is easier to see that we must respect each other. I knew a successful and wealthy farmer who had great and justified respect for a drunken and illiterate cowherd when he spoke of any matters relating to cattle. 'Honour thy father and thy mother' is an injunction which lacks validity unless the father and mother are worthy of respect. The general principle has to be worth applying in a precise instance. The individual is always a particular instance to himself; whether he can respect himself is a matter which *he* must decide. I do not know if this bears on the question you ask, but I think it is related to it. There are good grounds for supposing that the character of a group would be revealed by the individual people or activities or achievements it chose to honour + or –.

ROBIN By 'honour + or –' I suppose you mean honour or dishonour.

P.A. Yes. Part of the ambiguity and uncertainty of psychoanalytic interpretation is that we have to speak spontaneously and cannot at such short notice express ourselves with precision. However accurate we may try to be, there is the ambiguity of imprecision of the language we use.

ROLAND You should cultivate the precision of mathematics.

P.A. I doubt whether we can do much in the realm of mathematics – unless you consider the introduction of plus and minus signs as a 'mathematical enlargement'. We have to forge our instruments while engaged in the work for which we need them. Rosemary is very quiet.

ROSEMARY I'm sorry I haven't much to say, but I was listening.

ROLAND A flattering thought; I hope it is worth listening to.

ROSEMARY Oh yes – though I don't always understand in spite of trying.

ALICE Rosemary and I spend so much of our lives in mundane activities that we cannot spare time for erudite books. If a house has to be kept liveable it is women who have to do so. How much respect do you think is paid to the minutiae to which we devote ourselves?

ROLAND Probably not much; isn't that true of all necessary but unspectacular activities? After all, we cannot erect monuments to all the heroes and heroines who have invented cheese. I love Camembert but I don't say grace to its creator. Perhaps I ought.

ROBIN Is that why some have a poly-gratitudinous all-purpose ritual – to ward off the evil eye that watches the scales recording our greed? No one seems to regard mental greed as reprehensible – people speak with admiration of the 'omnivorous reader'. What does P.A. think of that?

ALICE I would like to ask P.A. why there is no book on mental dietetics.

P.A. The principle is recognized though not formulated. We do not consider that children should be allowed access to every book; it is thought that some form of regulation is required to produce and maintain mental health –

ROBIN And freedom – see *Areopagitica*.

P.A. As a general principle the personality must be stimulated so that curiosity is aroused but not surfeited; if desire is too easily satisfied there is a loss of mental vigour. The danger of mental indigestion must be watched.

ROBIN I understand your metaphors, but can you give me a concrete example?

ROLAND Would you regard childhood masturbation as a surfeit?

P.A. It can be – later it would be lascivious or pornographic stories, or pictures or films. But what is pornographic for one man

may not be so for another, even at the same age. One man can sit facing another and be sexually stimulated by his vision reinforced by imagination; he has a homosexual experience which cannot be prevented by any physical obstruction. He may thus have a facile sexual life which outwardly arouses no censure. A similar experience, but heterosexual, can be equally mentally debilitating. It is as if the mind itself required some difficulty, some obstruction in order to function in a health-evoking manner. The diet must not be too easily digestible for physical health. Freud considered that analysis should be conducted in an atmosphere of deprivation.

ALICE Oh, Freud! You people seem to believe that no one ever thought before Freud. Any *woman* knows that it does not do to give children everything they want, but you should hear the row when. you try to introduce moderation –

P.A. I can still hear the yells and reverberations – all disguised in terms that might be used by an articulate cat while it licked the stolen cream from its whiskers. I am sure you would not maintain that cats are only male.

ALICE Or that only women are catty or tigerish? I do not.

ROLAND You sound a little ruffled yourself.

ALICE I am getting tired of the blameless innocent.

P.A. Sometimes the weary unite and . . . there is a Massacre of the Innocents. Then we start all over again to grow more Innocents and more teeth and claws to match.

ROLAND Nowadays we are growing more and better psychoanalysts to produce better minds to turn out bigger and more efficient bombs –

ROBIN And more and more breeder reactors to keep up the supply of fissile material.

ROSEMARY Isn't Nature wonderful!

P.A. I remember an old man who had retired, but liked to pride himself on his youthful, up-to-date vision. His eyes used to twinkle as he waggled his snowy beard. 'We live in stirring times!' he used to say. 'We live in stirring times.' 'What stirring times?' said an irreverent nephew. But by this time he had gone to sleep.

ROLAND And the moral of that is?

P.A. I don't know; I only fear that whatever Freud or Melanie Klein or Alice may say, the temptation to release a BIG BANG may be greater than the rewards of depriving ourselves of that pleasure.

ROBIN

Litora litoribus contraria;
'Bring your sticks of chewing gum
and sit upon the floor
And we'll tell you Bible stories
you have never heard before.'

P.A. Pleasure, particularly sexual pleasure, is one of the earliest pleasing events to be appreciated. Thanks to Freud it is not difficult to detect the existence of that pleasure.

ROLAND Surely that is general. I have always regarded Freud's discovery as somewhat naïve and over-rated.

P.A. Freud himself was astonished that something so commonplace should create such a furore – but it did. Today, the theories of psychoanalysis have to be formulated in tired language and it is thought that the *meaning* of Freud's formulations is correspondingly tired. Illnesses don't become tired, and mental pain is as fresh and lively as ever it was. People who complain of mental pain are regarded as being as unreasonable as an ancient Egyptian would have been had he complained about what *we* diagnose as syphilis. Mental pain is regarded, even today, as a fuss about nothing. *Theories* are discussed – rarely the pain the sufferer inflicts or embodies. I remember being called to see a German prisoner of war who complained of pains in his wrists which had been caused, he said, by the British who chained his hands together when he surrendered at Narvik. A German naval officer captured at the same time was called to interpret. I could do nothing because the officer, instead of translating, made use of the opportunity to express his contempt for the man and for the British for resorting to such barbarous tricks. I did not respond to his own self-hate for surrendering either to us or, as I began later to suspect, to the Nazis.

ROLAND What made you think that about the Nazis? I should have thought it most unlikely.

P.A. I did not in fact have any evidence of the kind that I would consider necessary had I been psychoanalysing him. I am citing it as a specific example of a general principle which I had formulated for myself. In the practice of psychoanalysis I always aim for specific evidence for the scientific facts which I am interpreting. But an accumulation of such experiences leads me to discern a pattern

underlying all the examples. This pattern I then try to formulate. No doubt if I were a painter I would try to transfer my discovery to a canvas; if a musician, to a musical score.

ALICE Do you mean the black marks on paper or the sounds which an orchestral instrument might produce?

P.A. Since I am speaking of the underlying, fundamental reality I imagine it would be the sound. I cannot know because I am not a musician; nor am I a painter. In those performed arts I am only capable of reception. When I aspire, as here, to be the transmitter I have to fall back on articulate speech. It is not because I am good at it, but because I am 'less bad' at it than I am at other methods of communication. It is not lost on me that Alice might again ask, 'Do you mean the black marks on paper, or the noises people make with their vocal chords when they speak?' I mean to use all my resources of language. I think there is a better chance for someone to interpret my spoken words correctly than to interpret the black marks on paper correctly. In both instances the fate of the meaning which I wish to convey is dependent on me – on my ability to communicate – *and* on the existence of a receiver.

ALICE So it depends on 'transmitter' and 'receiver'.

P.A. The Nazi officer was not a good transitory link in the chain – the episode afforded him an opportunity to communicate what *he* wanted to communicate. From his point of view – vertex – *I* was not a good transitory link, but the best available. It was that or nothing. Earlier he would have been able to augment his verbal apparatus with guns; disarmed, he had the spoken word.

ALICE And such gestures and tones of voice and facial contortions as he could command. I had not the slightest doubt when Robert was a baby that he could understand what I said and could make himself clear. What sets me against psychoanalysts is that they seem to have to resort to an enormous quantity of jargon in order either to conceal their ignorance, or to express a minute particle of common sense which any woman would know.

P.A. Not any woman, alas! Nor any man. As for the profession of psychiatry or psychoanalysis, it is no different from any other in that it has to be practised by human beings. I cannot transform myself into a person fit to be a psychoanalyst but, to be fair to myself and my colleagues, I know of no other occupation where such unceasing

efforts are made to become fit for the job we do. Unless we submit to the discipline we cannot call ourselves psychoanalysts.

ROLAND Can't this be done without an apparatus which is so costly in time and money?

P.A. No; mental pain requires careful handling. So does physical pain – although we usually regard a headache, or stomach ache, or abrasion as unworthy of the attention of a trained surgeon or physician.

ALICE What about your hypochondriacs?

ROBIN Yes; you seem to me to encourage some of the most tiresome people on earth. Aren't you encouraging such behaviour and profiting by its encouragement to make a living?

P.A. It is not our intention. Our difficulties are contributed to by the debasement and devaluation of our technical terms – 'paranoid' and 'narcissistic', for example. We have to use such language as is available and it may seem that we use it in the way that it is used in social intercourse.

ROLAND You make it sound as if psychoanalysts are all professors of English. That is not the impression I get when I read – which is not often, thank God – their books and papers.

ROBIN & ALICE (*together*) Amen to that.

P.A. 'And so say all of us.' We are not professors of English – though no doubt we would all be the better for it if we were. In practice we make do with a restricted capacity for English for accurate use in a limited area of experience.

ROLAND I do not understand in what sense you use 'area'. Do you mean an epoch of time, or geographical space, or part of the anatomy, or . . . ?

P.A. You point my difficulty. It is assumed that the character or personality corresponds to the physical boundaries which we can see and touch, but that does not seem a wise assumption – if there is in reality such an entity as a mind or character. For example, if one of us went out of the room and spoke, we. would recognize that it was . . .

ROBIN Oh surely! We should only recognize the sound and interpret that to be evidence of an individual, not a 'character'.

P.A. Perhaps. But I think that I would soon learn to distinguish between a recording, however faithful, and the real thing. I do not believe a baby would be unaware of the distinction if it listened to a

recording of the mother's voice, even if the mother were physically present and appearing to be speaking to it.

ROLAND Hasn't that test been carried out?

P.A. I should not be impressed if it were; I do not believe that a mother, being requested to act the part of a mother to her child while a record of her voice was being played, would not betray her deception. I suspect that the baby would react to that sense of falseness in the mother.

ROLAND But this is pure conjecture! Is there no scientific proof?

P.A. It is conjecture; but I am not sure that it is 'pure' conjecture any more than I consider 'pure' truth to be available to mere human beings like ourselves. Psychoanalysts have to be cautious about their claims of scientific truth. The nearest that the psychoanalytic couple comes to a 'fact' is when one or the other has a feeling. Communicating that fact to some other person is a task which has baffled scientists, saints, poets and philosophers as long as the race has existed. 'Nymphs and shepherds weep no more', 'Weep you no more, sad fountains' – could there be any statements more simple, any grammar or vocabulary less obscure? Yet those words have had a powerful effect on generations of people.

ROBIN 'Mummy, what does "a bloody fucker" mean?' – that is a simple question too, words and grammar. But it likewise has been known to create an emotional state in the 'Mummy' to whom it is communicated. Perhaps Alice could throw some light on the problem.

ALICE I admit that just now when the words were uttered they created a momentary flutter; in fact I immediately wondered if you were right to say them in front of Rosemary.

ROLAND I have known the reciprocal of that when something shocking has *not* been said. On one occasion the authorities in war did not divulge facts which might have saved many lives; they did not wish the enemy to know that his secrets were no longer secret. I suppose that we who survive would be willing to concede that those who died did not die in vain. But I wonder what the dead would say if they knew.

P.A. Going into action in war I knew I might lose my life. I don't think I mobilized my patriotism; I simply succeeded in believing that I would probably *not* be killed.

ROLAND That seems to me to be not divulging facts, even to yourself, for fear of what use you might make of them.

P.A. That is true. A decision involves choosing a particular set of ideas, inhibiting another.

ROBIN I thought 'inhibition' was a technical term for a pathological process.

P.A. Certain terms are chosen for technical use in discussion, but reality does not obey the rules of grammar or psychoanalysis. Our apparatus of thinking may have served us in good stead so far, but 'so far' only means as far as the limited range of our perceptions. André Green has pointed out that in the limited sphere of our chosen subject our intuition may be 'un œil en trop'; we are able to grasp a meaning so unwelcome that we cannot tolerate what our own perceptions reveal.

ROBIN I remember the depictions in the caves of Elephantine being considered by my parents to be too gross for my innocent eyes to observe.

ALICE Was it you who asked your mother what 'bloody fucker' meant?

ROBIN No – I was so 'innocent' that I was hardly fit to survive in the strange world of the 'bloody little sods' of my prep school.

ALICE Rosemary, do you object to this sort of language as much as I do?

ROSEMARY My mum was most particular that I should *not* hear and see what the gentlemen who came to see her behaved like.

ROBIN So you must be quite used to the behaviour of 'ladies and gentlemen' – your 'betters', in fact?

ROSEMARY My mother was 'pertikler' how I was brought up; of course I learnt it from my friends who used to tease me because they said my mum was a 'whoore', as they called it. One day in class, when the teacher told me to read the end of a poem, the children began to whisper, louder and louder, 'Rosemary's a whoore, Rosemary's a whoore', till at last the teacher said, 'Whoore or no whoore, Rosemary will now read the end of the ninth book of *Paradise Lost'*. I remember it clearly because I was dreaming of the words, 'Paradise the blest' – something about 'blest communion, fellowship divine'. I didn't know what the words meant, but they made me cry and everyone thought I was crying because my mother was a whore – but I wasn't.

ROLAND Poor kid. What did you do?

ROSEMARY Oh, I didn't mind. I told the boy next to me that I'd

knock his block off if I caught him after school; that shut them up because they knew I could fight. I was a terrible kid.

ALICE Worse than the 'gentlemen' who came to see your mum I expect. Do you blush, Roland?

ROLAND No; by the time I could go a-whoring I was so scared of spirochaetes and gonococci that I didn't dare. It is one occasion on which my cowardliness paid off. I expect P.A. must know something though.

P.A. Yes – though I too must plead guilty to cowardice as far as practice is concerned. I have plenty of second-hand, hear-say experience, and some experience of dealing with people who think that a psychoanalyst is a second-class citizen hardly worthy of common courtesy or respect. If he knows what he is talking about he is thought to be beneath consideration; or beneath consideration because he does not know what he is talking about. I don't think we are any worse off than anyone else, but we are supposed to be able to tolerate facts, however disagreeable. On the whole we get used to the low regard in which we are held. After all, not everyone would treat Rosemary as a human being or a social equal.

ROBIN In Russia perhaps, or the U.S.A.

ROLAND Is the culture of a country more than skin deep?

P.A. Any culture, civilization or temporarily exposed characteristic of persons or peoples is subject to penetration and displacement by the unexpected. They say animals are aware of the imminence of an earthquake. Humans are sensitive to the imminence of an emotional upheaval.

ALICE You mean people who are afraid they are going mad, or going to have a breakdown?

ROLAND Break up, down, in, out, or through?

P.A. Yes, though I was thinking of being subject, as human animals, to a cosmic upheaval. We probably would not be consciously, scientifically conceptually aware of it for some centuries. Until we are able to discern some such pattern we cannot 'test' it by submitting it to related forms of validation.

ROLAND Since none of us lives for centuries, a store, exposed to scrutiny, would be required to reveal a pattern.

P.A. I suppose so – unless there is some unknown form of communication between discrete individuals. Even if individual humans are separated by Time, Space, Deity – to borrow Alexander's

formulation – this barrier is penetrable by forces whose understanding is beyond the range of our logical, rational modes of thought.

ALICE Such as . . . ?

P.A. Speculative imagination, speculative reason. André Green has pointed out that there may be something about the dramatic art 'form' which is perspicuous. That might make communication possible through the barrier. I was thinking of something which I cannot support in any way that I regard as scientific unless we suppose that science develops from a germ of phantasy. Suppose the results of a colossal cosmic explosion – as for example the explosion which is visibly evident to us as the Crab Nebula – could now be reaching us in a way that affected the DNA molecule. That could exert an influence on the germ plasm of the entire human race; from that, the outbreak of many generations of humans all irritated into violent, murderous activity.

ROLAND Science fiction surely.

ALICE So he said, But what of it? Isn't it more reasonable to suppose some explanation like the wide dissemination of violence by film, press and television?

P.A. Much simpler – much more rational too. That is my point; a rational explanation is always welcome especially in contrast to no explanation at all, or a confession of ignorance. The fact that it is more acceptable to our insignificant little minds does not mean that an unwelcome fact would just go away because we did not like it.

ROBIN Somewhere Freud describes a paramnesia as being a secondary elaboration intended to take the place of something forgotten.

P.A. Or something that has never been known – the gap where a fact ought to be but isn't.

ROLAND Yes; but is there any evidence for a mind at all? It has no colour, smell, or any other sensuous component. Why should not the whole of psychoanalysis be just a vast, towering Babel of paramnesias to fill the gap where our ignorance ought to be?

P.A. I do not think Freud or any psychoanalyst would welcome such an extension; it is typical of the devaluation to which the language we use is subjected. I am prepared to entertain the possibility that the cloud-capp'd tow'rs of human imaginative structures may disappear like the insubstantial vision of a dream. I do not have any difficulty in thinking that the human race itself might disappear in a puff of smoke. Suppose the sun were to flicker as a prelude to its

disintegration, would any human survive? This world is only a grain of cosmic dust and our sun an ordinary star – so the astronomers tell us. We know of no other world to which we could fly as a new home.

ROBIN On the other hand it would be extraordinary if amongst the many millions of solar systems there were not some other accident similar to that which produced 'homo sapiens'.

ROLAND A fat lot of use that would be to us.

P.A. In the meantime we should remain true to our nature and endeavour to make the best of ourselves.

ROLAND Is P.A. also among the moralists? I thought you people prided yourselves on being above that.

P.A. I am not aware that we pride ourselves or deprecate ourselves on account of our being ordinary members of the human race. Like my fellows I would be gratified if I discovered that I was in some way excellent; in fact I have found no evidence of my 'excellence' as a psychoanalyst.

ALICE Your colleagues think highly of you.

P.A. Some do, luckily; I am not unappreciative of the fact, but it tells me more of the generosity and affection of my colleagues than of *my* merits. I think we could discuss something of greater interest than me and my qualities and defects.

ROBIN Doesn't your working day consist in discussing the qualities and defects of others?

P.A. I try to demonstrate the qualities of the individual. Whether they are assets or liabilities he can then decide for himself.

ROLAND I thought you were supposed to cure them.

ROBIN So did I.

P.A. 'Cure' is a word which, like 'illness' or 'disease', is borrowed from physicians and surgeons to account for our activities in a comprehensible manner.

ROLAND I hope you will not murder the language by introducing monstrosities like 'anti-bodies'.

ROBIN That was one of Quiller-Couch's aversions, but I do not see why. Quiller-Couch was hampered by his admiration for the translators of King James's Bible and did not recover from the fact that medical science was not written by men of literary genius at the height of English culture. I think James Strachey's achievement in translating Freud may yet come to be valued at its worth.

ALICE Is the matter he translated to be thought of as comparable

in value to the matter of the Bible? Perhaps we should discuss it with Priest when he returns. He's been away a long time but I understand he is coming back in time for our next meeting.

ROLAND Oh my . . . good.

ALICE You don't sound pleased; what is the matter?

ROLAND I'm glad he's coming, but I don't want to be involved with God and the rest of that pious stuff.

ROBIN To do him credit he does not try converting us; to be fair to P.A. *he* doesn't try to convert us to psychoanalysis either.

10

ALICE (*to Priest*) It is very pleasant to welcome you back to our group. I hope your trip was successful.

PRIEST It was; I am glad to be back and to find you all looking so well. How's the debate been progressing?

ROBIN Well; though I don't think we made any discoveries. We were wondering whether you could re-light the flame which seems to have grown dim to near extinction. How was your conference?

PRIEST Much like others I have known – in fact I suspect my experience has not been so different from yours. Your account could be transferred to the religious conference without verbal alterations – insignificant, but not in the eyes of God.

ROBIN Why drag in God? We have no evidence of his existence.

PRIEST True. But the fact that we cannot prove that God exists may be a matter of importance only to our self-admiring selves. 'Self-yeast of spirit a dull dough sours', as the poet says. 'But, swollen with wind and the rank mist they draw . . .', as an earlier poet said.

ROLAND You do not mention that the two you quote were of opposing sects.

PRIEST Of opposing sects, yes; but at one in agreeing there is a God.

ROLAND Between them there is not *one* god but two. In fact there seem to be as many gods as there are people to believe in them.

P.A. I agree, but that is only saying that different individuals have different ideas about whom they are addressing and in what manner they should communicate their approach.

PRIEST That does not prove there is no God.

ALICE I think the discussion pointless. Some people have an experience which they cannot explain in any way comparable to that

in which they describe other experiences. The sense of contact with God is not similar to other contacts.

P.A. You are, here and now, making just that comparison. That could be because when you speak of 'contact with God' you are using 'contact' metaphorically; when you speak of contact with air or water or Tom Smith you do not mean it to be supposed that it is a metaphorical contact. I have not had such an experience and therefore find no necessity for any explanation. Freud had a good deal to say about the psychoanalysis of religion; he seemed to think there was no need to seek any other than a psychoanalytic explanation.

ROBIN In other words, he did not believe in God.

P.A. That could be one conclusion. I do not know if he had any other views.

PRIEST Whether he had or not, I cannot see that any one man's views, however impressive, can be regarded as relevant to someone who is not Freud. Freud spoke of a psychoanalysis of religion; if I had time I could write a book about the religion of psychoanalysis.

P.A. Could you give us a rough idea of what your book would contain?

PRIEST I think I could write an introductory volume or two about the many 'religions' that have existed, been discarded for another, been in turn replaced as more in conformity with the needs of its time. For all its apparatus of erudition I see Psychoanalysis as yet one more religion – not the True Religion – des-tined to flourish for its day and then be heard no more.

P.A. Why categorize it as a religion? Most of us try to be scientific; this is tantamount to claiming only one standard – the Truth. It is not incompatible with the religious stress on truth, but that does not make it a religion.

PRIEST The fact that people who have claimed to be God-fearing show little respect for the truth does not make all religion false, or God only a fiction spawned by a fevered imagination. Is that not more likely to be true of psychoanalysis? After all, who are the originators in psychoanalysis? Is it not generated by neurotics and worse?

P.A. I think it likely, but the revolt against neurosis and psychosis is also generated from amongst these same people. If you gather together a group of neurotics, psychotics, hypochondriacs and other disturbed people they soon rebel against themselves and their troubles.

ROBIN Is that any more than what people do who want to escape the consequences of a mistaken choice?

P.A. I think so. I doubt if individuals make a choice; they cannot know what the 'choice' is. The first requisite of a choice is that the person making it knows what the alternatives are from which he or she is to choose. But assuming that they have had a choice and made the wrong one, ought we not to attempt to correct it? If the belief in an almighty spirit is mistaken, if experience leads us to suppose that there is no such spirit, we should cease behaving as if there were.

PRIEST I agree. But does your experience support the idea that people give it any serious thought? From what I see of psychoanalysts they do not know what religion is; they simply transfer their allegiance from one indisciplined, desire-ridden system of emotions and ideas to another. I have heard psychoanalysts discussing; their discussion itself betrays all the characteristics which I have recognized as pathognomic of religion of a primitive, undisciplined, intellectually unstructured kind. They argue heatedly, adducing national, racial, aesthetic and other emotionally coloured motivations in support of their particular brand of activity.

P.A. I would not deny that we do all these things, but we do in fact continue to question ourselves and our motives in a disciplined manner. We may not succeed; neither do we give up the attempt.

PRIEST I hate to appear to sit in judgement but I have to judge, to appraise such evidence as I have as it touches my private life and my responsibility for my own thoughts and actions. You have as many sects of psychoanalysts as there are in any religion I know. You have as many psychoanalytic 'saints' with their individual following of devotees.

P.A. We are human and show all the weaknesses of that biological category. We do not cease to worship and adore because adoration and worship are basic, fundamental and therefore unalterable, inalienable characteristics; we try to allow for that fact.

PRIEST Ought you not then to make room for the capacity to worship and adore – even to depend on something worthy of dependence, adoration and worship? Otherwise such capacities either 'fust in us unused', or become debased by the object worshipped.

P.A. True. The individual who adores a particular nation, or drug – such as alcohol – may be debased by that fact and unable to

release himself from a loyalty which has become debasing and dangerous. Loyalties that are health-giving and growth-fostering at one stage become a barrier when the individual cannot transcend them. The barrier can be anything from the limitations imposed by our animal nature, to something temporary that has become hardened, calcified, rigid – I borrow the terms from medical descriptions of arterial degeneration; there is reason to suppose some spiritual counterpart, some unwillingness to entertain new ideas, which is inseparable from advancing physical age.

ROBIN Cannot the 'religion' of psychoanalysis, or the investigation of psychoanalysis by theologians, teach psychoanalysts something valuable, as the psychoanalysis of religion could teach theologians something valuable for theology? Why should there be any difficulty?

P.A. There *is* a difficulty; the very efficacy of teaching is a matter for caution because we do not know what those taught will learn. Children often learn to emulate their parents' faults. Even the good intentions of parents and teachers can be nullified by that fact.

PRIEST What man professes is not so important as what man is.

ALICE Whatever facets we observe, it is those facets, temporarily obscured, which exert such influence – perhaps because men deliberately hide from scrutiny what they wish to do.

PRIEST I would rather men learnt that God was the observer from whom nothing is hidden than that they only have to hide from their confessor or psychoanalyst.

P.A. That is one reason why I would avoid being trapped into being a 'good analyst' who does not require to be correctly informed. It must often lead some religious aspirant to hate and rebel against an all-seeing God, or even human being, whose business it is, like the police, to find out.

PRIEST A parent does need to be loving, but that does not mean he has to be a fool or believe in God as an expression of his folly. We do not recruit fools for our work, or choose fools to be God's servants by virtue of their folly.

P.A. We don't choose psychopaths to be candidates for psychoanalysis.

ALICE We do not knowingly choose fools for husbands or to be the parents of our children. The trouble in real life is to know how to choose from what chance offers us – only men.

ROSEMARY No, Ma'am – only males. We hope they will turn into men. I would rather be your servant, Ma'am, than risk a boyfriend who might never become a man. They are all pretty free if it is a matter of messing about with us – no one wants to change.

PRIEST That is so; men are similar to women, and women to men. That is the problem stated in terms – correct terms – of biological sex. We try to show people there is more to passionate love than simply the activity – contact – between genitalia.

ROBIN Does anyone believe that sex is only physical contact between genitalia? I have been a farmer nearly all my life and have never believed such nonsense. You would have to be someone really intelligent – like a psychoanalyst – to think something so divorced from reality.

P.A. I agree. It requires intelligence and the resources of an educational system at full stretch to produce a real fool. I have had experiences which could be understood as genuine endeavour; no fool, no *real* fool, could be the product of effortless pleasurable exercise. I have known people who think that effortless pleasurable activity must be the height of bliss. Do you, Robin, think that only a psychoanalyst could achieve this?

ALICE I'm sure Robin does not think that.

P.A. Exaggeration, all exaggeration, is analogous to the use of a mental microscope which makes visible what otherwise would remain unobserved.

ROBIN It is no exaggeration. I don't want to be rude to P.A. but I have seen experts of all sorts – architects, soldiers, sailors, statesmen – and though it took me years before I broke through the crust of training, by which I learned to revere my superiors and their wisdom, I did achieve my freedom.

P.A. I congratulate you on your felicity. I still find it easier to suppose that farmers and doctors and artists and others on whom I depend are wise.

ROLAND Should you be 'finding it easier', or are you being sarcastic? Rosemary, Alice, Robin and I are all wiser now than we were. It is a mistake – however natural – to be a creature of habit, to slip into these well-worn grooves of thinking. You should have had no difficulty in maintaining a disciplined 'way'.

P.A. Nevertheless I have difficulty; I am not exempt from the failings of my fellow men. I do not plead guilty to your complaint that

I was being sarcastic – although I am not debarred from the freedom to be sarcastic or hostile. When I am professionally engaged I do my best to refrain from thoughts and feelings which are irrelevant to my work. That does not mean I am obliged to be incapable of anger.

ROBIN You seem disturbed. I think Roland must have penetrated your adamantine calm.

P.A. Not adamantine: I expect to be treated with civility even though I pursue a profession which is disliked –

ROLAND – because it claims the right, on technical grounds, to say hurtful things.

P.A. I claim the right to say things that are correct psychoanalysis though they are hurtful. A surgeon uses a scalpel, but cutting into flesh is not done because of the pain it inflicts. A sadist may be a surgeon, but that is not the same as being a surgeon in order to conceal a forbidden pleasure. I might have to demonstrate that a patient was gaining surreptitious pleasure from the survival – active survival – of an emotionally charged idea that I was a father inflicting corporal punishment.

ROBIN Don't you use the expression 'Father figure'?

P.A. I should of course use it if I felt it expressed something I wished to say and the person to whom I said it understood what I meant.

ROBIN Can you give me an example?

P.A. I had a patient who was educated and cultivated. Yet he ejaculated 'God' with great emphasis in a context which made it clear that he was feeling angry and resentful towards me.

PRIEST How do you know he was not simply using the noise – 'god' – as a swear word? I would say he was uttering the name of God in vain.

P.A. That is assuming that there is a God.

PRIEST It is an assumption based on many years of experience.

P.A. Yes; but in the practice of my profession I have to consider the nature of the experience which you describe as lasting through years. I have to consider whether the 'experience' was not prompted by some events within your body and mind. The fact of a father and the fact of a mother are both impressive. You can say it is only a theory, but I should have thought it would occur to any parent that the theory could be plausibly regarded as compatible with known facts.

PRIEST Plausibly, yes. But why do you regard 'plausibility' as significant? An adult's conjecture about his views when he was an infant is called a scientific fact, but not when the discussion is of a 'religious' fact. You say the psychoanalyst – a real psychoanalyst – is a compassionate man or woman only concerned to be helpful even as he reminds the patient of a bad or cruel father or mother.

P.A. You go further than we do when you claim that there is in fact a 'guardian angel'.

PRIEST You go further than I do when you say there is a compassionate man or woman who is only concerned to be helpful. Tell me – have you ever known one? *I* do not say there is a sincere, compassionate, God-fearing, God-loving priest. I do not wish to denigrate any surgeon, physician, psychoanalyst, artist or other; nor do I want to endorse the claims of anyone who expects me to take such a figure at its reputed value. It is a less ridiculous claim when I say I have evidence of guardian angels who save us fallible creatures from our folly if we let them, and if it is in accordance with God's plan.

P.A. There are many 'ifs' in your discourse.

PRIEST Are there less in any other?

P.A. Yes, because only by comparison and discrimination shall we refine and discipline our unruly selves.

PRIEST I do not want to obstruct your aim, yet I am not unaware of the narrowness of your view.

P.A. When are blinkers a hindrance, not a help, to the horse?

PRIEST The horse's rider no doubt would be prepared to argue that he has improved the breed of horse. I think God has improved mankind –

P.A. Men have improved the race of gods, but they have not improved their methods of choosing their gods or of expressing devotion to the chosen one. When I say 'improved' I admit thinking in conformity with a scale of 'better' and 'worse'.

PRIEST So I noticed. Can you give any idea of the nature of that standard?

P.A. Not really; I suppose I would regard 'progress' as good if it were associated with what I regard as further development. Devotees of religion often do not appear to develop any increase in mental ability.

PRIEST Do you suggest that in this respect religious people are any worse than scientists or artists or musicians?

ROSEMARY Men and women always do just as they please, and find an explanation afterwards. Sometimes it is difficult because they haven't enough money, or the police stop it –

P.A. Or they haven't the physical health, or there is not time, or – as psychoanalysts think – there are unknown or unrecognized elements in their character which contribute obstacles to the fulfilment of their conscious aims even though there is no hindrance in the known universe of not-self. There are facts which I would like to demonstrate to you, but I cannot because I have not the experience and the training which are essential. Even if I had, you would have to be able to understand the 'language' I used.

ROBIN Well, what's the trouble?

P.A. You think you speak English and can therefore understand a Shakespeare play: I think the Shakespeare play would have to be competently produced and acted. An Englishman has to learn English.

ROBIN Poor Shakespeare! What a time he must have had to be able to write the world's most marvellous plays and have no one to help him put them over but a crowd of ranting ham actors.

ALICE Yet they did it. The Elizabethan crowd saw, and kept on going to see, plays in Elizabethan England.

PRIEST Does P.A. still believe in progress? Does he think that the world has 'progressed' positively, increasing the chance of development?

P.A. I could ask the same question of you. So far I still feel able to say 'Yes' just. How long I shall continue to be able to nurse my capacity for hope before black despair and depression swallow me in everlasting night, I do not know. I cannot fall back on your belief in a life after death, although I can entertain the hypothesis, fantasy, fairy-story, that a fetus has a pre-natal existence. I am not in a position to argue with an opponent who says that these fanciful 'theories' have no place in a scientific discipline.

PRIEST Then what hinders? If you cannot exclude the possibility that there is a fetal mentality suitable to a watery, fluid environment, then why deny an after-life? – a post-gaseous-fluid existence?

P.A. It is a fact of my nature, to which I have become accustomed, to believe that when I die I shall cease to exist.

PRIEST I do not deny that; I see no reason to believe that the creature that conforms to that same creature's 'laws' of nature, logic,

science, will continue to exist in accordance with those same laws, any more than I believe that the post-natal creature conforms to such 'laws' that the fetus 'regards' as reasonable. The fetus could 'believe' that a baby was a 'fabulous monster'.

P.A. I have had patients who are on bad terms with whatever they feel they have become; they are on bad terms with human beings who remind them of themselves. One of the difficulties of psychoanalysing such patients is that they do not want to be reminded of 'ordinary' behaviour – theirs or anyone else's.

ALICE Has this anything to do with real life?

P.A. It has a great deal to do with real life. Amongst the many and frequent dangers of psychoanalysis none is more dangerous than the experience of the coming together of the pre-natal and the post-natal personalities. It can be easily appreciated that the danger is associated with anything whatever – psychoanalysis, music, painting, mathematics – which could remind those two personalities of their continued and continuing 'contact' with each other in the same body and mind.

ROLAND You make it sound most dramatic.

P.A. It would require a drama of Shakespearean quality to portray the reality.

ROLAND Shakespeare must be responsible for many murders and suicides.

P.A. He said, 'Upon the King! let us our lives, our souls, our debts, our careful wives, Our children, and our sins lay on the King!' Shakespeare, doctors, and lesser fry like psychoanalysts, have been accused of inventing, 'creating' the diseases of which we would have our fellows be aware – *Be-ware*!

ROBIN Be ware! How certain this sound alarms! The alarm is dealt with as a substitute for, not a prelude to, action. If your belly aches tell it not to belly-ache!

ROLAND If your mind tells you not to bore the un-offending world with your private cares, go to a psychoanalyst and enlist his support against such old-fashioned ideas!

P.A. Psychoanalysts do not advocate indiscriminate broadcasting, but discriminating, meaningful, and consciously directed discussion. A parliament cannot achieve its highest function if it chooses caterwauling rather than debate. Why didn't Bion go on with groups?

BION I had more pressing problems which could be adequately

dealt with only by psychoanalysis – or something better; particularly the problem, which P.A. had been discussing, of the relationship of the highly equipped fetus with its own and its parents' 'parental' qualities.

ROLAND The fetus's parental quality! That sounds wonderful.

BION I was afraid it would arouse someone's contempt. The crackling of thorns under a pot is more serious when it becomes the crackling of radio-interference, or the marriage of divorced nuclear elements. Not that I would or can deny you your fun.

ROLAND I'm sorry if you felt I was making fun of you, but I do find it somewhat exasperating when people take themselves so seriously. I think you have an inflated view of your importance.

BION I regret that I give such an unfortunate impression. I should be less than sincere if I said you are only a source of innocent merriment. There are times when I find your supposedly sane and balanced outlook, your fascinating sense of humour, difficult to tolerate.

ALICE I don't wish to take sides, but 'peace! you English fools'.

11

ALICE Surely it should be possible to discuss reasonably.

BION It is also possible – as we have reason to know – to resort to arms. The disastrous meeting I have been imagining as taking place between a potentially gifted fetal mind and its divorced but equally gifted post-natal self also occurs when two or more groups of individuals meet. The history of the relationship between French and English, German and British, and now Black and White races looks likely to end in mutual annihilation, not mutual beneficient stimulation.

ROLAND What is the ground for disagreement – colour? sex? prosperity?

ROBIN Father and son? Guardian and ward? Exploiter and exploitee? Mother and daughter?

P.A. The possibilities are endless. Once the problem obtrudes there is no end to explanations – *rational* explanations, though I would not like to say how a 'rational' explanation is distinguishable from a rationalization.

ROBIN You are as bad as the Intuitionist mathematicians who seem to disparage logic.

P.A. The Intuitionists would say that logical and intuitionist mathematics can exist happily with one another provided the logicians admit the reality of another approach. Quantum mechanicians do not deny the existence of wave motion.

ROBIN Is there an analogy in the relationship between group analysis and psychoanalysis proper?

P.A. It is a seductive possibility. Detailed psychoanalytic scrutiny reveals movements, up and down, of the individual particles composing a group; the 'up and down' movement would give an illusion of

waves, as when the sea is compared visually with the drops of water in it. Visual images penetrate deeply in the way that a capacity for sight extends the range of the infant; it is not limited to what it can grasp or touch. Mobility does not extend as far as the eye can reach.

ROBIN What about the range of visual images in geometry? That was extended by algebraic, not visual pictures of lines and circles.

ROLAND Desargues extended the grasp of mathematics even though his diagram was visual.

ROBIN The development of projective geometry which followed was not visual.

P.A. The person concerned with conic section falls back on the operation of an inner eye. Psychoanalytically individuals still seem to rely on the existence of a diaphragm analogous to that separating the lungs from the digestive canal. There is a survival of that mentality in the 'division' which is made between pre-natal and post-natal – as if *birth* were of great significance –

PRIEST And death which, as I have remarked before, you also speak of as if it were obvious to anyone except possibly stupid people like priests. We are assumed to deny death because we are afraid of it. It seems to me to be a naïve example of psychoanalytic misinterpretation and ignorance of religious teaching and experience.

P.A. It is not naïvety that is limited to psychoanalysis. I would not defend myself against such a charge, but the tone you employ when you formulate your observation invites a response which becomes either an admission of guilt or an aggressive repudiation.

ROLAND Admission of guilt? You don't say what crime.

P.A. I am not bringing the accusation. I am merely trying to draw attention to the way in which a feeling of guilt is evoked or created; it is basic, fundamental. The crime – rational, logical – and the feeling of guilt are natural partners. It is a matter to which justice, morals, intellectual ingenuity can be devoted for so long as anyone can spare the time and energy.

ROLAND The psychoanalytic view is an invitation to create a lawless and undisciplined world.

P.A. There is no 'psychoanalytic' view. But there are people who can use psychoanalytic theories to support any activity they choose. That is why we try to train people who are not only able, but who also wish to help, not hinder, the individual.

ROLAND Individual burglars, robbers, murderers as well?

P.A. The occupation or the philosophy of individuals is not usually – in the culture with which I am acquainted – believed to be the concern of doctors or surgeons; they are usually expected to confine themselves to medicine and surgery. I have an idea of how I ought to run my own life, but what I consider to be appropriate for me has nothing to do with an individual 'not-me'. I choose to train people I wish to help, but my ambition is not psychoanalysis – it is me.

PRIEST I could not watch a child putting its hand into a fire to grasp a live coal. If I saw adult behaviour likely to have similarly evil consequences I would intervene.

ALICE Anyone would.

P.A. These are hypothetical situations and the problems posed can be solved logically. In real life problems appear in a form which is not susceptible to solution theoretically; you have to act or refrain from acting. These discussions are important not in themselves, but because they promote readiness. Psychoanalysis is a kind of action which is a *prelude* to action. In the individual a nerve impulse is a prelude to action; it is not a thought. 'Tell me', a neurologist will say, 'if you feel anything when I touch your foot'. I do not need to ask such a question because I can see for myself if the patient feels anything when I touch his sensory apparatus with an idea, or a grimace, or a tone of voice. That is one reason why a psychoanalysis is not a social conversation or vice versa; the behaviour of a psychoanalyst conversing in a psychoanalysis is *not* the same as the behaviour of a psychoanalyst conversing at a dinner party. Confusion occurs because that important distinction is not observed.

ROBIN You spoke one day about articulate speech being indistinguishable from splitting. I don't understand your meaning when you say that speech at a dinner party is not the same as psychoanalysis.

P.A. If I say that it is a hot but rather muggy day, that articulated statement consists of bringing together a number of ideas – of heat, daylight, humidity, feeling – that have been split apart. Splitting is a convenience when prelude to an articulate sentence. But weather remains weather – a totality, not a mass of discrete particles. An individual angry with the weather might wish to attack it and split it into minute fragments. That, I would say, was an expression of impotent (and therefore omnipotent) rage. Atoms of hydrogen, oxygen, carbon and the rest are consequent on scientific observation – primitive splitting transformed to sophisticated use.

ROLAND How does it help a patient to be told that?

P.A. You are making the mistake about which I was just talking. This conversation is *not* a psychoanalysis; it is a social discussion *about* psychoanalysis. What I said to Robin was not psychoanalysing him. If I used the same words to a patient the circumstances would be different. I would have to ask myself the question Roland has just put to me – what would be the good, if any, of saying it to the patient?

ROLAND I often hear that a psychoanalyst tells a patient that 'when he was a child . . .', or 'when he was an infant . . .', such an event took place. There seems to be no evidence to support those statements and nothing that the analysand can do about some event reputed to have taken place in the past.

P.A. I agree that the 'past' is past and nothing can be done about it. All that can be 'done' is whatever can be done in the present and about the current consequences of some action which was taken in the past. What is *done* in psychoanalysis is 'done' by means of articulate speech in the present. In surgery we don't say, 'You once had a tail like a monkey'; we say, 'There is a malformation in the lower part of your spine; I think it would be worth your while allowing me to operate. I think you will find that we can make you comfortable and that when you have convalesced from the operation you won't have your present complaint any longer.' I am not concerned to say that something or other happened 'in infancy', or 'before you were born', and so on ad infinitum. That might be relevant if I were teaching psychological embryology, or psychological archaeology or history. Psychoanalysis, in practice, is more closely analogous to surgery, but it is only an analogy.

ROBIN You seem to me to come near to making reassuring, even flattering, comments about what most of us regard as a disastrous state of affairs – what we call being mad or insane. Don't you regard psychosis as serious?

P.A. Of course I do; I regard all states of mind as worthy of study. The seriousness of the state is not improved by its being untreated or misnamed. All descriptive terms – asleep, awake, sane – need to be kept in constant repair. Relatives and doctors allow their hopes to be stimulated by the facts of surgery, medicine, psychoanalysis, to an optimism indistinguishable from being carefree or careless. That is a misfortune as great as depression or despair amounting to passivity and negligence.

ROLAND There is no substitute for common sense.

P.A. Substitutes for common sense are legion; people turn to any course of action which offers an alternative to common sense. They become devoted to psychoanalysis because they think the theories are a romantic and seductive escape from common sense; they become devoted to individual analysis when analysis common to the sense of a group would be preferable. The fact that infants – perhaps even fetuses – display 'common sense' is most unwelcome.

ROLAND Oh come! Can you really give an example of an infant that shows common sense?

P.A. Let me start with something which I think you may even have observed for yourself, it has fascinated me and I have still found no adequate explanation. A baby, almost newborn, has a pot placed against its posterior by a mother who hopes it will defecate into the pot rather than its nappies. Its face is immediately suffused with expressions of intense concentration and determination, and there! – to the mother's delight – lies a modest but adequate contribution to the pot.

ROLAND There must be a simple explanation.

P.A. I agree; but I have not found out what it is. Any amount of 'interpretations' but – which is correct? With regard to the fetus I have no difficulty in supposing that at some stage two or more senses are in common – for example smell and hearing. Why should that not be a prototype of an experience which later becomes known as 'common sense'?

ALICE How do you link high intelligence, or a gifted personality, with something so disastrous as psychosis, insanity and even delinquency? That seems very peculiar – and most disturbing.

P.A. I do not find it difficult to do, but that very fact increases my hesitation about doing so. I do not wish anyone to seize on what, as far as I am concerned, are mere fancies and conjectures as if they were facts.

ALICE But don't you think you can rely on us to be fairly reasonable?

P.A. 'Fairly' reasonable, yes; but my experience is not the same as yours, and what I regard as 'fair' may not correspond to your idea. I am used to finding that what I say is regarded as strange, incomprehensible, fantastic. After a time what I say is regarded as obvious, commonplace, not worthy of remark. Later still I discover that the

formerly incomprehensible comment has become an established creation of the listener which I have plagiarized.

ROLAND You sound ill-treated.

P.A. I do not agree that I display grievance. The reality of the world often provokes feelings of grievance; people cannot reconcile themselves to the facts which they cannot deny and do not like.

ALICE What has that to do with the fetus?

P.A. A fetus might take a dislike to its experiences including awareness of them. As a result of her experiences with infants a theory was formulated by Melanie Klein which became known later as 'projective identification'. She did *not* attribute it to fetuses.

ROLAND Then why complicate the theory by supposing an even earlier existence of the mental mechanism? Isn't it a fact that this Kleinian theory is already questioned by many psychoanalysts?

P.A. If it were simply a matter of saying 'ditto, ditto to Mrs Klein, only earlier still' I would agree that there would be every reason for dismissing both the Kleinian theory and its supposed 'improvement' as probably ridiculous and not worth the expenditure of time and effort involved in their consideration. Many analysts repudiate Klein's extension of psychoanalysis as elaborated by Freud. I found it difficult to understand Klein's theory and practice though – perhaps because – I was being analysed by Melanie Klein herself. But after great difficulty I began to feel there was truth in the interpretations she gave and that they brought illumination to many experiences, mine and others, which had previously been incomprehensible, discrete and unrelated. Metaphorically, light began to dawn and then, with increasing momentum, all was clear.

ALICE Did you remain convinced by further experience?

P.A. Yes – and no. One of the painful, alarming features of continued experience was the fact that I had certain patients with whom I employed interpretations based on my previous experience with Melanie Klein, and though I felt that I employed them correctly and could not fault myself, none of the good results that I anticipated occurred.

ROBIN In other words the objections raised by contemporary psychoanalytic colleagues to Kleinian theories were being supported by your own experience of futility?

P.A. That was indeed one of my anxieties and one I did not feel disposed to ignore.

ROLAND But you must have ignored it. Did you not feel you had a vested interest in continuing to support psychoanalysis, Kleinian or otherwise?

P.A. I was aware that I would be likely to cherish my preconceptions. Every now and then something would occur that convinced me I would be foolish to abandon my ideas as if they were clearly wrong. In fact it was clear that they were not always wrong. So – it became a problem of discrimination.

ROLAND What led you to persist?

P.A. Partly a chance recapitulation of Freud's description of the impression created on him by Charcot's insistence on continued observation of facts – unexplained facts – until a pattern began to emerge; partly his admission that the 'trauma of birth' might afford a plausible but misleading reason for believing that there was this caesura between natal and pre-natal. There were other impressive 'caesuras' – for example, between conscious and unconscious – which might be similarly misleading. Melanie Klein's interpretations began to have a vaguely but truly illuminating quality. It was as if, literally as well as metaphorically, light began to grow, night was replaced by dawn. I was aware, with a new comprehension, of the passage of Milton's invocation to light at the commencement of the Third Book of *Paradise Lost.* I re-read the whole of *Paradise Lost* in a way which I had not previously done, although I had always been devoted to Milton. This was true likewise of Virgil's *Aeneid* – though it involved much painful regret for the way in which I had wasted and hated the privilege of being taught by certain schoolmasters whose devotion had but a sorry response from me. Let me now praise men who ought to have been famous. For my own pleasure I write their names: E. A. Knight, F. S. Sutton, Charles Mellows. Later came the debt to my friends whom I will not name lest it cause embarrassment.

ROBIN I appreciate the point, but I would like to know more about the 'illumination'.

P.A. Had you not better ask yourself to whom you owe such illumination as has saved your journey from being plunged in everlasting night or, worse still, in the blaze of everlasting certainty and good fortune?

PRIEST May I introduce a note of pity for the unfortunates who have been plunged in the everlasting gloom and self-satisfaction of

scientific knowledge – a fate which has deterred many from the joys of devotion to God and respect for His truth.

ALICE Surely scientists devote themselves in all modesty to the truth. Even women have been known to wish to bear children in whom a love of truth can germinate; we are not only ambitious to be sexually satisfied.

ROSEMARY Most of the men my mother knew behaved as if that was the only thing in life.

ROLAND Good God!

PRIEST Poor God! Can you imagine what it would be like to be worshipped by men and women? Even Socrates is said to have been tried and condemned to death by his betters. Some of you may remember the story of the Garden of Gethsemane.

ROLAND 'God Almighty first planted a garden and, indeed, it is the purest of all pleasures', said Bacon.

P.A. One of the purest of human pleasures appears to be the pleasure of cruelty. Could Priest enlighten us about this?

PRIEST Perhaps I can do so by reminding you of a religious doctrine of the Immaculate Conception; that is in contrast to 'human pleasures'. It seems to me that psychoanalysts' discoveries may be something which has been known to the Church for a long time.

P.A. Psychoanalysts who respect the truth have done and still try to do just that – respect the truth. But we do not put it in the terms you use.

PRIEST But what you say and the way you say it matter. For this reason the Catholic Church is particular about what it says and how it says it. We are often accused of narrow-mindedness and bigotry for being particular and not co-operating with people who believe themselves to be our allies.

P.A. We have been deflected from our problem, namely, to account for facts that lead us to think that existing theories are inadequate but too true to be discarded without loss. Maybe it is significant that the discussion that obtrudes centres on owner-ship, on who created or owned the idea.

PRIEST Or rather, who owned the owner – God or man? But let us debate the idea further tomorrow.

12

PRIEST What is the psychoanalytic view of original sin? Do you deny there is such a thing?

P.A. I hesitate to say I believe or disbelieve in something reported as a fact by someone else. I have been convinced that certain observations could be most easily explained if there were such a thing as original guilt.

ALICE You have often said this; I have no doubt about it.

P.A. A most unwelcome feeling – even to an infant. As I became aware of good psychoanalysis, even by myself, 'faulty psychoanalysis' was an inadequate explanation, so I cast around for some pattern other than our failings. Considering the great intelligence shown by some analysands, it was absurd to suppose that the intelligence sprang into being merely at the fact of physical birth. Surely, I thought, the offspring of gifted and intelligent parents might be as likely to be intelligent as much and as often as the offspring of stupid or handicapped parents might be expected to be stupid. In other words, the fetus must have inherent characteristics which sooner or later become apparent. If the fetus subsequently becomes an intelligent or wise or gifted man or woman, why should it not, as it approaches full term, show prototypes of the sort of behaviour expected of children and adults? It occurred to me that a fetus might hear noises, see sights, smell odours, in a watery fluid such as the amniotic fluid and meconium. The significance of this did not become apparent at once, but I felt that past experiences with patients would have been less obscure if I had dared to imagine that the emotions displayed might be prenatal. They were often expressed in a manner which differed from commonly accepted modes of expression.[1]

[1][See Piontelli (Alessandra) in the *Key*, this volume. *Ed.*]

ALICE How did that differ from any other person?

P.A. That is what I asked myself. I wondered whether the highly endowed fetus might employ the mechanisms which psychoanalysis had made familiar in the treatment of children and adults, even before birth, precociously. Such a precociously developed fetus could try to rid itself both of the senses when they became sensitive to changes of pressure in the watery medium, and of the feelings, 'emotions' of sub-thalamic intensity; it might be prey to experiences unmodified in the way we expect them to be by the 'higher' centres. Then comes the 'trauma of birth'.

ALICE I have some difficulty about the expression 'trauma'. Whose experience is traumatic? The mother might find it so, although even the unmarried girl must have a good idea that the prospect of giving birth would be frightening. Is the baby supposed to find it a traumatic experience? Or the father? Most people must be aware that the birth of a child is likely to be dangerous – one of the few experiences which bring home the fact that issues of life and death are never far away.

P.A. At the moment I want to be oblivious of these manifold considerations so as to concentrate on 'hypo-theory'. I am supposing that the gifted child has tried, even when a fetus, to be without 'feelings' or 'sensations'. It cannot get rid of its inborn, inherent genealogical inheritance; it can possibly get rid of what used to be called 'acquired characteristics', what I have called phenomenes – phenomena as contrasted with genotypes. So it remains the gifted, inherently gifted, person. Since this is so, it is able to learn what is expected of it, how to be what Mother or Father, or both, want. It learns the difference between what Father and Mother call right and wrong, what will one day be called the M'Naghten Rules. All this, however, is split off from its fundament, its base, its real self. So there you have a civilized, apparently well-adjusted moral being; its armoury of accomplishments is daily augmented in the way that a really intelligent animal learns to augment its repertoire of parlour tricks. 'Die for your country', the fond dog-lover says to her pet who obediently lies down on its back and wags its tail. In due course the young patriot learns to die for his country but may get killed in the process – unless one of these powerful but anaemic emotions breaks through the caesura and causes the young man to have 'shell-shock', or to have his brain washed according to the fashion prevalent in the culture current. His

intelligence hardly need cause a ripple in the depths of his personality even though engaged on what would be a difficult task of maintaining his shell-shocked, brain-washed personality in good repair if he had to do it with the conscious skill of an actor playing a part.

BION In the meantime – if I may join in the discussion – his premature personality continues its life in uneasy proximity with his post-mature lodger in the same physical soma. Sometimes the psycho-somatic partner demonstrates his soulful qualities; sometimes his soma-psychotic demands acknowledgment and recognition of his physical and psychotic gifts. I describe the situation in naïvely pictorial terms. There are other descriptions, but most of them have been impregnated with pejorative connotations.

ALICE Such as 'hypochondria'?

BION Yes; or 'crazy', or 'insane', or 'difficult', or 'tiresome'.

ROSEMARY My mum used to say her boyfriend was always belly-aching about something.

P.A. Such creatures cannot have any respect for their bodies unless they become medically, physically ill.

BION Or outstandingly athletically gifted.

ROLAND You don't mean to suggest that our Olympic athletes are all hypochondriacs?

P.A. I'm sure he does not – any more than you think that all those athletes are confined to Olympus. But you can see that it is quite respectable to be massaged before or after taking part in a race or other athletic contest.

ROSEMARY I took service once with a lady who regularly had her face massaged.

P.A. I am sure she was a perfect lady.

ALICE I knew her – she was an absolute bitch! I don't know how Rosemary ever put up with her.

BION I get the idea – thanks to the bi-lingual description achieved by Alice and Rosemary co-operating to describe the . . . the . . . er

ALICE } Bitch.
ROSEMARY } Lady.

BION Your happy combination and the clarification you achieve by your joint efforts encourages me to draw attention to another union not unlike the one I was describing between our two enemies, Soma and Psyche. Sometimes the two characters do not share the

same body; each contributes a real physical and imaginary component. They tend to be over-simply described as 'homosexual', or 'heterosexual', or 'married', or 'in partnership'. In those situations in which the disguise – the conventional costume – excites psychiatric attention, they are liable to be described as participating in a folie-à-deux. If they excite the attention of the Board of Trade they may become known as a famous business venture, although the dividing line – caesura? – between that and a bankruptcy, or criminal association, or un-happy-marriage, may not be so easy to determine in close investigation as it is in a purely literary or grammatical scrutiny. Words and articulate speech are wonderful inventions – still in their infancy.

ROLAND Yet you psychoanalysts talk as if you were learned people.

P.A. True; and that often leads the cognoscenti – amongst whose prophetic community perhaps I should include Roland – to suppose that we know nothing whatever.

PRIEST It is often assumed that theologians, priests, prophets – as P.A.'s intonation just suggested – also know nothing, that God is a figment of the imagination. There is truth in the criticism because the gods that most people believe in are figments created by such imaginative capacity as is available.

P.A. Some religions could be described as folies-à-deux; that is, relationships between the individual and a god created by the individual. These realities are often fundamentally real, but are made to appear unreal by verbal dependence on splitting as the basis of articulate speech. For example, we speak of 'religious melancholia'. A poor labourer I knew was in a state of profound depression because he *believed* that the cow on which he depended to earn a living had tuberculosis.

BION Who or what had tuberculosis? His cow? His wife? Or daughter? Or the society he had to serve? These questions cannot be investigated here – only in contact with the patient.

P.A. There is always the risk the investigator will catch the complaint – a risk he may not want to run. The analogy in the mental sphere of activity is the psychiatrist's fear that he himself will 'catch the complaint' – or find he has already caught it – if he allows himself to have a close contact.

BION In the relationship I have been describing – pre-natal ↔ post-natal – the individual often behaves as if his wisdom and intelligence would be contaminated if he allowed himself to recognize that his body thought; conversely, that his physique would suffer if he allowed his body to know what his mind thought.

ALICE The bloom on the cheeks of men or women can show that the pair in love are suffused by a reality which cannot be gainsaid.

BION Many wise people would not want to believe that the suffusion on the faces of the pair might be traced to a fetus in contact with the walls of the uterus. I see no reason to deny that the fetus – the germ plasm itself for that matter – could be affected by the loving relationship between the parents. Could not the blush on the bridal cheeks be communicated by a corresponding blush on the walls of the uterus and vice versa?

ROBIN So what?

P.A. 'So what' indeed. I was taught the Laws of Mendelian Inheritance, but not the laws of phenomene inheritance. Yet the child might inherit a passionate love which seemingly could only be acquired.

ROLAND What would obstetricians and gynaecologists think about these ideas? I suppose Priest would say that the Church had preached these matters for generations – even before there was a Christian church.

P.A. I don't suppose that medical science would be satisfied with anything less than the kind of documentary evidence that X-ray films provide – in time no doubt it will be forthcoming. The demand for it now – at this stage of human endeavour – might be more likely to stifle than encourage investigation. Psychoanalytic conjecture can be dismissed as too fanciful, but it is possible that a psychoanalyst might reconcile one of his analysands to respect what his body was trying to tell him and even persuade his body to have some respect for his mind. There has never been much anxiety to attribute an important function to the brain substance.

ROBIN I should have thought there must have been sufficient suspicion of it to encourage the vogue for decapitation – at least of one's enemies.

BION In war, public or private, no one thinks of anatomy or physiology but about hurting the opponent without getting hurt oneself. The relationship between man and woman which results in a pregnancy is emotionally significant; the feelings, absent or aroused,

have powerful physical accompaniments. I see nothing inherently unlikely in these being communicated to the fetus. The only problem is whether, and at what point, these events could communicate conflicting ideas and feelings in a child or adult; whether there is evidence that the conflicts were being worked out in a domain which may not be known to us – yet.

ROLAND What if they are? How does that effect a 'talking cure' – as psychoanalysis is sometimes called?

P.A. The problem has been raised before in our discussions – what language must we talk to the body? I think we must talk our own native language, ordinary articulate conscious speech, as correctly as we can. The speaker must also be free of the need to silence his body. If he is talking, the conversation must not be interrupted by the need to silence his hands, or his feet, or his facial muscles, or his eyes. For that matter he has to be free to talk even without fear of what lies his tongue may communicate. I have known analysands who could talk perfectly but who were nevertheless disturbed by the thought that they would stammer; that one of the 'two' people present would be the mouthpiece of a third even though invisible and inaudible.

BION To borrow from the embryologists, the analysand, though physically correctly formed, fears the intervention, in the tasks of his ears and eyes, of an over-active supposedly archaically surviving system of auditory or optic pits.

P.A. They might be regarded as prematurely active; in adulthood the causes of suspicion are variously, rationally described; in essence something excites comment because it is inappropriate. Hence the 'consciously' dubbed 'stammer'. In short: A and B meet, but fear the presence of x, y, z, a, b, c. . . . 'Friends, Romans, countrymen, lend me your ears . . .', but the rest of you lay off and do *not* borrow my sense apparatus –

BION – or mind; it may know too much. 'Vulgar Errors', or, as an old farm-hand said to his employer, 'To tell you the ghastly truth, Mister. . . .'

ROLAND How can you make these matters clear to the sufferer in his anxiety state or insanity?

P.A. Or his unconquerable self-satisfaction; or equally unconquerable rectitude –

PRIEST – or scientific training, or mathematical flair.

BION Great is the Truth and shall prevail – when none cares if it prevail or not.

MORIARTY My old friend Iago said to me as I went over the Reichenbach Falls, 'Don't worry – Sherlock Holmes will be sure to recover when Conan Doyle discovers on what side his bread is buttered'. 'But, Iago my friend, don't you realize our frightful predicament? We are due to be dashed in pieces on these frightful rocks at any moment. Indeed, I think we are overdue at the bottom now.' Don't worry. Falstaff is still alive, but where are all the Figments of Imagination who used to strut around patting themselves on their Reality? Careful now, how you dash yourself to pieces on those rocks of reality. There! Well done – you could hardly have done better if you were the Devil himself.

13

PRIEST Really, this is hopeless. I wanted to have a serious talk about right and wrong, and we are interrupted by these rowdy street urchins.

BION I remember those terrible, never-ending half-hours called 'Search the Scriptures'.

MORIARTY You were a very naughty little boy, forever thinking about trash like Sherlock Holmes instead of the . . . er . . . er . . . ranks of . . .

BION I know – 'prowl and prowl around'. We used to sing it 'ppp'. Terribly exciting! And *then* 'fff', 'Christians up and smite them'. I loved that bit. Was it Midian or Gideon? I forget.

MORIARTY There! Didn't I tell you? You should have learnt your scripture.

BION What *did* happen at the Reichenbach Falls?

MORIARTY I got dashed to bits, but we were all reunited again and went to Heaven.

BION How awful!

MORIARTY Yes. For a few aeons I was in reserve as a Solar Myth.

SEXTON Myth Whybrow.

MORIARTY No, you fool. You were her Favourite; don't you remember?

SEXTON Oh yes. I died of appendicitis, didn't I?

BION Yes; perfectly simple case.

PRIEST I suppose you disguised it as a Figment of Imagination.

MORIARTY 'Scientists' always do. Anyone with any sense knows that Figments of Imagination are the hereditary Rulers of Intellectual Life. Everything starts as a figment of imagination; it is the intellectual counterpart of what biologists call the germ plasm, or what

Bion chooses to call a phenomene. We figments of imagination are *not* dependent on sexual reproduction. People ought to take the advice, 'Shut up! Give your arse a chance'. But do they? No! They go to see a doctor who is only interested in his training and not in a body – which will probably tell him something he doesn't want to hear. It is worse still with a split or fragmented mind – and the rocks that cause all the trouble.

ALICE From what I have heard, the complacency and ignorance of psychoanalysts makes it difficult for them to take any adequate steps to perfect either themselves or psychoanalysis.

P.A. A danger lies in the belief that psychoanalysis is a novel approach to a newly discovered danger. If psychoanalysts had an overall view of the history of the human spirit, they would appreciate the length of that history of murder, failure, envy and deceit.

MORIARTY I at least, like my master the Devil, advocate civility and kindness and a decent evening dress. What is the big novelty about rudeness and dirt and hair all over the body?

P.A. You practise so well what you preach that you almost seduce me – I nearly said 'persuade' me – but in reality nothing is so simple that it can be disposed of as if it were a matter of personal cleanliness. Honesty can be regarded as devoting oneself to speaking the truth. But we have to depend on our senses to keep us correctly informed and to teach our children the truth – assuming that they want to know it. Although Moriarty is a figment of the imagination –

MORIARTY So is your god.

P.A. I haven't one. I am not opposed to the idea, but nor do I favour it – I am impartial.

MORIARTY I was about to congratulate you on your impartiality when you took the words out of my mouth.

ALICE Sarcastic fool – devil, I mean.

MORIARTY Do you? Or are you just meaning to be rude? What did she mean, P.A.?

P.A. I think she is afraid of being fascinated by you. *I* was, and I bet Bion was too during his 'Search the Scriptures'; so was Conan Doyle.

ALICE Conan Doyle was only a writer and Moriarty a figment of his imagination.

P.A. Exactly; but you are afraid that if Moriarty fascinated you, you might become a writer of detective fiction; or even influence a

baby inside you to 'get born' so that it might be a criminal who fascinated you – indeed *the* criminal that fascinated you.

ROBIN Is that what Bion means by phenomenes?

BION I think it convenient to have such a term. This episode to which you refer could be an example; if Alice was fascinated by a well-behaved, civil crook, that idea could be propagated and influence the growth or development of the 'character' inside her.

ROLAND You are being very fanciful!

BION Fancy? Or fact? Just fancy, if there was something about ideas which might make them 'generative'! The transmission of ideas may not follow the biological laws of sex, or the Mendelian laws of inheritance. Alice may fear – to resort to biological analogy and metaphor – the movement of a 'phenomene' in her mind. When an 'idea' is created, there is, in addition to the actual creation, a series of reactions to the created idea.

PRIEST Gerard Manley Hopkins strove to express an awareness both of a sense of being ideationally or artistically pregnant, and of the reaction, the counter-actions, to that activity. He believed this applied whatever role he played. He might identify himself with the poet that he himself was, or with the priest who hated and feared the fetus, or the poet who feared the priestly fetus. He seemed to be well aware of murderous envy which is born when the envied idea or person is born. Where? Who knows? The only certain thing is, *somewhere.*

P.A. You talk about envy in a way that I would expect to hear from one of my colleagues – or even from one of your colleagues predicting the birth of the Messiah. I do not restrict these expectations of a messiah or of envy and hatred to any profession. I am familiar with expectations, even announcements, of the existence of a saviour. Sometimes it is a military saviour; sometimes a scientist who is going to make the world safe for mental defectives of one kind or another. Heaven will presumably then consist of boobies and a number of angel nurses who will save the boobies from liquidation.

MORIARTY That Great and Good Man Adolph Hitler has not been assessed at his true value.

ALICE You are a swine. I don't like saying so, and hitherto I have been saved the necessity by the fact that you are a figment of the imagination.

P.A. I think you may in future have to have a great deal of respect for figments of imagination and take them seriously. I could draw up

a considerable list of Saviours of the Nation; for example, Hindenburg, Sir John French, Henry V.

ALICE But surely some of them were good men? Or do you want to suggest that none was?

P.A. I understand your unease. Mine is perhaps even greater because I am convinced that all the men and women I have ever known have some good in them. Conversely, probably all had some bad. Let me say at once that I am aware of the utter banality of that conclusion, but that this is one reason why I do not wish to regard it as a *conclusion.* I am sometimes consoled by the possibility that the goodness, the capacity for love and concern for our fellows, may be a greater force than hate.

ROLAND Possibly. But don't you think it pathetic that when Science and its brood of astronomers leads unmistakably to the discovery of our insignificance in contrast with these gigantic forces – novae, super novae, black holes and the rest – someone is sure to apply a mental first-aid dressing and hurl us back into the downy comfort of ignorance. Doesn't that depress you?

P.A. No. Down serves the fledgling; mental down preserves us, however praise- or blameworthy we may be. The fact that the blackness and absolute cold lie beyond the charming blue of a summer sky does not make the blue less lovely to me. The vast incomprehensibility of the Absolute surrounding me is not so biting as a tooth-ache. I have not begun to cope with the fear of tooth-ache, whereas God and Devil do not even make my flesh creep.

MORIARTY Splendid! Splendid! Allow me to congratulate you on your perspicacity and courage. *Carpe diem* say I. A good ghoulish murder is worth all the rest of Priest's high-falutin' nonsense – as any reader of the more sensational parts of a newspaper knows. Even Priest knows better than to cut all the spicier bits of the Bible from Sunday reading. 'Search the Scriptures' indeed! Why *not?* Instead of that, you humbugs search the quotations! No wonder life – real life – doesn't seem worth living. You priests and doctors, and now psychoanalysts, would have made some pretty vile sadistic monsters if you had not been so afraid of your imaginations and the figments to which they would have given birth.

PRIEST Do you suppose we don't know that?

P.A. We advocate knowledge of what we are really like – in so far as we can. But we do not thereby close the options. On the contrary;

the options that are there, whether we like them or not, remain open. The patient, who may not have had the knowledge, cannot be regarded as making a truly moral judgement – as he can if he re-views his opportunities when more mature. We do not even know what our nature – bodily, mental, spiritual – is capable of doing. We can hardly, therefore, regard ourselves as responsible in any true sense.

ROBIN Real human beings are usually so difficult to believe in, that we have to be introduced to them gently by the medium of the figments of imaginative genius.

P.A. Even so, we do not want to be reminded of our selves.

PRIEST We may want to remind *others* of something they would rather forget; they fear they might not be able to survive the shock of the reminder. Hell is feared – by some.

P.A. I know people who do not need to be told that the kingdom of Hell is within them.

ROLAND If they do not need to be told, what do you psychoanalysts tell them?

P.A. What *they* tell *me* may remind me of something relevant to what they are saying which is not clear to them.

ALICE Suppose, while I am pregnant, I have some disturbing news. Would this affect the fetus?

P.A. It would surprise me if it did not. I do not restrict 'news' to information conveyed to the mother by relatives or books or newspapers. Suppose you had been brought up in ignorance of the physical facts of sex either by the folly of your authorities, or through your unwillingness to learn; then you became aware of being pregnant. The information, from the fetus or your body, might be unwelcome 'bad news'. The waves of pressure communicated through the amniotic fluid would form a different pattern from those usual in a mother pregnant with a fetus she wanted from a man by whom she wanted it. The fact that there is no demonstrable communication between mother and fetus as clear as that between mother and baby is not an adequate reason for asserting that there isn't one. I expect unbelievers to state the 'facts' on which their 'unbelief rests.

ROLAND The facts on which *my* unbelief rests are the multitudinous and multiform theories of psychoanalysis itself. I do not become more confident in a doctor's ability the greater the number of theories he expresses about a pain in my thumb. I prefer him to hold his tongue until he is able to tell me precisely what to do about it. When

a psychoanalyst produces more and more erudite explanations about why I believe or think as I do the more impatient I feel.

P.A. Then go to another psychoanalyst or doctor. I do not believe that you or Alice are asking me questions for nothing; why you are asking these questions is no business of mine – though I may have my suspicions.

ALICE Would you tell me what to do?

P.A. If I thought there was anything you could do – in the sense that you mean it – I would advise you to go to someone who *does* things. Experience has taught me that there are many things which need to have something *done* about them; they first need to be discussed. The fact that the British believe in *parliamentary* government is evidence that this has at least been unconsciously recognized. It is absurd to condemn those who believe that 'discussion' is a way of doing things; 'talk' is not a substitute for action.

ROBIN But you don't think it is disastrous when action, say, war, is required and people prefer to talk in the hope that the problem will go away or be solved if they talk long enough?

P.A. Yes, but it is just as serious if people, rather than face the pains and frustrations of talk, fall back on murder or war as a substitute for discussion, Similarly, the individual may feel that drugs or self-murder are preferable to the tedious discipline of analysis; they are seductively shorter.

ROLAND It is sometimes seductively less painful to talk than to undergo a physical operation.

P.A. Seductive possibilities, concealed in the wide range of options available, will ultimately compel the growth of a capacity for discrimination – or catastrophe.

ROBIN Why catastrophe?

P.A. Because unless the human animal learns to become expert in discrimination, he will be in imminent danger of the *wrong* choice.

ALICE Nuclear war, for example.

P.A. There are no labels attached to most options; there is no substitute for the growth of wisdom. Wisdom or oblivion – take your choice. From that warfare there is no release.

A I see you turn to the last page as you always used to do.

Q Of course. Last time you told me how much it had cost you to publish. Did you find it interesting? How was America – North and South?

A Marvellous; a nice change from the Third Battle of Wipers.

Q Lots more since then. And more to come – which reminds me; I must rush; I have a date to meet Fate.

A Bye-bye – happy holocaust!

. . . & EPILOGUE
. . . FUGUE
. . . DONA ES REQUIEM
. . . MANY

All my life I have been imprisoned, frustrated, dogged by common-sense, reason, memories, desires and – greatest bug-bear of all – understanding and being understood. This is an attempt to express my rebellion, to say 'Good-bye' to all that. It is my wish, I now realize doomed to failure, to write a book unspoiled by any tincture of common-sense, reason, etc. (see above). So although I would write, 'Abandon Hope all ye who expect to find any facts – scientific, aesthetic or religious – in this book', I cannot claim to have succeeded. All these will, I fear, be seen to have left their traces, vestiges, ghosts hidden within these words; even sanity, like 'cheerfulness', will creep in. However successful my attempt, there would always be the risk that the book 'became' acceptable, respectable, honoured and unread. 'Why write then?' you may ask. To prevent someone who KNOWS from filling the empty space – but I fear I am being 'reasonable', that great Ape. Wishing you all a Happy Lunacy and a Relativistic Fission. . . .

A KEY TO A MEMOIR OF THE FUTURE

1981

A Memoir of the Future was first published by Karnac Books, London, in 1991. It consisted of revised and corrected versions of three previously published books – *The Dream*, *The Past Presented*, and *The Dawn of Oblivion* – together with *A Key to A Memoir of the Future* (1981).

A Key to A Memoir of the Future, compiled by W. R. Bion and Francesca Bion, was first published by Clunie Press, Strath Tay, in 1981. A revised and corrected version was published in *A Memoir of the Future* by Karnac Books, London, in 1991.

INTRODUCTION

Bion was reluctant to supply readers of *A Memoir of the Future* with information they could (or perhaps should) discover for themselves. However, as Editor of the single-volume 1991 edition, I took advantage of the opportunity to add to the *Key*. The *Complete Works* project now provides the last chance to add a few additional entries.

Francesca Bion
2011

Chapter numbers are preceded by a roman numeral indicating Book One (I), Book Two (II), and Book Three (III).

A Key to
A Memoir of the Future

AVE . . .

F *Are you there?*

W *You have woke me too soon, I must –*

F *Oh, do get a move on – we shall never finish this index at this rate – three pages an hour! It's endless –*

W *It's very hard work – and whenever am I going to get any writing done?*

F *This is writing – and a necessary part of the trilogy.*

W *I hate having to examine my own vomit.*

F *All right – let me know when you have a free hour and the inclination –*

W *I never have. Let's get on with it –*

F *I can arrange my schedule to suit you –*

W *For Christ's sake let's get the ruddy thing done now!*

F *It's no good trying to do it if you are in a bad temper. I shall do some gardening.*

A

Abominable Snowman creature conjectured to exist in the high Himalayas. II.1
'about' formulation of the 'thing itself contrasted with formulation 'about' the 'thing itself'. I.19
about *see* discussion centred on *Myself* discriminating between 'talking *about* psychoanalysis' and psychoanalysis. I.42
Absalom lament for, OLD TESTAMENT, SAMUEL XVIII.33. I.17; III.4
absolute *colour*, zero, pitch, space. I.8
Absolute Space and Absolute Time. Laws of chemistry and physics as understood at present are probably not applicable owing to limitations of the mind. II.1
Absolute Truth a usage borrowed from 'absolute value' in mathematics. The word is enclosed between two parallel lines to indicate the total span of meaning, e.g. |fight| to indicate all directions of violent movement, and in this respect not differing from |flight|. II.1
abstinence sexual and alcoholic, debated as an aspiration. II.19
abstract term discussed. I.43
thought. I.8
abstractions meaningless, related to dreams and reality. I.15
'accidental' features – discussion of. I.38
accusers real or imaginary, and supposed defences against them. I.19
Achilles *Homer*, ILIAD. I.34
sulking. I.17, I.34
acquisition of ideas, contrasted with theft. II.18
Acton, Lord on the foundations of civilized society. II.18
act, aggressive The verbal description of an act depends for its accuracy on the context in which it is used. A doctor can describe the behaviour of a patient (adult or child) as aggressive, but he does so from a particular vertex. To what extent can this be considered to

be a correct description from the vertex of the patient, child, fetus? The problem is the same as that implicit in the idea that a person who is wide awake knows of his state of mind when asleep. II.3

acts without an agent, compared to thoughts without a thinker. I.36

Adler, Irene real or fictitious. I.31; II.19

admission of ignorance, an essential ability of the aspirant to scientific accuracy. II.18

adrenals What at a later stage in development can be described and felt as fear and aggression, 'fighting' and 'running away', are closely related to pharmacological reactions in the developing embryo. This statement cannot be supported as yet by what I call 'scientific fact'; I only claim for it that it is a 'rational conjecture'. At some stage of post-natal development the personality will display strikingly powerful emotions and symptoms, as for example continuous crying of such a degree that the parents cannot tolerate it. When the patient is old enough, he will express the pressure of the intense feelings of which he is aware as a fear of going mad. Such expressions arouse, in the parents and doctors responsible for the care, reactions which are premature, inappropriate and liable to 'blind' all intuition. In waking life this can emerge as the panic which afflicts even disciplined troops and their leaders in war [*see* **panic, thalamus, theorizing**]. I.42

'adsum' conventional reply when a roll is called to detect if there are any absentees; an English public (i.e. private) school custom. II.19

adulation as a method of silencing the generator of unwelcome trains of thought. II.1

Aeneas hero of the ILIAD. I.13

Aesthetic as universal linguistic. II.1, II.2

aesthetic mathematical formulation as analogue of poetic creation. II.1

Agamemnon and religion. II.9

husband of *Clytemnestra;* murdered by his wife. II.11

see Horace, ODE TO LOLLIUS. I.11, I.13; II.3, II.19

Aguecheek, Sir Andrew *Shakespeare,* TWELFTH NIGHT. III.5

Alcuin A.D. 735–804. Letter to Charlemagne. A.D. 800. II.2.

Alcuin of York, nicknamed Albinus. An English scholar, ecclesiastic, poet and teacher from York, Northumbria. He became the student of Archbishop Ecgbert at York.

Alexander SPACE, TIME, DEITY: THE GIFFORD LECTURES, GLASGOW 1916–1918. I.38; III.9

algebraic deductive systems. I.28

geometry, and development of projective geometry. III.14

Alice 'a fabulous monster', ALICE IN WONDERLAND. I.Pro
and bad night. I.Pro
and *Lewis Carroll*. II.7
and *Rosemary,* symbols of master and mistress; cf. arbitrium. I.15
dreams of imperial honour and maid *Rosemary.* I.1
wealthy background. I.3
wish to help *Rosemary.* I.2
alimentary canal bad night and dream. I.Pro
and telescopic view. I.Pro
alimentary canals brains like. III.3
ali-metric word invented to describe hunger as making the passage of time explicit. II.14
Allah Akbar [*see* **God, Godhead**]. I.38
all-alone [*see* **dependent**]. II.16
All change! call used on British railways to warn passengers that they have arrived at a railway junction where it is necessary to mount another train. II.19
all-conquering Implicit in the idea, expressed by *Rosemary* referring to the chocolate bar which has intimidated the rest of the group, is the psychological experience of the all-conquering dominance of sight vis-á-vis the other senses. I.39
Allen war reminiscence; dream or breakthrough of imperfectly verbalized feelings. I.12
All-mighty omnipotence as mental archaism still active. I.9
α ref. *Bion,* THE GRID. I.13
α **and** β [*see also* **'trick'**]. I.39
Alpha a communicable shorthand for something which is not, and is not like, but is becoming [*see* **Beta**]. I.14
Alps as minor preparation for Himalayas. II.1
All Souls an Oxford college founded as a memorial to British dead in the battle of Agincourt in 1415. I.27
'All's right with the world' state of optimism described by *Browning* in PIPPA PASSES; also as a sarcastic comment on the optimism of German philosophy by *Voltaire* through *Pangloss* in CANDIDE. II.1
All toes pun linking dancing with singing (altos). II.19
Amiens-Roye road road running in the direction of the advance of the First French and Fourth British Armies on 8 August 1918. II.2
amplifier mechanical means used to magnify a sound which might otherwise be unnoticed; used metaphorically. I.43
anachronism The ordinary calendar or other measure of time is good enough for conversation but not adequate for psychoanalysis. I.34

anal eroticism seems to cover an activity which is pre-verbal. There is gynaecological evidence for the evacuation of meconium by the fetus. It provokes the possibility that evacuation could be one of the earliest active functions of the physical body. This being so, it may be the counterpart of a primordial 'thinking'. This primitive activity is one which *Melanie Klein* emphasizes, and this matches my own experience. Evacuation could thus be indistinguishable from 'blotting out', i.e. making opaque, an area of the mind. I.40

analogue link between two objects which are usually specified. Here the emphasis is on the link and not on the two objects to which it is 'moored'. I.44

analogy as link between two objects, not the objects. I.16; II.2

anarchs ref. *Shelley,* HELLAS. I.34; II.1

Anatole France quotation from LA REINE PEDAUQUE. II.4

angels common to many religions. Is it a pointer to a basic reality, or a cover for 'nothingness'? I.26

angry Anger is one of the emotions that is so obtrusive that it can be given a recognizable name in any individual life. Its detection can often be used to arouse guilt in the angry person. II.20

angstrom units used in measurement of light waves. I.34

animate contrasted with *inanimate* for which there is no adequate definition. I.30

answers popular journal of that name typical of the facile search for substitutes for truth. II.1

anus as analogical link. I.16

anxiety Herodic, and infanticide. I.10

apart from (#) mathematical sign. I.41, I.42

Apparition spoken of by *Rosemary* as personified in poetry and fiction. II.17

apparitions and hallucinations, claimed to have a health-preservative function if acknowledged by the person who experiences them. II.17

Arab Lady described by *Yeats* as lying with *Solomon.* II.2

archetype term used by *Jung.* II.19

AREOPAGITICA *Milton,* SPEECH FOR LIBERTY OF UNLICENSED PRINTING. III.9

arf childhood version of 'Our Father . . .', THE LORD'S PRAYER. I.11, I.12, I.13, I.16

Aristarchus thinker who contributed to train of thought that led to modern astronomy [*see* **Palomar** and **Jodrell Bank**]. II.3, II.19
his helicocentric hypotheses used as models of the mind. I.30

aristocrat In fact the murderer was an ordinary businessman who had never been known to depart from respectability. The assault he

made could not be described in terms of 'human conduct'; it is typical of an accredited fact which would not be believed if reported in a work of fiction. II.10

Aristotle and a practical world. III.3

Arjuna criticizes, and criticized by, God. I.17
quoted by BHAGAVAD GITA. I.16, I.34; II.20
presumption of [*see* **uncertainty principle**]. I.43

arrogance expressed by music or anatomical posture. I.17

arsenic poison discredited in use for murder because of its capacity for preserving the evidence of the crime. II.14

arse 'oles One school caused a Protestant hymn to be unusable by pronouncing 'Our souls' in an irreligious manner. I.15; II.19

artefacts used in the sense of facts whose source, origin and creator is a human mind. It could be debated whether it is equally applicable to animals other than human. II.2

articulate articulated language contrasted with hieroglyphic. I.43

'articulate' communication dominant method of, between the self and the self. I.43

articulation as a method of putting words together to construct an 'architectonic'; this is analogous to the use of materials in architecture to construct a building. I.38

artificial Analysis is artificial, but is an attempt to approach a basic reality. II.9

artisan as 'respect-worthy'. I.30

artist differentiated from scientific detection. I.20

artistic Whether a scientist, a painter, or a composer, the person to whom this book is addressed is assumed to be driven by an urge to the truth. One cannot conceive of a drive to untruth as being separable from what is evil. II.7

art nouveau Art has never been new, although the current method of communication conforms to changing fashions. The thing itself – painting, sculpture, mathematics etc. – is unchanging even though its method of communication changes. II.9.

'As without sound or struggle . . .' lines from 'The Return of the Guards' by Sir Francis Hastings C. Doyle. III.8
The lines would have held a powerful resonance for Bion from his service in World War I [*Ed.*]:
These were not stirred by anger,
Nor yet by lust made bold; Renown they thought above them,
Nor did they look for gold. To them their leader's signal
Was as the voice of God: Unmoved, and uncomplaining,
The path it showed they trod.

As, without sound or struggle,
The stars unhurrying march, Where Allah's finger guides them,
Through yonder purple arch, These Franks, sublimely silent,
Without a quickened breath, Went in the strength of duty
Straight to their goal of death.

asses a reference to *Omar Khayyam,* RUBAIYAT: 'The wild ass stamps o'er his head', *Fitzgerald* translation. I.Pro

asthma relationship to personality. I.22

astronomers their discoveries are unlikely at present to cause panic. Any scientific work is liable to be resented if it exposes human beings to dread. II.5

Athanasian Creed exact, elaborate Catholic statement of the Trinity and the Incarnation, no longer believed to be by Saint Athanasius. I.39

athletic dominance an early form of dominance fairly easily established in the rivalry of games [*see* **pits**]. II.1

Attlee, Clement British prime minister succeeding *Winston Churchill* after World War II. II.1

audiences *P.A.* draws attention to the fact that a communication is dependent on there being a receptor. II.11

auditory apparatus comprehensive term used to describe everything from auditory pits to ears and their accompanying sensory extension, and finally to mechanical aids, including radio. I.26

August 8 August 1918, Battle of Amiens, described by *Ludendorff* as 'a black day for the German Army'. It was delivered by the Fourth British and the First French Armies and supported by the British Fifth Tank Battalion. I.33

Augustine, Saint and Rome. I.20
used the equipment of religion to separate good from evil. I.17

Augustus the Caesar who reigned during *Virgil's* lifetime. II.11

Auschwitz cleansing showers of. I.14

Auser young officer killed on 11 August 1918 in the Battle of Amiens. II.19

austere conditions of philosophical thinking and part of the discipline of psychoanalysis. II.1

authority conferred by power. II.12

autismological a punning word of the kind described by *Lewis Carroll* as 'portmanteau'. II.19

autistic wisdom. II.19

automatic weapon as an instrument for the expression of new female subservience. II.19

auto-mobile implying a machine and an independent person. II.1

awe and facts. III.8
awe-ful to be distinguished from 'awful'. II.18
Aztec as name of a religion. II.5

B

baa-ram reference to *Bahram,* 'That Great Hunter'; *see Omar Khayyam,* RUBAIYAT, *Fitzgerald* translation. I.11
Babel confusion. I.8
confusion of, used as an expression of divine hostility to thinking man's ambitions. I.34
Bach, J. S. THE WELL-TEMPERED CLAVIER. I.8
and *Mozart* and *Beethoven;* chance of actual throwing together of notes or lines and other pictorial representations, without the existence of a mental midwife [as *Socrates* described himself]. II.3
musical score and patterns of sound. I.19
Bacon, Francis brilliant thinker who was also an artist in words. Quotation from his essays. II.1
bad job Bion's last paper, 'Making the Best of a Bad Job' (1979). W. R. Bion to the British Psycho-Analytical Society, March 1979. (First published in *Bulletin of the British Psycho-Analytical Soc*iety, 1979. Also published in *Clinical Seminars and Four Papers*, Oxford: Fleetwood Press, 1987.) III.8
bad temper provoked with reason; *see Freud's* reaction to *Adler* and *Jung,* ON THE HISTORY OF THE PSYCHO-ANALYTIC MOVEMENT, 1914d, p. 62. I.29
BHAGAVAD GITA [*see* ***Arjuna*** and ***Krishna***]. I.31
bait, mental an invitation to 'swallow' a fact without the labour of discrimination. II.3
Balaam OLD TESTAMENT, NUMBERS, *Micah;* NEW TESTAMENT, *Peter, Jude, Revelation.* I.26
bandersnatch *Lewis Carroll,* THROUGH THE LOOKING GLASS. II.1
baptism term used to signify a happening in a manner similar to 'interpretation' and 'diagnosis'. II.1
barbarism past civilizations described as barbarous. *Priest* demurs. II.11
basic and fundamental. Both these terms should be used with respect so that their real value is restored. Example of 'talking about' fundamentals in psychoanalysis. II.2
bastard gross or biological use. I.10
term of abuse used by *Alice* and *Rosemary.* II.19
battering physical or mental, dream or real. I.6

beam '. . . or of th' Eternal co-eternal beam . . .', *Milton,* PARADISE LOST, BOOK III. I.8
beamish boy *Lewis Carroll,* THROUGH THE LOOKING GLASS. I.9
beautiful clothes used to communicate beauty. *Roland* interprets it as a sign of self love. R.16
separation from ugly. I.17
Beauty athletic and aesthetic, as an outlet for frustrated energy. II.1
'Beauty is truth, truth beauty', *Keats,* ODE ON A GRECIAN URN. II.12
beauty function of, in aiding formulation. I.28
of the verse, quoted as conferring longevity on the artist's product. II.15
reputed, signified by *Helen* of Troy. Also equated by *Keats* with Truth. I.42
sometimes claimed to give penetrating power to human achievements that are 'blunt'. II.14
stimulates and initiates 'fire' analogous to inflammation. I.17
beco- an illustration of what the French call 'enjambement'. What is the effect of writing 'become' as beco-me? I.23
Beerbohm, Max his representation of the Devil as wearing morning dress. III.4
being the understanding of the relationship between 'being' and 'understanding'. I.38
belief ambiguous word; does not differentiate a state of mind from the object observed or believed. II.9
religious intensity of THE ILIAD and THE ODYSSEY. II.3
state of mind; its relation to the object of belief. II.7
state of mind operative when evidence is not available; related to probability, a generator of action. I.37, I.38; II.7
Belloc, Hilaire and Church. I.9
belly-ache [*see* **body-ache** and **blush**]. II.1
bend round the; slang expression for becoming insane. II.19
benevolent sea, disguised as the Mediterranean to screen malevolence. I.13
Berkeley a bishop of brilliant scientific intuition who made destructive play of *Newton's* OPTICKS. I.20, I.40; II.9, II.19
Berles-aux-Bois village two miles behind the front line from which tanks moved to entrain for the Battle of Amiens. II.19
Beta a communicable shorthand for patterns supposedly established in the soma and identical with geno-types of ideas and feelings. I.14
teeth and somatic 'thought'. I.14
beta-element as a convenient method of referring to something which may exist; not a thought, but that might become what thinkers

would describe as a thought, e.g. if a dog comes when it is called. II.3

Bible source of dirty stories. I.15

Big Bang the epitome of a violent solution. I.29
temptation to release. III.9

'big bang' borrowed from astronomical theory, indicating the origin of the universe. II.19

bigotry *Anatole France* on. II.1
and 'bigotry generators': their prevalence in all forms of humans and their expressions of formulations. II.1
[*see* **dogmatism**]. I.41
spiritual, in place of tolerance. III.3

bilge filth collecting in the bottom of a ship; popularly used to express contempt. II.1

binocular metaphorical model for two or more emotions. I.13

biological creator and its relationship to the creator of morals. II.2

Bion talking about psychoanalysis. I.19

bio± symbolizing a spectrum of reality. I.7

Birchanger reminiscence of a bluebell wood associated with the miseries flowing from patriotism. II.4

birth usually considered to mark the commencement (not death); nevertheless death is also supposed in religion to initiate a new life [*see also* **death**]. II.19

bitch pejorative and sacred. I.14

blackguards and scientists [*see* ***Santayana***]. I.20

black hole possibly combined in a binary system which appears as if an eclipsing variable. II.2
term borrowed from astronomy; astronomers' discovery of 'spaces' where the forces of 'physics', 'chemistry', etc., as we understand them, do not apply. II.1

blackmail a threat, usually for the purpose of exacting gain. The context is an example of *Robin* exposing experience to *Rosemary.* I.15

Blake, William preface to MILTON; set to music and usually referred to as 'Jerusalem'. I.34

blame attribution of, by different disciplines. II.19

Blandish reference to a book by *James Hadley Chase,* NO ORCHIDS FOR MISS BLANDISH, published in 1938. I.27

blindness Christian hymn describes the 'heathen' as blind. An English boys' school at Blackheath, with strong religious connections, was known by rival schools as 'The Heathen'. A rival school cricket team once defeated 'The Heathen' through the skill of two boys called Wood and Stone. I.26

blinkers used to indicate that 'love' can be used to hide any frightening spectacle. II.19

blood handwashers as a class of characters. I.27
noises; when does the fetus first hear its blood? I.13
of the lamb. II.12

bloody by Our Lady. I.11; III.6
line borrowed from *G. B. Shaw,* PYGMALION. II.6

blue colours are often described as if permanently associated with feelings. They require attention. II.18

blush 'Her pure and eloquent blood spoke in her cheeks . . .', *John Donne,* THE SECOND ANNIVERSARY; his description of a physical re-action suggesting that the body itself might think cannot be bettered. Similarly, 'unscientific' traces can be discerned in the survival of terms like 'rhinencephalon'. These 'survivals' should be regarded with respect by psychoanalysts concerned with patients who are sensitive about their noses and their watery productions. Even physiologically there are traces in the 'extra-cellular fluid' unpolluted by salt and other chemicals, as are the oceans. Only psychoanalytic observation is likely to unveil the relationship between post-natal and pre-natal mentation. II.1
representing the physiological source of what at a later stage could be expressed verbally; ref. *Gray*, ELEGY WRITTEN IN A COUNTRY CHURCHYARD. II.4

blushing invisible yet intolerable [*see* **self-murder, suicide**]. I.11

body-ache [*see* **blush**]. II.1

books as the repository of metal activity that is irrelevant to the present and the future. II.19

bomb atomic. I.14, I.23

bored This word is often used for a feeling which is unmistakable, but which is nevertheless difficult to analyse. The emotion itself is ambiguous and complex. Like 'love', it is often facetiously or carelessly used, but the analyst cannot afford to ignore the reality which transcends both words. I.42

borogroves *Lewis Carroll,* THROUGH THE LOOKING GLASS. II.14

boundary physical, used as anatomy of metal boundaries. I.17
bounds physical boundaries, to be distinguished from mental. II.18

brain convolutions of. I.30
damage and genesis in war. I.21

brains like alimentary canals. III.3

brain washing fashions in nomenclature. III.8

Braughing House social significance contrasted with brutal helplessness. I.6

brave supposed to have a basis in reality; frequently emphasized by honours and decorations intended to give substance and reality to what otherwise might pass unnoticed – if it exists. I.32

bravery cover for cowardice. I.14

Bray, Vicar of well-known English song about a character notorious for changes of opinion according to self interest. II.12

break-down Words borrowed from special direction are often combined and liable to lose their significance in combination. Sometimes it is a matter of importance to distinguish what the contrasting 'direction' is. II.18

breast as analogy. I.16

brilliance Illumination, particularly emotional, is often regarded as too great for human sight. II.2

Britannia alleged to rule the waves at the time of the supposed supremacy of the British navy. II.19

Broglie, Louis Victor de French physicist, inventor of wave mechanics. I.38

Brouwer his initiation of a type of mathematical thought not unlike *Gödel's* discussion of the excluded middle. II.2

Browne, Sir Thomas PSEUDODOXIA EPIDEMICA: OR ENQUIRIES INTO VULGAR AND COMMON ERRORS. II.2

URN BURIAL. II.2

Browning, Robert thoughts similar to *Kant's.* I.18

quotation from poem HEROES; attributed to *Browning,* but not confirmed. I.26

bullet claimed by *Moriarty* to effect the change from social superiority to inferiority, and vice versa. II.16

bump *Milton* describes Satan's flight into an horrific vacuity known to modern airmen as an 'air pocket', PARADISE LOST, BOOK II. II.2

Bunyan, John PILGRIM'S PROGRESS. I.9; III.4

THE HOLY WAR. II.3

Valiant-for-Truth, departure at the end of pilgrim's progress, part ii. I.30

Vanity-Fair, described in pilgrim's progress. II.4

bush burning. I.8

but word used to discomfit participant in a verbal intercourse. I.32

C

caesura between natal and pre-natal, and between conscious and unconscious. III.11

two aspects of, separation and connection. II.2; III.6
used as a screen on which can be projected the explicit/implicit. I.35
Cain name used to brand a quality of mind. I.17
Calcutta Cup a Rugby Union trophy awarded to the winner of the annual Six Nations Championship match between England and Scotland. III.8
Campbell, Roy English poet, 1901–1957. II.14
Cambrai 20 November 1917; a battle in which tanks were used to effect a surprise on the German army. The surprise was so successful that the British, like the Germans, almost failed to recover. I.32
canals of Mars. I.41
cancer an example of unwillingness to make discoveries. I.22
cannibal and blackguard, used anachronistically. I.34
and mental cannibalism. I.35
cannibalism and blood drinking; ritualistic, imaginary or factual? I.27
primordial, self-devouring. I.26
capacity development of awareness. I.22
Cap'n 'art tha sleepin' there below?' *Newbolt,* DRAKES'S DRUM. Compare *Palinurus.* I.9, I.21
Carnarvon, Lord and *Howard Carter;* their combined efforts led to the discovery of the tomb of Tutankhamun. II.10
Carroll, Lewis Not only is there a devaluation and debasement of words which could still have a useful value, but this could also apply to entertaining and valuable stories such as ALICE IN WONDERLAND. They can suffer by being regarded as children's books hardly worthy of adult attention until they reach a point where they become the victims of 'psychoanalytic' interpretation. The vogue for prestigious, scientific erudition can undermine the original value without adding any illumination whatsoever. II.7
carte blanche used as a metaphor for freedom of thought. II.4
Cartesian co-ordinates as a means of liberating the implicit. II.1, II.2
used for the point of intersection of a line with a circle [*see* **conjugate complex**]. II.1
Cassandra *Rosemary* identified with. II.18
castration [*see* **rivalry, success**]. I.37
cat related to tiger. I.21
cause 'because' frequently a prelude to introducing a 'cause' or explanation or theory prematurely as an evasion of the need for thought. II.1
cautious problem of whether caution is prudent or timid. II.14
cave man shadows man. I.10
parable of. I.10

Cawdor one of the titles of *Macbeth.* II.19

Celestial Light In *Milton's* account of his journey introducing BOOK III, PARADISE LOST, he describes his discovery that he awakes to find he is blind; he proposes to resort to 'insight' since 'sight' is no longer possible. II.2

celibate celibacy is often quoted as necessary to religious leadership and also to modern Confucianism. II.19

cemetery cannibal, literal, not metaphorical. I.29

centuries *Priest* is maintaining that belief in God is not a vogue, but is related to a reality that is not dependent on human thought. II.11

certainty and uncertainty. The claims to definitive knowledge often made, and supported by its pleasurable nature, are regarded as superior to the 'uncertainty' of analyst or scientist who makes no such claim. II.12

and uncertainty; opposite poles of the same feeling. III.8

Chamberlain, Neville British prime minister at Munich crisis, 1938. I.24

change as a fact that initiates mental growth. II.11

from good to bad, beautiful to whore. I.28

problem of the origin of its initiation. II.14

chap guy (U.S.). II.19

character discrimination of real from fictitious. I.28

Charcot quoted by *Freud*. III.5, III.11

Charisma messianic colouration. II.2

related to hysterical manifestations. II.1

charisma and its use with implication of messianic expectations. II.2

Charity discussed as a formulation of love. II.1

chattering *Roland* describes his teeth as 'chattering' with fear years after the war. II.4

cheat psychoanalysis as a method of expanding the capacity for self/deception. I.35

cheats and lies; 'scientific' system of. I.7

cheeks a blush without a cheek analogous to a thought without a thinker. II.4

Cheshire Cat appearance and disappearance. I.7

grinning like. I.14

reality and imagination pictorialized. I.27

child pregnant. I.5

childbirth infant and maternal mortality closely associated with birth. Both birth and death are impressive and are reflected in mental reactions to them. I.32

childless *Alice.* I.5

children brain-, and the responsibility for their use. I.27
chocolate danger of misinterpretation stressed. II.11
sarcastic reference to the power of sweet food, deception and a force transcending the word overtly expressed. II.7
chocolate bar as representing a reality used for bluffing purposes. II.11
used by *Man* to take the place of a handgun in his holster. I.39, I.43
choice requires knowledge of alternatives. III.10
chortled *Lewis Carroll,* ALICE IN WONDERLAND. '"O frabjous day! Calooh! Callay!" He chortled in his joy.' I.9
Christ divine powers attributed to *Jesus* (ref. also *Jove* in *Milton's* LYCIDAS). I.30
Christian Scientists and Christian Philosophers considered. II.18
chromosome the characters to which Mendelian inheritance is supposed to conform. II.2
Church as a physical embodiment of religion; its tenets wrongly supposed to be uniform through all religions. II.16
Christian and modern contrasted. II.19
cigar *Sherlock Holmes* and his monograph on cigar ash. I.42
circle and diameter. I.8
related to section. I.28
CITY OF GOD by *Saint Augustine.* I.20
clarification replaced at once by further 'unknowns'. I.42
clarity [*see* **poles**]. I.19
class distinction wiped out by war. I.6
claw bird's; discussion of the range of psychoanalytic concern. II.12
claws hetero-hate expressed by psychoanalysing a woman's use of aids to beauty. I.19
clear enough This ambiguous phrase may conceal the blindness of the patient to 'material' which is not visible. II.2
clitoris envy of. I.10
clothing Discarded ideas can be re-assumed without growth or improvement. II.18
cloud-capp'd Towers THE TEMPEST, Act IV scene 1. III.9
Clytemnestra wife of *Agamemnon,* mother of Orestes, *Electra* and *Iphigenia.* II.11
CNS as anatomical structure possibly capable of a high degree of awareness. II.19
its relationship to the peripheral nervous system (PNS) debated. I.36
the use to which this sign is being put is discussed. I.38
cockatrice a fabulous reptile; used here to depict a frightening animal of the world explored by the adventurer in 'unconscious states of mind'. II.2

cold-blooded discussion of the exercise of power which contrasts with psychoanalytic respect for the individual personality. II.13
watching. The exercise of such power is differentiated from insensibility to the act. II.13
collar *Priest* would certainly know the derivation of that part of priestly uniform. His sarcasm frightens *Roland* and *Robin;* it reveals that a priest is not restricted to feelings of love any more than a girl is. II.8
colour blind Colours are often spoken of in the course of analysis; their mention deserves attention because of their linkage with primitive descriptions of character. II.19
Coma Berenices the constellation of. II.15
common sense The phrase usually refers to a distillate of the speaker's experience. Careless or vulgar use has eroded its functional value and therefore, like all the language the psychoanalyst uses, has to be used *always* with a value which is constant until the patient realizes that the term is not a slovenly formulation. 'Seeing' appears to be so impressive that it dominates all other senses. Even with the aid of powerful astronomical telescopes the meaning of what is seen depends on interpretation. I.41
prototype in the fetus. III.11
'real' contrasted with cosmetic. III.9
substitutes for. III.11
communication, verbal ambiguity disguised. III.5
compassion woman to woman. I.6
computer as machine for scanning medical material. I.28, I.42
auxiliary to the senses but, like them, requiring interpretation. I.30
Conan Doyle and spiritualism. I.20, I.39
creator of *Sherlock Holmes.* I.24
concept as a pit in which thought is buried. I.8
[*see* **Kant**]. I.8, I.18
concepts empty [*see* **Kant**]. II.1
conclusion as starting point of further problems. II.3
concrescence a growing or coming together, as in a pun or other form of compact statement [*see* **Sterne**]. I.14
concubine term used by *Rosemary* to express contempt for a person used for sexual purposes. II.15
conditions for psychoanalysis. There is a certain *necessary* minimum condition; also a certain minimum; necessity also is part of the 'necessary' condition. All three are involved in assessing work on a psychoanalytic task. These factors are rarely considered, although they are apposite in any human activity. II.9

configuration mental, compared with patterns made visible by X-rays. I.20, I.21
confusion appearance of, produced by starting what is in fact linear or conical not at the beginning. I.41
of tongues. I.8
relation to destruction. I.26
[*see* **poles**]. I.19
congratulations an expression of the idea of married love as a reason for congratulation. II.19
conic section and operation of an inner eye. III.11
conjecture a state of mind that invites accretion. If the conjunction of ideas develops positively in the analytic experience, the conjecture can become a probability. Whether the analyst formulates an interpretation and communicates it to the recipient depends on his assessment of both his potential statement and the ability of the analysand to receive it. II.3
conjugate complex borrowed from algebraic projective geometry. I.43
contrasted with what you can touch (tangents). I.14, I.28
two points contrasting with 'real and distinct' and 'real and coincident'. II.1
conjunction constant conjunction/conjunction that is conjoined; difficulties arising from that. I.35, I.42
conquest woman as object of. I.31
conscious in the sense of 'aware of. II.6
conscious, the as an extension of the concept of mind. I.16
consciously dreams are reported and discussed when the patient is awake. II.18
consciousness as a receptor. I.21
consideration equated with contemplation. II.18
'considering' the time taken to 'consider' is often exploited by those who do not wish to do so and 'know the answers'. II.1
constancy *Priest* is maintaining that belief in God is not a vogue but is related to a reality that is not dependent on human thought. II.11
constant conjunction [*see* **integration**]. I.43
constant conjunctions and facts. II.1
[*see* **'constructions'**]. II.1
constants borrowed from algebra to describe qualities as 'visible' from a particular vertex. I.30
'construction' contrasted with 'interpretation' by *Freud.* I.29
'constructions' as meaningful conglomerations. II.1
used in the description of mental constructs. I.20
contained (♂) as analogy. I.16

container (♀) and content; destructive relationship. I.8
as analogy. I.16
container–contained (♀ ♂). Term used to discuss aspects of mental growth. I.34
contemporaneity Awareness can be of something that increases the burden of the present. I.24
contempt for master and mistress; a version of husband and wife, father and mother. I.3
P.A. expresses anger. Some theorists appear to consider that it is possible or desirable for an analyst to avoid showing emotion. II.8
[*see* **Mister Toad**]. I.43
contest a pictorial description given of what in the individual amounts to a confrontation of opposing ideas, thoughts or feelings. I.38
context its relevance to meaning. I.16
contours of the mind, likened to map reading. III.7
conversation destruction of. I.26
converse as a method of intercourse contrasting with other, and more primitive, methods. II.3
convolutions of the brain. I.30
co-operative Dead objects can be made c. I.29
co-ordinates Cartesian, initiated algebraic geometry. I.21, I.28
of growth. I.17
Copernicus astronomical theories of, like those of *Galileo* and *Descartes*, unacceptable to authority. II.19
corpse-stenching sense of smell associated with heightened visual and auditory observation in direct contact with the enemy. II.4
cosine a pictorial formulation dependent on triangles. II.1
cough inability to, by the soldier whose thoracic wall had been blown off. The verbal reaction of the officer is an example of terror which is not dealt with by superficial military training. II.6
council (counsel) darken; reference to the BOOK OF JOB. II.19
Count with Cox; socially acceptable cover for the gross meaning. I.14
counter-transference by definition unconscious. III.8
couple, psychoanalytic fact and feeling. III.9
covens assemblies of witches. I.27
cowherd analogous to shepherd. II.18
Cowper, William quotation from OLNEY HYMNS. II.5
Cox [*see* **Count**]. I.14
Crab nebula. II.1; III.9
nebula, as a sign of a still existing stellar explosion. I.43
cravings masochistic, as an instance of a force that can dominate. II.7
crazy one of those words in common use which help to make a

psychoanalyst's life a burden. They sound like a verbal communication, but are often not much more than a vocal noise requiring interpretation. In this respect they share the fate of what once were used as psychoanalytic technical terms. II.7

cricket a game sometimes played with fanatical devotion. *P.A.* suggests that the devotion corresponds to *Freud's* theory of the power of unconscious ideas. II.11

Croce, Benedetto author of a book on Aesthetic which he proposed as a universal linguistic. II.1, II.2

'cruel looking-glass' *Rudyard Kipling*, THE LOOKING GLASS. *Kipling's* poems used to discuss the power of cosmetic beauty. II.1, II.9

cruelty deliberate. I.6
divine, as a component of religion. I.17
an early form of love. III.8

cul, le French vulgar for 'anus'. III.8

cunt gross word, related to international speech in contrast with anatomical usage. I.16

Cup Final the final of a knock-out competition between rival professional football teams [*see* **Wembley**]. I.26, I.27

cure as a hope for unceasing or permanent pleasure. I.36
'cures' likened to litter. I.22
word borrowed by psychoanalysts from physicians to make their activities comprehensible. III.9

curiosity and authoritative indifference. I.5
aroused but not surfeited. III.9
disposed of by sleep [cf. **Palinurus**]. I.8
insatiable; a reminiscence of *Kipling's* THE ELEPHANT'S CHILD. II.19
its part in transforming thought into action – e.g. Eve and the Tree of Knowledge, God and the Tower of Babel. I.38
related to waiting. I.9

'Curst be he that moves my bones' *Shakespeare's* epitaph, chosen by himself for his tomb at Stratford-on-Avon. II.10

D

dancing a more sophisticated capacity to verbalize would call it 'fetal dance movements within the womb'. II.19

dandelions sexual and vegetative reproduction. II.17

Dante and direct experience of the mortal being. II.19

daring and stupidity. III.8

darkness not to be considered negatively as an absence of light, but as a function of light. I.39

dawn The reference is to a popular theory about sleep. It is also supposed to be the time when the individual passing from a state of sleep to a state of wakefulness is assailed by irrational and frightening thoughts and feelings. II.10

'day of his coming'; dies illa, dies irae. II.14, II.19

daylight associated with safety. Darkness is regarded as safer if 'heavenly'. I.13

dead quite; cf. the religious view of the life after death. II.16
Roland presumed to have suffered physiological death. II.16
unconscious equated with somatic pattern. I.14
used to describe a language no longer in everyday use. II.19

deafening The threshold of sound varies enormously according to the individual. In psychoanalysis the analysand may talk in such a way that the analyst's interpretations appear to be lost. Therefore the analyst needs to adhere to the volume of sound which he is able to maintain during his day's work; engagement in a shouting match does not help. II.19

death and freedom. I.8
as the price which may be paid for decisions made by men or women. I.38
assumed and threatened. I.3
like birth, always exciting comment. II.19
quoted for its prominent role in the minds of the living. II.15

death pit Cadavers ultimately provide a record for archaeologists to interpret scientifically. I.27
of Ur. I.8; II.8

debris remnants of ideas acquired that are no longer of service. II.19

decapitation as an example of violent separation. This is similar to the splitting involved in 'evacuation' of projective identification; it is also related to *Freud's* and *Breuer's* tentative trial of catharsis. II.2

decay warmth generated by, as a condition for breeding. III.8

deception and lying. I.10

decision involves choosing and inhibiting. III.9

defeat as a release. I.16

definition inseparable from denial. I.20

definitory hypothesis relationship of the basic reality underlying the concern of psychoanalysis and the verbal formulations required to represent these realities. A person can be named 'Robin'; this is a convenient summary that does not require emphasis; but the real

person, the character, does not conform to that verbal summary – the proper name. I.38

to be constructed as a base for an 'architectonic' of the psychoanalytic mind. I.30

definitory hypothesis and constancy or variation. I.43

deity compared with *Mycroft* and *Falstaff.* II.19

delay intolerance of, because it is indistinguishable from frustration; its bearing on impulsive behaviour. I.36

Delderfield, Rose buried in a churchyard at Tring, England; otherwise unknown. II.2

Delilah the woman who seduced *Samson* from his devotion to God. II.1

Delphi origin of oracular statements which made itself redundant – like all progress. I.14

deluded The state of being deluded is regarded as preferable to an awareness of futility. II.4

democratic society Assuming that it is one in which the authority lies in the hands of the populace, do its origins differ from those of a theocratic society? The point is discussed by *Paul, Roland* and *P.A.* II.2

Democritus of Abdera atomic theories of. I.30

department *P.A.*'s disavowal of concern with unspecified areas of thought. II.12

dependent Dependence and being all-alone are both *unpleasant* states of mind. Even an infant seems to be aware of being alone *and* being dependent on the assistance of something which is not its Self. The early awareness of these feelings is linked with vulnerability and cruelty. The coming together of these manifestations suggests the presence of a basic characteristic. The problem of the analyst is to intuit the date of the quality he is observing. II.16

Depressive Position and turbulence. I.11

Desargues his geometrical theorem. I.39; III.3, III.6, III.11

Descartes and the implication of 'cogito ergo sum' for the foundation of psychoanalysis. I.37

inventor of Cartesian co-ordinates; associated with other 'markers' of mental progress. I.13

Desire misleading force of. II.19

desires and memories, interpretations and sensuous impressions. It is easier to restrict this concept to the anatomical and physiological view of the information communicated by the irritation of the nervous system. There is a problem; we do not know what a sensitive being is capable of – a woman can be aware of the reactions of her fetus to music. Presumably, therefore, the fetus is sufficiently

developed to be aware of sound. This involves questions of how soon the auditory pits become functional. Such developments lie outside the scope of the analyst who is communicating with a fully-aware 'being' when he himself is fully aware. It will be seen that the problem now impinges on states of mind such as that of the person who is asleep. II.9

despair *Priest* uses the words of Jesus to express it. II.11

destruction and its relation to confusion. I.26

detonated a dream version of supposedly ineffective but nonetheless dangerous psychoanalysis. I.23

development mathematical, similar to and inseparable from character development. I.20

the distinction made from decay as the negative pole of development. II.5

Devil obverse of God. I.10

The contrast of two forces, good and evil, has been derived from Arabian and Greek sources. II.14

devil evocative expletive. I.9

diagnosis an interpretation which has to be made, usually of physical signs [*see* **headache**]. I.18

diameter vast. I.8

Diana equated with Bahram; and baa-lamb equated with stupidity. I.16

die 'I don't want to d.'; a song popular amongst troops of World War I. II.19

'Dies illa, dies irae' from SEQUENCE FOR THE DEAD, poem by *Thomas of Celano.* [c. 1200–c. 1265] II.14

diet nourishment required for the mind. I.27

dietetics mental. III.9

'Dieu me pardonnera' the response said to have been made when the confessor spoke to the dying penitent. II.2

digestive tract terms from, used for models of the nervous system. I.20

dip used in the sense of a short swim contrasted with preoccupation with cosmic time. II.5

direction lack of a frame of reference for purposes of discussion. I.21

mental, spoken of without a mental 'compass'. I.13

often used in, or implicit in, psychoanalytic statements as if there were already an established system of co-ordinates. Psychoanalytic discussion is often carried on without recognition of the presupposition that a basic system of co-ordinates exists. There is no objection to this, any more than one would object to algebraic projective

geometry being implicit in Euclidean geometry. Our problem is how this implicit co-ordinate system is to be made explicit as a foundation for further progress. I.38
the need for vectors as a way of making it clear that a 'cause' is regarded as originating the origin of stimulation. II.19; III.8
the sense of progress towards the decay of our capacities acting as an unconscious orientation. III.8
disagreements and discontent, misinterpreted. III.9
discipline years of, as a prelude to real fun. It is more true to say that real fun is a prelude to the establishment of discipline. II.9
its imposition by authority discussed. II.18
discovery relationship to many particulars. I.21
discretion problem of preserving privacy. I.24
discrimination universe associated with. I.8
dishonesty the honesty of psychoanalysis doubted. I.24
'Divine afflatus' spectrum of meaning [*see* **'flatus'**]. I.26
DNA molecule, discovery of, and construction of dopamine receptors in certain areas of the brain, is liable to obscure the need for the human being to achieve disciplined thought. In fact the more clear it is, as in 'psychoses' and other disturbances, that there is a physical defect, the more – not less – necessary it is that the remaining part of the mind should be adequately used. II.1; II.18.
molecules supposedly affected by cosmic explosion. III.9
D.N.A. used to introduce further discussion. II.15
Dodo an extinct bird to which reference is made by *Lewis Carroll* in ALICE IN WONDERLAND. I.26
dog, barking, that doesn't bark. Reference to *Sherlock Holmes* story, SILVER BLAZE. I.26
dogma popular use of the term deprecated. II.19
religious and psychoanalytic. II.3
used as a pejorative comment on a scientific statement. II.19
dogmatism [*see* **certitude**]. I.41
'doing something' Confusion is created by the failure to distinguish between thought that is a prelude to action, and thought used as a substitute for action. This leads to an inability to distinguish between someone who is only 'talking' and somebody who is 'saying something'. This distinction is of vital importance in psychoanalysis. II.3
'dome of many-coloured glass' quotation from *Shelley*, ADONAIS. III.4
Doom crack of; legend scrawled on the side of one of the powerful

units used by the Royal Heavy Artillery of the British in World War I. II.6

Dormouse character in ALICE IN WONDERLAND. II.7

double bass a reference to the musical instrument alleged to be used for marking the commencement of a musical phrase. II.19

'double dark' appears to be *Gerard Manley Hopkins'* view of darkness as doubly 'thick'. It is taken up by *Freud's* metaphorical description of investigation of the unsolved problems of the mind. II.19

doubt as used by *Descartes* but not itself 'doubted', i.e. scrutinized. I.43

dovecote sarcastic reference to psychoanalytic institutes. II.18

down mental, as preservative. III.13

'do yer' a catch phrase made popular in the 1930s through a BBC series, 'ITMA' (It's That Man Again). I.26

'Do you remember an inn, Miranda?' quotation from *Hilaire Belloc*, 'Tarantella'. III.3

dragon the sowing of its teeth that sprang up as soldiers. II.6

dread boredom displaced by. I.3

attempt to ward off, is inherent. I.17

dream 'a queer dream' always requires particular attention. In what way is an ordinary dream distinguished? II.18

psychoanalytic use of, in contrast with hallucination. I.20

stimulated by a discussion. II.3

The term, used by *Freud* when he made his revolutionary attempt to investigate the human personality scientifically, refers to a happening which occurs when the person is described, physiologically, as 'asleep'. I have been more and more impressed by the fact that the state of mind which a person is talking about when asleep is used in a state of mind which is very different from that when he says, or thinks, he is awake. This may appear obvious, but I find it useful to treat 'happenings' as being as real when the dreamer is in that state of mind as the 'happenings' which are experienced by the person who is, supposedly, awake and has 'all his wits about him'. The transition from one state to the other is often confused. Conversely, some mentally disturbed people are said, psychiatrically, to be 'confused'. In psychoanalysis it is necessary to be aware when the popular phrase is being used to describe a pathological state. II.1

What is a dream? What does the dreamer think of the events experienced in what appears to the observer to be 'sleep'? Conversely, what does he think of the events he experiences when, to the observer, he is wide awake? I.36

dreamer a den in which conscious visual images are buried. I.8
compared to drunkard; the inefficient state of mind turned to good account. II.3
dreams facts of. I.8
mutilated. I.8
persistence of war experience in. I.17
psychotic. I.21
Shakespeare, HAMLET, quoted. I.22
violent, and fears of insanity. II.12
dreams, sweet often used as a greeting, but described, in a waking state, when referring to an experience when asleep which may have been anything but pleasant. II.1
drug to stupefy. I.8
drunk *Moriarty,* the personification of evil, shows his strict adherence to disciplined morality. II.14
Dryden ref. THE POWER OF MUSIQUE or AN ODE IN HONOUR OF ST CECILIA'S DAY. III.3
D.S.O. Distinguished Service Order. British army decoration, confined since 1916 to combat gallantry. II.19
Du a formulation of an imaginative conjecture. On this and subsequent pages it represents the germ of an idea striving to escape from the confines of *Roland's* mind. II.4
Duncan character in *Shakespeare's* MACBETH. II.19
dust galactic, thought to obscure the galactic centre from earth inhabitants. II.2
Duty Sense of, *Priest's* reply to 'sense or non-sense'? II.4
dwarfs white, likened to compact objects in mental space. I.8

E

eclogue a pastoral poem. *P.A.* refers to *Virgil's* Fourth, and discussion follows. II.11
Edmund representing an astronomical vertex. II.1
Edmund Halley (Halley was an English astronomer and mathematician and was the first to calculate the orbit of the comet which later was named after him).
education educated love indistinguishable from shop-soiled. I.8
Egyptians and animal containers; reference to the deification of the cat. III.2
ejaculation an ambiguous word biologically often referring to sudden evacuation of anything from 'sensuous phenomena' to the function

of disruption of a train of thought. The source of such intrusion is likened to destroying a painting. I.40

elaboration of instruments to reveal facts. I.22

electron microscope, and radio telescope as instruments to aid observation. I.30

elements constant conjunction of. I.21

Elephantine caves, on the island of Elephanta near Bombay, in which various aspects of Siva are depicted by carvings from solid rock. III.9

Ellis, Havelock contributed to the knowledge of *Krafft-Ebing's* PSYCHOPATHIA SEXUALIS and of *Freud* who was scarcely known in England before 1918. II.10

Elizabeth of Bohemia the transience of fame typified when applied to beautiful women. II.2

Elohistic code conflict between two streams of thought [*see* **Priestly code**]. II.1

embryonic sense related to non-sensuous thought. I.11

Empire empery founded on violence. I.38

emotions pre-natal, displayed by patients in analysis. III.12

Emerson as a philosopher. II.18

end used as if it were a sense organ. I.24

English inadequate for psychoanalysis. I.24

P.A. is referring to conversational English and the belief of psychoanalysis that words used have many 'over-' and 'under-' meanings. II.14

English Farm the name of a minute area in the mud of the battlefield of Ypres. II.19

English, plain a phrase easily used about a communication difficult to make. II.15

English, simple literate difficult for the psychoanalyst to achieve for the purposes of psychoanalytic practice. II.1

Enthusiasm discussed by *Father Ronald Knox* in his book of that title. II.3

entrancing This term is used by *Rosemary* sarcastically. The reader will have to decide for himself what he thinks about the topic being discussed supposedly by *Rosemary.* II.7

environmental factors Included in these the psychoanalyst has to remember the power of 'vogue'. It is useful to make a distinction between vogue and transient fashion. II.15

ephemeral The life span of the human being is of insignificant duration when contrasted with a background of astronomical reality. II.1, II.2

Equivocator gatekeeper's soliloquy in *Shakespeare's* MACBETH. II.19
Erasmus and a cultural prison wall. III.5
ergot a growth on rye which can burrow into human flesh. II.2
erect punning use of. I.14
'espaces infinis' *Pascal,* PENSÉES. This is a striking description of the fear of silence which can often be seen in psychoanalytic practice; it is shown by the dislike of pauses for thought. I.13; II.1; III.8
eternity 'Life, like a dome of many-coloured glass, Stains the white radiance of eternity', *Shelley,* ADONAIS. I.11, I.19; III.4
Eton and Harrow; two famous English boys' schools often singled out as targets for envy, hatred and abuse. The human members of these institutions make them vulnerable. I.25
Euclid his geometry of pictorial vision. I.21
Riemann and *Lobachevsky*. I.11, I.14
Euclidean dependence on visual imagery which is itself tainted by the dominance of the sense of sight. This can also imperil the possibility of 'insight'. II.2
geometry, an implicit formulation, to become explicit later. II.1
Eve primordial mother. I.17
everlasting life often carrying the connotation that life exists after death. II.2
evidence concept of, has to be borrowed to describe mental facts. It is possible that the only phenomenon which could be described as a 'fact' is what an analysand says he feels. II.19
It is difficult to see how any human being can claim that the evidence of his senses is validated. II.14
negative. II.19
title conferred on facts that the individual wishes to entertain authoritatively. II.2
exaggeration analogous to a mental microscope. III.10
examination medical. I.6
excluded middle Every choice involves what is not chosen. The statement, 'A thing cannot both be and not be', excludes the possibility of something that can both be and not be, e.g. a condition which is neither inanimate nor animate. Such logical and dogmatic formulation can be no more than a symptom of man's inability to think. II.2, II.19
exist The impulse to exist is postulated even as an urge to which the individual is a 'slave'. It provokes rebellion against its dominance. Such a rebellion finds extreme expression in selfmurder. II.2
expanding universe [*see* **Big Bang**]. II.19

exploded a verbal formulation of the violent response initiated by an idea. II.1

explosion *Man's* minimizing reference to the colossal explosion considered by astronomers to be visually witnessed when a nova appears. e.g. The Crab Nebula in the year 1054. II.19

explosive *Man* refers to the incident in Book I, ch. 7, but is discussing the 'explosive' nature of ideas and feelings. II.11

exo-skeletons ideas like. III.3

extinction possible, of psychoanalysis. I.20

'exuvias indutus Achilli' a reference to the qualities of *Achilles* before he was killed by *Hector;* ref. Virgil, AENEID, BOOK II. II.14

'Eyes that have seen colossal storms and terraqueous convulsions' a reference to Thomas Hardy's TESS OF THE D'URBERVILLES, ch. 43: '. . . gaunt spectral creatures with tragical eyes – eyes which had witnessed scenes of cataclysmal horror in inaccessible polar regions of a magnitude such as no human being had ever conceived, in curdling temperatures that no man could endure; which had beheld the crash of icebergs and the slide of snow-hills by the shooting light of the Aurora; been half blinded by the whirl of colossal storms and terraqueous distortions.' III.9

F

façade *Alice* is making a hostile criticism by emphasizing the fact that psychoanalysts can easily develop an 'occupational neurosis' which consists in developing their technical knowledge until it becomes a cover for their practical sensitivity, or lack of it. II.7

facts and answers. II.1

and artefacts, such as the thoughts, ideas and words which are formulated by men. II.2

and constant conjunctions. The question is always subsumed as if already answered in psychoanalytic practice. The problem has worried, and still worries, the searcher for truth in all disciplines and at all times as to whether human beings can ever know that something they 'think' is matched by a corresponding reality. II.1, II.2

discussion related to the problem of human ability to distinguish the real. II.7

In so far as facts are real events, independent of the human mind, they do not obey the rules propounded by human beings to which human beings can attempt to adhere. I.38

problem facing an attempt to make psychoanalysis scientific in view of what physicists would regard as a fact [*see* **evidence**]. II.19

fact, scientific is vulnerable in so far as it is a human idea of what constitutes reality, and liable to be destroyed by the supposedly more ineffective myth [*see* **conjecture**]. II.1

'faint at last' quotation from *Walter Landor,* IMAGINARY CONVERSATIONS, AESOP AND RHODOPE. II.1

faint a minimization of psychotic intensity. I.21

faithful institutionalized 'fidelity'. I.14

fall in borrowed from the army order to parade for subsequent manoeuvres. II.19

falsehood and truth. I.16

Falstaff as an artefact compared with reality. I.Pro

Shakespeare, HENRY IV. II.10

family whether literal or metaphoric, discussed. II.14

fancies supposed to be set free in sleep. II.19

Farrar *Dean Farrar* wrote ERIC, OR LITTLE BY LITTLE, a depressing, moral story for children. I.14

farts and gerks. I.Pro

fas referring to mottos of regiments of the British Army. II.4

fascination *Rosemary* typifying impelling sexual quality. I.21

fashions in nomenclature. III.8

Priest is implicitly referring to an English popular song, THE VICAR OF BRAY. II.11

fashions, power and patriotic wear. III.8

fata [*see* **fas**]. In conversation the fates are often spoken of as 'luck'. II.4

Father Figure technical psychoanalytic term used as a means of pointing to a fact in evidence in psychoanalytic practice; often misused as the 'thing itself' and not a pointer to the thing. II.3; III.6, III.10

fault The basic feeling of guilt, known to some religions as 'original sin', is shown as a characteristic which can be used in the warfare between the sexes; discussed by *Rosemary.* II.16

fear and cowardice. III.9

and 'murder'. I.7

of making a discovery which may be unpleasant. I.22

[*see* **worship**]. I.9

feast, marriage [*see* **Poverty** . . .]. II.15

feeble verbal inadequacy to represent a reality. Sometimes a psychotic patient deliberately masks what is powerful by calling it 'feeble'. II.16

feelings the stimulation of one component by the other when separated by a caesura, e.g. constant/conjunction. I.35

fees related to services. II.9
feet as early and primitive control of the body and the mind. II.19
object of attention. I.41
the athlete can use them better than some people can use their hands. II.9
♀ container; and symbol for 'female'. I.41
fetishistic related to religious ritual and sexual objects. II.5
fetus communication between mother and. III.13
highly equipped. III.10, III.12
precocious development of. III.12
pre-natal existence. III.10, III.12
tries to rid itself of feelings and sensations. III.12
two or more senses in common, prototype of the experience later known as 'common sense'. III.11
When does thinking start? II.3
[*See* ***Piontelli, Alessandra***]
fiaow onomatopoeic name given to a curious and blood-curdling cry of the wild jackal; the effect produced described. I.29
fibrillation punning reference to 'tribulation' [*see* **Holy Boast**]. II.19
fictitious characters, contrasted with characters supposedly real. I.20, I.28
construction; value and danger of, debated by *Bion* and *Man.* I.37
fiction use of, for purposes of illumination or deception. I.43
uses of, related to chivalry, treachery etc. I.42
fidelity drab. I.5
wealthy. I.5
fiend *Macbeth's* cry of despairing hostility is used to portray a denizen of the 'state of mind' from which *Milton* describes himself as escaping in his introduction to BOOK III, PARADISE LOST. II.1, II.15
fiery red reference to the poem, VIRTUE, by *George Herbert.* I.8
Fifth Army British, destroyed in World War I. II.5
figment of the imagination intellectual counterpart of germ plasm or phenomena. III.16
Moriarty. III.16
figments of the imagination further discussed. II.24, II.33, II.34, II.35; III.12, III.13
figments of imaginative genius as an introduction to real human beings. III.13
figure, idealized In mathematics an attempt to draw a square must be recognized as an idealized representation. Like any picture, it makes available to a sense of sight the existence of something real which transcends it. *Priest* also attempts to make others aware of

a force that passes notice but which he considers to exist. Astronomers, likewise, refer to forces which they believe to exist and for which they hope to find evidence. II.9

firmament PSALM 19 quoted. II.5

First Cause as a constant, and then diverted to constancy. II.19

'flannelle couvre toi de', *Daudet*, TARTARIN DE TARASCON. III.8

flattening photographic representation regarded as. It is also an effect produced by the satisfaction of curiosity. I.24

'flatus' as a vehicle by which one mind communicates with another; from Divine to devilish. I.26

focal point and its relationship to the caesura in which its presence becomes plain. I.35

folie-à-deux religious. III.12

two characters exciting psychiatric attention [*see* **Soma** and **Psyche**]. III.13

forebears mental, if known, would be illuminating. II.15

force and possession. I.39

formulation methods of, chosen as means of communication. II.7

'Forsan et haec (olim) meminisse juvabit' 'Maybe one day we shall be glad to remember even these things', Virgil, AENEID, BOOK II. III.7

fossils, old vulgar expression used as a model for a real 'state of mind'. I.34

foundling hospital institution for receiving and caring for children abandoned by their parents. I.15

'Frail as summer flowers . . .' popular school hymn sung softly by the girls, bawled by the boys. I.15

framework need for a structuring of human thought including art, religion, science. I.16

France, Anatole on bigotry. II.1, II.14, II.18

Frankenstein associated with monsters of the imagination contrasted with ugliness thought to be real. II.14

free association and realization. I.43

free associations and facts obscured. III.8

Freudian. I.8

freedom, perfect death. I.8

French, Sir John Field Marshal John Denton Pinkstone French, 1st Earl of Ypres (1852–1925). He was a British and Anglo-Irish officer who distinguished himself commanding British cavalry during the Second Boer War and then served as the first Commander-in-Chief of the British Expeditionary Force (BEF) in World War I. III.13

Freud, S. as 'midwife'. II.3

'constructions'. II.1

definition of 'conscious'. I.21
description of a 'paramnesia'. III.9
his view that psychoanalysis should be conducted in an atmosphere of deprivation. III.9
infant sexuality. I.Pro
letter to *Lou Andreas-Salomé* quoted. I.9
psychoanalytic explanation of religion. III.10
sexual theories decried. II.19; III.9
statements used by, 'precisely' and in a 'particular' context, becoming incomprehensible because of the growth stimulated by his own contributions to human thought. I.43
theory of anal eroticism. I.40
theory of consciousness, requiring extension. I.26
theories of, even if inadequate, are nevertheless valuable for containing, implicitly, the expression of formulation required, now and in the future, for making them explicit. I.37
transference. II.2
'trauma of birth'. III.11
two methods of mental functioning. II.3

Freudian and Kleinian. These terms are often used as if it were possible to split psychoanalysis. The division is useful for purposes of articulate speech, but it serves to obscure the thing that transcends grammatical boundaries. II.15

froth-blowers term for drinkers of beer. The 'anthem' is a song associated with jovial gatherings. II.19

fuck supposed, inaccurately, to be what is 'done' by one sex to the other, not an activity which is dependent on both partners. II.7

fucking the word and the act a nuisance. I.10

fugitive, false 'Back to thy punishment . . .', Milton, PARADISE LOST, BOOK II. I.21

funny a judgement of an event which stimulates horror. I.22
cruel fun to be discriminated; primitive sado-masochistic likewise. I.14

furniture as the contents of a dream. I.8

'fust in us unused' *Shakespeare,* HAMLET. III.10

futility pun on 'fertility'. II.14

'future' at hand; the past unknown, the present observed. I.4

Future casts its shadow before. I.25
in which to bury postponements. I.14

G

galactic centre invisible from Earth, but supposedly brilliant, as is the case with the centre of M31 and other spiral nebulae. II.2

galactic nebulae supposedly analogous to objects thrown together like the fall of dice. II.3

galaxy its centre hidden from us. II.1

Galileo need to conform to society. I.9

Gallowglass [*gallóglaigh* (pl.), *gallóglach* (sing)]. Old Irish for 'warrior' and 'foreigner'. (See novel of this name [1990] by *Ruth Rendell*, under name '*Barbara Vine*'). II.6

games including the 'psychoanalytic' game as a prelude to disciplined thinking. I.37

gap like a paramnesia, intended to fill the space before violence. I.29

garden serpent's entry into. I.8

Gates an officer who took part in the landing of the Lancashire Fusiliers at the Dardanelles; he was recommended for the Victoria Cross but could not face the prospect of further battle. II.19

'generator' a person or thing fostering an implicit development of thought which becomes explicit, possibly centuries later. II.1

genius need to develop sensitiveness to its presence. I.26

warning of the charismatic distortion of the word. Every analyst has to restore its meaning by constantly repeated use without varying the 'meaning' which he wishes to convey. II.2

geocentric time typical of ego-centric concern with |time| [*see* **Absolute Truth**]. II.1

geometry Euclidean and visual images. I.14; II.1

geophysical term borrowed from and therefore reminiscent of, past use in order to express a future yet undetermined. II.3

get up an expression used in reference to athletic activity, a function of the limbic nuclei. This and similar phrases must be recognized as signs that a particular state of mind in the analysand is being activated. II.4

ghastly expression [*see* **Cheshire Cat** and **grin**]. I.14

ghosts supposed visible evidence of absent persons. I.20

'ghosts' *Berkeley's* attack on *Newton* for his 'ghosts' of increments may assume a new meaning when used to describe the 'objects' evacuated (in phantasy) by the infant. I.40; II.4, II.19

Gibbon *The Duke of Gloucester* quoted in *Best*'s LITERARY MEMORIALS. III.7

Gilbert and *Sullivan:* H.M.S. PINAFORE quoted. II.1

THE GONDOLIERS; rhythmic imitation of 'That celebrated, cultivated, underrated nobleman, The Duke of Plaza Toro'. III.3

girl and man, on 'holiday'. I.36
'gist' used by *P.A.* as a word to summarize 'impressions'. II.11
glass darkly. THE FIRST EPISTLE OF PAUL TO THE CORINTHIANS. I.8
glittering prizes a phrase used by *Lord Birkenhead (F. E. Smith)* to describe seductive bait. II.3
'glories of our blood and state . . .', *James Shirley,* THE CONTENTION OF AJAX AND ULYSSES. II.19
glory of God PSALM 19. II.1, II.10
God and Satan. I.8
as expletive. I.11
belief in a cruel G. and masochistic adoration. I.17
communication of human being with. II.3
concept considered as an idée mère. II.4
cruel sense of humour. I.27
devouring cruelty. III.8
dreadful, screened by analogy with 'Decent Chap'. II.5
existence of, debated. III.10
figment of the imagination. III.19
flight from. II.1
fountain of compassion. III.8
His interest in religion questioned. II.2
human belief that human sacrifice acceptable to. III.8
incarnate; belief in the doctrine of, to include also Devil incarnate; *P.A.* discusses. II.8
in distinction from Godhead, debated. II.9
invoked in popular speech by *Alice* to aid in the prevention of further discussion which might lead to learning. This God is pictorialized in the story of the expulsion of Adam and Eve from Paradise. It seems to be similar to the God depicted in the narrative of Babel. I.42
'And God laughed' a reference to 'Ducks', by F. W. Harvey. ('All God's jokes are good – even the practical ones! / And as for the duck, I think God must have smiled a bit / Seeing those bright eyes blink on the day He fashioned it. / And he's probably laughing still at the sound that came out of its bill!). II.2
'. . . name of, in vain', THIRD COMMANDMENT. I.11
not obsessed with religion. I.26
'(the), of love my Shepherd is', Christian hymn. II.10
related to truth, and truth related to God. I.35
vestiges of, in past, present or future. I.29
word often technically used, as is 'Father Figure', to save thinking. II.9
'God' the god that is worshipped depends partly on the individual and partly on the cultural context. II.3, II.11

Godhead origin of what is known more precisely as 'God'. I.16; II.12, II.14
'Godhead' word useful as less abstract than 'Ultimate Reality'. I.43
Godlike dependent on the function endowed with omnipotence. I.8
gods false, contrasted with God. II.12
gold as a basis of value ignorantly believed to be independent of the artisan. I.30
golden boys and girls, *Shakespeare,* CYMBELINE. III.2
Gomer concubine of the prophet *Hosea.* II.18
good girl rewarded by the prospect of jollity. II.19
goodness The attempt to focus on the goodness of God contributes to blindness to the qualities of the world in which we live. II.9
good report sarcastic reference to a school aspiration. II.10
googly cricket term describing a particularly deceptive spin imparted to the ball by the bowler. II.19
grammar system of rules. I.20
Great is the Truth originally, 'For great is truth and shall prevail', *Thomas Brooks,* THE CROWN AND GLORY OF CHRISTIANITY. III.12
greed mental. III.9
greedy *soul* [*see* **glittering prizes**]. II.3
Greeks used to represent the educational model. I.17
Green, André his book, UN OEIL EN TROP. III.9
perspicuous nature of the dramatic art form pointed out. III.9
Griffiths, D. W. producer of spectacular films. I.23
grin [*see* **Cheshire Cat**]. I.14
gross words cunt and prick. I.16
discussed. III.6, III.7
guilty response to. III.7
language of the id. III.7
primitive reserves of vitality tapped. III.7
universally comprehended. III.6, III.7
group as a vertex from which observations can be made similar to a 'macroscopic' examination. This is contrasted with psychoanalysis of the 'individual' which, in its detail, resembles a 'microscopic' scrutiny. I.38
term borrowed from mathematics. The implications of the problem seen from a mathematical vertex have been described by *Ignacio Matte Blanco* in THE UNCONSCIOUS AS INFINITE SETS. That exploration can be so difficult as to be forbidding; it is evocative and rewarding. The difficulty is not different from that confronting anyone who embarks on the discipline of a psychoanalysis [*see* **set theory**]. I.42

group analysis and psychoanalysis; possible relationship discussed. III.11

groups Disciplined groups, such as armies and their leaders, can in certain circumstances succumb to the pressure of intense and communicable terror. This is one reason why regular soldiers have to submit to years of 'disciplined training' in discipline [*see* **discipline** and **panic**]. I.42

growth and maturation. I.17

Guadalupe shrine of, in Mexico. I.31

guardian euphemism for murderer. I.24

guilt and its relationship to self-deception. I.35
denial of, by the formation of a hard, smooth coat of love. I.3
resentment of; dialogue between *Adolf* and *Albert.* I.18

guilts irrational; a term whose meaning depends on the weight which is attached to the fact that 'reasons' are as plentiful as weeds. II.2

gun The easy availability of a handgun has to be reckoned with by anyone aspiring to appeal to reason. II.19

gustatory introducing the idea of the toxic use of food and drink as agents to prevent the evocation of thought. II.1

gutless lack of courage in sexual initiative. II.17

guts a reference to a horrible war event recurrent in dreams. I.23

guttersnipe a street urchin. I.17

H

haemorrhoids as an alternative to gastro-morality and intestinal revenge. III.8

hair dressing of. I.10

hallucination or dream, or unconscious, or artefact. I.4
term often coloured by fear as if malign. I.20

hallucinations contrasted with facts. II.17

happy pair a term often applied automatically to married people. II.2

hard-baked [*see* **façade**]. II.7

harlotry information about, requested by schoolboys wishing to embarrass teachers. II.17

Harrow [*see* **Eton**]. I.25

hatching out from shell; used metaphorically to describe the birth of an idea. II.19

hate contrast with banality. I.3
or love. I.43

penetrating effect of. I.32
real contrasted with simulated, both being called 'hate'. I.32
[*see* **love**]. I.32
hate, divine contrasted with human. I.32
hatred and contempt. I.3
headache a pain known by the individual, but invisible, and yet requiring interpretation [*see* **diagnosis**]. I.18
Heaven a word that should be used with respect because of its long history of being indispensable to human thought. II.19
spoken of as subject to the same rules of wealth and privilege as obtain on earth. II.19
Heavenly Muse contrasted by *Milton* with the pagan muse *Orpheus.* II.1
Heavens, the PSALM 19. II.1, II.10, II.19
Hector dishonoured in war. I.17
quotation from *Virgil,* AENEID [*see* **'exuvias indutus Achilli'**]. II.19
heel *see* OLD TESTAMENT, GENESIS III. III.1
Heisenberg His theory of the Uncertainty Principle seems to be paralleled in philosophy by 'doubt'. I.44
related to the discussion of logic. II.3
Helen of Troy as the seducer of *Paris.* II.1
caused mankind to see Beauty. I.8
This type of the power of beauty is significant in that her features are nowhere described – only her action in appearing on the walls. II.15
heliocentric reference to the theories of *Aristarchus* and *Copernicus.* II.19
helix structure of the DNA molecule. II.10
hell as a space filler; expletives used as a substitute for thought. I.30
flight from, described by *Milton* as 'pandemonium'. II.1
Hell evocative of God. I.11
compared to Heaven; presumed to be a way of segregating evil from good. II.16
helpless a stimulus to cruelty. I.24
helplessness inseparable from omnipotence. I.35
hemlock *Keats,* ODE TO A NIGHTINGALE. II.19
the poison administered to *Socrates.* II.19
Henry IV his ambition to possess Paris. I.13
here where? when? what? how? – all leading to problems which cannot be matched to the correct solution. II.19
Heredia his poem, VITRAIL. II.10
Herodotus on fossils. I.18, I.26
hierarchy discredited, represented by *Priest,* but confused with religion. II.14

hieroglyph a type of visual image used for communication. I.35; II.2
Hippotades guardian of the winds. II.19
history punning reference to LITTLE ARTHUR'S HISTORY OF ENGLAND, by *Maria Lady Callcott.* I.21
Hobbes his use of a group of individuals as a model for the individual in the LEVIATHAN. I.44
Hobbs a famous cricketer. II.1
hole violent release from the skull. I.9
'holier' degrees of superiority in holiness discussed. II.18
Holmes, Sherlock and wandering attention. I.31
only observing and detecting. II.7
the fictional character confronting the author. I.39
holy meaning honest and helpful. II.2
Holy Boast punning reference to boasting as an activity of the evil mind masquerading as the honest and helpful Spirit of religion. II.19
Homer ILIAD and ODYSSEY. I.38, I.43
Milton, in PARADISE LOST, BOOK III, likens his own fate to famous predecessors, 'Blind Thamyris and blind Maeonides'. II.1
homo-sapiens as a characteristic of omnipotence. I.35
homosexual relationship contrasted with heterosexual. I.22
[see **love**]. I.38
use of decorations to cover up despised homosexuality. I.24
honour or dishonour, + or –. III.9
hooks used metaphorically to describe that with which attention is aroused. II.19
hope related to the desire for unceasing pleasant sensations. I.36
Hopkins, Gerard Manley and schizophrenia. II.3
HABIT OF PERFECTION quoted. I.26, I.33; III.1
Horace said *Homer* conferred immortality on *Agamemnon* in the ILIAD. I.Pro; III.8
ODE TO LOLLIUS, BOOK IV 9. II.14
Lydia, in ODES, BOOK III 9; cf. *Verlaine,* COLLOQUE SENTIMENTAL. I.17
Hosea cited as an example of a prophet seduced by a whore; OLD TESTAMENT. II.1, II.3; III.8
howls loud noise equated with faint sound. I.21
howls, animal made by *Alice* and *Roland.* It is a reminiscence of the lilith, the demon that is one of the inhabitants of the mind. II.19
hunch as a popular expression for 'intuition'. I.36; II.2
possible refuge from exposure. I.22
related to discovery. I.21
hunters a reference to *Bahram* in the RUBAIYAT of *Omar Khayyam.* I.Pro

humbug and pretension of 'modesty'; *see Freud's* description of what he calls the 'over-interpretation'. II.1
Priest's soliloquy on the 'scientific' approach, compared with religious and intuitive speculation. II.10
Hume on 'reason' as the slave of emotion. I.36
hydrophobia rabies, commonly carried by wild animals. I.29
hyena animal used as a symbol of cruel laughter. I.21
'hypochondria' and other terms impregnated with pejorative connotations. III.12
hypochondriasis difficulty of distinguishing, from awareness of illness. I.22
'hypo-theory' concentration on, as an aid to imaginative conjecture. III.12
hypothesis related to dogma. I.14

I

idea as able to lodge in 'roughness'. II.3
exposure of; *Roland* questions the value of its exposure. *P.A.* concedes the possibility. II.11
in contrast with feeling. I.16
ideal idealization motivated by dissatisfaction with the realities in so far as they are observed. II.18
idealization of the unworthy. I.34
idealized figures The fact of idealization is an expression of dissatisfaction with reality and a belief that the person can imagine something superior to the fact. II.14
ideas disguised or displayed by words. III.5
idée mère the beta-element as generator of an idea. II.3
idées mères a name used by *James Joyce.* In analysis certain ideas, whether expressed by analyst or analysand, are soon seen to provoke breeder-reactions; be it question or answer, it 'breeds' a whole range of new problems and ideas. It is against this vent that either of the two people can strive to defend himself by a closure. This is often the function of being awake, insomnia etc., as a defence of states of mind and sights seen and places visited when asleep. Similarly, either of the pair can take refuge from being wide awake and scientifically capable, by sleep or by being deaf, dumb and blind to the surrounding universe. I.41, I.43
idiot 'tale told by an, ' *Shakespeare,* MACBETH. II.9; III.1

if *P.A.* emphasizes a word the significance of which can easily be ignored. II.15
ignorance worship of. I.9
ILIAD and basic elements of war. I.17
illogical the utterly, used to impress. II.1
illumination When illumination occurs much depends on the years during which discipline has been built up in the course of training and, more spontaneously, in dealing with frustration. Otherwise the illumination is liable to initiate an uncontrolled reaction. For this reason progress in psychoanalysis can appear to precipitate a breakdown of frightening proportions. The illumination has often been described, usually in religious literature and by poets; for example, the apocryphal description of Krishna's unveiling before Arjuna in the BHAGAVAD GITA; *Milton's* description of his reaction to blindness at the commencement of PARADISE LOST, BOOK III. Others may be profitably searched out by practising analysts. The revelation of these emotions which have been 'hidden' by the patient, even from himself, is liable always to produce a refusal of further analysis by patient, relatives and psychoanalyst. If this is proceeded with, it may be rewarding. I.42
'Ils gisent là . . .' from the poem, VITRAIL, by *Heredia.* II.10
image, real a reminiscence of SOLOMON AND THE WITCH, by *W. B. Yeats*. II.6
imaginary and fictitious characters. I.21
imitation of analytic session note-taking. I.19
Pirandello's play, SIX CHARACTERS IN SEARCH OF AN AUTHOR, associated with imaginary numbers. I.26
imagination as the origin of pain. II.14
has to be protected against reality. I.20
questioned as the real origin of a supposed fact. II.7
imitation prelude to articulate speech. I.26
Immaculate Conception doctrine in contrast to 'human pleasures'. III.12
impasse liable, like any obstruction, to lead to a diversion and therefore diverticula. I.14
impending disaster related anxiety state ↔ anticipation and foresight. I.37
implicit *Bion* and *Man* debate the idea that psychoanalysis was implicit in many writings before *Freud* made it explicit. I.36
impressed methods of impressing. I.17
inanimate change from animate to. I.28
field of the living extended by. I.16

incantation of Priest, who talks as if broadcasting an international cricket match with the intonation appropriate to a religious service. II.19
Incarnation *P.A.* is discussing a matter which is more thoroughly explored by theologians. II.8
incomprehensible contrasted with the simplicity of ferocious action. II.1
incomprehension paramnesias and other substitutes used as a detour to avoid the work of comprehension. I.43
increment + murder becomes war [*see also* **'ghosts'**]. II.9
related to growth. II.9
indigestion lightly spoken of by *Rosemary* in the service of denial of the mind; the same word is used by *P.A.* metaphorically to affirm the reality of a mind. II.17
mental. III.9
individual the importance of the 'individual' contrasted with the group. I.38
the importance of, falsely magnified by psychoanalysis. I.24
indolence contrasted with activity. I.27
infants massacre of; a reference to the alleged plot of the Roman authorities. II.14
'inferiority complex' term now vulgarized so that its psychiatric meaning is devalued. I.43
infernal pejorative or topographical. II.19
infinity stupor to bigotry. I.8
infra-conceptual term borrowed from 'things' whose position could be related if there were a suitable system of co-ordinates; the lack of it, illustrated by discussion. II.2
infra-red and ultra-violet, as unit of measurement. I.28
infra-sensual from, to ultra-sensual; or infra-human to ultra-human. I.13, I.16, I.28, I.34
infra-sensuous /'conscious' and rational. I.34
infra-sensuous /ultra-sensuous-the relationship discussed. I.36, I.42
'ingredients of the poisoned chalice', *Shakespeare,* MACBETH. II.14
inhibition technical term for use in discussion. III.9
in love *Rosemary's* mother, from her experience as a whore, does not regard being 'in love' as in any way related to reality in a heterosexual episode. II.16
insane the need for the analyst to be able to tolerate being regarded as. I.24
insanity 'sanity' regarded as superior to. I.14
insight and 'out'sight. II.15

insignificance discovery of, unwelcome. III.9
Institutes dead. III.3
institutions inanimate objects. III.5
members of. III.5
instrument a book as, for purposes of communication to other times and personalities. I.42
integration constant conjunction synonymous with? *Alice's* question followed by discussion. I.43
intelligence like a bad smell, a substitute for wisdom. I.14
underestimation of. I.7
intelligent word frequently used as an alternative to 'wise'; topic debated. II.15
intently used to describe the concentration with which an observation is made. II.11
INTERPRETATION OF DREAMS Chapter 7, *S. Freud.* I.21
interpretation a common activity, not only psychoanalytic, e.g. musical score. I.19
Empathy could be described, in contrast with projective identification, as the attempt to 'penetrate' in order to discover meaning. II.15
of bodily symptoms. II.14
inherent fear of giving. III.8
[*see* **construction**]. I.29
interpretations dialogue based on the need that every individual has to 'interpret' the 'facts' of which his senses make him aware. II.11
[*see* **desires**]. II.9
Introspection and Extroversion. I.11
intrusion of imagination into a serious discussion, and vice versa. I.20
intuition contrasted with 'things' observed. I.43
discussed. I.43
feminine, as a mode of intuiting the quality of a proposed union. I.43
mathematical, feminine and masculine as differing qualities of. I.43
[*see Kant,* CRITIQUE OF PURE REASON]. I.8, I.43; II.1
Intuitionist mathematics as a mode of thinking. II.9
Intuitionists and logic. III.11
infinity suggested as a thing easy to grasp by the immature, in contrast with the difficulty of the concept to the adult. II.2
[*see* **excluded middle**]. II.2
invader war, poverty, disease, beauty and dirt as penetrating forces. I.31
invariants borrowed from algebra [*see* **constants**]. I.30
investments in farm work and whoring. I.16
Irene Adler fictitious character alleged to be admired by *Sherlock Holmes;* here supposed to have embraced his wicked rival. II.19

irrational and mathematics. I.11
Isaiah Hebrew prophet. His formulations have been translated and transformed into terms comprehensible to present-day readers. These ancient events appear to leave 'vestiges' in present-day thought; their present-day form has to be recognized and re-translated into formulations suitable for our age. II.2
The reference is to ISAIAH, vi. The function of the two wings was consciously understood originally to refer to the genitalia; in the present era it would probably have to be interpreted psychoanalytically, to the scandal of the faithful. II.6, II.8, II.18
isolation [*see* **all-alone** and **dependent**]. II.16
it importance of context to confer meaning. I.29

J

jackal Indian name for coyote. I.29
jargon interchange of, becomes a mental slough. III.8
space filler, used as a substitute for thought; 'talking' instead of speaking to say something. I.14, I.42; II.1
The technique of communication or any other human activity rapidly becomes debased. *Rosemary* sums up the process by a hostile comment about learning to cook. II.9, II.14
type of verbalization usually distinguished for its pretentious language used with the object of passing for intelligence and wisdom. II.15
undisciplined growth of words likened to mental cancer. II.14
jaws reference to apparent expression of a skull. II.4
jealousy and envy. *Elliott Jaques* was responsible for pointing out to *Melanie Klein* that the title of her projected book should include 'gratitude' to represent the content of what she had written. II.18
Jessica *Shakespeare,* THE MERCHANT OF VENICE. II.3
Jesuit religion and mental illness [*see* ***Hopkins, Gerard Manley***]. II.3
Jesus and his God. I.9
eponymous. I.17
Jew said to claim Roman citizenship in contrast with attribution of Christian ideas. II.19
jewel *Shakespeare's* description of *John of Gaunt's* England: 'This precious stone set in a silver sea', RICHARD II. II.10
Jezail *Watson's* bullet. I.22, I.32
wound's location, ambiguously described. I.26
Job answered by God. I.28
judging the judge. I.17
[*see* **uncertainty principle**]. I.43

job An analyst has no control over the use to which the analysand puts his experience. He therefore has to be aware of accepting responsibility for a matter which is not his job. II.19

Rosemary, suspecting *Alice* of collusion with *Roland,* tells her to 'find another job.' II.16

Jodrell Bank the site of a radio telescope in England. II.1

JOHN BULL a disreputable journal published by *Horatio Bottomley;* notorious amongst the troops in World War I in a song parodying its prognostications. II.19

joke cruel. I.16

kind and loving. I.11

journey end of; part of a bawdy song sung by the troops in World War I. II.2

Joyce, James compared with sculptors in stone, *Michelangelo* and *Moore.* I.11

his illuminating use of 'idées mères'. I.41, I.43

Jung nomenclature of, contrasted with *Freud's.* II.19

juvenile nonsense the contemptuous reference to psychoanalytic theory and outlook contrasted with the new version of old male dominance. II.19

K

K minus and plus, assume a linear model for conveying lack or otherwise of experience. I.33, I.34

Kant 'concepts without intuition are empty. . .', CRITIQUE OF PURE REASON. I.8, I.39, I.40, I.41

'thing-in-itself, critique of pure reason. I.Pro

Karno sarcastic reference by the men of Kitchener's Army, sung to the tune of the hymn, THE CHURCH'S ONE FOUNDATION. II.2

Keats 'Beauty is truth, truth beauty', ODE ON A GRECIAN URN. II.12

used the term 'Negative Capability' in a letter to his brother. I.43

Kenner, Hugh [*see* ***Ruskin***]. II.2

kicking off a ludicrous ritual, often observed, in which the wife of some highly-decorated authority initiates a regimental event. I.23

killed in action. I.22

killing and war. I.17

Kingdom of Heaven; used from historically early times to describe the existence of internal objects. II.19

Kipling, Rudyard parody of *Horace's* ODES. I.17

was obsessed by a school friend whom he described as 'Stalky'. II.19

kiss type of significant action. What does it signify? Discussed. I.42
Kitchenger a distortion of *Kitchener,* war minister in World War I. II.19
Klein, Melanie her theory of projective identification not attributed to fetuses. III.11
her view of man as 'a world in himself'. I.43
paranoid-schizoid position. I.14
her ideas extended to cover domains believed to be implicit in her theories though not avowed by her. I.37
Kleinian vertex, regarded as one from which the observation is 'microscopic' rather than 'macroscopic'. I.43
knowledge and wisdom, differentiated [*see* **intelligence**]. III.7
Ronald Knox, Father (1888–1957). *Ronald Knox* was born in Kibworth, Leicestershire, and was educated at Eton College, and Balliol College, Oxford. In 1910, he became a fellow of Trinity College, Oxford. Knox translated the St. Jerome Latin Vulgate Bible into English. He also wrote satirically on the character of *Sherlock Holmes*. [*See also* **Enthusiasm**]. II.3
Krafft-Ebing PSYCHOPATHIA SEXUALIS [*see* ***Ellis, Havelock***]. II.10
Krakatoa and grandeur. II.10
Krishna quoted by BHAGAVAD GITA [*see* ***Arjuna***]. I.16, I.17, I.34; II.11

L

lady-in-waiting function performed, usually in royal courts. I.33
λ (lambda) Greek letter as a pictorial representation not unlike Chinese; used here as a constant. I.19
language a reference to PSALM 19. I.17
conversational. The psychoanalyst has to use terms which are misleadingly reminiscent of conversation. It is one reason why he should strive to use even devalued terms with precise, constant and repetitive frequency to restore their value. II.1; III.9
inadequacy of. I.17
lark descent from flight. II.1
Juliet, on parting from *Romeo; Shakespeare,* ROMEO AND JULIET. II.14
freedom of, contrasted with human. I.5
Larling a village near Thetford, England; the name sounds like a ghostly distortion of 'darling' – represented by darling/darling. I.33
laugh expression of cruel feelings by *Rosemary.* II.16
sadistic, fiendish response to suffering. I.21
laughing interpretation of the underlying force of which it is the disguise. I.8

laughter cruel, in contrast with friendly. I.21
of a fool, OLD TESTAMENT, ECCLESIASTES VII. I.21
Law *Poisson's*. I.8
laws Confusion is often caused by supposing that the laws governing human thinking have their counterpart in the 'laws' of the universe [*see* **black hole**]. II.1
of nature, not to be confused with laws that are obeyed. I.35
of Nature; spoken of as if the human ability to formulate observations, scientifically observed, makes them immutable. II.19
League tables sarcastic reference to rivalry amongst psychoanalysts. The term is borrowed from ball games. II.1
learning by heart; the popular phrase reconsidered. II.1
in excess, equated with insanity; *see* 'much learning doth make thee mad', NEW TESTAMENT, ACTS OF THE APOSTLES XXVI. I.14
Much of what has been acquired in the course of a lifetime, whether of the analyst or the analysand, can appear as what psychoanalysts call 'free associations', but what I think is sometimes more illuminating to regard as 'debris'. This word is applicable to both analyst and analysand. What the analysand says shows what he has 'learnt' in various stages of 'digestion'. The analyst must show the patient, in the light of his own debris, the relationship that the various scraps of the analysand's bear to each other. II.9
the acquiring of 'technical' proficiency, e.g. in the arts and sciences, and now a psychoanalytic ambition. II.2
Le Conte on knowledge of stella composition. II.5
Lee limerick about 'a young lady of Lee'. II.4
Legion The name of the famous XXth Legion stationed in the West Country of England was Legio Vicessima Valeria Victrix. It disappeared from the muster roll of the Roman Army, probably wiped out by the Brigantes, a warlike tribe inhabiting what is now Yorkshire. I.23
lenses as an aid to reinforce visual capacity. I.22
Leonardo da Vinci as the agent through whom a work of art is created. II.3
expressed turbulence by drawing hair and water. I.33; II.9; III.1
his golden number as analogous to Cartesian co-ordinates. I.28
Lesbia see poems by *Catullus.* II.15
L'Estrade the police detective in the MEMOIRS OF SHERLOCK HOLMES. I.28
Lethe the river of forgetfulness in Hades, used as a soporific drug by the god *Somnus.* I.28
Leviathan aquatic monster, described in the BOOK OF JOB, OLD TESTAMENT. I.9

liar *Rosemary's* disillusion leads her to assume that there is nothing but illusions deliberately created. To what extent the human being is capable of assessing what is a fact has always been a matter of doubt, but psychoanalysis helps to expose the doubtful nature of many 'facts' assumed to be true. Disillusionment is frequently accompanied by the unpleasant emotion of disillusionment; there needs to be a method by which dis-illusionment could be differentiated from disillusionment. Words are therefore of great importance to clear thinking, but they need to be correctly attached to the 'real' thing. II.7

liars heroic; quoted as a parody of *Horace's* ODE TO LOLLIUS. I.28

lie simulation of truth. I.11

lies and deceptions. I.28

Lies indistinguishable from Truth. I.11

Light Heavenly, described by *Milton* in PARADISE LOST, BOOK III. II.5, II.12

Lilith Jewish female demon. The reference here is to the legend of *Lilith* as the wife of Adam. It is worth comparing to the story told by *Colette* (and the opera by Ravel), L'ENFANT ET LES SORTILÈGES. II.18

representative of primordial thought. I.17

limits What are the borders which have temporarily to be established as the confines within which a discussion is to take place? I.42

linear co-ordinates use of, in the formulation of narrative. I.39

link Sometimes the word is used to express the conventional function and is then coloured by the context in which it is used, e.g. *Alice* married *Roland.* At others it has to be interpreted in the context of all that has been told the analyst. At other times the interpretation depends upon the context, which the analyst can see for himself, in the conversation; at others, it has to be interpreted in the context of the analysand's hopes, expectations and forebodings. I.41

links genetic; the need for extension analogous to Cartesian co-ordinates. I.28

listen with attention. I.17

'Litora, litoribus contraria' Virgil's description in the AENEID of the opposing coasts of the Trojan and Roman empires; used here to describe opposing coasts of France and Britain. II.18; III.9

live becoming hateful when transformed to inanimate. I.29

living equated with Beta becoming Alpha, unconscious becoming conscious, inarticulate communication becoming articulate thought. I.14

Livy his parable of the members of the body; his description in physical terms – the soma – when wishing to communicate the reality of a group's culture. II.1, II.15

Lobachevsky and *Riemann,* quoted as a method of provoking thought. II.1

and space. I.14

as a threat to *Euclid;* mathematics have to become irrational. I.11

locked up confinement as a punitive treatment of who or what is not understood. I.16

Loeb and Leopold A reference to two wealthy students from the University of Chicago, who in 1924 were tried and found guilty of the murder, an attempted 'perfect crime', of a 14-year-old boy. *Clarence Darrow's* summing up of the case for the defence was a criticism of capital punishment and retributive justice, and was to become influential in stimulating reform. III. 7

logic conscious system of, as a cloak for sympathetic and parasympathetic obtrusion into 'logic'. I.14

laws of, often spoken of as if what is in fact a limitation of the human mind applies to the 'cosmic' universe and not only to the universe of thought. II.4

often spoken of as if the laws which govern clear thought and expression of human thinking have a validity which extends to the universe in which humans live. II.19

[*see* **excluded middle**]. II.2

term used to describe a method of thinking which appears to be fundamental to the human capacity for thought. II.3

Lollius immortalized in *Horace's* ODE, BOOK IV. II.10

London Scottish territorial regiment, unfortunate enough, during World War I, to be placarded as such marvellous fighters that they became the laughing-stock of the British armies of the Western Front. II.19

Longfellow, H. W. [*see* **'Sail on!'**]. II.1

loon both human and bird usually associated with stupidity. II.19

'Lord, with me abide' the hymn, ABIDE WITH ME, popular in Protestant England. II.10

love and articulate speech. I.44

and destruction. I.8

and hate, often associated with physiological sex and consequently confused with each other. No distinction is made between problems of verbal communication and of the reality which it is wished to communicate. I.32, I.43

and sado-masochism. I.10

as made by beasts. I.8
brotherly. I.10
father's, as described in the NEW TESTAMENT. The earliest description, as part of a fundamental change in culture, is the story of Abraham and Isaac. II.11
friendship, and 'marriage' as an institution contrasted. I.14
indefinable but fundamental. The capacity to love persons or things is often misunderstood, misquoted or wrongly applied. Confusion is frequently produced by the prevailing cultural use of terms such as 'homosexual'. I.38
making, made impossible by *Rosemary so* as to avoid venereal disease. II.16
of God, contrasted with the meaning as applied to humans. II.19
passionate. I.38, I.43
Related words like 'friend' and 'comrade' are used so easily that the psychoanalyst has, incidentally to his work, to use them with circumspection to restore their value. II.9
The negative cannot be known without experience of the positive. Love of food is related to the kind of love that pre-supposes gain. The love which is an expression of a desire to 'give' usually depends on the co-existence of maturity – even in an infant. II.16
word ambiguously used. The laws of grammar are treated as if they were laws governing the *thing* signified, and not simply the rules of communication. I.43
word frequently frivolously used. In practice the analyst has to decide what value to place on a word which is used ambiguously. The problem depends on a capacity instantaneously to assess the frivolous or serious intent of the speaker. I.42
Love God's [*see* **Wrath**]. II.1
love-making a term which often obscures, rather than illuminates, the reality beyond 'love'. II.9
loyalty to truth, as the aim of and criterion for validation of the products. II.12
£.s.d. and L.S.D. The pun as a compact free association, dispersed as in these pages, is assumed to have a meaning when 'interpreted'. I.29
Ludendorff supposed to be the strategic mind governing *Hindenburg*. II.7
lunar illustration as an example of the problem of the differentiation of unthinking obedience from disciplined thought. I.30
Luria, Isaac sixteenth-century Jewish cabalist and mystic. II.2
lust-crazed lust as conducive to the destruction of clear thought. II.18
Lycidas [see ***Milton, John***].

M

M31 Andromeda nebula, used to exemplify. I.43; II.1, II.2

M'Naghten Rules The M'Naghten Rules (pronounced, and sometimes spelled, McNaughton), stemmed from legal responses to the acquittal of Daniel McNaughton, charged in 1843 for the attempted assassination of the British Prime Minister, Robert Peel. They relate to the question of liability for criminal acts in terms of sanity and the capacity to distinguish between right and wrong. Bion discussed this issue with a group in New York, April 1977, Talk 2. [*Ed.*] III.12.

macroscopic used to contrast 'the general' from 'the specific'. I.41
vertex [*see* **microscopic**]. I.29

mad loosely used to express a state of mind that is feared. II.18

mademoiselle part of a soldiers' song of World War I. II.4

Maginot a line of fortification on which France depended for its safety. I.14

Maid of the Mountain stage musical. I.17

♂ contained, and symbol for 'male'. In what way does this symbol differ from the word 'male'? This is typical of the problem confronting the analyst where he has to consider that what he hears said by the analysand should be interpreted in a psychoanalytically correct manner. Usually it is safe to assume that the patient is aware of the conscious meaning of what he says, his problem being to know what is the 'over-interpretation' that requires to be discussed. But in practice it matters whether it is 'over', 'under', 'ironic', 'punning' etc. [*See also* symbol for 'female', ♀]. I.41

Mammon and God. I.8

Man a character made prominent by *Rosemary* analogous to an inanimate object made prominent by the invitation to discuss. *passim*
his scorn of English hypocrisy. I.24
memoirs of. I.28

man and girl, on 'holiday'. I.36

manic-depressive psychiatric definition assumed to have a 'cause'. I.12

manicure as one method of expressing hetero-hate. I.32
example of non-verbal communication. I.22

marble [*see* ***Heredia***]. I.19

mare day, and night. I.16

marriage official certification of. I.Pro

marry a question posed by *Man* and debated by *Rosemary.* She is not contemplating a love match but is using *Man* as a step towards greater power. Contrast this with *Alice,* who has succumbed to a sexual assault by *Tom*. This is part of a progress in the direction of lesser power. II.16

Mars (god of war) and desire, as devouring. I.8
planet, and its 'canals'. I.41
Martha (biblical) Story of Martha, in LUKE 10, v 38–42. III.7
masochistic impulse 'Masochism' and 'sadism' suffer from the recent vogue for long words. The psychoanalyst, whether he likes it or not, will have to become a master of the precise use of the language which he speaks if he intends to use it to help people to achieve clear thought. II.7
mathematical terms simplifying communication. I.Pro
and thinking, can be applied to make explicit what is otherwise hidden, as *P.A.* is doing. II.9
mathematics as a possible language for the achievement of friendly co-operation. II.2
negative numbers. I.14
pure; the inability to exclude basic sensuous quality even from mathematics. I.41
rational and irrational. I.11, I.30
word used for evocation of thought and for evocations intended to initiate a train of thought. II.23
maths as easily disregarded as religion. II.1
matrix a punning reference to an imaginative conjecture of the idea striving, fetus-like, to emerge from the womb of thought. II.4
maturity The word is useful to indicate the status which any word and its underlying meaning have acquired at the time of writing or speaking. It is useful to see this and other words as 'borrowed from' their accepted meaning in order to express what the analyst regards as an analogue in mental life. It may be as well here to remark that though I make a distinction between mental and somatic, I do not believe that that distinction will be sustained in the light of further growth of psychoanalytic thinking. II.7
Mayqueen *Rosemary* falling into confusion. II.10
mean the mean character alleged always to remain distinguishable from the generous character. II.19
meaning as an extension of observation. I.20
double. I.11
fate of, dependent on transmitter and receiver. III.9
mechanical aids, to human senses; radio etc. I.16
the attempt to transfer problems demanding thought into material which can be handled either by a machine or by transforming the mind into a machine [*see* **instrument**]. I.42
meconium and amniotic fluid. II.4
medical examination. I.6

meetings psychoanalytic, juxtaposed to religious. I.27
Meister Eckhart mystic or quack? I.9
memories [*see* **desires**]. II.9
Memory stimulated into activity. I.15
memory ridding one's mind of, discussed. II.1
'memory' as a recognized part of a character. I.15
'Men who march away' quotation from the poem of that name by *Thomas Hardy.* II.6
men *Rosemary* is being sarcastic in referring to a generally accepted present-day convention of masculine superiority. II.7
menace Buried, the idea becomes 'toxic' and is therefore metaphorically described as an 'explosive bomb'. I.7, I.14
Mendelian Laws of Inheritance. III.12
mental use of the alimentary canal as a model. I.29
mentally alive involves the possibility of mental death either through choice made by the individual, or imposed from without. I.38
mescal a narcotic drug. II.4
Messiah [*see* **Christ**]. I.30
[*see* **saviour**]. III.13
metaphor as a method of communication. II.3
used as an antithesis to *Berkeley's* phrase about 'departed quantities' [*see* **'ghosts'**]. II.19
microscopic contrasted with macroscopic vertex; the distance from the object observed depends on micro- or tele-scope. I.13, I.21, I.38
midnight *Moriarty* is deliberately misquoting *Milton's* IL PENSEROSO. II.14
mighty *Moriarty* is parodying the NUNC DIMITTIS. II.14
milestones There are many signs used to indicate what is variously known as a caesura *(Freud),* birth, adolescence, mid-life crisis *(Jaques),* and others which the practising analyst can discover for himself. These caesuras can be investigated, to use a physical model, by considering the palm of one's hand, looking at it from the back of the hand. That crude pictorial model is the best way in which I can describe something for which there is no sensuous evidence at present. When Freud talks about 'resistance censor' (THE INTERPRETATION OF DREAMS, 1900a, pp. 308, 321, 322, 499, 542, 563), I think that the practising analyst has to consider both what is censored or hidden, *and* the censor or the cryptographer or the cipherer, or who or what is doing the concealing. To consider only the 'resistance' can be indistinguishable from siding with the censor. I.41
Milton, John [1608–1674] appears throughout.
'formless infinite', PARADISE LOST, BOOK III. I.38; II.5

his blindness described at the beginning of PARADISE LOST, BOOK III. I.13
'holy Light', PARADISE LOST, BOOK III. I.42
Pandemonium, PARADISE LOST, BOOK I. III.3
poetry as the most serious way of writing. II.1
the 'evil days'. II.11
Mind Disturbing. The mind itself may have been a development of the human animal which was painful and unwelcome. II.3
more than the Soma can carry. I.8
mind and anatomy. I.17
as a recent discovery. I.28
as a sense organ. I.21, I.26
assumed to be an entity. I.26
assumed to exist as if the assumption corresponds to something of great significance. I.24
brain and central nervous system as analogues of its function. I.30
comprehensive term used for assumptions, useful but unproven. I.30
concept for which the supporting evidence is difficult to demonstrate. II.15
diseased, *Shakespeare,* MACBETH. I.21
disturbed balance of *Newton's.* I.8, I.13
evidence for such a supposition debated between *Man* and *Bion.* I.36
potentially an instrument. I.22
taking the place of the senses as an instrument of discrimination. I.14
mind± and its patterns. I.28
miracle a transient episode. III.5
mirror psychoanalytic. An analytic interpretation should be correct; that is, what the analyst interprets should make the patient aware of something of which he is not ordinarily aware, namely, how he is and how he appears to be to others. The realization of these contrasts appears to stimulate progress towards maturity. II.7
unflattering image. A debate of which the transient idea is of a 'world' that reflects the characteristics of its creator. II.9
Mister Toad character in *Kenneth Grahame's* THE WIND IN THE WILLOWS. I.31
and contempt. I.43
mistress of the house. Words like 'master' and 'mistress' are frequently used without reference to the observed facts. II.8
Moby Dick *Quee Quegg* 'reading'. I.19
model related to the attempt to conceptualize that which is inadequately formulated. II.9

Money as an object of worship. II.3

money and 'honours', morals, position and power, used seductively. I.28

Money-Kyrle, Roger his description of man's picture of his world. See MAN'S PICTURE OF HIS WORLD (1961), and THE COLLECTED PAPERS OF ROGER MONEY-KYRLE (1978). I.43

monomolecular film term used in a discussion of the problem of what co-ordinates to use in describing, psychoanalytically, 'space' as applied to mental phenomena. I.40

'Mono'theism The monotheistic religions have been regarded as more conducive to the well-being of the individual than polytheistic religions. It has been observed that an ostensibly monotheistic religion expresses polytheism by disguising the gods as saints, angels, demons and other individuals partaking of divine qualities. II.9

monstrosities angelic. The belief in angels has a long history. It is pagan, pre-Islamic, Old Testament and New Testament. The term 'angelic' has been devalued, and its use in analysis, therefore, has to be scrutinized in order to assess its signification, bearing in mind that it may be concealing a feared monster. II.14

Montesquieu French political philosopher. *Robin* describes the way in which a man can be killed in an insignificant episode in war. II.14

Mont Pelée destructive volcano on N. Martinique; a reminder of man's ephemeral nature and therefore easily forgotten. II.1

moon landing on. I.24

moors a quotation from a folk-song of courtship; also a place of burial of the victims of notorious murders by a man and a woman who claimed a loving relationship with each other. I.27

morals contrasted with science. I.26

moral system requiring overhaul. III.8

moral views meaning of, dependent upon the context, e.g. *Plato*. I.16

Moriarty as a fictional version of evil forces [*see* ***Sherlock Holmes***]. I.42

expresses his ability to manipulate a thinking and feeling man. *Sherlock Holmes* reacts with anxiety and anger. This scrap of dialogue represents the fact that 'clear thinking' can be used for evil purposes as well as good. II.7

representing 'modern' crime. II.7

speaking for the rights of evil figures of fiction. II.19

'morituri te salutamus' gladiators' salute to the Emperor. I.17

mortar of the mind. *See Ezra Pound's* translation of STONE TABLES OF CONFUCIUS. II.15

most interesting . . . an instance of a woman expressing hate. It is

striking that in psychoanalytic literature homo- and hetero-hate appear not to excite attention although as real as homo- and hetero-love, and just as inevitably linked with the expression of real sex. I.32
'Mother' the appeal of a fatally wounded soldier. II.2
mouse in the posture of prayer. I.17
mouth [*see* **zero** and **O**]. I.8
Mozart alteration in musical sounds effected by the development of instruments used for their production. I.43
mules make a sound alarmingly like an approaching shell – at least to war-weary troops. II.4
multiplication particular instances. I.21
Munden a village in Hertfordshire, England. I.7; II.3, II.20
murdered associated with supposedly 'loved' authority. I.23
muse of fire, *Shakespeare,* HENRY V. II.3
'Music, when soft voices die . . .', *Shelley,* POSTHUMOUS POEMS. II.20
music listening to, including silence and 'music of the spheres', *Sir Thomas Browne,* RELIGIO MEDICI. II.1
musical expression of the spoken word. I.17
mustard seed NEW TESTAMENT, ST MATTHEW XIII.31. II.9
mutton vulgar expression of contempt for the dead. II.16
Mycroft Holmes *Conan Doyle's* character for superiority in logic, but indolence in practical use. I.19
expression of sarcastic contempt. I.19
on figments of the imagination. II.19
Myself the relationship of fiction and reality debated. I.20
mysteries and half truths; *Keats,* in a letter to his brother. I.21
mystification used to dominate the unsophisticated. I.20

N

name signifying interpretation or diagnosis. II.3
'names 'our names, our deeds', quotation from poem, 'Heroes', in a schoolboy songbook, GAUDEAMUS. I.17
naming the accurate naming of emotional forces not yet achieved. II.2
narcissistic and paranoid; debasement and devaluation of technical terms. III.9
nation a mighty and puissant, quotation from *Milton,* AREOPAGITICA. I.30; IL9
Native American Church the right to use peyote, derived from Aztec ritual, recognized. II.19

Neanderthal man behaviour of. I.17

Néant, le meaning 'nothing', 'nought'. 'Éternité, néant, passé . . .', *Lamartine;* Je suis comme un milieu entre l'être et le néant', *Descartes.* III.1

Negative Capability [*see* ***Keats***]. I.43

neiges, les d'antan: a reference to past beauties, *Villon,* LE GRAND TESTAMENT. I.13, I.28; III.4

Nelson is said to have put his blind eye to the telescope when not wanting to signal retreat; cited here as a model for uses of inhibition. Being blind and deaf to what is unwelcome is a therapeutic measure contrasting with awareness, i.e. psychoanalysis. I.13, I.28

neologism can serve a purpose, but the term is usually used for something which is closer to jargon than a contribution to the armoury of thought. II.1

Milton's use of the word 'Pandemonium', borrowed from the Arabic, is an example of a useful neologism because time has proved its usefulness. In the domain of mental disorder neologisms are usually private to the individual and therefore serve no useful part in communication. II.8

Newton, Isaac and others, deeply buried and forgotten. I.14

Bishop Berkeley's criticism of the Calculus. I.8; II.9

equated with outstanding artists and scientists. I.26

his vertex and disintegration of his mind. I.13

Master of the Mint [*see also* **Opticks**]. I.13

his theories founded on acceptance of the reality of time and space. I.37

Nietzsche on the function of the group. I.26

nightmare fiction of a fictitious nightmare. I.26

nit-wit beauty as a seductive cover for lack of mind. II.3

nod sleep. I.14

noise inaudible but intolerable [*see* **blushing** and **pain**]. I.11

non-sense The distinction between nonsense and non sense is intended to emphasize the need to discriminate different meanings contained in the same word. II.8

to be understood as something not available to the physical senses. II.2

non-specific pressure on the eye as evoking a response similar to, but differing from, the effect of happenings for which the evidence is 'proper' but not tactile. II.1

No-Questionnaire as evocative of psychoanalytic knowledge. I.19

norm *P.A.*'s idea that an anatomical 'norm' is applicable in defining a psychoanalytic 'norm'. II.12

notes as records of a session. I.19

nothing to see No British troops existed between the few in the front line and the sea. *Foch* is said to have claimed at this time that he held the Germans in the hollow of his hand. II.4
noumena and facts. I.Pro
[*see* **phenomenes**]. I.10
noumenon [*see* **ultimate reality**]. II.8
nous used colloquially for common sense. I.15
number generator the word 'sex' analogous to. I.43
numbers natural. I.14
negative, dependent on a framework. I.16
negative, to be invented [*see* **mathematics**]. I.14
negative, used to describe mental phenomena in linear terms. I.37
real. I.16, I.20
stimulus of. I.17
religious; no meta-mathemalogic yet formulated. I.30
nuzzling infantile caress of a lethal object. I.23
Nymphs and Shepherds 'weep no more, woeful Shepherds, weep no more.. .', *Milton*, LYCIDAS. III.9

O

O as an exclamation. I.8
as a visual image. I.8
its relationship to the sensuous aspect of 'ultimate reality'. I.39
related to 'ultimate reality'. I.38, I.43
[*see* **zero**]. I.8
obedience attributed in particular instances, often without reference to the real origin of power. II.7
obscure deliberately and precisely, in the use of words to activate a train of thought in the listener. I.39
obscurities darken. The debate is described so that it illuminates modern psychoanalytic dilemmas in a way that is impossible to the obscurities of jargon. II.8
observation an activity intrinsic to every form of scientific work. II.5
obvious term often used to indicate that further investigation is unnecessary; implicit ideas therefore remain dormant. I.37
obviously certitude, bigotry and dogmatism discussed. The problem was discussed by *Plato* reporting the conversation between *Socrates* and *Theaetetus* on knowledge; it implied fundamentally the problems which have now become explicit, thanks to the attempt to use what we 'know' as the starting point of a psychoanalytic

investigation of the human attempt to 'know' what is real and what is false. On the answer to this problem depends the future course of the human attempt to survive amidst the forces of his universe. Psychoanalysis is one aspect of that attempt. I.14

Odysseus 'many wiled Odysseus' in the ILIAD. I.8, I.13

Oedipus as shorthand for man's mind. I.14

OEDIPUS REX The state of mind when conscious thought may have to develop in order to allow for mental development of such dramatic expression. I.37

the meaning transcending and implicit in *Sophocles'* play. I.42

of course as a space filler. II.3

meaning 'as a matter of course'. II.1

old hat an out-of-date vulgarism. II.1

Old Woman contrasted with any other age. I.31

old as indistinguishable from physical dilapidation. I.32

only signifying exclusion. I.29

opaque This is related to the fact that the 'state of mind' when asleep is not the same as the state of mind when awake; this produces a difficulty because the events of the experience when asleep are related by someone who is conscious. Similarly, what experience the conscious person has when he is awake is not known by the person who is asleep. Therefore when a 'dream' is reported, the psychoanalyst must discriminate between a verbally formulated pictorial image and a dream with which it appears to be identical. It is not in fact always so; the analyst has to interpret a factual conscious experience which relates to the event in 'sleep'. This is a distinction of great importance when the analyst is told by a psychotic patient that he 'had a dream'. [*See also* **darkness**]. I.39

OPTICKS *Isaac Newton.* I.13, I.20, I.35, I.42

theories of, related to divine pronouncement. I.28

order 'The old order changeth . . .', *Tennyson,* THE IDYLLS OF THE KING: THE PASSING OF ARTHUR. I.29

orders as given by one human to another, the pleasure of. II.9

ordinary description and reminder that even the greatest names in the history of our civilization were 'ordinary' men and women. II.1

matters debated, when the word is used, involve ideas of extra-, common, super, divine and similar estimates of the *character* of ordinariness. II.9

original sin and original guilt. III.12

origins fallible. III.8

glandular. III.8

hatred of. III.8

orphanage a word which, like 'adopted', frequently evokes ideas that are irrelevant to the 'facts', but are important because they produce facts, emotional facts that are created. II.7
oscillation related to contrasting wave and quanta. I.8
osteo-arthritis psychical, and rigid 'articulations'. III.3
oughtism In psychoanalytic practice 'ought' is frequently used without reference to the source of a moral obligation. II.4
oughto-nomic a pun rationally conjectured as springing from primordial sources of the mind. II.4
Oval a cricket ground at Kennington, London. II.1
ownership and plagiarism. I.20
Oxbridge colloquialism for 'Oxford and Cambridge'. I.17
Oxford and Cambridge, universities [*see* **Eton** for their symbolic use]. I.22
oysters *Lewis Carroll,* THROUGH THE LOOKING GLASS. I.17
Ozymandias archaic remains; a reference to *Shelley's* poem of that name. I.9

P

pacification by fear. I.7
pain as an instance of direction, felt or inflicted. I.20
impalpable yet intolerable [*see* **blushing** and **noise**]. I.11
location of, often misleading. II.14
mental, regarded as a fuss about nothing. III.9
term borrowed from somatic experience to describe in-sensable mental experience. I.20
pain-talk from the hills; a punning reference to PLAIN TALES FROM THE HILLS by *Rudyard Kipling.* III.1
Palinurus fleet marker, *Virgil*, AENEID, BOOK V. I.8
helmsman directing mental traffic. I.13
Palomar site of the 200-inch reflecting telescope. II.1
Pandemonium *Milton,* PARADISE LOST, BOOK I. III.3
pander contrasted with man. I.28
Pangloss character in *Voltaire's* CANDIDE says, 'All is for the best in the best of possible worlds'. This is Voltaire's way of making a sarcastic comment on the optimism of German philosophy. III.9
panic a solvent of discipline. II.5
[*see* **groups**]. I.42
pansies vulgar term; U.S. equivalent, 'fags'. I.22

Pantheon Homeric; cf. *Pandemonium.* I.17

Paradise *Moriarty* regrets that *Milton* did not hail 'devilish darkness'. II.14

paradox related to a meaning. I.16

paramnesia *Freud's* description, THE PSYCHOPATHOLOGY OF EVERYDAY LIFE, 1900b, pp., 6, 7, 148, 149. III.9

paramnesias the problem of distinguishing between 'theories' and 'space fillers'. II.7

paramoecium and visual impression. I.28
the primitive organism contrasted with God. I.28

paranoid the psychoanalyst needs to 'smell' danger. III.8

'paranoid' [*see* **inferiority complex**]. I.43; III.9

Paranoid–Schizoid 'persecution' by individual's mode of thought and feeling. I.11

paranoid–schizoid position both clear and chaotic. I.21

para-sympathetic and sympathetic, contrasted with voluntary. I.14
[*see* **logic**]. I.14

Paris the lover of *Helen* of Troy. II.19

Parliament a 'talking shop'. III.8

parson contrasted with science. I.20

partiality The psychoanalyst's aim is not to take sides with one or other of the conflicts in his mind which the analysand exposes. Every analyst has to decide for himself whether he agrees with such an aspiration, and if so, whether it would be helpful to the analysand. II.8

Pascal investigates religiously as *Descartes* does mathematically. Both have the same vertices as *Newton* and others. I.13

passionate love related to maturity. I.29

passions as a force which appears under many disguises. I.8

Past and Present and Future are often used in psychoanalytic discussion. At best they can only be suggestions of the need to discriminate qualities which are being interpreted. The only evidence is that which the analyst can observe for himself at the time, while he talks. This fact is obscured by words which tend to imply that the event or emotion to which he wants to draw attention occurred 'in the past' or 'in the future'. The important thing about the patient's state of mind is that it exists *at the time* he or she is seeing the analyst. II.16

past often considered to be the concern of the psychoanalyst. II.19
unknown. I.4

patient term often used about ill or disturbed people without the prelude of thought to such usage being endured. Medical,

psychoanalytic and religious disciplines are all frequently evaded in the wish to find a short-cut. The psychoanalyst must discriminate between the ambiguities of the word 'patient'. II.1

Paton, H. J. philosopher, quoted from personal experience. II.1

pattern of thought. III.8

visual, recorded on paper, a sign that has to be interpreted. I.19

Pearse, Tom traditional English song, WIDDICOMBE FAIR, the chorus of which is, 'Uncle Tom Cobley and all'. I.32

peculiar used to mean 'odd'. I.11

Péguy on quality. II.14

Penelope wife of *Odysseus.* I.8

penetrating shaft of darkness, analogous to penetrating silence. II.3

penis and vulva antagonized. I.8

envy of. I.10

function of, as analogy. I.16

homogeneous. I.9

Pennsylvania University of, and its alleged wealth. II.15

perception sensory and extra-sensory. I.14

perspective changed if the focus or vertex is changed: e.g. eating, active or passive; nice feelings ↔ rage and pain. I.20

Euclidean image as a means of conveying perspective. Projective geometry is implicit in *Euclid.* I.35

perspicuity psychoanalyst's problem of his dependence on the analysand's capacity for comprehension. III.8

petrol used concretely in contrast to mental concept. II.1

phenomenes phenomena contrasted with genotypes. III.12, III.13

Philosophers and Saints and Artists, *P.A.* speaking of, draws attention to the fact that the mature expression of a basic quality is impossible – or has been so far. II.16

photogram an analogical portrayal of recording unseeable mental phenomena as if seen. I.24

phrenes diaphragm, often used as a model for any permeable membrane. I.20

If the phrenes are not the source of thinking, in what way are other locations of the source regarded as preferable? I.36

related to a bodily structure to which many functions are attributed. This attribution is similar to that by *Alcmaeon of Croton* and psychiatrists today to the brain. (*Alcmaeon of Croton,* c. 500 BC, physician and scientist, held the view that the eye is connected to the brain by pores.) I.37

pied facetious use of French for the slang expression 'my foot'. I.39

Piontelli, Alessandra See *From Fetus to Child: An Observational and Psychoanalytic Study* (Piontelli, 1992). III.12.

Bion would have been fascinated by Piontelli's findings, which demonstrate connections between psychoanalytic evidence and observational data on behavioural and psychological continuities between pre-natal and post-natal life. [*Ed*.]

'Pipe me to pastures still . . .', *G. M. Hopkins,* THE HABIT OF PERFECTION. I.20

pitch perfect (musical). I.8

pits optic and auditory, are discernible in the first few weeks of the life of the embryo. Under psychoanalytic observation many stages display the dominance of characteristics which, like those of seeing and hearing, appear to mark the character of the individual; they are signs which can reveal the 'direction' the individual is likely to take. II.1

Plato dialogue between *Socrates* and *Phaedrus.* III.5

Forms of, did not save him from the poets. I.13

on Forms, of which sensuous objects are the unreal but sensible counterpart. I.17, I.34

on Forms; parable of the cave. I.10

SOCRATIC DIALOGUES. III.5

Platonist The ideas expressed by *Plato* and *Socrates* in Babylonia were suppressed in Edessa, revived in Syria and were re-woken in Greece by the Arabs. Psychoanalysis today is carrying on from origins which were philosophical, religious and even athletic. II.16

plausible theories and fictitious constructions. I.37

play the playing of games as a prelude to making the thing 'played at' explicit; 'real' as a description of the quality of a thought or idea which has been made explicit by transformation into action. I.36

playing The practice of psychoanalysis has given a new dimension to the understanding of the play of children. The ability to 'understand' has to be extended to cover the significance and meaning of adult 'games'. The ability to regard psychoanalysis as one of these adult 'games' can aid in the comprehension of what is going on when two people are engaged in what is nowadays known as psychoanalysis. II.7

pleasure, sensuous ignorance of. I.3

+ mathematical symbol borrowed for purposes of indicating 'the couple' which is the biological unit in the case of living objects which depend on mating for genesis. I.43

PNS/CNS peripheral nervous system/central nervous system [*see* **phrenes**]. I.36
poetry a disciplined method of communication in the shortest possible terms known to the serious thinkers. II.1
Poincaré and mathematical beauty. I.28
THE FOUNDATIONS OF SCIENCE. I.21
'poison gas' [*see* **flatus**]. I.26
Poisson distribution statistical concept. I.39, I.40
Poisson's Law remains of archaic survival of 'embryological mentality' likened to. I.8
poles of confusion, as represented by the printed page. I.19
police The patient who resorts to violence forces the analyst to seek auxiliary aid; the consequent disruption of the conditions of his work has to be allowed for. II.19
polymorphous-perverse psychiatric technical term. II.14
Pontius Pilate a famous handwasher, now enshrined in literature. I.27
Pooter, Mister a fictitious character in THE DIARY OF A NOBODY by *George Grossmith.* I.20
Popsy nickname for an officer training cadet. II.4
pornography as a seductive component. I.31
portrait interpretations as portraits of the mind at whatever 'level'. I.31
Port Royal the home of a religious movement. II.18
possession of literary characters, as owned by their creator. I.20
post-fissile imaginative conjecture about the state produced after an atomic war. II.19
pother punning reference to person and state of mind. I.21
Pound, Ezra punning reference to, and buried meanings displayed. I.11
translations by. I.17
Fenollosa and 'Ideogrammatic signs'. III.4
Poverty be the bride *G. M. Hopkins,* THE HABIT OF PERFECTION. II.15
Powicke, Sir Frederick discussing communication or interpretation of states of mind. II.2
practice The practice of psychoanalysis belongs to a particular form of investigation of particular individuals. It is frequently forgotten that there are limits, however ill-defined, to the area in which its theories should be regarded as relevant. II.19
practising psychoanalysis The experience of *discussion* of psychoanalysis is liable to arouse powerful emotions in the discussants. This must be sharply distinguished from the powerful emotions released in the course of the *practice* of psychoanalysis. The emotions in the practice of psychoanalysis are important because they are often 'denied' without a proper realization that in the

psychoses the denial has a physical counterpart. What I have called sub-thalamic fear, 'terrifying' fear, relates to a primordial and probably pre-natal terror. It usually takes, with our existing methods, years of psychoanalysis before the patient will admit to the depth of terror. Usually the terror is so intense that verbal formulations are inadequate to do it justice. It is, therefore, expressed so faintly that the psychoanalyst can fail to observe it or may exaggerate his observation of expressions of terror which are not in fact subthalamic fear. The result is both failure to observe the serious condition on the one hand, and to claim a cure which in fact relates to observations of a state of mind which is *not* psychotic. [*See* **thalamus** and **adrenals**]. I.42

Praxiteles Attic sculptor, fourth century BC, conjoined with artists of other ages. I.31

precise contrasted with 'conversational' speech. I.42

preconception a word that might be useful to describe something not yet conceived; also a mind of a creature before conception. II.14

pre-conception The word 'conception' is often ambiguous; the context has to be relied upon to resolve the ambiguity. II.18

premonitions related to omnipotence. I.11

pre-natal and post-natal personalities; their coming together is a danger in psychoanalysis. III.10, III.11

pre-natal ↔ post-natal two-way relationship. III.12

present unobserved. I.4

pretend the ability to stimulate belief in the pretender's experience. I.24

pretty prettiness as a weapon used to humiliate. I.24

prick as a gross word. I.16

prides companies of lions etc. I.27

Priestly Code detectable in the OLD TESTAMENT. In the 51ST PSALM there are signs which may indicate the struggle between two states of mind. In psychoanalysis these usually appear as conflicts between the profession pursued for the sake of gain and the more God-oriented motives. II.1, II.2

priests of Ur. I.28

primal scene cruel version. I.4

Prime's Field schoolboy reminiscence. III.2

Prince the name of a cart-horse; boyhood reminiscence. II.4

prize a sarcastic reference to the alleged freedom of life in England. II.19

probability all theories of, are inseparable from an awareness of improbability. II.7

Procrustean In Greek mythology *Procrustes* was a highwayman who forced passers-by to fit one of two beds by cruel methods. I.9
profits financial, of psychoanalysis. I.27
progress and direction. III.8
conditions propitious to. III.8
projection 'algebraic projective geometry' as a soothing term. I.20
shadows unprojected. I.8
projective identification presumed to imply domains of thought not at the time explicit. I.37
resentment at being the receiver. I.18
prostitution The word should not be used by an analyst unless he wishes to convey the use of any gift or capacity in ways which involve a departure from what I understand religious people to mean by 'The Way', the Chinese know as 'Tao' and post-Islamic Arabs as devotion to Allah's will. I cannot speak with any authority on these matters; each psychoanalyst has to investigate for himself the 'domain' I am wishing to indicate. II.7
Ps ⇌ D wave theory ↔ quantum. I.28
psyche though invisible, 'betrayed' by psychoanalysis. I.24
Psychiatrist representing violent, artificial, civilized behaviour. I.17
State, representing socialized concern for social units of the group. I.17
psychiatrist and his fear of close contact. III.12
psychic quality *Freud,* INTERPRETATION OF DREAMS. I.21
psychoanalysis an action which is a prelude to action. III.11
bringing into view feelings of which the individual is unaware. III.8
compared with military action. III.8
meaningless term invested with meaning; a science that infuses fresh meaning into many terms familiarly used, usually without content. I.29
not accurately used in a group; an analogy borrowed from theories of the individual if applied in a group. I.24
practice of, advantage over the abstract. I.Pro
practice of, and fear. III.8
practice of; *P.A.* states the general principle of aiming for specific evidence for the scientific facts interpreted. III.9
presence of analysand and analyst a minimum necessity. II.11
terms used in, were rapidly learnt and misused when it was 'the fashion', and have been ever since. Nevertheless such people are thrown into disorder and dread when confronted by the actual experience, despite their easy familiarity with the language. II.6

use of this term is often applied to activities of which the nature is not understood. I.38

verbal formulation misleading in. III.8

psychoanalyst not wanted by *Rosemary.* Neuroses, and even psychoses before diagnosis, are not taken seriously; nor is pain or the psychoanalytic approach to it. II.18

psychoanalysts and doctors and surgeons, exposed to comparable stresses. III.9

psychoanalytic investigation and teaching, compared with problems of the religious. II.18

psychoanalytic conversation and social conversation; important distinction. III.11

psychoanalytic experience untoward effect of. I.24

psychoanalytic theories possible use of, to support any activity. III.11

Psycho-flim-flam contemptuous reference to psychoanalysis. It is a typical hostile comment on an activity likely to disturb existing modes of thought. II.4

psychosomatic and soma-psychotic, partners in the same physical soma. III.7, III.12

Public School in England open to 'all' if wealthy enough. I.15

Puckeridge a Hertfordshire village near Standon on the Road from Bishops Stortford to the North. II.4

pulsations rhythmic marching beat. I.23

punning typical of a state of mind. II.4; III.6

Purgatory used as a time or place for discarding meaningless accretions. II.14

pussy and grin. I.14

Pyrrha a character in *Horace's* FIFTH ODE on very unsentimental views of men. I.31; II.19

Pythagoras theorem of. I.30

Q

Q.E.D. quod erat demonstrandum; used to signalize the conclusion of the discussion. I.28

quackery derived from an animal noise, now contrasted with truth. I.14

quack-quack German machine-guns were superior by virtue of their slow rate of fire. The sound was believed to be more like the quacking of a duck than the nervous chattering of the Lewis gun. II.4

quanta not suitable to replace wave mechanics. I.39

quantity increase transformed from quantity to quality. I.21, I.22
loudness often contrasted with 'the still small voice'. I.42
+, zero, –: too much, just right, too little. I.14
quantum a discrete particle. I.28
quarters servants'; parts of a house reserved for 'inferiors'. II.7
Queen Mary sometimes known for her 'unqueenly' characteristics. II.15
Quee-Quegg a character in MOBY DICK by *Herman Melville.* I.19
Quentin modern disguise for the name of a soldier who 'broke down' and never recovered. II.6
questionnaire as a method of revealing a pattern. I.22
'Quo Fas et Gloria Ducunt' 'Where duty and glory lead', regimental motto. II.4; III.8
Quoodle 'bright smell of a stone'; incorrect quotation of 'The brave smell of a stone, ' G. *K. Chesterton,* THE SONG OF QUOODLE. I.28
'even the smell of roses is not what man supposes, And goodness only knowses the Noselessness of Man'. *G. K. Chesterton,* THE SONG OF QUOODLE. This is an example of 'concretion' [*see* **concrescence**]. I.14
quoth parody of *Poe's* poem, THE RAVEN: 'Quoth the Raven, "Nevermore"'. II.6

R

rack reference to *Shakespeare's* description in THE TEMPEST of the ephemeral nature of man's imagination. II.3
radiant term borrowed from mathematics. I.42
radiographers inaccurate without computer aid. I.28
rage *Alice's loss* of self control. I.3
and pleasure. I.20
ragged colloquial for 'teased'. I.15
ram caught in a thicket; an archaeological find at Ur of the Chaldees. I.8
random the supposition that chance might have 'laws' of its own and that 'logic' as it is known is a symptom of the limitations of the human mind and not a quality of *absolute* law. II.3
rape as cruel love. I.8
rational conforming to rules of human thought. III.7
rational explanation more acceptable than ignorance. III.9
rationalization as logical 'cause'. I.8

real *P.A.* is described as no more real than any other fictitious character. II.19
[*see* **play**]. I.36
things, contrasted with figments of the imagination. It implies a distinction between something supposed to have an existence independent of the mind, and what a mind perceives. The mind needs to be able to 'think clearly', i.e. to produce constructs that are as close as possible to the 'reality' which is thought to be observed. II.14
reality concept of, as referable to something knowable by humans. II.19
has to be defended against imagination. I.20
its differentiation from jargon. I.24
underlying a perturbation. I.24
underlying, physically as well as verbally recognizable. III.8
reason as a logical disguise for the passions. I.8
related to thought and constantly conjoined verbal elements and the limitation of the area of discussion. I.37
RECESSIONAL *Rudyard Kipling.* I.9
Regret a character in *Damon Runyon's* stories of New York. II.19
Reichenbach Falls fictional version of moral fall and termination; *Conan Doyle,* SHERLOCK HOLMES. I.42; III.12, III.13
relativity Ideas are relative to each other; it is not only between human individuals that a 'transference' exists. I.14
relevance dependent on the relation of the observer and his vertex, to the matter observed. II.19
RELIGIO MEDICI *Sir Thomas Browne.* II.19
religion ability to believe in God. I.17
Although words like 'God' and 'Devil' are frequently used as expletives, if in no other way, it is somehow supposed that a psychoanalyst would ignore the evidence which indicates something transcended by the words. Hostility is unlikely to escape anybody's attention; other possible origins for the emotion expressed are ignored. II.8
and education, and psychoanalysis; all described as futile. II.19
and worship. *P.A.* and *Priest* discuss. III.10
brought into contempt by its 'addictive' abuse. II.5
Christian, with decreasing adherence amongst combatant British. II.7
evidence of the force of power, bigotry, ignorance, given by. III.7
In *P.A.*'s soliloquy an attempt is being made to discuss a matter that is more familiar to theologically trained people than to psychoanalysts. II.8
language of. II.1

of psychoanalysis. III.10
psychoanalysis as a modern version of the religious 'concrete', i.e. the name given to all phenomena which are concrescent. I.26
[*see* **cruelty**]. I.17
'religions' discarded and replaced. III.10
religious and irreligious; aspects of a state of mind detectable in all classes of thought whether scientific or artistic. II.1
remember an example of a 'fact' alleged to be 'remembered'. II.3
word in constant use, but its meaning has to be re-valued for psychoanalytic investigation. II.2
Remes, Mr *Robin.* I.7
reminiscence not to be used as a denial of the reality of things remembered. II.3
repetition school term for memorizing poetry. III.3
réponse, la *Maurice Blanchot* quoted. III.6
representation arti-factual. I.34
reprobate Psychoanalysts are in no way peculiar in being both under- and over-estimated. II.7
research astronomical. The dissemination of scientific news is easily prevented by authority. II.5
resilient psychoanalyst needs to be. I.24
respect All psychoanalysis is based on respect for the individual as contrasted with the belief that merges him with the group. II.19
for character, and ownership of a character or its attributes. I.20
responsibility burden of, regarded as too great a price to pay for the privileges of choice. I.37
responsible the restoration of efficiency, physical or mental, debated. II.11
resort to arms. *Man* argues that psychoanalysis is a reprehensibly delayed act analogous to delayed attention to the signs of impending war. II.19
rests as in a musical composition; also silences, pauses and blank spaces. I.39
result used as if it were the end-product of a human endeavour. II.11
Resurrection Blues an alleged dance corresponding to the dancing movements of a fetus before birth. II.19
revelation term often used in a religious context, e.g. REVELATIONS OF ST JOHN, and the APOCRYPHA. II.11
revenge of past degradation. I.4
reversed perspective and vectors to indicate the direction of the 'reverse'. I.35

In psychoanalysis the analyst's observation must be acute enough to discriminate between metaphors and reversals of perspective. I.33, I.43

R.F. and punning associations. I.8

rhapsodically cf. scientifically precise. III.6

rhythm distinguished from pulsation by its timing. I.23

Rib the small river; a reminiscence of happy days, with the miseries of the muddy trickle of a beck in the Battle of Ypres remaining. II.4

Richthofen celebrated German airman. When he was killed the British dropped a wreath over the German lines. This was a dangerous action, as when a German airman, dropping mail from British war prisoners and carrying a mark indicating that he was not on a combat mission which was not seen by the antiaircraft gunners, was shot down. I.33

ridiculous a description which can be used to undermine any claim to scientific truth. II.19

Riemann and *Lobachevsky.* I.14

rigour of thought, dependent on destructive criticism. I.20

Rimbaud a French poet whose creative verse was written in a period of mental distress; considered by some people to be insane. He emerged from this into a period of physical travel and did not return to his poetic creations. II.2

ritual and sacramental death, equated with health. I.29

rivalry related to victory, success, triumph and failure – all expressed linearly from plus to minus; dependent on quality of emotion and amount of emotion, but without a scale of measurement. I.37

river 'shall we gather at the . . .'; from a revivalist, nonconformist hymn. II.19

road the end of the . . . , on a supposed journey to reach certainty. II.19

roaring associated with swelling. If psychoanalysis makes it possible to 'see' intuitively what is invisible, does it also make it possible to hear 'roaring' which is inaudible? I.9

Robin his own safety dominant. I.7

Roland as a concrete symbol of that which becomes abstract thought. I.16

and reversal of emotional roles between *Alice* and *Rosemary.* I.3

'only'; limiting discussion. I.29

Rosemary supports his death because of the danger that her former employers will attempt to undo their subjugation. II.16

Roll *Priest's* reference to a revivalist hymn. II.19

Roman Catholic Church ritual; its use for revelation or obscurity. I.30

Roman Catholics their monotheistic dogma. I.30

Ronsard 'Ronsard me célébrait du temps que j'étais belle', SONNET VI. I.8
root in its grave; ref. *George Herbert,* VIRTUE. I.8
Roper, Trevor historian. I.29
Rosemary and *Alice,* potentially augmenting power. I.22
as arrogant mistress. I.10
as lady-in-waiting. I.33
as personification of cruelty. I.16
emotionally more powerful than *Alice.* I.3
her feet demand attention. I.31
The content of her dream is represented as being the reciprocal of *Alice's* experience of conscious waking reality. It is a state of reciprocity that I have detected occasionally in psychoanalysis. The relation between the states of mind when asleep and awake has not been adequately explored by *Freud's* brilliant work on dreams. Any development of the understanding of dream states must not be regarded as taking the place of work already done. II.8
rose '. . . by any other name would smell as sweet', *Shakespeare,* ROMEO AND JULIET. I.14
'rosy wreath' *Jonson,* TO CELIA. III.4
'roughness' in contrast with smoothness and typical of descriptions e.g. hard and soft – which are so frequently used that their significance is often not observed. This is also true of 'left' and 'right'. In script it becomes more noticeable if it is in a language written from right to left, or up and down, in contrast with script read from left to right. In psychoanalysis the emergence of that kind of thinking can pass unobserved. II.3
Royal Court impossibility of unearthing archaeologically an archaic state of mind. I.28
ruck and reel *G. M. Hopkins,* THE HABIT OF PERFECTION. I.9
rudimentary brain, possibly related to rudimentary personality. I.18
Ruin Among the Lovers; distorted reference to LOVE AMONG THE RUINS by *George Meredith.* II.14
rules of war; contemptuous reference to war as a game played according to the rules of chivalry. II.19
Ruskin deflected from his true vocation by *Rose la Touche.* II.1
his elucidation of *Milton's* metaphoric communications. II.1
his interpretation of LYCIDAS compared with *Kenner's* interpretation of *Shakespeare.* II.2
on 'reading' without thinking the thought through. II.3
stressed the artist's loyalty to truth. II.1

S

Sade *Alice* and *Rosemary* similar to *Sade v. Masoch.* I.8
Marquis de; his services to cruelty. III.9

Sade* versus *Masoch suggested as a wrestling match by an analysand. I.22

sadism and mocking. I.4

sado- *Rosemary* interrupts *P.A.* before he can articulate a psychoanalytic concept; she expresses indifference for the psychoanalytic approach and for 'thought' as contrasted with material action. II.7

safety dominance of. I.7

Sagittarius supposed direction of galactic centre. II.1

Sahagun, Bernardino sixteenth-century Franciscan missionary in Mexico; on the use of divine attributes for the purposes of ordinary human beings. I.30

'Sail on!' quotation from *Longfellow,* THE BUILDING OF THE SHIP; used in an interchange between *Franklin Roosevelt* and *Winston Churchill.* II.1

Saint John of the Cross opposed to the dogmatizing of his beliefs. II.3

Saint Paul an early originator of the need to 'philosophize' what had previously only been described in terms of feelings. II.19

San Francisco topless style affected by prostitutes exposing their breasts. II.19

sanity as a refuge from imaginative conjecture and its association with the breakdown of logical rules. II.19
health as a limitation. I.8

Santayana, George view of science and scientists. I.20
view of the English. II.4

sarcasm (literally, 'tearing flesh') as a method of destroying a discussion at its initiation. II.1

Satan and hell fire. I.8

saturated used metaphorically to describe words which are charged with meanings. II.14

satyr 'and the satyr shall cry to his fellow', ISAIAH XXXIV. I.1, I.15, I.17

sauce impudence (colloquial). I.25

Saurian 'lay a-thynkynge'; a parody of one of THE INGOLDSBY LEGENDS by *Thomas Ingoldsby.* II.14

saurians dominant creatures of the reptilian age preceding an amphibian and possibly fishy state still detectable in the mature adult human. II.1

saviour expectations of the existence of. III.13

scandal school for; reference to *Sheridan's* play and to the act of spreading scandal. II.19

scandals as symptoms of social pain. II.18

scavengers excrement-eating. I.29

'Sceptre and crown . . .' *James Shirley,* THE CONTENTION OF AJAX AND ULYSSES. III.9

Schacht finance minister in *Hitler's* government. I.37

Schiaparelli the 'discoverer' of canals on Mars. I.41

schizoid smile gentle but clear. I.9

Schreber his MEMOIRS; ref. also to *Freud's* PSYCHO-ANALYTIC NOTES ON AN AUTOBIOGRAPHICAL ACCOUNT OF A CASE OF PARANOIA, 1911c. III.4

science fact and fiction related to. I.8

In so far as it involves awareness of truth it can have a destructive or obscuring effect on human feelings. II.15

relationship to smoke drums and real life. I.Pro

screens obscuring. III.7

resistant. III.7

sculpture its tangible qualities shown to be extended by what is seen; the difference elaborated between the pattern made by 'light' and the pattern made by the shadow. *Myself* discusses this and its similarity to 'rests' as distinguished from the musical notes. I.39

Search the Scriptures reminiscence of school task set for Sundays. III.13

'seasons return' *Milton,* PARADISE LOST, BOOK III. II.14

Second Army British. The general officer commanding in World War I was famous for his respect for his troops. II.6

SECOND THOUGHTS collected psychoanalytic papers. I.16

secrets *P.A.*'s reference to secrets is a summary of a theory that in psychoanalytic practice thoughts and ideas are made overt, the implicit is made explicit. Whether such a state of affairs is possible and how it could come about might be debated by considering that Euclidean geometry, though different from algebraic projective geometry, nevertheless 'implies' algebraic projective geometry which becomes explicit after *Descartes.* The reader might also consider the ideals of psychoanalysis; the aims of *President Wilson* with regard to international covenants being openly arrived at; and the present-day debate of the scientific exposure of secrets which some think should have been kept unavailable to potential enemies. II.8

seduction in love with. II.16

word used as one extreme of a linear progression from sexual love to sexual hate. I.43

See punning use. II.1

seeing an instance of the psychotic ability to transfer impressions of hearing to impressions of sight. I.26

seepage of the content of one idea into another idea. I.16

self-control lack of. I.3

self-destruction its counterpart in ideas and feelings. I.14

self-murder Psychoanalytic work has revealed – although it has long been a common-place observation – that the patient can, by a series of minute steps, achieve the destruction of all that makes life worth living without resorting to the destruction of life itself by murder or self-murder. II.8

'Self-yeast of spirit . . .' *Gerard Manley Hopkins,* POEM 67 (untitled, 4th edition, Oxford University Press). III.10

semantic term applicable to discussion of articulate speech, but often, as with 'logic', spoken of as if applicable to cosmic space. II.4

semen as accompanied with venereal disease. II.16

sense ambiguity of 'sense'. I.21

sensual scale of sensuous experience; the problem of stating in scalar terms 'where' the 'diaphragm' separating conscious from unconscious is to be located when there is no scale. I.13

sensuous impressions [*see* **desires**]. II.9

sentence reference to an old school-masterly joke about a student's description of *Agag's* punishment when he was hewn in pieces. II.19

sentential calculus psychologists' exploration. II.1

'sermons in stones' *Shakespeare,* AS YOU LIKE IT. III.8

Serpent OLD TESTAMENT, GENESIS III.15. III.1

set theory The mathematical theories have recently been worked on in a very suggestive and disciplined manner by *Ignacio Matte Blanco.* This sophisticated approach appears to illuminate many of the events and episodes with which I am familiar when using psychoanalysis to investigate the personality. This is particularly illuminating with regard to thoughts and ideas which have never been conscious, e.g. vestigial remains of what appear to be primordial 'thinking' even before birth. If this conjecture is correct it may open up a revision of the relationship between 'states of mind' when awake, conscious and rational, and 'states of mind' when asleep; in particular, reports made by a fully conscious and alert being about what he says is a dream and, conversely, the relationship between the 'sleeper' or unborn personality and facts (so-called by the scientists) which make themselves felt by the fetus, and possibly the embryo, in the womb. I.38, I.39

Seven pillars *T. E. Lawrence,* SEVEN PILLARS OF WISDOM. II.10

Seventh Division The gun barrels of their artillery were worn through constant firing without replacement. II.19

sex 'all sex'. At the present phase in which 'psychoanalysis' is part of a vogue, though possibly the 'fashion' is declining, the early furore centring on the revelation of sex drags on as a cliché drained of content. II.8
Love of man for man, and love of woman for woman, is differentiated verbally as homo- and hetero- sex. The differentiation is debased by moral contamination which makes even the verbal formulation of negative value. The result is that homo-sexual is now indistinguishable from morally wicked. *passim*
notoriously laxly used. II.19
simulation of. I.3
'superiority' of the sexes; discussed in the context of the reality of biological sex. II.18
term often used as if its value were constant. The adjective 'just' almost invariably means that the term is being used meaninglessly. II.2
term too ambiguous now to be useful without qualification in precise and particular happenings. I.43
term used in contrast with psychological extensions of the meaning. I.39
typical of a term that has lost its scientific meaning; compared with other debased qualities. I.29
vagueness and ambiguity of this term is such that it is virtually meaningless; point discussed. II.5
Sexton and appendicitis; reminiscence of schooldays. III.13
sexual term used to describe experiences which might be better known as pleasurable. I.37
S.F. and punning associations. I.8
shadow pattern and absence of [*see* **X-ray**]. I.20
shadows in dreams. I.8
Shakespeare as artist conferring durability on aesthetic communication. II.2
MACBETH. I.17
Sonnet 51; a punning and oblique reference. I.8
'There's a divinity doth shape our ends . . .', a quotation from HAMLET, used by medical students in jesting reference to circumcision clumsily carried out. I.20
the works of, facetious reference at University College, Oxford. II.9
shape of things to come; linked with a ghost of the past. II.4
'Shape nothing lips . . .' *G. M. Hopkins,* THE HABIT OF PERFECTION. III.1
Shaw, Bernard his sarcastic reference to the gradualness of change contrasted with catastrophic change. II.19
Shelol *The Duke* of, an honoured demon. II.19

shell-shock and emotion breaking through the caesura. III.12
respectable in contrast with contemptible [*see* **brain**]. I.21
[*see* **fashions** in nomenclature]. III.8
Sherlock and *Irene Adler,* as snide reference to *Mycroft's* entanglement with psychoanalysis. I.24
'shine inward' *Milton's* way of finding an outlet for his sight of which he was no longer capable because of blindness. II.1
shit use of word related to conflicts between truth and prevalent culture. II.1
shock Death instantaneously brings together many and conflicting feelings. I.22
shoes as receptacles for feet, similar to the 'imprint' of feet. II.18
shot A more sophisticated capacity to verbalize would call it an 'ejaculation'. II.19
'should be' contrasted with 'is'. I.31
Shub-ad the queen in the death pit at Ur. II.10, II.15
sigh and other words contextually related to form a pun. II.4
sign NEW TESTAMENT, ST MATTHEW XI. I.22
silence as part of psychoanalysis, contrasted with noisy quarrelling. I.20
'silence, le éternel . . .', *Pascal,* PENSÉES. III.8
simplicity term used to reveal or conceal mental quality. II.3
simplification problems of. I.19
Sir Galahad the 'saintly' hero in the MORTE D'ARTHUR. I.16
skeleton a structure on which flesh can be built, and after death on which archaeologists can build theories. I.14
skivvy and mistress. II.16
and whore, as contemptuously equated. I.28
contemptuous term for 'servant'. I.15, I.32
contrasted with goddess. The contrast here is between the contemptuous reference to a servant and the idealized reference to a mistress. II.10
'gives the orders'. *Rosemary's* 'explanation' is a simplification based on the idea that hypocrisy leads to misfortune and that loss of status is a misfortune. Both ideas could repay reconsideration. II.7
sleep and speed of dream. I.10
events of. I.8
fact or fantasy. I.8
reference to the RUBAIYAT *of Omar Khayyam.* I.74
Sleeping Beauties reference to the fable *of* a princess who was liberated. II.15
slumber *Isaac Watts,* THE SLUGGARD. I.18

smell bad, and mental counterpart. III.8
bad, and obscene language. III.8
sense of, short range in water. III.3
'smell' of danger. III.8
snipe game bird. In spring its feathers make a 'bleeting' noise in rapid downward flight. II.4
Socrates and God. III.5
SOCRATIC DIALOGUES [*see* ***Plato***]. III.5
soil *Dr Spooner* alleged, in Oxford University Church, to misquote 'horny-handed sons *of* toil'. I.11
sojourn *Milton* describes a period during which he was 'detained in that obscure sojourn'. He refers to a state *of* mind from which he emerged, but into which many analysands fear to enter – usually described as 'a breakdown'. II.2
sole sarcastic reference to the soul *of Rosemary* after the years of survival. II.19
Soma and Psyche not sharing the same body, sometimes described as 'homosexual', 'heterosexual', 'married', 'in partnership'. III.12
soma-psychotic [*see* **psychosomatic**]. III.7, III.12
Somnus [*see* ***Lethe, Palinurus***]. I.8, I.32
songs classically sung by the *Sirens;* used here to refer to songs that might have been sung by the women's paramilitary services. II.2
SORDELLO poem by *Browning* often regarded as obscure and of which *Browning* said, when asked later in life, that only God knew what it was about. I.26, I.40
sound has to be interpreted by the hearer when he wants to know what it 'means'. II.19
source in the sense of 'origin' from which a train of thought or impulse is initiated. II.12
space Euclidean. The space pictorially described by *Euclid* with his lines, circles and geometrical figures, although its fallacies, notably with regard to parallel lines, became increasingly clear, was nevertheless close enough as a description of Real Geometry to imply what subsequently became explicit with the help of algebraic projective geometry. II.1
infinite and religious. I.14
mental, likened to astronomical space. I.8
space, breathing *Freud* has described the part played by thinking in delaying the transition from impulse to action in FORMULATIONS ON THE TWO PRINCIPLES OF MENTAL FUNCTIONING, 1911b. II.9
SPACE, TIME AND DEITY *Samuel Alexander.* I.38; III.9

span of time, dependent on scale of measurement used. I.28

sparse 'thoughts'. I.8

spectrographic investigation. Thanks to the spectrograph, the composition of far-distant sources of light can now be determined. At present no method has been found for the elaboration of an instrument to detect the source or path of *thoughts.* At some future date this may become possible when a unit sufficiently small is detected and a 'grating' is able to measure and discriminate wave-lengths of different categories of thought. At present such an idea can be decisively stated by modern Le Comtes as 'never'. II.5

spectrum biological; the need for a structure which would include inanimate as well as animate. I.16

term borrowed from optics to describe shades of meaning and understanding. II.18

speculation I have found it useful to consider speculation as being imaginative or rational. I mean by this that the rational explanation is only a part of speculation; it is usually characterized by referring to speculation which could be related to probability. A murder is often related to a translation from impulse to action without the delaying effect of adequate thought. II.8; III.9

spinning a man violently rotated [*see* **guts**]. I.22

'spiritual consolation' moral or immoral; or holy, i.e. honest and helpful. I.34

spiritualism and science conflicting in *Conan Doyle.* I.20

spirochaete reference to a poem by *W. B. Yeats,* THE SAD SHEPHERD ('There was a man whom Sorrow named his friend') with the suggestion of the physical assault on the physical brain in tertiary syphilis. II.19

splitting and articulate speech. III.11

spoils of war. Primitively, sexual freedom was regarded as the reward for victory; quoted by *Rosemary* as one of the primitive rewards of power, financial or social. II.15

Sport 'a Good Sport', an expression used of athletes; also used to parody the facile optimism of some Christian attitudes to troops at war. It did much to bring all religion into contempt. II.5

spy The suspicion of psychoanalysis, attributed to *Roland,* is in fact easily evoked no matter how *'officially'* it may be recognized. Like any other human activity, it can be put to malevolent, as well as benevolent, use. In practice it would seem that there is no satisfactory aim other than demonstration of what is true. This can be obscured by an analyst wanting to be 'helpful'. II.14

spying usually used to express an evil branch of curiosity. In real life investigation is indistinguishable from the purpose for which it is carried out. II.8

'square one' term borrowed from games in which a checkered board is used to describe the starting point, e.g. snakes and ladders. I.44

stammer provoked by shock at reaction to death. I.22

standards impressions of the human being may be *difficult* or impossible to validate. II.9

starvation both literally and metaphorically conducive to seduction. II.16

Stations of the Cross The earliest use of the word 'stations' as applied to the accustomed halting-places in the Via Sacra at Jerusalem; occurs in the narrative of an English pilgrim, *William Wey*, in the mid-fifteenth century. II.19

stegosaurus heavily armoured dinosaur. I.18, I.32
the saurians as a stage in animal development. I.14

Sterne, Laurence his method of verbal communication; ref. SENTIMENTAL JOURNEY [*see* **concrescence**]. I.14

stickler one who is a pedant. In psychoanalysis the pedantic use of a word emphasizes its grammatical importance to the exclusion of its essence. II.16

stockings, black at one time almost a uniform of the 'inferiors'. II.7

Stokes a South African in the days when it was still possible for such a man to fight against oppression. II.6

stone and stick; inanimate objects used by the animate. I.29

stops and dashes space-fillers, substitutes for true thought or action. I.7

storm centre *P.A.* somewhat optimistically describes himself as being able to detect the emotional storm of which he is the centre. II.8

Strachey, James his translation of *Freud.* III.9

strait jacket an article used for restricting the activity of a violent person; used metaphorically for ideas intended to confine freedom of thought. II.3; III.3

struck on colloquial, like 'sweet on', referring to happy love. I.22

stupefied emotions often destroy clear thinking. II.18

stupendous upheavals, referring to cosmic explosions. II.19

sub-thalamic term used by *P.A.* to express a conjecture. II.1

success [*see* **rivalry**]. I.37

suicide [*see* **self-murder**]. II.8

Sullivan and *Gilbert,* H.M.S. PINAFORE. II.1, II.2

summer's day *Shakespeare,* SONNET 18. I.22

'super-man' related to god; quotation from *Nietzsche.* I.28

surrender *Man* maintains the value of stimulating an enemy's fear. *Field Marshal Slim* fed orders into a non-existent flank of the British 14th Army. II.11

Swaffham a town in Norfolk, England, where burial urns were found that stimulated *Sir Thomas Browne's* classic, URN BURIAL. II.2

'Swollen with wind' *Milton*, LYCIDAS. III.10

sword NEW TESTAMENT, ST MATTHEW XXVI. II.1

symbol ingenious manipulation of. I.20

synapse [*see* **link**]. I.41

system applied to deceptions. I.28

T

'talk about' It is clear that in psychoanalysis talking can be a method of communication of genuine thoughts. Unfortunately words can be used in such a way that they are a 'cosmetic' representation of thinking instead of being the outcome of the labour involved in thought. II.8

'talking shop' a contemptuous expression indicating 'talk' as a substitute for action. II.16

tangent measurements of, dependent on the pictorial image of a triangle. II.1

tarpaulin jump into; a reference to a 'funny' story. I.15

tds (of medication) to be taken three times daily; from Latin, *ter die sumendus.* I.19

tea and cooling off, in contrast to an emotionally powerful evocative reminiscence. II.1

tears of fear and rage. I.3

teeth somatic and metaphorical. I.14

telescope [*see* **microscope**]. I.13

telescope, radio as an auxiliary to the senses. I.30

television an apparatus for facilitating long-range scrutiny. I.24

Tenochtitlan ancient city of Mexico, now Mexico City. *Priest* makes a sarcastic reference to the triumphs of modern science. II.8

Teotihuacan the site of the Aztec pyramids. II.4

terror of combatant individual [*see* **groups, panic, thalamus**]. I.24

Thaïs Athenian courtesan, 4th century BC, said to have been the mistress of *Alexander the Great* and later the mistress of the king of Egypt. I.8, I.17

Thalamus used for any proto-types of thought. I.14

thalamus anatomically close to the optic chiasma and in this book supposed to have a psychoanalytic counterpart in 'feelings' [*see* **phrenes**]. I.37

There are some forms of terror which can be observed in psychoanalysis which have their origin in the developing thalamus and its 'non-myelinated nervous connections'. This, of course, is an 'imaginative conjecture' which may take years to confirm scientifically. It is likely to be denied by those who claim that the infant or embryo cannot display primordial mental symptoms on the grounds that myelinated nervous tissue does not exist in these early embryological states [*see* **adrenals, theorizing**]. I.42

theocratic society [*see* **democratic society**]. II.2

theorizing an attempt to evolve 'scientific' knowledge. In the practice of psychoanalysis the analyst has to pass through an experience of 'rational conjecture' and 'imaginative conjecture' before he can reach a point where he is able to formulate a 'theory' of what is taking place. All these stages are vulnerable to 'scientific' assessment. The whole discussion between *Myself, Bion* and *Sherlock Holmes* is an 'imaginative conjecture'. I.42

'There will be too much of me . . .' *W. S. Gilbert,* PATIENCE. III.1

thing-in-itself sometimes interchangeable with 'it' and 'reality' [*see* ***Kant***]. I.10, I.38; II.8

think At what stage does an activity exist to which it is correct to apply the term 'thinking'? What term is to be found and used by the psychoanalyst when in practice he has to refer to primordial thinking as precursive to thinking? This problem commonly arises and has to be solved precisely on each particular occasion. II.1

thinking as an activity which *Freud* attempted to describe, scientifically, in psychoanalysis. I.34

varieties of thought. I.35

thinker abstract related to concrete. I.16

and abstract thought. I.8

thinking 'not thinking' does not prevent a fact which is ignored. II.1

thirty related to counting, ordering and mathematical manipulation; compare the dream in which the lean cows devour the others. OLD TESTAMENT, GENESIS XLI. I.14

thorns the crackling of, OLD TESTAMENT, ECCLESIASTES VII. I.21

thought 'to be thought through'. II.3

transformed into physical reality. I.36

with concepts. I.39

without a thinker; the debate between *Man* and *Bion* concerning the usefulness of such a postulation [*see* **Mind**]. I.36

thought generators [*see* **idées mères**]. I.41
thoughts and thinker. I.8, I.11, I.13, I.16, I.18, I.20
as evidence of an underlying, though unperceived, activity. I.20
as preludes to actions. II.1
empty. I.8
empty, and noumena. I.10
shoved into [*see* **projective identification**]. I.18
without a thinker. I.37
thought-without-a-thinker can assume the appearance of reality or that of an hallucination. I.20
threatening as an important part of an old-fashioned belief in a masterful and intimidating deity. II.19
Thus far . . . the lesson that *King Canute* was trying to teach his courtiers by demonstrating the fatuity of their flatteries. II.1
Tiger 'Tyger! Tyger! burning bright . . .', *William Blake*, SONGS OF EXPERIENCE. III.2
Time, the [*see* **watch**]. II.19
Time! a call used in English public houses to indicate the closure of the premises. II.19
time concept of, as a means of 'measuring' the otherwise immeasurable 'space'. I.16
the passage of, as affecting all expressions of human thought. II.3
the passage of, necessary condition for the confirmation or refutation of a hypothesis. I.38
times, ordinary contrasted with 'novel experiences'. II.17
timidity and fear of discovery; courage is required for the initiation of a train of thought. II.3
Tom and impotent, violent and unloving sexuality. I.17
tomb robber and the death pit at Ur. I.8
tomb robbers and archaeologists. I.27, I.28
Tonks This conversation took place between the two artists, *Tonks* and *Sargent*. I.33
tool depending on the function of the user. I.14
invisible, embryo as. I.10
said of a traitor who can betray either enemy or friend, or both. II.14
tools and tool-making. I.9
topless towers *Christopher Marlowe*, FAUSTUS. I.8
tower of Babel, as a symbol of confusion, OLD TESTAMENT, GENESIS xi. I.8, I.26
trail 'There's a long, long trail awinding . . .'; a song popular with the British Army in World War I. II.6
training It is a commonplace that loving parents like to have their

children correctly trained. Since we cannot foretell the future we do not know for what we need to be trained, or for what to train the child. We, therefore, fall back on memories of the past and assumptions about the future. Memory and desire can be seductively useful and as misleading as seductions are. II.7

traitor one who does not conform or subscribe to the prevailing culture. II.7

transference *Freud's* term borrowed to stress transience. II.2

transformation as one process of development. I.20
direction of. I.28
verbal. I.20, I.35

translating by *Pound,* CANTOS. I.15

translucency a reference to states of mind expressed in a 'translucent' manner in dreams, poems and other ways where the context causes the relevant meaning to be unnoticed. I.24

trash *Rosemary* assumes that there is no need to be selective because she has decided that 'trash' is an adequate summary of the material. This is not the case if there is any possibility of a valuable amongst rubbish. II.11
visual, referring to the accumulation through the sense of sight of worthless 'knowledge'. II.19

trauma of birth. III.12

trees troops advancing in the mist at Ypres; restored sight returning, NEW TESTAMENT, ST JOHN VIII. I.15
walking: 'I see men as trees, walking', NEW TESTAMENT, ST MARK VIII. I.8

trick as a method of manipulating an experience for which no scientific definition exists. I.39

tricks learning to deceive as a defence against scrutiny. I.24

Trinity term used by the religious, just as the story of *Oedipus* is used to describe a web of relationships. Difficulties arise because these concepts can be used to illuminate and come nearer to the object illuminated, or to closure the discussion, or even to hinder the approach to what is being sought. II.4, II.9

triumph last; cf. 'last infirmity of Noble mind', *Milton,* LYCIDAS. I.8

trivial related to the vast and the minute, and paradox. I.16

trompe d'oeil discussed with regard to the differentiation of the fake from the real. II.8

Trotter, Wilfred surgeon, and author of INSTINCTS OF THE HERD IN PEACE AND WAR. I.24; II.1

trousers *Robin* is referring to *Daudet's* LE ROI DES MONTAGNES. II.14

trust *Rosemary* expresses her independence of feelings of love or trust and the irrelevance of such feelings to anyone seeking power. II.16
term frequently used in psychoanalysis as if a person or senses could be trusted. In view of the psychoanalytic experience and theories, it is difficult to see why or how 'trust' can be supposed to be trustworthy. Neurologists may indeed believe that the health or efficiency of the central nervous system can be detected; the psychoanalyst on the other hand has to be aware of the intervention of forces the source of which we often do not know. II.16

Truth as a menace when associated with the insignificance of the human race. II.4
indistinguishable from Lies. I.11
robust in spite of neglect and poisoning. III.7
search for, as an obstacle. II.3
supposed to be the aim of and test for 'scientific' observation. II.19

truth and falsehood; polarization of. I.16
as a force exerting pressure to achieve overt existence. II.3
cowardly shrinking from. III.7
devotion to the idea of, the misleading consequences of taking such a concept as referring to something real. II.19
[*see* **fiend**]. I.11; II.1, II.15
obliteration of respect for. III.7
often unwelcome though sought after. II.15
'What is truth?' The question has provoked much thought and many theories. Undoubtedly there is a reality beyond the word 'truth'. Even an infant seems to be aware of the importance of being able to distinguish what we call reality from fiction or conjecture; but the problem of validating a theory is bound to be particularly clear, sooner or later, to a psychoanalyst. II.7; III.7

'Tu Marcellus eris. Manibus date lilia plenis.' [You are to be Marcellus. Give me lilies in armfuls.] *Virgil*, AENEID, BOOK VI. III.7

turbulence drawings by *Leonardo da Vinci.* I.11
insensible yet violent. I.11

turmoil [*see* **black hole**]. II.1

Tutankhamun ideas of, enclosed within the preservative shells of Thebes. III.5

twinkle reference to a childhood rhyme about the stars, and a metaphorical reference to pretty feet. II.19

tyrannosaurus [*see* **stegosaurus**]. I.14

U

Ubique everywhere, anywhere. III.8
Ultimate Reality related to religious concepts. II.9
ultimate reality the 'thing-in-itself, the noumenon which can never be known. II.8
Ultimate Truth It is difficult for a psychoanalyst to see what event in the practice of psychoanalysis could be said to deserve such a description. II.1
Uncle Tom Cobley a character in a popular ballad, WIDDICOMBE FAIR. II.19
uncertainty principle formulated by *Heisenberg;* compared with *Keats's* Negative Capability. I.43
unconscious, the a dream as effusions of. II.18
as an obtrusion in the dialogue. I.15
equated with God. II.18
often used as the name of a location from which ideas come. II.14
'unconscious, the', the danger of glorification of, by psychoanalysis. I.24
unconsciousness night and reality. I.8
'underground' term used to convey 'position' where there is no system of co-ordinates. II.2
uniform mental uniformity institutionalized. II.2
unkind cruelty and mocking. I.4
'unknowns' clarification replaced at once by. I.42
unsaturated component of statements which are not complete. I.20
unveil the evocative initiation of uncovering beauty. I.17
upheaval cosmic; its effect on humans. III.9
'Upon the King!' *Shakespeare,* HENRY V. III.10
upset the state of mind as the defence against sexual intercourse. II.16
Urania and pagan wisdom; one of the Muses of Greek mythology, the goddess of astronomy. I.8
Ur and scientific forebears. I.35
and the 'little cup'. I.31
archaic view of death. I.28
ceremonial. II.9
of the Chaldees, royal cemetery at. I.14, I.28, I.29; II.8
pun on *Sir Leonard Woolley's* excavations at. I.11
use function of. I.13
uttermost 'outer most' in contrast with 'inner'. There are no coordinates for these spatial concepts frequently used about the mind. II.1

V

vacuum nature abhors a, *Spinoza*, ETHICS. II.2
vagina as an analogy. I.16
confused with hole. I.8
vagina dentata fear component of sexual feeling. I.37
variable, eclipsing usually applied to a binary system in which one star is of less luminosity and is therefore able to eclipse the other in varying periods. II.2
verbalization words used in constructing a pictorial image. II.7
verbal methods and mental maintenance and repair. III.8
verisimilitude as a reinforcement of an intention to convince. I.19
Gilbert and *Sullivan*. THE MIKADO. I.19
vertex change of, through the alimentary model. I.Pro
contrast with scalar [see **sensual**]. I.13
further discussion of the term. I.36
microscope or macroscopic. I.43
need for the term. I.Pro
related to definitory hypotheses. II.19
psychoanalytic complexities. II.7
used to describe the 'point' from which a view is perceived. I.43
vestments as auxiliaries. Commonly, clothes of any kind can be doffed or donned in conformity with changes in vogue; debated by *Priest* and *P.A.* I.11
Vexilla regis prodeunt Latin church hymn, STANDARDS OF THE KING ADVANCE. II.1
Vicar [see **Bray**]. II.12
Vico, Giambattista *James Joyce's* ULYSSES modelled on. I.26
vicoesque approach to confusion. I.41
Victoria Cross an award for valour instituted by *Queen Victoria*. I.22; II.17
victory The relationship between dominant and subordinate depends on what force is the arbitrator. The relationship between mistress and maid – *Alice* and *Rosemary* – is a pictorial method of describing how violent upheaval like war might be necessary before the problem is 'solved'. In real life the emergence of a particular merit is so slow as to be imperceptible. It is a matter of judgement as to what would be considered to be meritorious. II.9
vigilance the price of freedom. III.8
Villon, François LE GRAND TESTAMENT [*see* **neiges**]. Best known for his prison writings *Testaments* and his *Ballade des Pendus*. The question, 'Mais où sont les neiges d'antan?' (Where are the snows of yesteryear?) appears in the *Ballade des dames du temps jadis*. I.16

violence great, disturbance of, but too distant for mechanically unaided sensuous perception. I.16
violin like other musical instruments, an aid to non-verbal communication. II.15
viper classical story of *Cleopatra* putting the asp to her breast. II.1
Virgil death of *Palinurus.* I.9
[*see* **poetry**]. II.1
[*see* 'Tu Marcellus . . .']. I.Pro
visual images as vehicles of temptation. I.35
voices hearing can be more reliable than sight or taste. II.14
resemble; an example of voices/ conversation [*see* **caesura**]. I.33
voix *see Heredia,* VITRAIL. I.11
volcano *Lewis Carroll,* THROUGH THE LOOKING GLASS. I.21
Voodoo voodooism; religious belief and practices originating in Africa. II.5

W

wake up or sleep. The physical distinction between night and day is often used to express two different states of mind. They do not need to be related to solar time. II.14
waking with dread. I.4
waking up consciousness, sleep and waking related. I.21
waltz the dance movement used to describe the earliest form, still continuing, of skeletal movement. II.19
war 'authoritative' declarations of the winner. II.2
discussion of the basic conflict, thought as opposed to action. II.14
likened to conflict between individuals. I.22
[*see* **increment**]. II.9
WAR AND PEACE *Prince André* quoted. III.7
watch and pray: a reference to religious and scientific activities combined. II.19
mechanism regarded as an inadequate aid to measuring the dimension of time. II.19
water sheets of, as reflective fluid. III.6
drawn by *Leonardo da Vinci,* equated with turbulence. I.11
Watson character in *Sherlock Holmes* stories by *Conan Doyle;* superior in commonsense action, logically inferior. I.20
wave theory contrasted with quanta. I.28
way out expression used by *Roland* to indicate deterioration. II.16

wealth ordinarily supposed to be measured in monetary terms, but often used where no such scale exists. The scale, whether cowrie shells or gold coins, is misleading. I.37

wedding marking the start of a deteriorating relationship. I.22

'Weep for Adonis' *Shelley,* ADONAIS. The model for this poem was LAMENT FOR ADONIS, attributed to *Bion,* Greek bucolic poet, circa second century BC. III.8

'Weep you no more, sad fountains' sixteenth century, anonymous; set to music by *John Dowland.* III.9

Wembley the sports ground on which the Final of the Association Football Cup is played in England. I.22, I.23, I.27

West Front a reference to the idle use of heavy artillery. II.6

'What hours, O what black hours . . .' *Gerard Manley Hopkins,* POEM 67 (4th edition, Oxford University Press). III.7

'what's Dunton' punning reference to *Theodore Watts-Dunton,* poet and critic, benefactor to *Swinburne.* I.29

wheels of God distorted version of 'Though the mills of God grind slowly, yet they grind exceeding small', from the SINNGEDICHTE of *Friedrich von Logau,* translated by *Longfellow* under the title, RETRIBUTION. I.17

whirlwind God answering *Job.* I.28

White Queen *Lewis Carroll,* ALICE IN WONDERLAND. I.21

whoore dialectical pronunciation of 'whore'. II.19

whore commercial love. I.5
quotation of a remark heard at Plymouth. I.17

why a fundamental question; perhaps one of the earliest, after 'what?', of which the personality is aware. II.16

Why-bro a reminiscence of schooldays and a punning reference to curiosity and its inhibition. I.11

wicked fairy borrowed from *Grimm,* THE SLEEPING BEAUTY. II.1

wide extended opening of eyes, mouth, etc. I.21

wife [*see* **concubine**]. II.15

win World War I was alleged to have been won by the Western Allies. *Auser* is supposed to want to know whether his death was in vain. II.19

wings of the morning; the original version is: 'If I take the wings of the morning and remain in the uttermost parts of the sea', from PSALM 139. II.1

Wipers [*see* **Ypres**]. III.Q.A.

wisdom and knowledge differentiated. III.7
no substitute for the growth of. III.13

'Wise men never tell' a reference to Lord *Shaftesbury* [1621–1683] who remarked that all wise men are but of one religion. 'And which is that?', he was asked one day. 'Wise men', he replied, 'never tell.' II.2
wits consciousness, wakefulness, equated with efficiency. II.3
'Woke up if they', *Tweedledum,* THROUGH THE LOOKING-GLASS by *Lewis Carroll.* I.15
'woke up so fast' patients dream of being carried over a weir; no distinction of dream from reality. I.15
woman and dishonour in war. I.17
and intelligence. II.2
idealized as a product of the imagination. I.31
Rosemary contemptuously refers to male ignorance of any difference that is not somatic. II.16
The real woman cannot receive affection is she is hedged around by impenetrable adoration. I.31
womanhood truth about, discussed. II.14
woman's world an expression to convey the dominance of one or other sex. II.7
womb associated with ignorance as a protection against unpalatable reality. II.4
women augmenting powers of observation. I.22
Wotton, Sir Henry (1568–1639) Provost of Eton College, friend of *Isaac Newton*. II.2
words as part of thinking, a method of diminishing the violence of a change from impulse to action. II.3
contrasted with other means for establishing communication. II.3
Wordsworth the inner eye: '. . . They flash upon that inward eye . . .', DAFFODILS. II.1
worship as a word loosely used to describe passionate devotion to many activities other than religious. II.12
the adoration of woman for woman. II.11
the object that is worshipped. II.2
Wrath God's; Truth and Love, like Wrath, are attributed to God in much religious thinking; the undisciplined use of this concept deplored. II.1

X

Xanthippe *Socrates'* wife, said to have been a shrew. III.5
Xaritas [*see* **Charity**]. II.1

ξ (xi) Greek letter. I.14
as an unknown variable. I.19
as a sign for 'end'. I.24
as a symbol of self-destructive progress. I.14
X-ray as a method of making an unseen pattern visible. I.20
film, interpretation of; cf. the interpretation of a mathematical formula. I.21

Y

yawning as a signal. I.16, I.19
Yeats SOLOMON AND THE WITCH. II.2; III.5
yeux de pierre *Heredia,* VITRAIL: 'Ils gisent la sans voix, sans geste et sans ouie, / Et de leurs yeux de pierre ils regardent sans voir / La rose du vitrail toujours épanouie.' I.34; II.10
Ypres third battle of; known as 'Wipers' by the English in historical times as in the two World Wars. I.32; III.1

Z

zero as dream thought not conceptualized. I.8
as a mathematical symbol. I.8
as negation. I.8
as a pictorial image. I.8
zoo term used contemptuously to express with hostility collections of people. II.1, II.2

. . . ATQUE VALE

W Are you there?

F Don't interrupt me I'm trying to finish this index.

W I wondered what you had been doing these last few months.

F Well, since you went off on an extended trip I thought I'd better have a go at completing the job we started so long ago.

W We were aiming high, weren't we? An index, glossary, notes, a book in itself, the definitive volume that would illuminate the obscurities

F I only hope it can stand up to scrutiny in its final form. By the way, I'm going to call it 'A Key'.

W What is it supposed to open?

F A few small chinks perhaps. Anyway, it's refreshingly short. Have you any suggestions?

W How about 'The Long Week-end'?

F Have you forgotten? That's supposed to be the title of your auto-biography.

W More words, words, words – how do you stand it? Excuse me, I must get back to my cubby-hole.

F Sweet dreams.

STANDARDIZED BIBLIOGRAPHY OF THE WORKS OF W. R. BION 151
by Harry Karnac

UNPUBLISHED WORKS

1961–1977

EDITOR'S INTRODUCTION

The previously unpublished works by Bion included in this volume comprise four papers and 'Further Cogitations' from 1968 to 1969.

The first of the papers has the title, 'The Conception of Man'. It was written originally as a chapter for a planned book of the same title, to be edited by Arthur Burton, who also edited *Psychotherapy of the Psychoses* (1961). Bion had been recommended as a possible contributor to the book by John Harvard-Watts – who had, around that time, suggested to Francesca Bion that she might persuade her husband to publish as a book the papers of *Experiences in Groups and Other Papers* (1961). Burton's book was to have clarified how different thinkers conceived of Man, "in his basic nature and humanity.

In the end, *The Conception of Man* project did not result in a book, and it seems likely that Bion filed the manuscript of his paper and forgot about it. Interestingly, among the other contributors were to have been Jean-Paul Sartre, Martin Buber, Karl Jaspers, Thomas Szasz, and Alan W. Watts; the latter was the author of *The Rise and Development of Zen*, a book Bion had found of interest in relation to his ideas on memory, understanding, and desire.

At the heart of Bion's conception of man is the problem of living with emotion. Bion began with the question, commonly asked in a different and more peremptory manner than the use to which he put it in the paper: who do you (or we, or they) think you *are*? He reminds us that phantasies about who we are have a structuring effect on our personalities and on our behaviour towards other people. It seems so characteristic of Bion that instead of answering the question set him by the book's editor – to describe how he conceives of the human being, or human condition – he begins with the fact that we are beings who

form conceptions of ourselves, conceptions that are instrumental in directing the nature of the relationships in which we take part. This emphasis resurfaced in his final paper, in 1979, 'Making the Best of a Bad Job' (see Volume X), in terms of the need to consider the nature of the communication of the Self with Self – particularly in relation to self-idealization.

Bion proceeds from the opening question – who do we think we are? – into the conception of man as an emotional being faced with the 'choice' of evading feelings or facing the reality of them and, possibly, modifying at source the pain produced, a distinction resting on Freud's 'Formulations on the Two Principles of Mental Functioning' (1911b). The concepts that form the basis for *Learning from Experience* are described clearly in 'The Conception of Man', following a description of how, according to Freud, the phantasy of being able to rid the psyche of unwanted contents is effected by the mental process of projection – predicated on the physical reality of muscular action. The paper is notable for a concise description of how Bion uses, and expands, Melanie Klein's theory of projective identification, in order to build his model of container–contained (♀♂). He writes that this expansion of the ideas explains, "more than what their propounder intended". In other words, projective identification together with container–contained (and, in later formulations, the operation of an oscillation between Klein's two mental positions, which Bion contracted to Ps ⇌ D) offers an account of the role of normal splitting and normal projective identification into the mother, the first container, as the means of the alleviation of terror and the inception of communication and mental functioning. Some of Bion's passion for his subject comes through in this paper, as it gathers momentum. He conveys his belief that the ideas that he is communicating are of more than academic importance, but are of urgent and practical significance for the human race.

The second paper, 'Penetrating Silence', was prepared as a talk, to be followed by discussion, given to members of The Study Centre for Organizational Leadership and Authority (SCOLA) in Los Angeles on 14 December 1976. It was transcribed by Francesca Bion from a tape recording made by Bion before the talk, together with interpolations of material from a recording of the talk when it was delivered. The subject of the paper, silence, tends not to be addressed very much in psychoanalytic training. When questioned after the talk about the importance

of silence in the analytic setting, Bion speaks about the internal 'noise' produced by our multitude of theoretical voices, as well as the difficulty experienced by most analysts during some kinds of silence. It is clear that he is not thinking of silence as the absence of something, but as containing a real and present quality which is part of the total situation facing analyst and patient in the room:

> I think it is useful to listen to a silence and not to be in too much of a hurry to break it up. I am familiar with this because I know that whenever I am tired I have a spate of interpretations to the mind – all the Freudian, Kleinian, Abrahamian, every blessed interpretation you ever thought of – they all come flocking to my mind. Indeed one could almost say that psycho-analytic training becomes a kind of psychoanalysts' neurosis, a sign that one is tired when rushing to employ these interpretations. . . . Much the same thing applies to the person who can't listen to silences. I would be surprised if anybody here is unfamiliar with the experience of not being able to tolerate the silence. 'For goodness sake! Why can't you say something?' But in fact there is a lot to be said for being able to listen to the silence.

The paper is really about attention. Although approached here by considering the aural modality, Bion's ideas on memory, understanding and desire are never too far away. Directing attention to the heartbeat – something normally unconscious (in the topographical sense) – he speaks of *achieving* a particular quality of silence, a term that resonates with something Bion felt important to the specificity of psychoanalytic attention – that is, the Language of Achievement, or Negative Capability. Bion felt the following quotation by Keats, written to his brothers in 1817, captured perfectly his sense of the mental attitude requisite for the analyst:

> . . . several things dovetailed in my mind, and at once it struck me what quality went to form a Man of Achievement especially in Literature and which Shakespeare possessed so enormously – I mean *Negative Capability*, that is when man is capable of being in uncertainty, mysteries, doubts, without any irritable reaching after fact and reason . . . capable of remaining content with half knowledge.

The notion of Negative Capability became central in Bion's thinking, especially in his later writings.

Bion seems suddenly to have felt in this meeting that he had spoken for long enough, with the audience passive, and he stops just after presenting an allusive idea – suggesting, Quaker-like, that anybody who feels inclined to participate should do so.

The third paper, which was given as a talk at the Los Angeles Psycho-Analytic Society on 20 September 1977, is the ironically titled 'New and Improved' – a title he borrowed from the advertising line on a box of Kellogg's Corn Flakes. It is a complacency-shaking paper which, while not containing any new ideas, manages to deliver in a fresh way a clear, potent message concerning the inevitability of the uncomfortable, disturbing nature of real analysis – and the subtly seductive pull exerted by promises of something better, quicker and pain-free. Essentially, Bion is sounding a strong cautionary note against the silent operation of manic delusions in our field.

Bion speaks to what practising analysts know from experience, and practising patients too, when he writes,

> . . . when you go into your office tomorrow you have a chance of experiencing this 'transference'. The trouble about a word like that is you can't see it, smell it, touch it or taste it; so it is regarded as typical of intellectuals who invent more and more terms. But we are actually with those few people who come to us for analysis and very often find they don't like it. It may sound rather like a consolation – perhaps it is – but I think that the more experience you have of analysis the more familiar you get with the fact that it only takes a few seconds, if that, for the prospective analysand to pack it in. The knowledge that patients are hard to come by, and when they do come they disappear easily and quickly, is the first thing you are familiar with – the failure of psychoanalysis. . . .

Bion writes of the actual, real life of the analytic consulting room, reminding us that if we engage in an analysis,

> we cannot expect a trouble-free existence; we have to realize that in the office the analyst and the analysand are in for a rough time. In fact, liking either to be analysed, or to be an analyst, is a peculiar state of affairs. It is much more natural and in conformity with the nature of this subject, that both parties should hate it. There is considerable pressure all the while not to give what is the real interpretation, but some more tolerable version of it. So both the patient and the analyst are very glad to find some interpretation which is less than the truth – I think this is constant, inescapable. We are engaged on a somewhat unpleasant and dangerous occupation in spite of appearances to the contrary and the fact that we are always offered the chance of believing that it is something safe and pleasant, 'new and improved', more curative.

Bion underlines that this pressure away from direct, specific interpretations is inevitable and inescapable – not something to be hidden, or to

be ashamed of. It is part of the difficulty of the work. This was also the main thrust of an early paper by James Strachey, in 1934, 'The Nature of the Therapeutic Action of Psycho-Analysis':

> . . . there must be some quite special internal difficulty to be overcome by the analyst in giving interpretations. And this, I am sure, applies particularly to the giving of mutative interpretations. This is shown in their avoidance by psycho-therapists of non-analytic schools; but many psycho-analysts will be aware of traces of the same tendency in themselves. It may be rationalized into the difficulty of deciding whether or not the particular moment has come for making an interpretation. But behind this there is sometimes a lurking difficulty in the actual *giving* of the interpretation, for *there seems to be a constant temptation for the analyst to do something else instead. He may ask questions, or he may give reassurances or advice or discourses upon theory, or he may give interpretations—but interpretations that are not mutative, extra-transference interpretations, interpretations that are non-immediate, or ambiguous, or inexact—or he may give two or more alternative interpretations simultaneously, or he may give interpretations and at the same time show his own scepticism about them*. All of this strongly suggests that the giving of a mutative interpretation is a crucial act for the analyst as well as for the patient, and that he is exposing himself to some great danger in doing so. [p. 159; emphasis added]

Failure of one kind or another, suggests Bion, is associated with the idea that there is something much better just around the corner – usually with the connotation of 'cure': a 'better' method, which will make the patient 'better'. An important part of the problem, writes Bion, is that patience is necessary for real work, and patience is a scarce commodity. He reminds us of the precarious nature of the capacity to think and to wait. Following Freud, he refers to the role of *patience* in Charcot's formulation about waiting for an underlying pattern to emerge. There is the patience required too, we recall, in the attitude required to allow the crystallization of a Selected Fact – something Bion saw as an important contribution of the mathematician Poincaré.

Here Bion also makes a plea for analysts to value the part played by imagination in the work and to admit it into the faculty for observation. He urges that we should be careful not to be too mistrustful of the power of our imagination to damage the rigour of what we do. In this respect, as in many, Bion agreed with his close colleague Hanna Segal – who supported the inclusion in psychoanalytic work of the qualities of imagination and passion, together with reason.

Finally, Bion reminds us too that analysis is lonely work, in which we have to suffer a painful degree of isolation and dependency. The point is made not simply to 'point it out', but to encourage the analyst to recognize his or her need to find the resources, the necessary, limited 'supply of capacity' necessary for meeting this painful state – including the capacities of the patient.

Bion's *Cogitations* (Volume XI) comprised notes made between February 1958 and the beginning of August 1968, when Bion had been in Los Angeles for seven months. In the early 2000s, as preparations were being made to prepare and edit a *Complete Works*, some additional cogitations, which had been set aside, were discovered in a filing cabinet. These are published here as 'Further Cogitations', which begin in April 1968 and end in August 1969. As well as illuminating many of Bion's ideas, they reveal the kinds of difficulties faced by Bion in the first few months of setting up an analytic practice in Los Angeles.

The reader will notice how sometimes these previously unpublished writings clarify matters further, even when they are to do with ideas expressed by Bion many times in other places; the small differences reveal the underlying structure of his thoughts by something similar to the musical 'variations on a theme' to be found in jazz. In Bion's terms, this would be the depth-perception (binocular vision) enabled by holding, simultaneously, 'multiple-vertices' on the same psychoanalytic 'object'. This is true generally of his work, with its many instances of repetition, near-repetition and apparent repetition.

The Conception of Man

1961

The conception of man is unlikely to be thought of as a practical matter. It may not seem to be of interest to any but philosophers and others who lead academic lives. But the question, 'Who do you think you are?' is a spontaneous tribute to the fact that a man's idea of himself may be important in fashioning his behaviour.

The question, 'Who do you think you are?' is often associated with hostility aroused by what the questioner thinks is aggression. Hitherto, until the wars of 1914 and 1939, the aggression that an individual might suffer at the hands of another seemed to be of proportionately greater consequence than the injury one nation might do to another. A man might kill another, but a group would be unlikely to kill, or even seriously damage, another group. The atom bomb has altered that, and with it any hopes we might harbour that the greater the group, the more unlikely it would be to suffer or to inflict much harm. It therefore matters for a group to ask of another group and of itself, 'Who do they think they are?' Much may depend on the answer.

I began by framing our inquiry narrowly, as it might be necessary in a particular episode in the life of a man. It is no longer advisable to leave the wider application on one side as of no consequence in the affairs of nations. I shall consider it as a concept with significance in the context of man's place amongst living things in their historical development. Who, or what, does the human race think it is?

The question, and its possible answers, has become urgent since our capacity for destruction has increased. Our capacity for asking the question and pursuing an inquiry has also been increased by the work of Freud. Freud invented psychoanalysis during his observation of the class of sick persons who appeared to be ill and yet showed no

sign of physical or mental disorder as that was ordinarily understood. The investigation commenced with his interest in neurotic disorders, but I wish to focus attention on his work less as inquiry into the sick mind and more as an exploration of the minds of people who are not regarded as sick at all. For it is in this that he comes nearer to the inquiry, 'What is man?', and further from the relatively limited question, 'Why is this man ill?'

Freud believed that a great part of the opposition to his work was due to his sexual discoveries, and his hardihood in making these facts public. Hostility to his sexual theories has tended to obscure the hostility to the inquiry. Freud ignored the part played in the Oedipus myth by the Sphinx.

But it may be wondered why we should bother with a myth at all. Of what consequence is a fairy tale, told in antiquity, embroidered by various writers since then, but unlikely to have any factual counterpart? Even as a myth it hardly seems to merit consideration above that accorded to other myths: the names of the constellations include no Oedipus.

The usual view (that Freud observed certain forms of human suffering, invented psychoanalysis as a method of investigation, and discovered through its aid the Oedipus complex and other similar phenomena), is not as revealing as a view that his genius discovered the importance of the Oedipus myth as a tool and used it, perhaps unconscious that he was doing so, to discover not the Oedipus complex, but psychoanalysis and man.

The basic elements in the Oedipus myth are these:

1. The Sphinx, a monster compounded of different animals, parts of which are reassembled to form the creature that poses the riddle.
2. The riddle, to which the answer was supposed by later tradition to be "Man". Failure to answer correctly carried the penalty of death; the correct reply precipitated the death of the Sphinx.
3. Thebes, a city whose inhabitants suffered death by the agency of a mysterious plague.
4. Tiresias, a prophet, the opponent of curiosity relentlessly pursued and the upholder of the principle that such ruthless curiosity constitutes a crime, Hubris, inviting the attention of Nemesis, commonly identified with retribution or righteous indignation.

5. Oedipus, identified with infanticide by being the victim and with parricide by being the criminal, the ruthless investigator of a crime that he has unwittingly committed, he suffers the penalty of blindness.
6. Laos, the King and murdered father, who is himself an accomplice in infanticide; a believer in oracular pronouncements.

I have stressed the elements in this story, treating the narrative as a matter of secondary importance. Of these elements, the riddle-posing Sphinx and its fate have attracted least attention in psychoanalytic literature. I have mentioned[1] the obtrusive appearance of curiosity and its guise in the group; elucidation of transference in psychoanalysis involves investigation of the analyst's curiosity, but the detail in which this is carried out obscures the macroscopic view obtainable in the group. Group procedure does not therefore involve any conflict with the procedure and theories of psychoanalysis, but involves a change in emphasis. This change is relevant to an investigation of the conception of man, because the conception itself is the product of the play of curiosity around facts that obtrude as soon as the individual is aware of himself or his group, or the group is aware of itself or another as a group.

It is usual to be aware of the attributes of objects and of the sense organs that are responsible for the sensations we associate with physical objects. But awareness of personality depends only partly on sense organs. We can see that a man makes certain muscular movements, that his eyes are directed at a particular point, and that in some conditions the sum of these various sensations is interpretable as meaning that the man is expressing, say, love or hate. Freud postulated that consciousness was the sense organ of psychic quality (1900a, p. 574) and thus showed that there is a need for a conception of a 'sense organ' that would bring us information not only about physical phenomena but about aspects of personality, anxiety, fear, hate, depression, love and so on. The existence of these words shows indeed that we think we know of the existence in ourselves and others of realizations that correspond to these words, and therefore presumably that we possess equipment that makes it possible to see not only

[1]In *Experiences in Groups and Other Papers* [Volume IV].

the movement of facial or other muscles but to cognize the emotions of which these muscular movements are secondary manifestations.

Two developments have led to our dissatisfaction with our knowledge of emotional life. Philosophers of science have always become active in the precise elucidation of problems of learning when the individual or the group has, through failure of a project, been thrown back on doubts of the nature of its knowledge or the methods it has employed in acquiring it.

The history of preoccupation with methods of acquiring knowledge is as old as Plato and his simile of the men in the cave studying the shadows projected on the wall they face by the light behind them. The pessimistic conclusion expressed by Prichard (1950) is that such an inquiry is liable to end with our wondering how we can ever know anything. Yet, in fact, it is obvious that we do learn, even in infancy, and the pessimism is appropriate not so much to our capacity to learn but to our capacity to learn how we learn. This last inquiry is related to the second of the two developments to which I have referred, namely psychoanalysis.

The inquiry with which psychoanalysis is concerned is not new, but its methods and the success achieved by the founder of the movement have brought into sharp focus the problems presented by phenomena such as love, hate, anxiety, sex, depression, and the means by which we are aware of their existence, either in ourselves or others, and how we are to learn from the experience of these emotional forces.

The individual has to live with his feelings. He must therefore achieve an accurate awareness of what he feels, for only then is he able to learn from that experience what it means to live with other people's feelings.

The question of living with one's own and other people's feelings obtrudes first in infancy: the infant is aware of feelings, its own or its mother's, and has to do something about them. In his theories of pleasure and pain, Freud postulated the theory that a growing dominance of the reality principle involved a change of attitude to the environment. The part of the environment with which we are concerned is the personality, and the feelings that betray its existence, of which the individual thus becomes aware at an early stage. The reaction to painful feelings typical of the phase of dominance of the pleasure principle is epitomized in *Alice's Adventures*

in Wonderland by the scene in which the executioner is told that either the Cheshire Cat or its head must be cut off, and that "in less than no time". If the feelings are painful, then so much the worse for the feelings – they must be annihilated. Dominance of the reality principle implies developments of reactions intended to modify the environment that stimulates them. Assuming that evasion and modification are mutually exclusive reactions, and that resort to one rather than the other depends on the extent to which the psyche can tolerate frustration, an inability to tolerate it prejudices the development of the capacity for contact with reality since frustration is intrinsic to any real situation.

If the personality cannot tolerate the reality of emotional experiences, it becomes unable to learn from emotional experience *per se*. This state of mind is dominated by evasion of frustration, and I shall use the term 'evasion' as an abstraction to represent a number of different situations alike only in implying a destructive response to any apparatus that might lead to awareness of painful, and therefore all, emotions. 'Evasion' is contrasted with 'modification'. I use the term 'modification' as an abstraction to represent situations favourable to the development of capacity for sharpened awareness of emotional experiences, and the complementary development of capacity for using the emotional experiences thus made available to the personality.

Freud described muscular activity that is typical of the phase of the dominance of the pleasure principle, as intended to rid the psyche of accretions of stimuli. Dominance by the reality principle involves realistic attempts to change the environment. I shall use the sign E to represent the state of mind governed by the principle of evasion, and M to represent the state of mind governed by the principle of modification.

Muscular action, thought itself, and indeed any form of activity, may express E or M; there is no activity that is intrinsically bound to the exclusive expression of one or other. This applies even to attempts to rid the psyche of accretions of stimuli, an activity which, in certain circumstances, might be regarded as being more accurately described if placed in the M category than if placed in the E category. (This difficulty is one that constantly confronts the investigator of psychological problems; I shall hope to deal with it by employing the same symbol to express the same value in the

same argument.) When it is necessary to describe a situation in which the only realistic course open to individual or group is to rid itself of accretions of stimuli by destructive attacks on the feelings rather than by modification of the sources stimulating those feelings, I shall make it clear that the dominant principle has changed from E to M, though the activity was indistinguishable from one that usually characteristic of E.

In studying the 'conception of man' we have to investigate thinking, its origins and various transformations, and its relationship to awareness of psychic qualities of individual and group. I therefore need to introduce another theory, propounded by Melanie Klein under the name of 'projective identification'. I shall use only one aspect of this complex and widely applicable theory. This states that the infant, feeling overwhelmed by emotions, resorts to a mental activity that Klein describes as splitting off the feelings and putting them into the mother. The mother apparently is thus made into a container for the feelings that the infant feels unable to contain. After a sojourn in the mother, during which the feelings undergo modification, the infant takes the feelings back into its personality, which can now tolerate and therefore contain them by virtue of the modification that has been effected by the mother.

As I propose to use this theory in different contexts, for container and contained I shall apply two abstractions represented by the signs ♀ and ♂.

The theory of projective identification and those derived from it explain more than what their propounder intended: they satisfy the criterion that requires the theory to show itself capable of coherent and uncontradictory development when used in scientific investigation. I shall use the theory of projective identification as a model for early development of the processes that have later come to be known as thinking.

The model supposes the existence of a couple; I use it to represent an internal apparatus in the individual. What originally represented a relationship between mother and infant, or breast and mouth, now represents these objects internalized. The representation of these internalized objects is used as a model for the mental mechanisms involved in thinking. The signs ♀ and ♂ can be used to represent the internal apparatus by the sign ♀♂.

I have said that thinking may be dominated by E or M. It is necessary to examine further the model of the couple, ♀♂, to understand the issues involved in the use to which thinking is put.

Suppose that some feature exists to inhibit smooth development between infant and mother. Envy is one such factor, and I shall take it to illustrate my example. The infant can feel unable to use the mechanism for modifying feelings that I have described if the predominant emotions in the infant-and-mother link are envy and greed. If the infant is possessed by fears that it is dying and attempts to split them off and to project them into the mother for her to moderate their intolerable quality, instead of the process following the course described, ♀ is felt greedily and enviously to remove any goodness contained in the projected fears. This 'goodness' is whatever there is of *meaning* in the fears that it is dying. Consequently, when the infant comes to reintroject the fears that it is dying, it does not receive back those fears moderated so as to be tolerable to the infant psyche but, instead, takes back into itself a nameless dread.

Returning now to the installation of ♀♂ in the infant personality: instead of having a benign object, ♀♂, the infant appears to feel dominated by an object that has attributes of a conscience that is inflexibly opposed to knowledge, or the spirit of inquiry, or curiosity essential to acquiring knowledge. Furthermore, ♀ and ♂ are related to each other in a way that leads to the denudation of one element by the other. In so far as the situation can be verbalized, the benign unit ♀♂ is replaced by a malignant couple exerting an influence on the personality compatible with (a) a conscience devoid of regard for truth or personality, or indeed animate life itself, and (b) a 'scientific' (i.e. truth-regarding) object concerned only to employ facts as elements fitted for the destruction of conscience or morality.

Such an object, for which I shall use the sign –♀–♂, is calculated to starve the personality of truth and goodness of any kind. Indeed, the use of the term 'starvation', appropriate to the model that an alimentary system provides, is peculiarly apt as a description of the process of deterioration that such a personality displays. Although one doubts the suitability of such a model to represent thinking processes, yet its illuminating quality makes it impossible to discard it at the present stage of the inquiry. The object –♀–♂ suffers the same degenerative change. Not only is it starved of development-stimulating matter, but

it appears to be actively destroyed by its products as if they had a toxicity for mental life comparable to toxins in the body.

So far I have dwelt on the nature of the apparatus on which we depend for learning by experience. I have concentrated on a description of the fundamental quality of this apparatus as it appears if we approach the investigation by considering how both learning and destruction of learning develop. I have suggested that no learning by experience is possible without learning by experience what we, as individuals and groups of individuals are; we must experience ourselves and our emotions if we are to experience anything else, and we must learn from that experience. This involves acceptance of the idea that a scientific view is essential to the mental health of the individual as well as to the success of the attempt to win fresh knowledge. It is incompatible with the contrary view embodied in and typified by the forebodings of Tiresias. The successes of scientific method in modern physics tend to obscure hostility to the methods and operation of curiosity, especially from scientists who take scientific method for granted. The gloomy prognostications of Tiresias may seem to apply only to the investigation of the Oedipal situation, but for Tiresias the crime lies not in incest and parricide but in the ruthless persistence in investigation, hubris, in Oedipus himself. Instances of similar forebodings are the warning to Adam against eating of the Tree of Knowledge, the infliction of confusion on the builders of Babel, and the injunction against the numbering of the people. Anxiety so clearly expressed in racial myths may be biologically good, perhaps even complementary to the fear of mental starvation in the individual; is it possible that methods could be evolved that might win more knowledge for the individual or the race that either could tolerate?

There are conditions in the physical world that are unfavourable to the survival of man; similarly there are emotional situations that cannot be tolerated by the individual and lead to mental breakdown. If there is a danger of mental starvation, there is also a danger of mental surfeit. Pierre de Chardin (1955) postulates a *noösphere* on the analogy of the atmosphere. I shall borrow the term to facilitate this discussion but shall not use it as he did. I shall restrict it to denote that emotional environment essential for the survival of mental life in the individual from birth to death. An example of such a noösphere is a state in which the infant's emotional need for

a breast into which he feels able to project a part of himself appears to be satisfied.

The statement that the infant feels a need to project a part of his personality into the breast is Melanie Klein's description of a model that she uses to represent her abstraction from the behaviour, verbal and otherwise, of another adult. By use of this model I intend to convey my idea that those elements of the adult's behaviour to which I wish to draw attention may be recognized by the fact that they would be appropriate if they were part of a story that the infant believes, namely that he is splitting off a part of his personality, etc. In short, it is a *narrative* employed to define a psychoanalytic object. I use the term 'psychoanalytic object' in the same way and for the same purpose as the term 'mathematical object' was used by Aristotle. However, I intend also to convey my belief that the patient, when he was an infant, felt he was engaged on an activity which he would describe, if he could speak, in the terms I have attributed to him. In other words, he would describe his experience by using this model. But it could be argued that the patient was not using a model at all. In this case I am giving a verbal description of the model I have constructed, but am claiming in addition that my model is a verbalization such as the patient, were he an infant, might use if he could speak, to describe what he believed he was in fact doing.

This digression indicates some of the unsolved methodological problems that I have to ignore if I am to make public, before adequate equipment is available, my view of the issues raised by the conception of man. To believe my attempt may succeed, I have to suppose the existence of a noösphere into which I can project my views and on which I can rely to give my words a meaning for you who read them. I expect to evoke a response from individuals who read my words and also from the noösphere.

The latter will include a change of meaning so that what I now think is my communication will have a meaning of which I am not aware while I am writing it. An example of noospheric reaction would be an envious and hostile reception stripping my words of all meaning and returning them to me not merely denuded but envenomed in a manner calculated to erode my impulse to communicate creatively. The example I have just imagined can be represented abstractly by ♀♂–, in which ♀ is the idea and ♂– the noösphere dominated by greedy and destructive impulses.

If the reader will consider the whole of what I have said about the noösphere and will then attempt to reformulate my communication so as to preserve its value while conferring on it lucidity, he will easily be convinced of the grave difficulties involved in the attempts to think accurately about thinking. The problems are more complex than those involved in experiencing, abstracting a model from the experience, and making a further abstraction by theorizing by aid of the model, for the problems incidental to abstraction pervade more than one dimension of growth. Is the 'noösphere' to be regarded as an abstraction for 'breast', albeit a sign of the underlying impossibility of changing anything but the names we give to functions of human inability to devise an adequate equipment for thought?

The advances of the physical sciences seem to support hopeful estimates of our capacity to develop accurate methods of thought about the inanimate. Assuming that methods for thinking self-consciously are unlikely to remain uncreated, there may be a further danger of a kind supposed by some zoologists to have beset the progress of man's predecessors. One of the striking facts of animate development has been the decline of the dominant species. It has been supposed that the stegosaurus developed a defensive armour so complete that eventually it sank under the load it had to carry. If the distinguishing feature of man's triumph is his capacity for tool-making, then it may be that the tool he must forge for thinking self-consciously contains not only the hope of his survival, but the germ of his downfall. He may sink under the weight of his capacity for thinking as part of his wider faculty for making and using tools.

Suppose that increased power for thought does not simply destroy the meanings that we have hitherto been used to associate with life but strips all meaning, as we understand it, from thought: such a development engendered by the forces and in the manner described earlier falls within the category of disaster. But mobilization and sophistication of primitive mechanisms of the ♀♂ type may lead to loss of meaning similar to the normal loss of fear in the infant. This could effect a change in the realization represented by the term 'noösphere' that would not be any more disastrous for the group mentality than it would be for the mother to lose her fear that the infant was dying.

The feeling that phenomena have a meaning relates to the fundamental narcissistic, ego-centric judgement that a phenomenon is

an indication of a development that is conducive either to the death or the life of the individual. If the individual is unable to abstract a statement that the event falls into one of these categories, then that phenomenon has, as far as he is concerned, no meaning.

It follows that an empirical criterion of thinking is provided by its function. If the function is to abstract from phenomena those elements that the individual needs to know if he is to survive, then the activity is thinking. Thinking is the activity by which the individual abstracts the meaning of the phenomena: if the abstraction does not lend itself to determination of action appropriate to death or the survival of the individual, the abstraction (whatever it may represent) does not represent the meaning of the phenomenon. Conversely, failure to produce meaning, in this sense, increases fear of thinking. Yet it is clear that in certain circumstances individuals may feel that a phenomenon has a meaning without being able to see its relevance by ego-centric standards. Such meaning may be regarded as useless and ignored forthwith, or pursued with a view to further, supposedly disinterested, investigation. Analytic experience shows that phenomena displayed in the consulting room all have a meaning for the patient and that that meaning has the limited quality I have postulated here. That is to say, the individual has learned, or thinks he has learned, from experience, that all facts have a meaning that is relevant to the action he must take to evade or modify frustration: any other 'meaning' is meaningless.

As Freud showed, man is resistant to the acceptance of any meaning that does not support his narcissism: unwillingness to endanger narcissistic beliefs makes it difficult to abstract from phenomena those elements that would enable him to entertain views that ministered to his self-preservation. The attempt to evade feeling unwanted is inimical to the moderation of dangers inherent in being unwanted. Meaning, then, does not inhere in phenomena but is something that man seeks to abstract from phenomena.

The 'conception of man' may be regarded as the name for a meaning we believe to inhere in phenomena which have been collected to form a set: Man. At the start of this discussion I suggested an empirical meaning for the term, 'conception of man' limited by relating meaning to aggression and survival between men, between groups of men, and between man and other species. There is a case for systematic exploration in which the 'conception of man' is the name

for a meaning that is divorced from that the penumbra of associations inseparable from its origin and development; it might then be employed as an abstraction in a system that was not homocentric. The attempts to do this, notably in theology, are initiated by the anthropomorphic investment of the concept of a supreme being.

To summarize the problem: failure to solve problems has always led to scrutiny both of the unsolved problem and of the methods that have been employed in the unsuccessful investigation.

Hitherto the successes of scientific investigation, especially in the realm of inanimate objects or of those characteristics of animate objects that lend themselves to the investigations appropriate to the inanimate, support the validity of what has become known as scientific method. But these very successes have thrown into relief the failures.

Investigation of the causes of failure has led to a fresh approach to the problems, and also to the methods employed. The investigation of method has brought to light two main sources of error: the first, inadequate techniques of learning based on lack of human ability or knowledge at the time of the failure. The second, inadequate equipment inherent in the defects of the human personality itself. This has compelled attention to our own personalities; it has forced the human being to be self-conscious.

Following from this, there has emerged a fresh problem calling for investigation – ourselves; the object of our study – the conception of man. If we narrow the field in which the problem, lies our attention is focused on one very important characteristic of man, namely his capacity to think, and the fact that the tool he must employ is this same capacity to think. Thinking is the attribute that characterizes man and the central problem calling for scientific investigation. It has also to be the tool by which the investigation must be effected.

The problem is thrust upon us because scientists in their attempt to overhaul their scientific apparatus are forced to recognize that they are themselves part of that apparatus. But an additional reason for the development of this crisis of learning from experience has been Freud's investigation of what he believed originally to be sick people. That investigation has turned out to be no less than an investigation of the human mind itself.

As a result, the weaknesses of the human mind, although not a new discovery, have been demonstrated with a precision and

comprehensiveness not achieved before. The discoveries made so far show that the findings of psychoanalysis, though made in the course of an attempt to relieve human suffering, relate to the problems of scientific fallibility and therefore to the domain in which the scientist has to seek for, and correct, the failings of his apparatus.

The conception of man can accordingly be regarded as something more than a subject for academic debate. I do not mean that the academic debate is unimportant: on the contrary, it is more urgent and important than it has ever been, but in addition to the slow and patient study we have now to achieve a capacity for sure yet rapid judgement of the kind that would be appropriate to the situation in which the question, 'What do they think they are?' might be asked. Such a situation is an emotional one, and it is as well to be clear that the problem whose solution has to be found by an immediate judgement demands a capacity for clear thinking at a time when this may be endangered by a tendency to lose one's head. I propose to devote the remainder of this paper to the elements of this problem as it has to be approached in these particular circumstances.

Freud quoted Le Bon in support of the view that the group was inimical to creative thinking by the individual. It is this hostile environment to which we must direct our attention, as well as to the problem which has to be solved in that situation.

Lord Wavell said that it was not enough for a general to be intelligent: to be effective he must be able to think clearly even under bombardment and other stresses of battle. It is something of this capacity that is required in the ordinary citizen today. It is a capacity that I believe can be observed, fostered and strengthened in certain types of small groups organized the purpose.

The first requisite in the individual who aspires to cultivate his judgement of fellow men and neighbouring groups is perception of what Freud called psychic reality, or, as I put it earlier, psychoanalytic objects. There is a great difference between knowing that there is such a structure as an appendix and being able to detect which of the many structures laid bare by the surgeon's knife is it. Similarly, there is no difficulty in accepting statements, and even making them, about such concepts as transference, Oedipus complex, ambivalence and others, but it is another matter to be able to recognize the counterparts in reality of these representative terms. What does the thing they represent look like?

The denial that these and other theoretical concepts have a corresponding realization shows that observation of these psychoanalytic objects must be a matter of some difficulty.

I have suggested elsewhere that the apparatus concerned with the perception of psychoanalytic objects is the conscious and unconscious working together in a manner analogous to a harmonious working of the two eyes in binocular vision. This harmonious working that is the prototype of correlation makes it possible to observe the realizations, or at least our observation of them, with a three-dimensional quality that puts their existence beyond all sense of doubt in the observer. So far I have not been able to find any training better than psychoanalysis itself for decreasing obstructions to our capacity for vivid observation.

But the observer's troubles are not ended by an analysis. He soon finds his attempts to observe subjected to attack by the group. I drew attention to the Sphinx in the Oedipus myth and the fate it meted out to those who failed to answer its riddle and to himself when Oedipus answered it. The builders of Babel were punished similarly by the loss of ability to communicate and therefore to co-operate to achieve their aspirations. The penalty of banishment was likewise imposed on the pair who ate the fruit of the Tree of Knowledge. In the group it soon becomes clear that membership is dangerous in proportion as the group is dominated by the scientist's curiosity.

This belief of obtrudes too consistently to be dismissed as fortuitous; the scientist's curiosity must be, and is, attacked. Each member of the group is scrutinized to see if he may be made the vehicle for a particular type of leadership. The member who leads in curiosity is permitted to do so, so that the rest of the group is excused the necessity to follow his lead.

An important element in preserving hostility to the operation of curiosity lies in the group's dislike of exposure of projective identification. This mechanism is almost a favourite method of 'thinking' in the group. There is of course ordinary rational communication, but at times it seems as if the group is conniving, and trying to make the analyst connive, in surreptitious employment of this mechanism to the exclusion of any other.

The employment of this method depends on the existence of thoughts that can be split off and used for evacuation. The reader may wonder what the justification is for using the term 'thought' in

this context, and what an object such as a thought that can be evacuated may be. The problem of exposition is serious, and objection to such terminology in a scientific investigation must be sustained in the existing framework of scientific method. As I am unable to find a more rigorous method of verbalization, and as changes in scientific method to meet the challenge of group relationships cannot be effected without long and patient endeavour, I must rely on the indulgence of the reader to extract the meaning I wish to convey in these imperfect descriptions.

There seem to be certain elements that are developmentally related to what ordinarily are recognized as thoughts. Some of these appear to be regarded by the individual as possessing qualities appropriate to what Kant calls 'things-in-themselves'. Accordingly it is felt that they are contained by the personality and lend themselves to procedures such as evacuation or, when they are outside the personality, ingestion. In extreme cases they seem to be treated as if indistinguishable from things-in-themselves; in less extreme cases, such as those ordinarily occurring in groups, they seem to be recognized as ideas, or ideational objects, but with a force appropriate to a high degree of particularization and therefore concretization.

When the group or the individuals composing it wish to manipulate the group without observation, resort is made to these highly concretized objects, which are then dealt with by the evacuatory and ingestatory processes typical of the mechanisms of projective identification.

These objects may be observed as being roughly divisible into two main classes. One consists of elements that are strong in emotion but weak in ideas, the other of elements weak in abstraction – or the qualities associated with abstraction and abstract thought – but strong in concretization.

The method of projective identification may also be seen to operate in two different states: Melanie Klein described it as a mechanism that was in fact the product of omnipotent phantasy. However, in my opinion it is capable of change in the way that so many ideas that start as omnipotent phantasies can, ultimately, be translated into realistic activity. If the group or the individual is resorting to omnipotent phantasy, then it does nothing, and the observer may be aware only of a somewhat passive but otherwise well-behaved group or individual. Consequently, although projective identification in its most extreme

form is highly active, paradoxically it makes little or no impression on the observer. But if individual or group becomes less omnipotent and better based on reality, then the observer becomes aware of an emotional situation in which he appears to be participating unwittingly and suffering disagreeable emotions as a result.

Resistance to the group's attentions and feelings of persecution are associated with this phase; the two are felt as if causally linked (resistance to projective identification ↔ feelings of persecution) but there is no realization approximating to the impression of cause.

Resort to projective identification, expressed by the sign ♀ ↔ ♂, is always facilitated by membership of a group; it is in the group that its activity is most pronounced and its acceptance most wholehearted. In the analytic or pair relationship it is ordinarily felt as disagreeable in itself, or as leading to disagreeable consequences. The nature of the activity and its consequences appear in very different forms according to the other elements in the network of relationship. So much is this so that it may take considerable effort to appreciate that apparently widely different circumstances are, dynamically, so closely related. For simplicity and brevity I shall consider only two elements: the degree of omnipotence, and the emotional medium in which projective identification is operating.

As we have already seen, extreme omnipotence can give a totally misleading impression of well-behaved passivity. It is not uncommon in analysis to hear a parent say about a patient who is disturbed to the point of psychosis: "But Doctor, he was always such a *good* baby (child, etc.)." Even allowing for the blindness of parental love, this statement is explained only by the fact that omnipotence requires no activity. Similarly an improvement leading to a decrease in omnipotence has the paradoxical and often embarrassing consequence of revealing depths of unpleasantness in emotional participation with such a patient or group as were previously passed over unnoticed.

The emotional element may be illustrated by the extreme and dangerous operation of envy. It is a commonplace that this, one of the seven deadly sins, can destroy a relationship between a pair or between individuals and the group they compose. It is nevertheless possible to witness at any time and place a denial of the seriousness of this element. Even the clear description given by Melanie Klein in 'Envy and Gratitude' (1957) is more often received with apparent apathy or positive denial than a just appreciation of its import.

I have said already that envy leads to a realization that I have represented by –♀♂ or –♀–♂. In group observation it is easier to see the stripping of thought, idea or person of value than to observe the objects that have been thus stripped: for example, a morality denuded of almost every quality that we ordinarily associate with it, and a scientific outlook stripped of almost every aspect of regard for the truth. It is even more difficult to see that these stripped objects have a product that is attractive to other and differently composed groups or persons.

I can only indicate the nature of this phenomenon because it is one that is incompletely observed and requires much more study and investigation. It is as if the –♀♂ state leads by its denudations not to dependents that are beneficently supported, not as it were to the so-called welfare state, but to parasites and a host group that is eroded from within. But this host group exerts a powerful attraction on other groups that are anxious to absorb or emulate it according to the nature of the other group. The consequences and nature of this phenomenon I leave to the scientific curiosity of my readers.

In his paper 'Instincts and Their Vicissitudes' [1915c], Freud describes vividly the conflict that can exist between sexual impulses in their operation as part of the group's need to perpetuate itself, and the individual's need for fulfilment. This bipolarity of the instincts he appears to restrict to sexual instincts and a conflict with ego instincts. It seems to me that the conflict must exist equally in the aggressive impulses, where it is even more clear that aggression in the service of the group may be of limited value to the individual, who may forfeit his life that the group may live. Freud makes the suggestion that the narcissistic neuroses might illuminate the problem. In fact, as other writers have shown (Burton, for example[1]), it is impossible now to investigate the characteristics of man without feeling that his nature cannot be understood without reference to behaviour that has hitherto been regarded as the peculiarity of an incomprehensible disease, and dismissed accordingly. Burton likewise indicates that there must be an expansion of individual consciousness in the interests of his mental health. The problem that arises through the primitive fear of curiosity, on which all learning depends, is one that concerns the

[1]['On Modern Man and Consciousness' (a chapter envisaged for the *Conception of Man* project). *Ed.*]

health of the individual himself. Hubris and Nemesis emerge as the penalty for extremism. Yet the scientist must be an extremist who admits no obstacle to the search for truth. It is a striking fact that the group will often protest that its opposition to the statement of certain truths to which it objects will split the group.

Inevitably the scientist, that is to say the individual who considers devotion to truth as paramount in himself or the group, is signalling that he is that kind of leader and wishes to enlist followers. His work, in its group orientation, is a signal to that effect. The league he thus offers, like the lead that is offered by all other individuals, appears to meet with a particular response from the group. Examination of this response shows that the group is behaving as if it were choosing a leader. Rejection of a given individual may seem to be dictated by the individual's failure to satisfy the group of his ability to satisfy the hopes that he arouses. I have said elsewhere[1] that the group is activated by certain basic assumptions that express themselves in preconceptions of leadership that observation of the group can reveal. It might be thought that that individual would be invested with leadership who showed himself to have qualities that approximated to the preconceptions – in short, that it chose the strongest man for the job. But this is not always so: it often chooses an individual because of his or her weaknesses.

This peculiarity becomes more understandable in the light of the theory of projective identification. The individual's desire to rid himself of certain elements of his personality by this evacuatory process leads, when the reality principle is well established, to a search for a character who will give substance to the idea that he can be used as a container for unwanted aspects of personality. Some individuals show a weakness in rejecting what on more ordinary levels of mind we regard as imputations of character, whether the imputations be good or bad. This weakness is exploited and a battery of signals is employed by the group to convey to this weak member that he is that character which, for the time being, the group wishes him to be. It may be that he must in some respects be undesirable, or, equally, it may be that he must carry an imputation of genius or leadership of a particularly flattering kind. If the object were flattery, no great harm would follow. But since these manipulations are secondary to giving

[1] *Experiences in Groups and Other Papers* [Volume IV].

substance to the phantasy of projective identification, the group is itself deceived and behaves as if the given leader had become the repository of the projected characteristics. In this way a leader is chosen for a particular purpose precisely through his unsuitability to be a leader at all. The wider extension to which the organism aspires will have to include the area of the conception of man as it obtrudes in the critical situations of group dynamics. I have attempted briefly to indicate why and in what way this study is important and why this skill should be mastered. Although it is a limited and highly specialized field, the same could have been said fifty years ago about nuclear physics.

Penetrating Silence

1976

The title is one I thought of because it seemed that it might give an idea of the area about which I want to talk, and it might be sufficiently stimulating or irritating to induce somebody to come and hear. Unfortunately what is an advantage from that point of view is almost immediately a disadvantage because it tends to obtrude to a point where it becomes difficult to pay attention to further extension of this subject. To try to extend the subject, in a sense it would be easier if I said it would be a good thing for all of us to remain silent, and if you could simply note what you then hear. Some of it would seem to be immediately obtrusive, other parts of it not so clear, but gradually perhaps you would be able to hear even things like your heartbeat. This is what I mean partly by the penetrating silence. If you can achieve that silence then it becomes more possible to hear things you cannot otherwise hear. In that way one begins to be able to collect evidence: certain facts, impressions begin to obtrude. It is rather like the situation which Freud describes a when he talks about Charcot, whom he obviously admired very much – the statement of Charcot's in which he says, "Go on looking until you think you see a pattern emerge." People who have had a medical training would be familiar with this in looking at an X-ray photograph. If you are familiar with the X-ray, you begin to notice some shadow with which you are not familiar. If you can stand the strain, you go on looking at what you don't understand and with what you are not familiar. Unfortunately most of us rapidly learn at school and elsewhere to fill that gap because it is so unpleasant. As a result it becomes very difficult indeed to achieve a silence because of the clamour of all the information picked up in the course of one's life. There is so much noise going on in one's own mind that it is hard to notice any fresh

element. We tend to try to simplify the situation by thinking of it in terms of a body and mind, these artificial divisions; we produce these boxes into which we put various ideas and compartmentalize them – physicians and surgeons, and finally psychiatrists and psychoanalysts. If we find ourselves in this last box, which is concerned with what we suppose is the human mind, what do we listen to? What is the counterpart? Is there anything we can take guidance from in the already existing discipline? For example, in medicine you are supposed to be able to have enough respect for the body to be open to the information which it is giving you. I remember a veterinary surgeon who was commiserated with on the grounds that his patients couldn't talk, to which he replied, "Yes, but it also means that they can't tell me any lies."

Can we understand the language of the body? Physicians are accustomed to various auxiliary aids, like stethoscopes and, finally, laboratories, which bring in a certain degree of extra information. But this doesn't seem to be available so far as the analyst is concerned. If he believes that there is such a thing as the mind which he is supposed to investigate, he has very little indeed to fall back on. If you are concerned with the behaviour of a group of people, what are you listening to? One doesn't really consider oneself to be a qualified physician, and therefore one excludes, so to speak, one's obligations as far as the body is concerned. But we don't in fact deal with bodies or minds: we deal with the totality of a person or of a group. And there the amount of information we get is infinite: it has no boundaries whatever. So out of this mass of material we have to do some selecting. As always, this not only involves choosing what to listen to, but also includes what not to hear. So you are pretty sure to regret the outcome: you can deplore the fact that you didn't see the point earlier, once it has a become clear to you. It applies even to the future, about which we know nothing; we choose a particular profession or sphere of interest, and this again means not choosing masses and masses of other jobs. Taking a group as a whole, you get a situation which is spread out because every individual has chosen a particular route, a particular journey as it were, and in a way they can pool it if they are so disposed, and you can get a kind of mass impression. But once again from the point of view of the individual, he has to make up his mind what to listen to and what to ignore of the totality of the available wisdom or knowledge.

Supposing it were possible for this group to fall silent: it would then be interesting to collect what different people heard, or thought they heard, during that silence. In psychoanalysis you can become familiar with that sort of silence and the temptation to break it by making noises oneself – and even producing interpretations. Luckily, or unluckily, interpretations are so available that it is almost impossible to move a yard without tripping up over them. I remember a time when psychoanalysis seemed to be extremely fashionable; you could hardly move into a community of people without tripping up over a 'father-figure' or some such creature – the place was simply littered with them.

Freud described 'rationalization' as a pathological mechanism, but I would like to consider this whole business of reason, reasonable reason, as simply being forms of rationalization. At what point do you draw the line between something you would call 'rational', a reason which would be of some value or use, and one of these rationalizations? The whole of psychoanalysis provides us with reasons, supposedly scientific reasons, but it doesn't matter what qualification we give these things – scientific, artistic, or religious – they are all reasons; and another way of looking at that is simply by saying that they fall into the category of things comprehensible to the human mind. It is very awkward indeed if the universe in which we live does not oblige us by falling into the box of our comprehensibility. There may be a great deal that is not comprehensible in the sense of the understandable or reasonably explained in a way which satisfies us what we regard as adequate.

However, first and foremost is this problem of collecting information. When I was at school, we used to have what was known as Divine Service, and amongst other things there was one hymn which used to be sung frequently. The words were something like this: 'Onward Christian Soldiers, Onward as to war, with the cross of Jesus, going on before.' That doggerel, highly religious doggerel, was matched by appropriately martial music – the same sort of status musically as the aesthetically valuable words. The music master, a person of not noticeably religious character, was in fact a very capable musician, so it presented him with no difficulty to play a tune such as that of Onward Christian Soldiers; but in order to add a certain verisimilitude to the music, he decided to include a bit of martial music, and what could be more natural than that he should

introduce a well-known British Army bugle call – one of which was always used to summon troops to the mess for meals, together with the words, "Come to the cook-house door boys". Some of the school were familiar with that bugle call from camp days; others with a more seriously religious disposition were quite familiar with the sacred meaning of this music. So as the audience listened one could only say they developed a kind of schizoid reaction: one half was rather shocked, the other had broad grins on their faces. I don't know what happened to the divine part of this occupation, but there it was: the audience was divided evenly. That seems to me to be one of these situations in which being able to listen, making yourself available to what is going on, has a somewhat disturbing effect on the listeners.

Another example of much the same thing: Kreisler wrote a composition which he called 'Träumerei, Reverie'. That tune goes very well with 'Way down upon the Swanee River', so the two can be combined without any difficulty. To make it more particular still, the effect of this tune on me when I hear it is quite different, because the combination of sounds which are associated with it in my mind are these: in France in 1917 a party of us had been much battered in the trenches, and we were at last withdrawn – we were to be relieved. We were enjoying our first meal and were in what was known as 'back areas'. A fellow officer picked up a fiddle he had found somewhere and began to play the Kreisler theme. While he was playing, the noise of the bombardment became extremely clear. We had all fallen silent listening to the music, and then to its considerable accompaniment of gunfire on the west front. As he ended his playing, it was announced that orders to stand to arms had just come through: we had to go back to the same trenches by the same route we had come by. That is an individual experience, the precise and practical thing. That is why it is a matter of some consequence when there are a number of us – as here, for example; the same stimulus produces very different reactions in each individual. If you can look at it individually, microscopically so to speak, you find a tremendous diversity of experiences – the same tune, same stimulus, but a multitude of different reactions.

Bring them together again and try to tell yourself what is the state of mind of that group. Are you in a position – we'll call it 'leadership' – in which it is of some consequence to you to know what the state of mind of that group is? What do you listen to? I am not suggesting an answer, because I don't know one; one of the disadvantages

of being a leader is that you have to make decisions when you don't know the answer; there is no other reason for making a decision. Otherwise the decision is made for you; nobody bothers with a problem to which the answer is already known. The leader always has to be able to stand the strain of making decisions when there is no answer. One quality he would have to have is a certain degree of robustness. A further difficulty is this: the actual universe in which this decision has to be made is unknown. So you have to translate such experience as is available to you – usually not very much – into action. Thanks to Freud and his predecessors and successors, even talking has become a kind of action. That is to say, it can be the sort of talk that is space-filling, simply intended to be a substitute for action, an indefinite postponement of the unhappy day when something will have to be done; or it can be a prelude to action – that brings it very close indeed. It is a matter of having leaders who have a certain amount of experience or training, but not to the point of excluding this ability to look at that part of the field which you don't know, do not understand, and for which your equipment is usually pretty thin. Even if you mobilize all the experience you have, every scrap of it, it doesn't amount to much when you are up against real life, as it were, having to decide what to say or think almost instantaneously. When you are in a position of taking the lead, you don't have the luxury of being able to fall back on having a long analytic discussion first – you have to act straight away. Usually people like to be able to discuss matters in advance of anything that is likely to happen, but that of course is related to something which hasn't happened yet – the future. The preparation for action is all really done in the dark: we don't know what we are preparing for. When the moment of action comes, the moment at which the leader has to say or do something, there is not time for any of that – he has to act instantaneously.

If you collect together people who might be interested in leadership and administration – SCOLA[1] – what training do you have? What are the minimum conditions which you demand of the person who is asking to be accepted into that particular group? Having accepted such a person, what do you subject them to? What further training or experience would you choose for them? Some of it is a matter of choosing a bibliography, choosing what books a person has

[1][The Study Centre for Organizational Leadership and Authority. *Ed.*]

to read, but in this brief sketch of the sort of problem with which we are confronted, what else would that person have to read? The poets seem to have a flair for expressing this kind of problem verbally; so one could turn to them and what they say. Shakespeare, for example, says, "It is a tale told by an idiot, full of sound and fury, signifying nothing". Victor Hugo says something rather like it, although he also describes a situation in which he classifies words as if they had a kind of caste system: high-class words, words used by another poet, Racine, which are all aristocratic words you could regard as suitable for the expression of experiences which might be had by Phaedra and others. Then there are, as it were, middle-class words, which can be used for ordinary conversation and ordinary exchanges of view. Finally there are the indecent words, *les gros* mots. It is in this latter category that you very nearly get a universal language. You can try an experiment on yourself and see what your reaction is when your alarm clock goes off. What is the language which naturally springs to your mind? It is hardly the sort of language you can advocate, say, for the United Nations Assembly, but it is probably the language that would be understood by all of them, however diverse their cultures, training and so on.

To return to something much more individual, like the patient who one day comes and lays down his 450 revolver by his side. You can see he still has the safety catch on, but you, if you are the analyst, find yourself paying a very great deal of attention to that safety catch and what happens to it. The same patient can then turn up with one of those vast musical instruments – a tuba – which looks like some enormous heavy piece of artillery. If he can't put a stop to your interpretations by shooting you with his hand gun, then at least he can put a stop to them by blowing this infernal machine. Within the 'United Nations', if a common language isn't available or isn't considered proper, and if more proper forms of language are also not adequate, then they likewise can be reduced to resorting to fire-arms. But it ceases then to be murder; it becomes war.

Well, then, what about your candidate for admission to SCOLA? What are you going to choose leaders for? And what training are you going to give them? I think you will agree that it opens up a vast problem. I don't know what the solution is or whether it will ever be achieved – or whether it will be achieved in time. The more

urgent the situation – and I don't think there is any doubt about the urgency – the more reason there is for saying, like Marshall Lyautey when he was told it would take a hundred years to produce the wood necessary for building ships, "Well, there isn't a moment to lose". That is the situation: there is no time to lose; our reserves of time are, like all the rest of our reserves, very small in face of the job that has to be done. That being so, I think I would like to stop talking and give somebody else a chance. I suggest that the rest of the discussion should be one in which anybody who feels inclined should participate.

Q: The usual reason someone is accepted into an organization is intangible, something we can't define. Standards then lose their meaning, they become artificial; and yet one does like to think that in an organization certain definable parameters and standards are logical.

Bion: Yes, it is curious that a lot of people seem to be chary about choosing what they like with no better reason than that they like it, whether it is a person or a thing, or even an idea. It is hard to say why there should be any difficulty about that, but there certainly is. Sometimes it seems to present an almost impenetrable screen; the fact that the person would have to say what they like makes it very difficult for them. You can say to a collection of people that they are free to talk about whatever they like. It seems absurdly simple. It is therefore quite surprising to find that you are met with a silence.

Q: Doesn't this bear on the issue of justice in some sense, and isn't liking somebody not enough – in an organization or running a business or dealing with human beings in some matter of respect – doesn't one look to oneself for some sort of criteria above and beyond the immediate liking?

Bion: That's right – we always crave for that. This is the difficulty about making a decision: you always have to make a decision based on insufficient knowledge or experience, and the more that you know about yourself, the more you know how extremely slender your resources are. Even after a considerable experience of life, there is one thing which is pretty sure to be borne in on you – your ignorance, your lack of equipment. Even if you fall back on what you like

or don't like as the method of deciding what to say or do, the one certain thing is that it is not adequate. It is a frightening situation for the human being always to have to be responsible in a situation where the answer is not known, where the information is not enough. You can have the most elaborate intelligence systems, but it still isn't enough.

I doubt you can afford to do without any part of the vocabulary – any theory, diagnosis, or interpretation. Ultimately it falls back on the individual: Who are you? What are your resources? What is your information? What is the evidence on which you decide what to say or do? If you had good-enough intelligence, or if you supposed that you were sufficiently intelligent, I would be very surprised indeed if you felt you had enough intelligence available to solve these daily problems. But of course one could say that you might try to limit your vocabulary. Observe that I have used the word 'intelligence' three times in the last few lines, but that doesn't prove that it is therefore a good word to use, or that it is widely used, or that it is a word of your essential basic vocabulary. If you are one of these people who uses human speech as a chosen method of doing something, then you have to forge a personal vocabulary which you think you can keep in working order (in place of the available debased old clichés, worn theories and devalued coinage). Unfortunately it is only part of the problem; it is no good using that particular kind of weapon or tool of language unless there is somebody who will listen to you and understand what you say.

I was very impressed by an experience told me by John Rickman after we had succeeded in running the Northfield Experiment for about six weeks. He met a private soldier at York station, who said he had been at Northfield during the time Rickman and I were running the experiment, and he wanted to say how grateful he was because for the first time he had understood what a university was like – and I think it was very likely to be the last too, because he was not one of the privileged classes. He was a poor man who had been swept into the army. There is something extremely moving about an experience of that kind. When I say it impressed me very much, I wonder what was the impression that man got. It does indicate that talking may impress: there may be somebody who hears what you say and is impressed by it. So it is quite a good thing if you have a vocabulary

that can at least make an impression, but you have to choose your own vocabulary and keep it is good working condition.

Q: It seems from the title of your talk that one aspect of vocabulary has been your own particular concern – for example, your title, 'Penetrating Silence'.

Bion: I think musicians appreciate this point because they have signs they make on paper for various forms of what they call 'rests'. There are others who also recognize the importance of that – 'Wisdom cometh to the learned man through opportunity for leisure.' The thing that impresses me about that statement is 'wisdom' and 'cometh to the learned man'. In other words, the person must be capable of being learned, but that doesn't mean to say he becomes wise.

Q: I wonder if that is one of the reasons for resistance to one's own vocabulary, and for a certain difficulty in distinguishing between learning and wisdom. Is it because there is a terror that goes along with wisdom?

Bion: As far as I am concerned, I am persuaded that there is a great deal to be said for respecting the use of a term like 'terror'; I feel 'terribly' anxious. Very often a word like that is used in a context which seems to rub it all out – "Oh, I feel terribly anxious." The music is brought in to contradict the term; the accompanying music disguises it. It is another reason why the person who finds himself in a leadership role has to be able to be sensitive to the evidence – what is evidence, and what it is evidence of, amongst a whole mass of which is irrelevant. In the Burma war elaborate 'secret' messages were sent, but sent in a way which the enemy would be able to intercept. So not only were the movements of the troops, tanks etc. hidden, largely by virtue of air cover by the American air force, it was also possible to keep the enemy in ignorance of the real intentions and to build up in his mind a conviction of the position – I think it was of the 4th Corps – on entirely the wrong section of the front. With regard to oneself, if you are in a position of leadership, you have to take into account getting all sorts of information – some of which is voluntarily provided, some deliberate; but you have to decide, with your very limited resources, what you propose to listen to in what you are told, in what your senses tell you, in what your spies tell

you, your 'intelligence service'. So I could say in this way – or so it seems to me building up and improvising my own vocabulary as I go along – I make a distinction between 'intelligence' and 'wisdom'. I think the Nazis must have been extraordinarily intelligent to be able to organize things like the Nuremberg Rallies – a wonderful piece of organization – but even if I had a choice in the matter, I wouldn't fall for this highly intelligent organization and for its highly intelligent organizational capacity. If you ask me why I wouldn't, I don't think I could really answer. . . .

When it comes to the individual, you can apply such resources as you have to a very narrow field. How does what you can see for yourself apply to the immediate everyday decisions which have to be made?

Q: What about the knowledge we don't know we have – what we sometimes call 'intuition'?

Bion: If you want to talk about it, you have to invent a word like 'intuition', hoping that it is about something and that in fact you have intuition. Even the mathematicians have supposed that the classical method of conducting mathematical operations isn't adequate – there has to be something else. It is rather like the poet who is able to express something in a way that draws the attention of the reader to what he might otherwise not be aware of. The person who uses a word like 'intuition' may not have enough knowledge to be convinced that there is such a thing, but he may feel there is, and he may express a term, but he has to take the risk of somebody saying, 'What do you mean by intuition?' All he can say is, 'If you hear me use it often enough, I hope you may get a rough idea of what I am talking about.' The pattern will emerge in which it would seem to be appropriate to say, 'Ah, that's what he means by intuition', or 'Ah, now I know what you mean by university; I've never been to one and am never likely to go to one, but that's what you mean.' This seems to me to be part of the fascination of this kind of occupation.

Q: Could you comment on the personal need for silence in our profession?

Bion: I think it is useful to listen to a silence and not to be in too much of a hurry to break it up. I am familiar with this because I

know that whenever I am tired I have a spate of interpretations to the mind – all the Freudian, Kleinian, Abrahamian, every blessed interpretation you ever thought of – they all come flocking to my mind. Indeed, one could almost say that psychoanalytic training becomes a kind of psychoanalysts' neurosis, a sign that one is tired when rushing to employ these interpretations. Indeed, I think the only situation in which we are really omnipotent and omniscient is when we haven't the faintest idea what is going on – it's the only thing to be. Much the same thing applies to the person who can't listen to silences. I would be surprised if anybody here is unfamiliar with the experience of not being able to tolerate the silence. 'For goodness sake! Why can't you say something?' But in fact there is a lot to be said for being able to listen to the silence.

Q: You seem to be rather pessimistic about human resources. That makes me feel very pessimistic – and I wanted to counteract it by thinking how we can deal with that. . . .

Bion: I deal with it in this way: whether I am pessimistic or optimistic doesn't matter very much because I have to deal with human beings. Even as an infant one is dependent; and as the independent person one is also familiar with loneliness, isolation; even when you are in a crowd, you are all alone – it is the price you pay for being an individual. The fact that you are mostly dependent on things which are not worthy of being depended upon can become clear to you. But if you are a leader you are not supposed to make that clear to the people with whom you are dealing because there is always the danger that what is an individual fear might, when it is sufficiently supported, become panic fear. At least it has the merit of obliterating the loneliness if the whole bunch runs headlong away. That's one reason why the leader is in a dangerous situation if he stands against the stampede. His resource is not any greater, but he is not supposed to translate his thoughts and his awareness of the dangers of the situation into the kind of language which makes it available as a model to the rest. He is not supposed to lead the regiment from behind – like the famous Duke of Plaza-Toro.[1]'But when away his regiment ran, his place was at the fore, O – That celebrated, cultivated, underrated

[1][From *The Gondoliers* by Gilbert and Sullivan. *Ed.*]

nobleman, The Duke of Plaza-Toro!' This is a situation in which the loneliness is brought home to you in an unmistakable manner.

Q: Are the troops any less alone?

Bion: It depends who put them into that particular box, calling them 'the troops'. I don't think they are in any way in a different situation; they are in the same situation, except possibly that those people who are leaders are not in that particular slot: they simply serve as troops and may in fact be what we might call 'poor troops' because there is no outlet for their leadership. It is conceivable that some of them would be much better employed if they were in a position in which they had scope for their leadership qualities. I think it is the kind of thing Churchill had in mind when he said that democracy is a damn bad system of government, but it happens to be the best because it affords an opportunity for people to show what they can do – at least, it is supposed to.

New and Improved

1977

I sometimes think that Freud never really understood what a cloak he wore. In several places[1] he quotes this phrase by Hebbel,[2] in describing himself as "one of those who have disturbed the sleep of the world", and more than once he suggested that he was aware that he caused an uproar. But he seemed to be surprised to find what kind of uproar. In his paper on the history of psychoanalysis he mentions the motto (device) on the coat-of-arms of the City of Paris – 'It is tossed by the waves, but does not sink'.

If we are right about the scale of things, we could say that our recent achievement as human beings is the capacity to talk – a matter of a mere few thousand years. It is an achievement which floats. What does it float on? It is a matter of some importance because here in detail we are still floating on the surface of whatever the sea is that we float on. It seems to me that the nearest I can get to the emotional life of the human being is this capacity to talk and discuss. But I think that the capacity to talk – and nowadays even to think, to co-operate as here in solving these various problems – seems to be extremely precarious because people are impatient. Great crowds of people, even nations, decide to solve the problem by violence: if you don't like a problem, shoot it down.

---

[1][E.g. Letter from Sigmund Freud to Ludwig Binswanger, 10 September 1911 (in Fichtner, 1972, pp. 73–75); Letter from Freud to Fliess, 26 April 1896 (in Masson, 1985); and 'The History of the Psychoanalytic Movement' (Freud, 1914d). *Ed.*]

[2][Christian Friedrich Hebbel (1813–1863), dramatist, poet, and short-story writer. The quotation is a reference to Kandaules' words to Gyges in Hebbel's *Gyges und sein Ring*, Act V, Scene 1. *Ed.*]

André Green introduced me to the statement, '*La réponse est le malheur de la question*',[1] which one could translate, 'The misfortune (or the illness, or the disease) of curiosity is the answer.' That is what kills curiosity. If you can rush to the solution quickly enough, then you can put a stop to the curiosity. So when it comes to the question of people who want to understand, or want to know something about themselves, the investigation of who we are, of what we are and what we do, the temptation is to put a stop to that by rushing precociously to the answer.

In recent times, as we know, this has actually been done on a large scale by killing, murdering, or – put in more respectable terms – waging war against people. One wonders whether the whole of psychoanalysis is floating very precariously indeed on these turbulent seas, and could easily be submerged by the violent approach. For example, it is not easy to tell what sort of person an individual is, so it is convenient if you can look at the colour of the skin which is visible straight away, and say, 'That is white', or as Ustinov says, 'pink' – and go no further. You can stuff that answer into your curiosity and hope it will shut up.

The curious thing is that it seems to cause an awful bunch of trouble if a person really wants to know what all this turmoil is about. On the surface psychoanalysis seems to be a very safe job, physically comfortable, rather inviting; so lots of people can be drawn to this peculiar occupation.

Psychoanalytic investigation can arouse powerful feelings – for example, feelings of hate. Freud called it 'transference' – a sort of phenomenon which presents itself. So, when you go into your office tomorrow you have a chance of experiencing this 'transference'. The trouble about a word like that is you can't see it, smell it, touch it or taste it; so it is regarded as typical of intellectuals who invent more and more terms. But we are actually with those few people who come to us for analysis and very often find they don't like it. It may sound rather like a consolation – perhaps it is – but I think that the more experience you have of analysis, the more familiar you get with the fact that it only takes a few seconds, if that, for the prospective analysand to pack it in. The knowledge that patients are hard to come by, and when they do come they disappear easily and quickly, is the

[1]Maurice Blanchot.

first thing you are familiar with – the failure of psychoanalysis, and what a fake it is to give interpretations. Most people dislike personal remarks – and that is exactly what interpretations are. One result is that while it is brought home to you that you are a failure (or something is a failure and you are bad at it), there is always something better – new and improved. I borrow that title from Kellogg's Cornflakes. I don't know what happens to the 'new and improved' things; they are often successful – or at any rate successful as far as the technicians are concerned. It is a very seductive idea – one could almost sum it up in one word – cure. It carries with it a connotation of good times coming, an improvement, *better*. We have to be aware of that because there may not be much more we can hope for than that we shall continue to float when the thing that is really flourishing is the turbulence, the turmoil, the upheaval. As analysts we should beware of being seduced by any such ambition from the actual task of analysis.

Freud was impressed by Charcot's statement that if you watch long enough, you ought to see a pattern emerge. The difficulty is how to find a chance of lasting long enough: most people don't like being looked at or observed and – worse still – having personal remarks made about them. I would like to consider that we should think not about our own analysis, but the problem which presents itself as part and parcel of the job.

In other words, when your patient walks into the room tomorrow, what do you see? Of course a lot of analysts have a medical training – I doubt whether that training is anything like good enough, or even as good as those concerned think it is. But as analysts we may get into further trouble because our idea of what is wrong with the patient can be so much more intense and exacting than that of the ordinary physician. I once had an experience of this when I agreed to see a patient referred to me by a doctor; I wrote to him saying that I considered the patient was suffering from myasthenia gravis (about which nothing much was known at the time – I happened to know by accident). He wrote to me about six months later, giving a very fine description of the terminal stages of myasthenia gravis and saying, "So you see, you were wrong. What the patient died of was . . .". It was perfectly true – but it had not been one of the initial symptoms.

I think there is a good chance that even in states about which it is reasonable to suppose that the only correct approach is a physical one, psychoanalysts may be able to detect symptoms of a physical

disease presenting themselves not only on the skin or in X-ray, but also mentally, yet can be seen to originate not in the mind or personality, but in the body. Some of the early analysts had a good clinical flair for physical ailments, but unfortunately they tended to decide that everything was physical; so Freud was attacked on the grounds that the real origin of mental disturbance was physical, and a physical approach was necessary for physical ailments. But our problem is observing tomorrow's patient. We are supposed to be able not only to detect that the origins of grosser symptoms of a particular disorder originate in the body, but also to detect a disorder that originates in the mind itself. "Canst thou not minister to a mind diseased?" as Shakespeare put it. I suppose the answer to that would have been, "Yes, if you wait four hundred years, we'll try. By that time somebody will have invented psychoanalysis and we'll know something about the mind."

How are we going to observe a character or personality? My feeling about this – in so far as I have been able to observe myself – is that I go from nothing to a point where I begin to make guesses, conjectures, rational conjectures. Freud says dreams are central – and so they are. But a difficulty crops up when he describes certain dreams as rationalizations. How do you tell the difference between one rationalization and any other? One could say that about analysis itself: in what way does the whole of analysis differ from a kind of elaborate paramnesia, something that is invented to take the place of what you don't know or have forgotten?

I would find it difficult if I couldn't start by imagining what is the matter with the patient, or imagining why the patient has come. But that is a very vulnerable state: anybody could say, "You're just inventing any old story instead of really examining the patient." So it is just as well to keep your imaginings, your imaginative or rational conjectures, to yourself, because they can be put a stop to if you formulate them. Of course the most obvious person who can stop them is the analysand, who can walk out there and then. But this also applies to people who are not analysts, who don't know anything about it, but who might be related to the analysand. They can easily say, "What a lot of rubbish; what a lot of feeble imagination." From that point of view, if you can possibly enjoy the luxury of waiting to see if your imaginative reconstruction appears a bit more solid, that is why I think it is a good thing to give your imagination an airing – never

mind how ridiculous, stupid or intolerable it is. I am not talking about an undisciplined, rhapsodical display of just saying anything that comes into your mind. At the same time I do not want to be limited by having to be scientific, precise and exact.

Euclidean geometry appears to be well established, partly because we can draw pictures, triangles, circles, and the evidence of the eye carries an enormous amount of weight. It is one of the first infant capacities seeming to give release, a sort of approach to omnipotence: while you may not be able to crawl, you can reach something by looking at it. So geometrically it seems to solve a lot of problems – although there are certain problems like parallel lines, which don't really fit in; they break down logically if you look at them long enough.

We can still say that Euclidean geometry is useful, and Euclid cannot have been altogether mistaken – what he produced has lasted for two or three thousand years. But I would go further: geometry was at last released from the tyranny of the eyes by algebraic geometry, by the discovery of the Cartesian co-ordinates, and from that you could transform visual geometry into a mass of algebraic formulae.

To return to Euclid: one could say that 'real' geometry must have been partially discovered by Euclid, and what he discovered was the true geometry implicit in it, even if he didn't know what projective or algebraic geometry was. Nevertheless, when it comes to Cartesian or algebraic geometry, what was implicit has become explicit. I don't think it has caused much trouble, but when somebody – Freud for example, *the* example – makes explicit something that is implicit – then there is trouble. As he pointed out, people can complain about doctors who are always inventing – and are therefore responsible for – new diseases; but that is because they see the disease exists. But to do this with regard to the mind really seems to be going a bit far and causes very considerable uproar. Even with people like ourselves we don't have to go far to find that we have stirred up trouble simply by making explicit what is in fact implicit, and always has been; there is something about displaying it, or making it overtly obvious, that is most unpopular. Anyone who is practising analysis cannot expect a trouble-free existence; we have to realize that in the office the analyst and the analysand are in for a rough time. In fact, liking either to be analysed, or to be an analyst, is a peculiar state of affairs. It is much more natural and in conformity with the nature

of this subject that both parties should hate it. There is considerable pressure all the while not to give what is the real interpretation, but some more tolerable version of it. So both the patient and the analyst are very glad to find some interpretation which is less than the truth – I think this is constant, inescapable. We are engaged on a somewhat unpleasant and dangerous occupation in spite of appearances to the contrary and the fact that we are always offered the chance of believing that it is something safe and pleasant, 'new and improved', more curative. "Have what I call psychoanalysis, and you will feel better." The danger is much more that the individuals concerned will be able to observe more, and what they observe will not necessarily be at all agreeable. Even painters like the Impressionists have got into trouble – their pictures used to create a furore. This latest discovered activity – looking at ourselves – is probably the most obviously unpleasant. We don't mind very much about astronomers building vast radio-telescopes and observatories, but we hate this activity of looking at ourselves, our minds which are usually conveniently hidden away – so much so that it is difficult to tell if a person has a mind at all – and that state of affairs is regarded as much more comfortable than considering the personalities of people. I suggest that we should free ourselves to exercise our imagination and hope that it will be replaced by something that comes nearer to fact. I am doubtful about whether it comes to fact, because belief in fact is the privilege of physical scientists, and even they have got into trouble now because of the introduction of ideas like the Uncertainty Principle. The law courts are also in trouble and not happy with the fact that there are only two diagnoses – guilty or not guilty – and only two treatments (or possibly three, if you include execution in the sense of killing the person, which is a drastic operation). There again there is the tendency to want to drag in psychiatrists and psychoanalysts to help them out of this predicament thanks to having these somewhat limited but effective diagnoses and cures. Whether we should be wise to get involved with that is another matter. Knowing what we now know, it is difficult to decide whether to co-operate or to collude with these systems.

This brings us to another point: we are dependent on people who are not us, even dependent on society's groups, but at the same time we are alone. So we have the doubly unpleasant experience, namely,

of being dependent and isolated. Even in your office, where you have the analysand who can be your most valuable ally, the person who can co-operate in this task – even then, when you are alone with your analysand – you are alone. I don't think it is simply a verbal paradox; it is one of these things you can test for yourself in your own office, using all your reason, logic, imagination and capacity for conjecture; you cannot afford to do without any of this limited supply of capacity. What this means in practice is this: whether you make notes purporting to record what happened in the session, or whether it is worth considering that it might be more profitable not to make notes but to give your imagination an outing and imagine what happens next.

I am reminded of a story that was told me by Polunin when he was engaged in the Russian Ballet in England. He said he was with Diaghilev, Stravinsky and Fokine, and they had just run through the ballet, more or less the final version of *Petrouchka*. Stravinsky and Fokine were delighted and satisfied. Diaghilev said, "No, it won't do." The ballet ended with the death of Petrouchka; Diaghilev said, "The ghost of Petrouchka must appear." They protested about this, but ultimately Stravinsky wrote some more music, and Fokine added the choreography, and that was the final version. That depended on Diaghilev's capacity to believe something absolutely ridiculous – that the ghost of a puppet, which has no life in it anyway, should appear, seems to me to be an extraordinary feat of imagination. So in these sessions with an analysand we have to make some approach to the ghost which hasn't appeared. You have a perfectly good narrative story; the patient tells you everything – his life history. But what about the part that hasn't appeared? Just now I called it 'the ghost', but it is really the ghost of analysis that one needs to be aware of, the thing that would complete this story if only we knew it or could invent it. All this sounds like saying, "All you have to do is let your imagination rip – just think anything you please". But that isn't good enough; there has to be some sort of disciplinary framework; a skeleton, some sort of bony structure. There is no escape from the discipline of psychoanalysis. It is very difficult to understand why we should have to go through such a frightful discipline, and equally difficult to guess in what way it will pay off at some future date. But it is somehow necessary so that even your imagination cannot be allowed to develop into an imaginative orgy.

I have not really said anything about what we are looking at, partly because everyone has to make up their own minds about what it is that we, falling back on these words we borrow from physical events, see or hear. Nothing whatever can possibly take the place of the actual meeting between the analyst and the analysand; those two people are required to produce a binocular vision, a binocular observation. Perhaps you would like to continue the debate.

Q: Could you enlarge on this 'skeleton' that you just mentioned – the bony structure?

Bion: The thought that occurs to me immediately is a passage from *War and Peace* where Prince André says, in response to something that has been said to him, "That is sooth, accept it." In other words, there is something which makes one feel that it is true; in spite of all these imaginative reconstructions, what we are basically after is the truth. There are all kinds of approaches: a composer can compose a piece of music, and somehow you feel, 'yes, that's right'. The same thing with a painter: there is a difference between a painter who produces a sincere work of art and one which is bogus. The bogus one can look exactly like, or even better than, the genuine one, but there is something about the genuine thing which is convincing; even though we are not capable of knowing the truth, we are fundamentally right to be prejudiced in favour of it. And that is about as near as I can get to answering that question as to what this is that is so unbending, so rigid that it is very difficult to fool oneself about it.

Q: You touched upon medical education not being nearly as good as the people who are concerned with it think it is, and would like it to be. What would you recommend in the way of psychoanalytic education if you were to have a totally free hand?

Bion: I have asked myself that question and continue to do so. When I had something to do with the Training Committee of the British Psychoanalytical Society, I can't say I got much further with it. It is still a question that puzzles me. Recently I have begun to wonder whether we should attempt to develop our imagination, or even our capacity for rationalization. But there again, the risk is that it becomes completely undisciplined. I wondered whether I could describe it by saying 'rhapsody' – you engage in a kind of rhapsodic activity, just let your imagination go. That is obviously a danger; it

is not good enough simply to proliferate more and more imaginative constructions.[1]

One could say, "What is the interpretation of that? What does it mean?" It is a fairly simple and straightforward thing. It has the peculiarity that once you have seen it, it is impossible to stop seeing – there is no problem whatever. This is one of the peculiarities of solving a problem – we wonder what all the fuss has been about because the answer is so obvious.

Q: Like M. C. Escher – it keeps you from seeing the other answers.

Bion: Yes. In fact, would it be a good thing to have a course on Escher? Of course, it is not simply a question of the discipline of drawing or painting; it is also the discipline of looking. You could say it is no good supposing you have seen the Impressionists unless you go and look at them; you have to go through the physical discipline of getting your body there and having a look at them – and probably looking at them for some time too.

Q: As you were talking, I had the feeling that you were really gently encouraging us to accept our own helplessness in the analytic situation, that our only feeling of power might be in imagining, and seeing if our imagination was developing.

Bion: In so far as we are helpless, I think it is a good thing to know it. But it is a mistake to suppose that omnipotence is a peculiar state of mind which patients have. In fact we slip over into omnipotence over and over again whenever we are up against a problem we cannot solve. The whole pressure is to feel that we are omnipotent. Indeed it is almost an occupational disease of analysts to be cured; we crave to be able to produce some evidence to show that we have been cured. It is difficult to believe that a collection of really intuitive people would not be able to see someone's defective qualities. It is an astonishing thing that the collective, combined wisdom of the nation has achieved as much as it has done.

Stories like the Garden of Eden, the Expulsion from Paradise, the Tower of Babel, would seem to indicate a clear awareness that there

---

[1][At this point Bion handed out copies of an A4-sized page with an illustrated version of his title for the talk, one which has the qualities of a drawing employing reversible perspective. See next page. *Ed.*]

Copy of Bion's original 'reversible figure' title

is a power who objects strongly to the development of intelligence in the human being. But you don't have to resort to these stories – you only have to see what happens in your own office. Freud thought, when he got a lot of psychoanalysts together at a congress, that there would be a certain amount of agreement. He seemed to be extremely disappointed to find that the effect was a kind of dispersal: they all quarrelled, they all disagreed. In this way there has to be a kind of 'splitting'. When they come together – as here, for example – they can separate physically and mentally and go off in different directions. I think it is a phase that has to be gone through.

According to Melanie Klein's theory of projective identification, the individual believes, as a phantasy, that he is able to split off parts of his personality, evacuate them, and get rid of them. As we all know, that is a matter of opinion – some people think they can see it; some people don't. But I would like to give another version – the same story on a different level, as it were. Breuer believed, and so did Freud, in a cathartic method. Is that the same story again? Cure people by evacuating some state of mind of theirs? Freud broke away from that; he didn't feel that this cathartic method was good enough. He had an extraordinary capacity for being able to exist in isolation, and yet he was companionable, very capable of making contacts, a most compassionate person.

An originator of human speech might be very disturbed at having his invention used for telling the truth; the obvious advantage of being able to talk is that you can mislead people. To distort a perfectly magnificent facility for lying into a method of speaking truth could seem to be a bit much – I hope I don't speak as an advocate of the liar, but even Blake said that Milton was very much on the side of the opposition – not on the side of the authorities in Paradise.

Q: [*Question missing from typescript.*]

Bion: I think Freud still carries the prejudice in favour of cure, that the truth would make you feel better. There is a good deal of controversy about this – I don't say it is open controversy, but there are a good many people who believe that a good lie is worth the truth any day. In fact, there has been a recent paper suggesting that when somebody has a terminal cancer, we should tell them nice things, things they would like. But there is always the risk that a person who has a

terminal cancer knows it and doesn't value lies about it; our primitive, primordial impulses don't appreciate being invaded by stuff from up here (the brain). It is like being the original possessor of the personality or character; things like primitive guilt – or original sin as religious people call it. The original possessor of the human being is nowadays being invaded by these impulses to speak the truth, to know the truth, or to investigate the truth.

Further Cogitations

1968–1969

16 April 1968

Volume 1, page 362[1]

A very striking passage. Money and wealth are very important because money can be exchanged for other things. This makes the value of money contingent: I am able to buy a comfortable bed, Californian sun and air, books, and interesting food and wine. I can buy interesting opportunities for Julian, Nicola, Parthenope. And when I am reminded, as I drink wine, by F., that I do not have to have food, I am angry – having had breakfast and lunch. Why? Gluttony – which I know cannot yield what I seek. Is gluttony concerned with quantity? Amount of pleasure, prestige; quality even?

"I have told you", says X. Told me what? I would not be asking if I thought I'd been told. I ask because I think I have *not* been told, and have something I have not told X. Schizophrenics tell me what I don't want to know: the ambiguous smile, the love of money, the greed for time, salesmanship.

8 May 1968

Friendly feeling = love is a constant, but when love is replaced by hate? A new formulation required to bring order out of chaos. Is this 'growth', or is it growth by catastrophic change? Replacement of one formula rather than another – change by catastrophe?

---

[1][This is a reference to John Milton, *A Treatise on Christian Doctrine, Compiled from the Holy Scriptures Alone* (1825). *Ed.*]

10 May 1968

Technique:

Why am I such a bad psychoanalyst? Cannot just be age because have always been aware of this, though sometimes it is a suspicion that it is the inadequacy of psychoanalysis itself and not just me. But this is based on a mistaken idea of psychoanalysis as a body of knowledge or a therapeutic procedure rather than as a research into the domain of the mind itself, an expedition.

15 May 1968

Finance: The protean nature of it. No psychoanalytic interpretation satisfies. Greed for more money as a substitute for *x*: *x* a substitute for *y*: *y* a substitute for O. But substitutes only remind one of the dis-satisfaction, but satisfaction itself felt to be impregnated with dis-satisfaction for which it is felt to be a substitute.

Greed – can never be satisfied.

May and June, 1968

[*Fourteen pages of notes dealing with his anxieties connected with the (analytic) practice and fears of finding himself in an intolerable situation – the outstanding impression is one of anger, hostility and self-dissatisfaction. F.B.*]

4 July 1968

It is a waste of time and an expense of spirit to allow one's self to wonder how one appears to people. Yet that seems to be what psychoanalytic interpretations involve. Maybe one does that in work hours – but not outside.

Today I did interpret X's complaint of being attacked by me as a need to be able to be frank, and the feeling that it was not possible because it would be interpreted against him. But I did NOT interpret his feeling of being seduced and therefore being denied the criticism he needs. This I think is one instance of failing; but it is also something (criticism) which I feel I can get better from myself than from others. This is, however, indistinguishable from claiming a very favourable reception – one's own. Wish to claim unfavourable or hostile environment so one can ignore hostile criticism. How, then, can one be [judged]as an analyst? Not by one's self, not by friends and not by enemies. Being a recluse will not do, either. Very difficult to tolerate bad analysis, and very difficult to demand good analysis.

20 July 1968

Dejection and rejection. Fear the latter will emerge as sarcasm. Resentment at not being a success, and feeling I am not a success because not good enough to be one. If only I were a good analyst! Envy others who have the guts to charge fees on that supposition. I prefer paying the cost of being morally superior, thinking thereby I avoid the cost of being scientifically superior – which of course I don't. Resent that too. This comes near to resenting being a mere ordinary person who has to earn a living.

The language of achievement needs to be differentiated from the language of substitution for action. Both have precursors – there are day-dreams which are a substitute for action and day-dreams which are a prelude to action. I have available α and β elements: could these be used? The β elements, I have said, scarcely qualify for thoughts at

all; α elements I regard as precursors of C Category elements such as are used in dreams etc. . . . Could α be regarded as analogous to alpha-particles and β elements as inert, *not* penetrative and *not* reaction producing? The elements of 'thoughts of achievement' would be α elements. The language of inertia substitution would be the language composed of β elements (the β screen) capable of deflecting α elements. (Related to resistance, stability, inertia – no dream, no thoughts). Even when concerned with achievement in other fields, LA must conform to aesthetic laws of aesthetic achievement – "beautiful forms, beautifully executed".

[*Next page blank except for 'Vol. 1, Book II. Ch. 6'*[1] *'IV, page 425'*[2].]

21 July 1968

The point is that one can verbalize many qualities such as 'beautiful forms, beautifully executed', but it depends on motive with which it is expressed how outcome will be decided. And this brings one to O, which will never be known – not the 'form', the evolution, but that from which it evolves – the ultimate reality.

Growth as the criterion (not cure). But what of the cancerous growth? And once one admits a standard of values, one is back in the circle: 'who or what or how' is the growth assessed – Life? Death? The problem grows with its solution. There is no solution, or – as St John of the Cross put it – "The soul is now, as it were, undergoing a cure in order that it may regain its health – its health being God himself."

A capacity for growth might be better. But how is such a capacity to be assessed? Has it to be assessed? These continuing questions themselves may betray a fallacy, in that they are at once evidence of growth and afford evidence of an existence of pseudo-growth – premature formulation of next question long before that stage has been reached.

---

[1][Milton (1825). Relevant to Bion's thinking here is that serving from 'the newness of spirit' releases one from the 'oldness of the letter', gaining a degree of freedom from 'the yoke of human judgement'. *Ed.*].

[2][Ephesians, IV: 15, to be guided by the spirit of 'truth in love'. *Ed.*]

24 July 1968

Washington send a favourable reply and sound very welcoming despite (because of?) fee and conditions. It seems hard to believe that one is worth it. (It is significant that one even entertains the idea of being worth it).

29 July 1968

What is the relationship between dreams as ordinarily understood and what I am calling *transitive dreaming* – the turning of actual experience into a form suitable for storage? I say (the) patient can no more make use of experiences without dreaming than he can make use of food without digesting it: food must be digested; equally the experience must *at the time* it is experienced be 'dreamed'. Then what is the dream ordinarily so-called? It is a failure of the patient to dream the experience of sleep. He fails to 'digest' the experience of sleep. If he 'remembers' a dream, he means he has to wake up before he can leave the dream, just as my psychotic patient has to come to analysis before he can 'dream', In both instances it is because he cannot tolerate the synthesizing, digesting process of the dream because he cannot tolerate what is synthesized (namely the super-ego?).

11 August 1968

Another way of stating the patient's difficulty is that he can dream, but that even any 'good' dream (i.e. one that lends itself to interpretation) is evidence of a breakdown in dream-work alpha. The point with any patient is not whether he suffers or does not suffer from insomnia – does or does not sleep – but whether he can or cannot do α, is or is not capable of α, for whatever reason. It may be because he

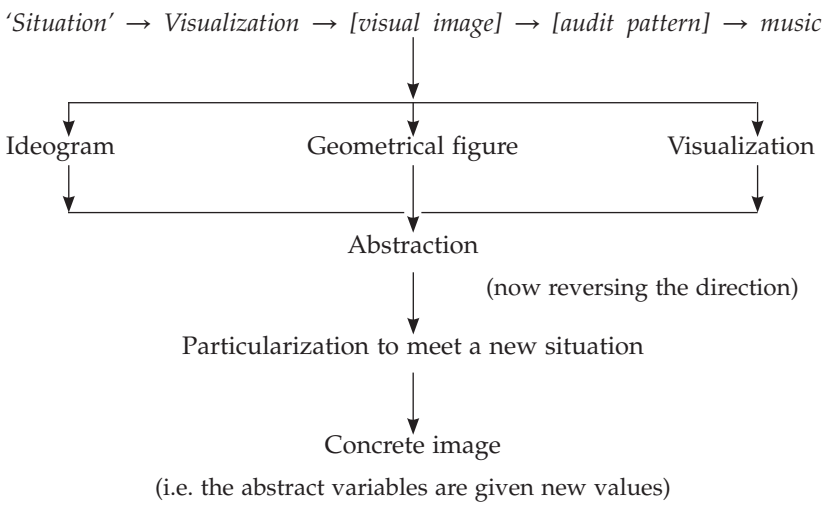
lacks whatever the necessary apparatus is that is required, or that he fears the synthesizing activity of *α* if all dream work is not inhibited. But the result is he may not be able to sleep because of fear of *α*, and then find he cannot keep awake for the same reason, for as I have pointed out, *α* operates in sleeping and in waking. Since the patient, if he is to live, must sleep and must wake, he can oscillate rapidly from one to the other to destroy *α*.

11 August (*continued*)

α

It has just come to me that mathematician is one who is capable of *α* and that it has its consequence:

He can see the essential characters in, say, the paranoid–s[1] and depressive positions; or the oedipal situation; or the primal scene; or any other. These situations, or complexes, are seen concretely and, at some point, in visual images. For example Euclid's geometrical patterns: They can easily be visual lines which are made abstract. (Similarly the word '*dog*' can be an abstraction.) Hence:



[1][Abbreviation for paranoid–schizoid. *Ed.*]

But the mathematician is able to produce abstractions and signs for these abstractions and can then replace the abstraction or its sign, now reversing the direction of α (as it was in the production of the abstraction) with a *particular* concretization.

If my idea is right, then Euclid could say good-bye to 'elements' (1.5 *Elefuga*). That is to say, the 'elements' could be worked, transformed in his case, into an abstract visual image, the theorems, and then radically still further abstracted by Descartes, or rather by use of the system of coordinates he worked out so as to form the whole system of projective geometry, and then abstracted them still further to form the system of algebraic projection geometry. Now the calculus thus elaborated lies ready to use.

Leaving aside the question, for the time being, of how this process of abstraction is to take place and how α effects it, we can see that the calculus that has been produced is available for the solution of all kinds of problems which on the face of it are far removed from the basic facts ('elements' in this case) from which the original abstraction was effected. But it is probable it will only serve effectively for the solution of problems in which the concrete facts that are to be substituted for the variables of the calculus have a value relative to each other which is similar to the values the basic original facts had relative to each of the other basic original facts. Put in other terms, Newton explores astronomical space, elaborating his laws of motion in doing so, by virtue of an already existing calculus, or calculi, which derived originally by a process of abstraction from the facts of the first space of all – the infant's space of breast, the Positions, Oedipal situation, Primal Scene. There are these: (1) a base pattern, (2) an abstraction, (3) calculi, (4) reapplication of calculi.

A Newton, then, owes his freedom to investigate to a series of derivatives from a basic pattern, which same basic pattern imposes also a limitation on his freedom in that only such data tend to be regarded by him as will lend themselves to a scheme fitting in with the original basic pattern. In an extreme form this can lead to such a limitation of selectivity of observed facts that the 'discovery' (e.g. of the origin of the solar system) is really not much more than a projection on to astronomical facts of a crude and very easily detected emotional problem centring on, say, the stature of Newton. The facts now drawn together by aid of the calculi already in existence can be

seem not to be adequately represented by the laws of motion and their representative calculi.

Thus there is produced anew the situation described by H.P.[1] of disparate elements lacking any coherence. Confronted by this repetition of the Positions, again all depends on the individual's capacity for *α*. The new Positions can again be negotiated depending on *α* capacity, new visual images, new abstraction and further calculi. And so on. . . .

In this lies the possibility of belief in this value for scientific enquiry of the original basic patterns, and at the same time as indication of the nature of the limitations from which human intellectual exploration and enquiry is bound to suffer.

He can ultimately only see in the universal that which lies within the compass of the mental equipment, and that in turn it means that he can only see that which lies within the compass of his ability to solve through *α*-capacity certain basic elemental positions and patterns such as paranoid–s and depressive positions, primal scene and oedipal situations. All that lies outside those few elementary patterns can, in fact, only be grasped by virtue of *α* capacity which can be brought to bear on a derivation from a derivation from a derivation . . . to the nth.

26 August 1968

The 'Cure'. The term has a considerable history germane to the topic on which I wish to embark . . .

Considering the matter in greater width, it would seem that this term has affiliations with certain people and certain disciplines. Most of us are familiar with it in the context of medicine. In England it is often employed, as in the phrase 'cure of souls', as delineating a particular domain of religious activity: priests have been – sometimes still are – actively concerned in aspects of the cure of souls in a 'therapeutic' sense. I remember one such person causing some debate in the psychoanalytic establishment in the days when I was part of it.

---

[1][Henri Poincaré. *Ed.*].

30 August 1968

Still there is the wish to write about the war but seem unable to overcome my inertia. I suppose there is fear of areas of discontent and resentment. Arthur used to say I was sulking in my tent like Achilles. Achilles or nothing perhaps, but do not like being nothing. Only the thinker venoms all his days. Who said that, or something like it?[1]

7 September 1968

'Cure' The problem that I want to discuss may be introduced by a somewhat compressed and distorted – in the instincts of discretion – account of some episodes in the treatment of a borderline psychotic. I call him that because although he had been certified and kept in a mental hospital as a schizophrenic for about a year, the psychoanalytic experience made me dissatisfied with such a diagnosis without making it possible for me to propose any other.

The psychoanalysis went on interminably, week after week, year after year. The patient claimed he was better. If asked to substantiate the statement, he would report that his writing had improved, or he no longer blinked in a bright light. There were various items of this kind, none of which could be regarded by a sane man as offering evidence in support of the idea of improvement and all which could be seen as requiring further psychoanalytic interpretation.

Ultimately the analysis terminated. The patient, as if feeling it would be hopeless to resort to his usual procedures for prolonging it, seemed to be stupefied and helpless. There were no communications from the relatives or medical practitioners: my last memory is of his face, agonized, with beads of perspiration showing, though it was not a hot day.

---

[1][Bion has half-recalled that in Keats's 'Hyperion' the Goddess Moneta admonishes the poet: 'Only the dream venoms all his days. / Bearing more woe than all his sins deserve'. *Ed.*]

I could give you, without any difficulty, a perfectly true factual account of his progress from the day he came to the day he left: of exams passed, work done, marriage successfully maintained, and children born and brought up. As I say, it would be factually correct, but in almost complete contrast to the evidence of my experience in the analysis: almost but not quite.

Any version purporting to repeat facts would be almost intolerably boring and as misleading as a photograph which was not correctly interpreted, or, subject to interpretation, in which case it is open to objection on the grounds of its *being* an interpretation and coloured by its vertex – medical, psychoanalytic, Kleinian etc. . . . – *ad nauseam*, *ad infinitum*. Yet is difficult to tolerate the idea of dispensing with 'cure' without substituting some other.

Analysands have a reason, or many reasons, for justifying their expenditure of time and money on the activity, the psychoanalyst likewise is suggesting that his company is what the patient really wants and for which he should pay in hours, weeks, months and pounds; if need be, for years. The statement, even if not made overtly, has to be made (in the privacy of his own mind at least) by the psychoanalyst in a few brief moments of the preliminary interview.

The rest of the history of the emotional relationship between psychoanalyst and analysand (whether terminated or continued) resolves into doubts about the wisdom of the course decided upon: The more significant and searching the association, the more powerful the doubts. The less significant, the nearer to 'no doubts' and nothing to be doubtful about.

The capacity for doubt, the condition in which doubt can be entertained, has become central. The 'analytic situation' must be one in which two people can have a relationship in which neither is compelled to search 'irritably'[1] for certainty as a method of stifling doubts, uncertainties, mysteries, half-truths and neither is compelled to assert anything as a means by which doubt and uncertainties are evaded.

---

[1][A reference to Keats's 'Negative Capability': "I had not a dispute but a disquisition with Dilke on various subjects; several things dove-tailed in my mind, and at once it struck me what quality went to form a Man of Achievement, especially in Literature, and which Shakespeare possessed so enormously – I mean Negative Capability, that is, when a man is capable of being in uncertainties, mysteries, doubts, without any irritable reaching after fact and reason" (Keats, 1817). *Ed*.]

7 September 1968 (*continued*)

Thinking

The main premise of this book is that thoughts exist and that thinking is a function which has been and is being developed in order to deal with the thoughts. Stated thus, the view is contrary to the usual presumption that thoughts are a result or by-product of thinking. I am not educing evidence in support of his hypothesis which appears here as one of the premises in a deductive system and must therefore be treated as part of the apparatus of investigation, to be justified or condemned according to its usefulness as such.

A thought is an emotional experience which may be independent of any recognizable physical sensory stimulation. Should a man be threatened by another with physical violence, it is supposed that he would have an emotional experience and would be able to feel that he could see why he was afraid or angry or whatever he did in fact feel. (But) there is a class of patient who has an emotional experience and cannot see why he has it because the emotional experience cannot be related to an episode such as I have just imagined, and cannot be related to any other because he is incapable of recognizing that quality in thoughts which makes them capable of arousing feelings, or indeed of recognizing the existence of thoughts themselves.

It is exactly this phenomenon that such a patient cannot recognize that I describe as an emotional experience independent of any recognizable physical sensory stimulation. I do not wish to deny the existence of thoughts (which are) dependent on, or at least associated with, a recognizable physical sensory stimulation, but to emphasize that they need not so depend.

September (undated)

A theory of functions

Introduction – Concerned with the application of psycho-pathological theories in the consulting room. One very important part is incidental to main theme of paper.

The common everyday locution, 'How like so and so' or 'Churchillian' – meaning a *function* of the personality. Various *factors* combined to produce the characteristic.

From this I propose to abstract 'Functions' and 'Factors'. As an example of a function I propose to take the relationship the patient established with the analyst. This I shall abstract by using the term 'Link' as a name for it. I shall consider that three links only exist: Love, Hate and Knowing – meaning by the last term something akin to 'getting to know'. These terms I shall at once replace by further abstractions: *L, H,* and *K.*

Plan

When it comes to use of abstraction, models, etc. . . . in the session itself, I must point out that students think they know too little. Though this is true, it obscures far more important points, namely:

1. That the student's analysis is not primarily to give information but to remove obstacles to his capacity for observation.
2. That he knows far too many psychoanalytic theories to be good for him.
3. That he should pick out the smallest possible number of fundamental theories which together will enable him to construct the maximum number of models, and from them the maximum number of interpretations. This is the fundamental importance of learning to make model-flexibility.

5 October 1968

Conscience used as lumps of β, which can be employed as missiles. The greedy devouring of a moral outlook (SE[1]) and turning it into lumps of β.

---

[1][Abbreviation for superego. *Ed.*]

6 October 1968

The bad super-ego produced by disparagement of good parental discipline – "you *always* stop me doing what I want!" as an indignant comment made on an ordinary parental prohibition. This means that the good super-ego is chewed up into lumps of faeces – a kind of disparaged faecal super-ego is thus produced and chunks of it used as ammunition. Differs from the ordinary *neurotic* disparagement in that the latter is related to influencing parents and the former is omnipotent projective identification.

27 October 1968

The predominant feeling is one of fear, resentment, anger, obstinacy, laziness, 'can't be bothered', jealousy, envy, resentment, sulks, ungraciousness – Achilles sulking in his tent. But not being able to get out is peculiar to all ages: and unwelcome at all. All states have their unwelcome features. In all, then, one is a prey to envy.

3 November 1968

The positive and negative therapeutic reactions are in essence the same. They are therapeutic reactions intended to take attention away from psychoanalysis. Like the insistence on 'cure' as an objective for taking up analysis, they are objectives for continuing or stopping. They are 'covers', rationalizations – 'reason' operating in its role 'as a slave to' . . . what? The passions, or some unknown such as hatred or doubt?

When a small attendance at a meeting is deplored, it is explained that had the complainant been in charge how much better the result would have been; when he is one of the absentees, how good his reason for absence was. These are 'therapeutic' explanations; they heal

the traumata of decision, and decision is an essential of 'achievement' or the transformation of thought into action (thought as a substitute for, or a prelude to, action)

16 November 1968[1]

A. Introduction.

How the gap between theory and interpretation is to be bridged.

1.
B. Psychoanalytic theoretical equipment:
As few as possible, say 6 at most:
e.g. Oedipus
Transference
Infantile sexuality
Pleasure and Reality Principles
Paranoid schizoid and Depressive Positions
Projective Identification
C. Relationship between analyst and patient restricted to these categories –L, H, and K
D. Theory of practices
And Factors

2.
E. This paper is on K
F. Twofold approach – use this to investigate breakdown in K [α-F][2] and so throw light on normal K

3. Now I use these theories to investigate a breakdown in K. NB. I am NOT going into a detailed clinical description: I wish to use the material later in a full discussion of it from a psychoanalytic

[1][This outline appears to be for a revision of *Learning from Experience*, or for a talk based on that work. *Ed.*]

[2][Abbreviation for alpha-function in these notes. *Ed.*]

point of view: for the present I use it as a breakdown in K to illustrate normal K.

4. First I need to describe a number of mental activities such as attention, symbol formation and so on – I do not know what. They have already been copiously described, notably in 1. 'Two Principles of Mental Functioning' [1911b]. 2. Freud's view of consciousness as a sense organ for the perception of psychic qualities. 3. Klein on splitting and Projective Identification, and Paranoid Schizoid and Depressive Positions. 4. Symbol Formation by Segal and Rycroft and Klein. As I wish to investigate the function of the various mechanisms operating in consort, and as I do not know what other mechanisms may be involved, I propose, rather than allow myself to be held up, to make use of my theory of functions and call them all, known and unknown, factors in *α*-F.

5. (a) *α*-F works on

(i) sense impressive

(ii) feelings and emotions

to produce *α* elements

(b) *α* elements are

(i) storable

(ii) used in dream thoughts

(c) If *α*-F is disturbed, sense impressions and sense impressions of feelings and emotions remain unchanged

(d) *β*-elements

(i) Not useable in dreams

(ii) Only for projective identification

(iii) Ridding psyche of accretions of stimuli

N.B. Distinguish clinically between memories and undigested thoughts – *β*-elements.

6. A breakdown in K.

(a) If *α*-F does not operate, no dream thoughts, and patient cannot dream, *so* he cannot wake up and cannot sleep. This can be seen in the consulting room.

(b) To bring out my point I shall rewrite the folklore statement[1] that a man has a nightmare because he has indigestion and consequently wakes in a panic.

My version would be: the man has a panic, and because of breakdown in *α*-function he cannot have a nightmare. Consequently he has had mental indigestion ever since.

(c) Wider context of inability to sleep or wake.

Inability to make unconsciousness waking thinking possible. Therefore cannot learn from experience e.g. learning to walk.

(d) Cannot learn from experience of his own emotions – seriousness of this for psychoanalysis.

(e) Cannot keep bad things out, therefore no capacity for discrimination, and thinking (i.e. what you do with thoughts) is correspondingly impaired. Cannot contact with reality and cannot be unaware of a single sensory stimulus.

(f) Instead of being awake, patient can only achieve mania. Instead of being asleep, stupor. In-between these two: agitated melancholia, persecutory mania, melancholia and depressive stupor.

7. The use of *α*-screen, = contact barrier: to preserve reality-contact from being overwhelmed by phantasies *AND* phantasies from being overwhelmed by reality sense.
8. The *α*-screen to protect 'conscious' views from being overwhelmed by 'unconscious' and vice versa. *α*-F is converting the *emotional* experiences.
9. Thoughts. Freud on thinking ('Two Principles')

---

[1][It is close to the 'folklore statement' that Bion wrote in *Learning from Experience* (1962, Chapters 3 and 4): "As alpha-function makes the sense impressions of the emotional experience available for conscious and dream-thought, the patient who cannot dream cannot go to sleep and cannot wake up. Hence the peculiar condition seen clinically when the psychotic patient behaves as if he were in precisely this state" (Volume IV, p. 275). "The emotional experience must now be considered generally and not only as it occurs in sleep. I shall emphasize what I have said so far by re-writing a popular theory of the nightmare. It used once to be said that a man had a nightmare because he had indigestion and that is why he woke up in a panic. My version is: The sleeping patient is panicked; because he cannot have a nightmare he cannot wake up or go to sleep; he has had mental indigestion ever since." Volume IV, p. 276). *Ed*.]

'Thoughts are a nuisance'

Thoughts logically and epistemologically, prior to thinking.

10. Importance of Reverie.

    Importance for analyst because he thus manufactures 'Thoughts'.

11. What is to be done with the 'thoughts' once they have been manufactured?

    (a) L, H, W, K Choose function

    Elucidate 'factors'

    It sets the 'key' – the 'value'.

    (b) The Selected Fact and Poincaré's *Science and Method,* p. 30.

    (c) The formula.

12. Danger of Abstraction.

    Becomes an 'ingenious manipulation of meaning of symbols'.

    This modified by reference to the background.

13. Freud's reflex apparatus.

14. The Model.

    Restores concreteness.

15. Danger of Models and need for constant vigilance, e.g. latent model or metaphor in 'Link'.

16. Need, therefore, to be abstract (see 12 above) and Scientific Deductive Systems.

17. Anthology of Theories [see after 19. Conclusion].

18. Model compared with theory (T, Tn where $n < 6$) to produce the Interpretation.

19. Conclusion.

    (a) Advantages of theory of functions

    (b) Advantages of Models – avoids over-abstraction

    – avoids over-production of theories

    (c) Advantages of Anthology – shows analyst's armoury

    (d) Advantages of Abstract Notation – shows diagnosis

    – shows deterioration in analyst's technique.

[Undated – probably 17 November 1968]

Anthology of theories

(a) Why limit the number? Because a psychoanalyst, engaged in observation (which he should be) limits his field for other activities. Similarly and conversely, if he concentrates on Theory, he limits his field for observation. He can hope to lay hands on the right one, or one near enough to make no difference if the number and quality of theories available are adequate, without having his attention distracted from what is going on.

(b) The number: if they are too few, say only one, the Oedipus – too much time is taken, or would be taken in the session in reaching that point in the deductive hierarchy where the hypothesis could be seen to represent the model or realization – that is to say the point at which the theory becomes sufficiently particularized for its relevance to the realization to be clear.

(c) If on the other hand they are too many, then too much attention is diverted to hunting through a mass of hypotheses which are so particularized that they have to be generalized before their applicability and relevance can be seen. And in the meantime precious opportunities for observation are being missed. T, to . . . Tn, where n = any number >0 and <6, depending on person.

(d) Quality: means that which makes the theory capable of change and development and logical expansion. It must then be capable of (i) standing up to logical analysis and, more importantly, (ii) susceptible to revision and therefore supercession, and (iii) expansion by deductive logic. They must be sufficiently high in the hierarchy of theories to cover a wide area; that is to say, to provide a premise for a large number of hypotheses – when taken in conjunction with others of the basic theories selected.

(e) The selection and formation of the personal handbook of theories is in itself a valuable exercise and enables the analyst to stand back from himself and see where he stands at any point in the space identified by two coordinate axes, one the man's body of

psychoanalytic thought, and second the line of his own changing outlook. He can do this by using his personal handbook for notes.

(f) In note-taking, the handbook makes it possible to use a private notation so that a session can be rapidly recorded; e.g. (T_1 + α-F. + L) or (T_1 + T_3). Scrutiny of this record could yield three alternative illuminations (f, g, h).

(g) Information indicating what psychoanalytic theories were returning their value for him and which ones were being discarded. This clearly is a record of the axis provided by the main body of analytic thought.

(h) Information indicating some change in the analyst's armoury and therefore in himself, either + or – .

(i) Diagnostic. The pattern of such formal notation could in time offer help for analyst to elaborate, after scrutiny of recurrent items in his notation, a system of diagnostic classification. It would in any case be evidence of the kind of practice the analyst was accumulating.

(j) Such a handbook, if the analyst liked to bequeath it to the society, might be an invaluable aid to understanding the history of the development of psychoanalytic thought and practice.

29 November 1968

How impossible it is to be satisfied of reasonable efficiency of psychoanalytic work. Is this not an example of 'validation' as an expression of psychoanalytic desire? Why not just get on with one's job and put up with the consequences?

The consequences, with X, may be very serious.

The importance of sense came clear to me again. 'I am going home' is not the same as 'I am $\overrightarrow{\text{going}}$ home' or 'I am $\overleftarrow{\text{going}}$ home'; or 'I $\overleftarrow{\text{am}}$ going' as 'I $\overrightarrow{\text{am}}$ going'.

7 December 1968

The divorce is centrifugal: Divergence

Marriage is

Centripetal: Convergence

This suggests a dynamic pulsation – expansion: contraction.

The paranoid–schizoid and depressive positions are related to a part of the domain of thought, that part of it in which there exist thinkers corresponding to the thoughts awaiting someone or something to think them. The thinkers might be likened to objects sensitive to contain wave lengths of thought, as the eye or radio-telescope is sensitive to a particular range of electromagnetic waves. Such thinkers can be impinged upon by thoughts which are too powerful in relation to the sensitivity of the receiving apparatus. Or they may be unmatched by a reciprocating thinker.

The human being may not, despite similarities to other human beings, have an apparatus adequate to thinking the thoughts, through over- or under-sensitivity. The human becomes aware of these thoughts usually through the medium of what is ordinarily known to him as religious awe and is variously expressed as incarnation, evolution of godhead, platonic forms, Krishna, mystic experience, inspiration and the like. Thus the source of emission of the received or evolved thoughts is felt as external, God-given, derived from a particular person, or occasion, phrase, book, painting, awareness of a constant conjunction. The fate of the thought and the thinker is to follow one of the paths I have already indicated as peculiar to ♂, or some variation. In some circumstances the impact is incandescent, growth-producing, and then the individual thinker becomes an emitter or intermittent. And a chain reaction is set up, as I have already discussed it, in terms of the messianic thought, mystic etc. . . . The problem is whether one is to regard this model ♀♂ as a model for a configuration which underlines certain groups of particular instances, or is it simply a way of regarding meaningless, incoherent, unrelated phenomena and making them appear to have coherence and

a meaningful pattern.[1] Does it in fact matter which it is? Do facts arrange themselves in this pattern, or is it a peculiarity in the individual that he finds it necessary to discern this or similar patterns in the facts he observes?

The craving for validation may then be a wish to localize the emitter in God, universe, person, conscious and unconscious by instruments which are micro- or macro-scopic and which appear to confer authoritatively the Guardian of truth.

2 January 1969

Reason starts primitively as the slave to the passions, and is then sophisticated so that it can be used for some very different purpose. Do maths likewise start primitively as slaves to the passions – possessiveness for example – and then become sophisticated for use in a quite different realm? Same with the idea of the father: a primitive god – rationalized, sophisticated and then used in the realm of reason? [see Paton, *Categorical Imperative* , pp. 188–196]. Mathematical statements seem to me (5 + 2 = 7) to be related to a belief that the mind cannot think otherwise until it is proved that it can. The moral judgements may be based on sensuous experience. Good = pleasurable. Evil = painful. Conversely, painful = morally evil. pleasurable = morally good. Then undergo sophistication. Why? To make them more generally applicable – to find the underlying group of which the several instances are only particular examples.

4 January 1969

Knowing Mrs Klein, I am unwilling to suppose she had not sufficient supporting evidence for the robin interpretation.[2] On the other hand,

---

[1][Later elaborated by Britton and Steiner (1994) in their distinction between Selected Facts and Overvalued Ideas. *Ed.*]

[2][Klein (1961), *Narrative of a Child Analysis. Ed.*]

it is impossible to be satisfied with the formulation of evidence as she formulates it. She says, 'when the robin has stood for his genital'. This is now an established fact, and in her mind I am sure it is so. As Kant says (*Critique*, B7, p. 46), we should assure ourselves of the foundations on which any structure is built. How?

As futile as finding the cause? The criminal? The mystic? The messianic idea? The 'curse'? How do ideas spread? Parasitism? Symbiosis? Communalism? Violence-murder and robbery? Cross infection – the violent container is destroyed by the contained object?

The central point about psychoanalysis, in this context, is its demonstration of the difficulty of tracing the history of any idea, especially if ownership is thought to be important. The judgement of Solomon is based on the idea that the owner is the one who is prepared to pay, or does pay, the cost of suffering of being responsible for the idea. There does not appear to be anything sacrosanct about the idea or about 'responsibility' for it. 'Idea' seems to be a term representing a realization in itself.

8 January 1969

Cannot quite recapture the analogy between line and plane, contained and container. It is clear that ♀♂ can be used for concealment; similarly then, a plane can cover something, or that the line could penetrate something.

13 January 1969

Just read Huxley's introduction[1] to Haydon's Autobiography. Felt the criticism might be made of myself and with it the immediate

[1][Benjamin Robert Haydon (1786–1846). Huxley insisted that Haydon's true talent lay as a romantic novelist but had wasted his creative energy on painting: "a born writer who wasted his life making absurd pictures when he might have been making excellent books" (Huxley, 1926). *Ed.*]

denial – indeed a refutation that could be said to forestall the criticism it is so immediate – of the criticism. How impossible self-criticism is, no matter what anyone may say to the contrary. The only reassurance I can get is – for what it is worth – the feeling that I like devoting myself to psychoanalysis. Haydon apparently had capacity. It is not over-criticism from which one suffers but lack of criticism, lack of quality in criticism.

23 January 1969

Notes almost as unsatisfactory as ever, and yet they have an occasional use. The visual image, as befits a locution with a sensuous origin, is most effective . . .

28 January 1969

I feel a deep lethargy, that I cannot see my way – and when I cannot see my way I feel no disposition to act as if I could, nor in a way that would give substance to a reassuring phantasy that I could. I *do not know*, nor does anybody else. It is absurdly simple really – unless one wants to complicate it. When there is nothing to do – don't do it!

4 April 1969

Every so often I am impelled to abandon a train of thought, or the impulse to think, and wander off on some trivial diversion, distraction, if one could say that it was some external stimulus. One is not *drawn* off – it is not '–traction'. *Pushed* off, *driven* off, would be nearer to it; it is almost topological. It is not from an

intellectual area; the Greek Phrenus, or mid-riff, would come closer. Does 'diaphragm' pictorialize a division between conscious and unconscious?: below and above the line. The division could also be made between male and female. Female = sub-diaphragmatic, intuitive, emotional, visceral; Male = Thoracic, intellectual. The fundamental difficulty seems to be in the gap between O and public representation. 'Cat' does not look like a cat as a hieroglyphic can. Or even a Chinese character, however fanciful the supposed resemblance.

5 April 1969

This seems to be a schizoid, already established, view of an already established alphabet which is then transformed into a depressive (whole object) view. Words can be seen and read as a whole, but it is difficult to believe that they are formed like that. The subject is itself a formless void:[1] maybe it will evolve in visual images, in noises, perhaps musical patterns; muscular patterns – dance movements; Balinesque eye-dance patterns, tongue-stammer movements; mental detritus from which dreams are made, when awake. Perhaps 'being awake' is made out of the mental detritus, is simply the state out of which it is possible to rationalize and say, 'I had a dream'.

Certain pairs which appear to represent conflicting elements can be formulated: Love and Hate, conscious and unconscious, emotion and intellectual ability. Whether this pairing is significant of more than an underlying sense of conflict, I doubt; it is convenient to ignore all significance other than its signification of conflict. Emotions appear to have the power to suppress thought and vice versa. The experience appears to be painful, unsuccessful, 'remembered' and

[1][Milton, 'Light', Line 12: ". . . Or hear'st thou rather pure Ethereal stream, / Whose Fountain who shall tell? before the Sun, / Before the Heavens thou wert, and at the voice / Of God, as with a Mantle didst invest / The rising world of waters dark and deep, / Won from the void and formless infinite". *Ed.*]

'forgotten' – what Freud described as a repressed memory. It is only one example of the painfulness of mental life. It seems to be painful itself owing to its function of linking pain with awareness of pain, and to be painful by virtue of its defective, inadequate operation in almost every (except the rarest) of its instances.

It can be a substitute for action, a prelude to action, and instrument for obliterating awareness of past action.

Instantaneous avoidance of sensuous pain provides a model for an ideal. Freud pointed out the advantages flowing from the development of thinking as an aspect of the onset of the reality principle, but the cost of prevision . . .

6 April 1969

If avoidance of pain was an adequate response, there would be nothing further. As always, there is 'something further' even when the solution is adequate. Greed must contribute to the course of 'something further'. Probably it is a part of mental pain. Mental pain presents a problem because, unlike sensuous pain, it cannot be satisfactorily located. The intensity is not always in proportion to its significance in accordance with a known vertex.

10 April 1969

Preoccupation with raising fees (patients), failure to dose and failure to do so and failure to charge for missed visits by going on holiday out of my term. Fear of open admission of craving for money, anxiety to have it without accepting responsibility, or laying one's self open to the accusation of being mean and greedy; and in short, wanting money but not the price one has to pay for it. I do not want to pay the price. I would like to make plenty, have a

reputation for being 'unworldly', generous, altruistic, unlike 'other men', and ascetic.

Francesca says she gets pleasure, a sense of well-being, from abstention. I think she is quite right, mentally and physically: I strive and perpetually fail to do what she succeeds in doing. I resent the failure; the exposure of the greed. I rely on her indulgence and indeed claim it as a kind of right – as if I were entitled to nurse a grievance because her sense of reality and my own could not possibly exclude awareness of the truth. Hence the cheat: all the advantages of an intimate life without the cost.

11 April 1969

For what can the Grid be used beside communications? The use to which it is being put sounds useful as a start. It is necessary to have 'definition' for one: perhaps 'binding' would be a better term to apply; it needs definition itself.

'Definitory hypothesis' is another tem (col. 1).

Related to the above is the act of exclusion. One narrow restriction of the elements conjoined, or deemed to be conjoined, can be to restrict the field to 'manageable' proportions in keeping with needs of subject and objective: equally it may be related to the need to preserve the observer from emotional upheaval. The latter 'use' relates to ψ turbulence. In fact col. 1. definitory hypothesis, binding etc. . . . involves ex- and inclusion. Apparently, but actually?

Related to the above is the problem of 'evolution'. If the constant conjunction is part of 'evolution', the question of inclusion and exclusion does not arise. It happens. Inclusion and Exclusion are part of the investigatory activity (col. 3? col. 4? What?) . Hitherto it has been a col. 2, restricted to restriction. And to a relatively sophisticated activity – classification itself being sophisticated.

17 May 1969

The problem was the psychotic transference from line to plane, and both to container.

Penetration, depth, confusion = *line*. Breadth, shallowness, sensitivity, indiscrimination = plane.

24 May 1969

In Euclidean geometry a model can be found in space which matches the Euclidean statement, or postulate, that two contradictory logical statements cannot be simultaneously true. This postulate – that logically incompatible statements cannot be simultaneously true [e.g. a thing cannot both *be* (exist) and *not be* (exist)] – cannot be matched by any model in the domain of the mind.

The statement: 'two logically incompatible statements are simultaneously true' *can* be matched in the domain of psychosis (or non-logic).

28 June 1969

I think X cannot afford analysis because of the appalling cost of the truth. It is certainly a price from which I shrink. Or, I shrink from the appalling cost of speaking the truth, the effort required and the courage. The last point, the courage, never ceases to surprise me. On the surface, nothing would seem to be simpler. In fact even when one thinks one knows the truth, I do not speak it. Colman[1] said Davis was the only Welshman he knew who spoke the truth spontaneously as

[1][A schoolmaster at Bishop's Stortford College. *Ed.*]

if he did not have to consider carefully whether it would not be wise to lie. How can one form an opinion about other people?

24 August 1969

Amherst (Group conference)

Started the day feeling sick and tired of being regarded as the trouble-maker, and particularly disgusted at being attacked on these grounds by S. The sting, as usual, being related to feeling that it was impossible by action or in any other way to refute such an action, or defend oneself against such an accusation – Northfield, Tavistock, Presidency. Guilt both at craving privileges and knowing one does want to pay the price of being dominant either by being the liability *or* being the asset.

APPENDICES

APPENDIX A

The Days of Our Years

Francesca Bion

'The Days of Our Years' was an address given by Francesca Bion in April 1994 in Toronto and Montreal, Canada. It was first published in The Journal of Melanie Klein and Object Relations, 13*, No.1, 1995*.

Before studying the work of original thinkers in the field of human behaviour and the human mind, it is surely valuable to know what influences and experiences contributed to their personalities, especially as seen through their own eyes. We are fortunate to have a record of Bion's own impressions of his first fifty years in *The Long Week-End* and *All My Sins Remembered*. Less fortunately, we are left with an impression of unrelieved gloom and of his dislike of himself. I tried, therefore, to present a more balanced view by publishing a selection of his letters to the family written during the following thirty years, giving it the title, *The Other Side of Genius* For those who have not read those books, a brief biographical outline may be the best way of setting the scene.

Wilfred Bion was born in 1897 in Muttra in the United Provinces of Northwest India where his father was an irrigation engineer. He had one sister, three years his junior. At the age of eight he was sent to school in England, never to return to the India he loved. His years in the prep school were unhappy ones. To a child of eight it must have seemed as though some incomprehensible and disastrous turn of events had deprived him of parents, home and sunshine, and had dumped him in an alien land inhabited by nasty little boys and cursed with an even nastier climate. It was more than three years before he saw his mother again – and then, momentarily, did

not recognize her. By the time he entered the senior school, he had adapted well, joined the "enemy" and enjoyed the next five years. He always said that what saved him was his large size, physical strength and athletic ability.

He left school in 1915, just before his eighteenth birthday, and joined the Royal Tank Regiment in 1916. He was posted to France where he was on active service until the end of the war. He was awarded the DSO (Distinguished Service Order), the *Légion d'Honneur* (Chevalier) and was mentioned in dispatches. The chapter on the Battle of Cambrai in November 1917 in *The History of the Royal Tank Regiment*, includes the following:

> Some of the tankmen fought on when 'dismounted'. A striking example was that of Lt. W. R. Bion who, when his tank was knocked out, established an advanced post in a German trench with his crew and some stray infantry, and then climbed back on the roof of his tank with a Lewis gun to get better aim at an opposing machine-gun. When the Germans counter-attacked in strength he kept them at bay until his ammunition ran out and then continued to fight with the use of an abandoned German machine-gun, until a company of Seaforths came up. Its commander was soon shot through the head, whereupon Bion temporarily took over the company. He was put in for the VC (Victoria Cross) and received the DSO. [Liddell Hart, 1959, p. 143, fn. 2]

After demobilization at the end of 1918, he went up to Oxford to read History at The Queen's College. Compared with undergraduates entering university from school, he and others were "old" war veterans and must have been in disturbed states of mind.

Nevertheless, his years there remained a cherished memory all his life, not least because he was a first-class athlete (playing rugger with the Oxford Harlequins and captaining the water polo team). He also remembered with gratitude conversations with Paton, the philosopher, and regretted not having studied philosophy.

On leaving Oxford, having disappointed his tutors by not achieving a First Class Honours degree – due, they said, to the strain of recent fighting – he tried school-mastering at his old school for two years, and then embarked on medical studies at University College Hospital in London, already knowing that he was primarily interested in a strange, new subject called "psychoanalysis". He said he

wisely avoided disclosing this at his initial interview; he mentioned, instead, his athletic successes at Oxford and, lo and behold! he was offered a place.

As with his time at Oxford, the memories of these years from 1924 to 1930 were vivid and enduring. He was especially impressed by, and admired, Wilfred Trotter, who was not only an outstanding brain surgeon, but also wrote *Instincts of the Herd in Peace and War*. This was to prove an important influence on Bion's interest in, and nascent theories about, group behaviour. It was first published in 1916 when the horrors of the First World War had already exposed the crass stupidity of leaders of nations and armies alike.

Bion had no copy of the book; it may have been among those he lost during air raids over London in the early 1930s, and by the 1950s it was out of print. So I had not been able to read it until a few years ago, when by, by chance, I came across a copy for 20p in an antiquarian bookshop in Oxford – a happy example of serendipity.

Trotter makes observations which remind one strongly of Bion's later views. He speaks of man's "resistiveness to new ideas, his submission to tradition and precedent"; of "governing power tending to pass into the hands of a class of members insensitive to experience, closed to the entry of new ideas and obsessed with the satisfactoriness of things as they are"; of "our willingness to take any risk other than endure the horrid pains of thought". Of the war, then in its second year, he wrote, "Western civilization has recently lost ten millions of its best lives as a result of the exclusion of the intellect from the general direction of society . . . so terrific an object lesson has made it plain how easy it is for man . . . to sink to the irresponsible destructiveness of the monkey". And twenty years later, "man" was at it again.

After obtaining his medical qualification, Bion spent seven years in psychotherapeutic training at the Tavistock Clinic, an experience he regarded, in retrospect, as having been of very doubtful benefit. In 1938 he began a training analysis with John Rickman, but this was brought to an end by the Second World War.

He joined the RAMC in 1940 and worked in a number of military hospitals, trying to introduce new methods for the treatment of psychiatric casualties. (This period is covered in detail in Eric Trist's valuable contribution, "Working with Bion in the 1940s: The Group

Decade", included in Malcolm Pines's book, *Bion and Group Psychotherapy*.)

The Northfield Experiment, ill-fated and short-lived, was one of the earliest group therapy projects. He was also Senior Psychiatrist to the WOSBs (War Office Selection Boards) set up to select officers capable of leadership, using the way candidates dealt with the tension arising in working groups to judge their suitability. What he learnt from these wartime experiences formed the foundation of his group work at the Tavistock in the years immediately after the war, culminating in his papers published between 1948 and 1951 in the Journal, *Human Relations*.

Early in the war he married the actress, Betty Jardine, who tragically died when their daughter was born in 1945. So at the end of the war he was left grieving, with a baby to care for, very little money and no immediate regular income to depend on. He returned to the Tavistock Clinic, having written very little up to that time (a paper entitled, 'The War of Nerves', in a collection called, *The Neuroses in War*, published in 1940, and 'Intra-group Tensions in Therapy', based on the Northfield Experiment, published in 1943), but in the next five years he had the opportunity to exercise his exceptional abilities: he worked with many different kinds of groups, took a major part in the whole re-organization of the Clinic, chaired the Planning Committee and the Executive Committee, entered into analysis with Melanie Klein, and set up in private analytic practice in Harley Street. He was also Chairman of the Medical Section of the British Psychological Society to whom he delivered a paper, "Psychiatry at a Time of Crisis", in 1948. In 1950 he gave his membership paper to the British Psychoanalytical Society, "The Imaginary Twin".

So, when we met at the Tavistock in 1951, he had already written his last group paper and had a full-time analytic practice. It was mid-March, and we were married in early June. This sounds rather like rushing from impulse to action without any intervening thought: be that as it may, the partnership endured.

It was not long before I was asked to persuade Bion to agree to the publication of the group papers in book form. But, as he explained in the Introduction, he was "reluctant to do this without changes embodying later experience". The inclusion of the 1952 paper, "Group Dynamics: A Re-view" [see Volume IV, p. 207], went some way towards achieving this.

Due to his absorption in psychoanalysis, the writing of seven papers between 1952 and 1957, and his habitual lack of interest in past work as he always preferred to concentrate on the present – *Experiences in Groups* was not published until 1961. It proved to be his most successful book in terms of copies sold. Its success surprised him, especially as he was used to being told by reluctant publishers in the 1960s that his books sold, "very, very slowly". The demand for it continues thirty years after its publication and forty years since the original papers were written. I have lost count of how many foreign editions there now are; I do know that from an aesthetic point of view the Japanese is the most beautiful one to look at.

Melanie Klein was not sympathetic towards his group work: in her opinion it was at odds with analytic work. She was suspicious of some of his psychoanalytic theories, although she did ultimately acknowledge their validity. Bion, on the other hand, did not regard group work as totally divorced from that of analysis. He wrote, in the Introduction to *Experiences in Groups*:

> I am impressed, as a practising psychoanalyst, by the fact that the psychoanalytic approach, through the individual, and the approach these papers describe, through the group, are dealing with different facets of the same phenomena. The two methods provide the practitioner with a rudimentary binocular vision. [Volume IV, p. 101]

He was convinced:

> . . . of the central importance of the Kleinian theories of projective identification and the interplay between the paranoid–schizoid and depressive positions. Without the aid of these two sets of theories I doubt the possibility of any advance in the study of group phenomena.[Volume IV, p. 102]

Some of what he says in that Introduction was prompted by the frequent question, "Why did you give up group work?" He was already engrossed in the practice of analysis while taking groups but ultimately realized that, for him at any rate, to practice both methods in parallel, so to speak, would not be beneficial to the group, the individual or the analyst.

In the light of his increasing experience and changing views in his practice of analysis, the papers of the 1950s were published in 1967 as *Second Thoughts,* with his commentary, a critique, to

accompany them. His continuing work with psychotics formed the foundation of the four books of the 1960s – *Learning from Experience*, *Elements of Psychoanalysis*, *Transformations*, *and Attention and Interpretation*. The formidable difficulties involved in the analysis of such patients is clearly revealed in his occasional writings both before, during and after the production of those books: they show in detail the evolution of his ideas and theories. They were published in 1991 under the title, *Cogitations*, the name Bion gave them. They clarify many of the obscurities in the books; in my opinion he pruned away too much of the enormous amount of preparatory work that went into the final product, leaving extremely concentrated *faits accomplis,* and earning for himself the reputation of being, at best, difficult to understand, and at worst, incomprehensible and crazy. André Green wrote in a detailed and valuable review of *Cogitations*: "Compared with Bion's published works, the Cogitations are thrilling to read and often less difficult to assimilate, because the author's formulations are less condensed and because he makes us witnesses to the process of the unfolding of his thought. We literally *follow* him" [see Volume XI, p. 353].

He often talked to me about his feelings of being totally in the dark, unable to make any headway towards fathoming a patient's behaviour. There were infrequent occasions when he felt he had a glimpse of understanding, only to fall back almost immediately into doubts about the possibility of any effective treatment. He would say, "I'm in the wrong job", or, "It's beyond me", or, "I can't make head or tail of it." He would sometimes emerge from his study, where he had been deep in thought, struggling with these seemingly intractable problems, looking pale and what I can only describe as "absented". It was alarming until I realized that he had been digging so deep into the nature of the psychotic mind that he had become "at-one" with the patient's experience. Very rarely, he was elated by a sudden flash of understanding; I remember him exclaiming, "I must be a bloody genius." But he would soon after decide that it had been a "blinding flash of the obvious".

As an administrator he was an outstanding influence: he could pinpoint the crux of a problem and keep discussion "on track" in committee. With his acute mental vision and unerring instinct he never allowed the trees to obscure his sight of the wood. Time wasting was anathema to him: his heart would sink if, having completed

a meeting's agenda, someone said, "I would just like to raise the question of . . ."

Arriving back late, he would exclaim to me, "Have they no homes to go to!"

He never sought positions of responsibility – they were thrust upon him: Director of the London Clinic of Psychoanalysis from 1956 to 1962; President of the British Psychoanalytical Society from 1962 to 1965; Chairman of the Publications Committee and the Melanie Klein Trust; and member of the Training Committee from 1966 to 1968. In spite of his deep dislike of evening meetings – two or three a week at the end of an already very long day's work – he accepted these positions as his contribution as a senior member of the Society.

Looking back, it surprises me that in the midst of so much work and so many commitments, we had any time for a private life. However, week-ends were sacrosanct times for relaxing with the family, conversation, listening to music (our tastes were catholic but favourites were Bach, Mozart, Haydn, Britten and Stravinsky), reading, contemplating and writing. He once said, "I want to be a psychoanalyst. But I do not want that experience to make it impossible for me to have a life worth living where I could never go to the theatre or a picture gallery or paint or swim."

The children looked forward to his reading to them at bedtime; he was their friend, talked to them as equals, was gentle and even-tempered. I do not recall ever hearing him raise his voice in anger, but angry he certainly could be – the look in his eyes and a cutting remark were signs of stormy weather. He derived intense pleasure from the children's successes, but never made them feel diminished by their failures, which he regarded philosophically as a normal part of life. He restrained his natural anxieties to allow them to go their own ways, although he was always ready to offer advice, based on his own experience, which was usually given in a light-hearted, amusing way. Parthenope recalls the following episode:[1]

> I was about to leave, at the ripe age of eighteen, for a long period of study in Italy. The day before I left, my father called me into his study, saying that he wanted to speak to me. I entered the room;

---

[1]From a series of interviews with Dr Silvio Merciai, held during the preparations for the International Centennial Conference on the work of W. R. Bion, held in Turin in July 1997.

> silence – he was writing and perhaps had not noticed my presence. After a while, and without feeling at all enthusiastic about the matter, since I expected some sort of rather oppressive "good advice", I said, "I'm here."
>
> "Oh yes, I just want to say two things to you before you leave. First of all, remember to go and see the contemporary paintings in Palazzo Pitti too" (as much as to say, don't think that Italy and Italian culture are things of the past; they are alive and developing), "and then this is for you when you get lost." "This" was a map of Europe and Asia Minor.

Remembering his own medical school interview, he advised Julian, "Be sure not to mention any interest in psychoanalysis." Julian has said of him (during an interview for a 1990 article about the Northfield Experiment and the subsequent treatment of mental distress during the Second World War): "It was evident to me from an early age that my father was a man of tremendous courage and immense compassion. Because of his degree of self-control this was not always immediately apparent."

When Nicola told him that she had gained a place at Cambridge University, he said, "Well done." He paused, and then, with a mischievous smile, added. "Pity – wrong university."

I knew him as a man of strong emotions who evoked equally strong feelings in others. He was deeply moved by beauty in all its forms. He had a wry sense of humour and an appreciation of the ridiculous; there are many stories told of his droll remarks (some of them apocryphal) that were impossible to anticipate and always took one by surprise. When all is said and done, his published letters illustrate his unique qualities more strikingly than any number of anecdotes ever could.

During the 1960s we spent holidays in Norfolk, where we had a cottage on the North coast. Bion infected the children with a love of that area known to him since boyhood and which he had visited often during the 1920s and 1930s. The bracing climate and austere landscape were very much in tune with his temperament. We all remember vividly the fascinating country walks, the endless supply of beautiful churches to explore, ice-cold swims, lark song, primrose picking – and he made it all precious with his deep fund of knowledge and reminiscences. He particularly enjoyed painting there; its

clear air and wide skies make it a painter's paradise – provided you can prevent the easel from being blown away by the constant wind.

Books and book collecting played a prominent part in our lives; conversation at mealtimes usually led to a gradually increasing number of reference books between the plates. He always declared that he felt guilty about spending a great deal of money on books, which, he complained, only turn into millstones whenever they have to be moved. Most of ours are much travelled: six thousand miles to Los Angeles, and another six thousand back – there were, inevitably, many more on the return journey.

Our peripatetic years began in 1967, when Bion was invited to work for two weeks in Los Angeles where a few analysts were interested in the theories of Melanie Klein and hoped to persuade a Kleinian-trained analyst to move to California to work with them.

Our decision to uproot ourselves in January 1968 was not an easy one; we had doubts and fears about the wisdom of such a major upheaval and worried about leaving the family. But on the plus side it offered Bion the possibility of freedom to work in his own unorthodox way, a freedom he felt he did not have within the Klein group. He had for a long time experienced a sense of being, as he expressed it, "hedged in".

Many of the British psychoanalytic community were shocked and baffled; as well as genuine regret at losing him, the reactions ranged from surprise to the assumption that it was his way of going into retirement, to incomprehension, to disapproval and to dire warnings of culture shock and imminent racial bloodbaths in a land of drug addiction and weird cults. The dangers to be faced turned out to be of a somewhat different kind from those visualized by the prophets in London: the likelihood of being sued by paranoid patients; of being prevented from practising by the authorities on the grounds of lack of American medical qualifications; of not having a leg to stand on in a court of law as a "resident alien"; of actively hostile neighbours; even the possibility of making an adequate income was in doubt for a time. These were the serpents in that Garden of Eden where the sun shone, the flowers bloomed all year and the swimming pool beckoned.

Change the vertex again – as Bion might say – and I see many valuable, long-lasting friendships, generous hospitality, wonderful

art exhibitions, thrilling orchestral concerts and recitals at the Music Centre and UCLA. Our experiences were as diverse as the country itself and its inhabitants. I must pay tribute here to our many Californian friends for their help, support and invariably stimulating company. I miss them still.

The anxieties associated with the fundamental change in professional status and the loss of a sense of security (probably illusory even in one's own country but usually assumed to exist) added stresses to the already difficult job of psychoanalysis. But from what Bion told me and what I sensed, his work did not suffer; his courage and characteristic reaction to a challenge were beneficial stimulants.

A society fed on distortions of the truth, facts spiced with phantasy, lying by omission, the encouragement of false expectations, presents a rocky foundation for a structure based on truth, but psychoanalysis has to be practised in the real world, however adverse the circumstances.

In late 1971, when we had been in California for almost four years, Bion wrote in his *Cogitations*,

> The relationship between myself and my colleagues in Los Angeles could be accurately described as almost entirely unsuccessful. They are puzzled by, and cannot understand me – but have some respect even for what they cannot understand. There is, if I am not mistaken, more fear than understanding or sympathy for my thoughts, personality or ideas. There is no question of the situation the emotional situation – being any better anywhere else. [Volume XI, p. 321]

Nevertheless I am sure that California provided the environment, both emotional and physical, in which he could break free, develop further his individuality, think what he called "wild thoughts", give free rein to "imaginative conjectures" – there is always the chance that they may turn into realizations.

In the mid-1970s, the growing interest in so-called "Kleinian" analysis caused consternation in the 'traditional' American Psychoanalytic Society. Bion said, in a 1976 interview,

> . . . American psychoanalysts think that psychoanalysis will be undermined by sanctioning psychoanalysts who support the theories of Melanie Klein." He was reluctant to be drawn into this kind of controversy, regarding it as an irrelevant waste of time.

> He succeeded in preserving his independence by remaining an 'outsider'; he was not a member of any American psychoanalytic society, institute or group. [Volume X, p. 153]

His South American travels began in August 1968, when he was invited to work in Buenos Aires for two weeks. Unfortunately, I could not go with him, so my comments are based on what he told me in letters at the time and in conversations later. He enjoyed the experience immensely, and repeatedly said, "How I wish you had been there!" He formed a sympathetic relationship with the analytic society there, some of whom he had met previously in London. One particularly valuable result of the visit was the stimulus it provided for the writing, and publication in 1971, of *Introduction to the Work of Bion* by León Grinberg, Danío Sor and Elizabeth Tabak de Bianchedi. A new edition has recently been published with additional material on later works.[1]

His next working trip was in August 1969 to Amherst College in Massachusetts, for a Group Relations conference. This was the second and only other time he went without me: it was school vacation time, and I took the children on a tour of Oregon. His letters made clear that the usual group tensions and hostilities made themselves felt, no doubt exacerbated by the presence of the Great Guru Bion. As he wrote to me, "The continual 'Bion – Bion Bion' did ultimately make me a bit angry and impatient."

The next two years were a time of adjustment, of building up a practice, and of setting to work on 'The Dream', which became the first book of the trilogy, *A Memoir of the Future*. It was published in 1975, followed by *The Past Presented*, in 1977, and *The Dawn of Oblivion*, in 1979. The three were finally published in one volume in 1991, fulfilling a wish I had had for ten years. This exciting and disturbing "magnum opus" (it is certainly a hefty tome of almost seven hundred pages) is a fictionalized, dramatized presentation of a lifetime's experiences, filled with a crowd of characters; voicing the many facets of his own personality and thought, at the same time we recognize ourselves among the *dramatis personae*. Had he remained in England, he would certainly not have felt able to express himself in this frank and revelatory way. I saw the

---

[1][Grinberg, Sor, & de Bianchedi (1993). *Ed.*]

change in him and the relief he felt in throwing off some life-long restraints. He wrote in the Epilogue:

> All my life I have been imprisoned, frustrated, dogged by common-sense, reason, memories, desires and – greatest bug-bear of all – understanding and being understood. This is an attempt to express my rebellion, to say 'Good-bye' to all that. It is my wish, I now realize doomed to failure, to write a book unspoiled by any tincture of common sense, reason, etc. (see above). So although I would write, 'Abandon Hope all ye who expect to find any facts, scientific, aesthetic or religious in this book', I cannot claim to have succeeded. All of these will, I fear, be seen to have left their traces, vestiges, ghosts hidden within these words; even sanity, like 'cheerfulness', will creep in. [Volume XIV, p. 138]

In 1972 Bion gave three talks to the psychoanalytical society in Rome. I hesitate to use the word, 'lecture', because he always spoke *ex tempore*, with no notes of any kind, declaring that he didn't know in advance what he was going to say. In this way he achieved an immediate contact, made all the more effective by his commanding presence and piercing eyes.

The invitation to visit São Paulo for two weeks in 1973 was prompted by Frank Philips, who had also left London in 1968 and is [in 1994] still working in São Paulo. Brazil, with its repressive military government at that time, widespread corruption and economic chaos, seemed unlikely soil in which psychoanalysis might flourish, but adverse circumstances can provide growth both in individuals and societies. It was an intriguing prospect. Bion had already met some of the Brazilian analysts in London during the 1950s and 1960s and had found them receptive to his ideas and to those of Melanie Klein. They are charming, affectionate, cultured people – a pleasure to know and to work with.

His visit aroused great interest, and the lectures attracted large audiences. Curiosity and unrealistic expectations were fuelled by absurd press coverage about "the most famous psychoanalyst in the world" (although this was no worse than a New Yorker's reference to him as 'the hottest thing in town'). It dismayed and amused him, but exposure to such journalistic exaggeration is one of the occupational hazards faced by those who, whether they like it or not, are elevated to a kind of messianic status. As he often remarked, it is akin to being "loaded with honours and sunk without a trace." Fortunately for

psychoanalysis, he succeeded in keeping both feet firmly planted in reality.

He took pleasure in the work and was stimulated by it. At the lectures I sensed a marked willingness and desire to grasp his ideas, and there was plenty of lively participation. For those unfamiliar with his style, expectations would probably have needed adjustment; those looking for cut-and-dried answers to their questions were disappointed. He agreed with Maurice Blanchot's statement that "*la réponse est le malheur de la question*". He said, "'answers' are really space-stoppers, a way of putting an end to curiosity, especially if you believe the answer is THE answer." On another occasion he explained,

> When I feel a pressure – I'd better get prepared in case you ask me some questions – I say, 'To hell with it. I'm not going to look up this stuff in Freud . . . or even in my past statement – I'll put up with it', but of course I am asking you to put up with it too. [Volume VIII, p. 230]

And again,

> If you are looking for answers to questions, you will not find them except through your own intuition and understanding.

Accordingly, his replies were aimed at clarifying the problem by approaching it by an indirect route; in due course it became clear that the apparently irrelevant answer had in fact illuminated the area of the question and beyond – like a circular tour, bringing the traveller back to the point of departure, but now seen with increased knowledge and experience gathered on the journey. As Bion might have put it, "back to a higher point on the helix".

The following year, 1974, he was asked to go to Rio de Janeiro for two weeks, followed by one week in São Paulo. He welcomed the opportunity, although he had some misgivings about the wisdom of going again so soon after the 1973 visit. His schedule was, as usual, a heavy one: five evening lectures each week, and seven or eight hours of seminars and supervisions daily. He was skilful in pacing himself – he regarded this as highly important in any job – he could carry a heavy load of work without any apparent falling-off in quality. He was also able, like Winston Churchill, to fall asleep for a few minutes and wake refreshed. In this age of rapid communication, the precedence accorded to speed – speed

tests, speed reading, snap decisions, 'quiz' contests aiming for answers in seconds or even instantaneously – leaves less and less opportunity for leisure, that is allowance to think or act without hurry. Bion used to quote from Ecclesiasticus (xxxviii, 24), "wisdom cometh to the learned man by opportunity for leisure". He asked, "Is the growth of our wisdom likely to keep pace with our intelligence? It is a matter of the greatest possible urgency that the human animal should discover what sort of animal he is before he has blown himself off the earth."

In 1975, Dr Virginia Bicudo asked us to spend a month in Brasilia. That year was the fifteenth anniversary of the founding of the city; to mark the occasion, four meetings were held at the Bunti Palace to provide a panel of discussants (including Bion) with the chance to express their opinions, hopes and fears about this unique capital. Apart from these meetings and three evening talks at the University, clinical seminars and analytic sessions filled the four weeks, five days a week. In addition to analysts from Brazil, there were some from other parts of South America, who attended the seminars to take advantage of a month of concentrated work.

The fourth, and last, visit to Brazil was for two weeks in 1978. Here again, he worked in the same concentrated way: he held fifty clinical seminars, daily consultations, and ten evening meetings. Such a volume of work demonstrated his remarkable vigour and stamina at the age of eighty. There were many other working visits between 1976 and 1979: they included Topeka, London (four times), Rome (twice), Lyon, Paris, New York, and Washington.

During the 1970s I undertook the task of editing his work for publication – in addition to typing, proof-reading and corresponding with publishers, which I had already done for many years. It was obvious that he would never have the inclination to do the job, nor the time available if he was to continue with the all-absorbing occupation of creative thinking and writing. By that time I felt that I knew him and his way of working and expressing himself as well as anyone was likely to, and being present at all his talks made it easier to recall not only what he said (if recordings were of poor quality) but also how he said it. A tape recording tells you only a limited amount about a speaker: it presents an editor with the problem of how best to transfer the spoken word to the printed page, preserving

the individual style and spontaneity while at the same time producing smooth-flowing prose. The most difficult part of the whole job was persuading him to read the finished product; it would have been easier to get a child to take a dose of foul-tasting medicine. He expressed his feeling somewhat crudely but graphically: "I don't like examining my own vomit."

The books which grew out of the talks and seminars of the 1970s – *Brazilian Lectures*, *Bion in New York and São Paulo*, *Four Discussions* (held in Los Angeles) and *Clinical Seminars* (in Brasilia) reveal more about his convictions, his personality and his methods than any of the earlier writings; they are an invaluable extension of the theoretical books. They contain much that is applicable to whatever discipline you follow: there is no trace of jargon, and he manages to discuss complex matters in simple language that is nevertheless penetrating and filled with wisdom.

By 1978 we were seeing less and less of our family, owing to their work commitments: after lengthy discussions during that year, in early 1979 we decided to return to England but were unwilling to sever ties with California entirely. We sold our house and bought an apartment, hoping to divide our time between the Western world and Europe. Arriving in London on 1 September, Bion set to work (as usual), while I once more went house-hunting in the Oxford area. There were a few analysts in Oxford at that time, including Oliver Lyth, Isabel Menzies, Donald Meltzer and Matti Harris. Bion's arrival added a stimulus to the hope that the nucleus of a psychoanalytic group could be formed where none existed. Having found a suitable house, we moved in at the beginning of October, the container arrived from the docks, and unpacking began. I recall the hours we spent emptying cartons of books, a tedious job but one mixed with the pleasure of meeting 'old friends' again.

It has been suspected and believed that Bion wanted to return to England because he knew that he faced imminent death, but although it would have been natural for him to accept that at the age of eighty-two his days were numbered, taking steps to keep a foothold in California and agreeing to work with a group in Bombay in January 1980 were not the actions of a dying man – unless he is given to gross denial. Bion was, above all else, scrupulously honest with himself and others.

He became ill in the third week of October: myeloid leukaemia, diagnosed on 1 November, developed with extraordinary rapidity and, mercifully, quickly led to his death on 8 November.

* * *

I turn now to those aspects of his work that were of major concern to him and to which he returned time and time again in conversations with me. I do not want to appear to be preaching what I do not practise, so let me once make it clear that I base what I say on what I learnt during twenty-eight years as receptor and confidante, and also through subsequent reflection and experience during the fifteen years since his death. I have discovered that, as with a successful analysis, the close collaboration of a marriage makes it possible for learning and development to continue with increasing strength after its ending. An analyst's job is a lonely one: even communication with colleagues cannot take the place of contact with a close companion in whom to confide doubts, struggles, fears and even, occasionally, the feeling that a piece of work has been well done.

First and foremost he placed respect for the truth, without which effective analysis becomes impossible. It is the central aim and as essential for mental growth as food is for the body: "without it the mind dies of starvation".

Bion viewed the concept of truth in different ways: the usual, everyday meaning; the search for truth by those engaged in music, painting, sculpture, and so on; and the fear of knowing the truth "which can be so powerful that doses are lethal". And then there is the kind of Truth that is both elusive and unattainable. In his own personal search he constantly forged ahead through mental complexities with an intensity which was almost tangible, and as soon as he had overcome a "monster" he moved on as if driven by an irresistible force to the battle. Experience taught him the value of respect for the patient and for the unique knowledge that the patient has of him – or herself. No other information about the patient, from whatever source, is of such benefit. To quote him: "If the analyst is prepared to listen, have his eyes open, his ears open, his senses open, his intuition open, it has an effect upon the patient who seems to grow."

He advocated the use of speculative imagination or imaginative conjecture, without which the analyst will not be able to produce the conditions in which the germ of a scientific idea can nourish. At the

same time he should keep it disciplined and avoid being a prey to a state of rhapsody – that is, metaphorically drugged with optimism, pessimism or despair. In other words, be rid of memories and desires. These interfere with the analyst's ability to focus all attention on the "here and now"; they are illuminations that destroy the value of the analyst's capacity for observation, "as a leakage of light into a camera destroys the value of the film being exposed". Psychoanalytic observation is concerned neither with what has happened nor with what is going to happen, but with what happening. Every session must have no history and no future – the only point of importance in any session is the unknown.

It is hard to know why this recommendation – to all appearances one of obvious common sense – should have been adversely criticized and, one suspects, wilfully misunderstood. Bion knew that it is extremely difficult to achieve and can at first arouse fear and anxiety in the analyst, but he also knew from experience and perseverance that it make possible what he called "at-one-ment" with the patient. By divesting the mind of these temptations, "the noise made by learning, training and past experience is at a minimum". Those who have succeeded in putting this technique into practice have found it profoundly beneficial. I know that it was central to Bion's own analytic method.

He stressed the need for awareness of the *dangerous nature of the psychoanalytic experience*: it is a stormy, emotional situation for both people. The analyst, like an officer in battle, is supposed to be sane enough to be scared while at the same time remaining articulate and capable of translating what he is aware of into a comprehensible communication.

The development of his ideas associated with the impressive *caesura* of physical birth occupied him for a considerable time, leading to some intriguing suggestions about the effects of pre-natal on post-natal life – particularly, but not exclusively, that of the psychotic individual. Since he wrote his paper, 'Caesura', in 1975, there has been much research into the pre-natal behaviour and responses of the human foetus. Only two weeks ago I saw a film about experiments in foetal education leading, so the researcher claimed, to increased intelligence and maturation post-natally. In *The Dawn of Oblivion* there is a particularly apposite conversation between Somites, Soma, Psyche, Infancy, Childhood and Maturity.

Of the birth of an idea he said, "Each time somebody has a new idea, it at once becomes a barrier, something difficult to penetrate; instead of being liberating, it becomes imprisoning."

He well knew from personal experience that original thinkers face, first, the struggle to express new concepts, and then the opposition and hostility of those who are unwilling to suffer the turbulence involved in making a similar effort. In New York, in 1977, he said:

> Whether it is a group of people or an individual which is giving birth to an idea the pains which are associated with that experience are extremely upsetting and disturbing, and somebody will certainly try to put a stop to it; nobody likes pain. . . . I should be surprised . . . if the phagocytes do not collect and try to gobble up this new idea before it gets more troublesome, before it turns into a contagion or an infection. [Volume VIII, p. 299]

He regretted the difficulties and restraints imposed by the exclusive use of verbal communication in analysis. He was aware that, in order to compensate, the analyst should be acutely aware of the necessity of using all the senses to pick up messages, however faint and of whatever kind, from the patient. He envied the poets, painters, sculptors, composers of music, mathematicians, who can communicate in a way that is penetrating and endures. Nevertheless he was able to have a lasting effect on people through the way he expressed himself verbally, and also through some indefinable non-sensuous quality. Siegfried Sassoon wrote of his delight of knowing and talking with Walter de la Mare,

> I have never been in his company without a sense of heightened and deepened perception. After talking to him, one goes away seeing the world with rechristened eyes.

I have heard the same thing said of Bion; sometimes a single meeting has been remembered with gratitude for many years afterwards.

He emphasized the importance of interpreting a silence – or what seems to be a silence. He said, of the patient who is silent all the time:

> . . . restricting ourselves to verbal intercourse won't get us far with this kind of patient. What kind of psychoanalysis is needed to interpret the silence? The analyst may think there is a pattern to the silence. If he cannot respect the silence, there is no chance of making any further progress. The analyst can be silent and

> listen – stop talking so that he can have a chance to hear what is going on

To quote him from another occasion:

> Some silences are nothing, they are 0, zero. But sometimes that silence becomes a pregnant one; it turns into 101 – the preceding and succeeding sounds turn it into a valuable communication, as with rests and pauses in music, holes and gaps in sculpture.

He drew attention to the state of mind that the analyst has to be in during the analytic session; the margin between being consciously awake, able to verbalize impressions, and being asleep is extremely small. He found that "being on the right wave-length is comparatively rare and has to be experienced to be recognized". He told me that he also sensed this when alone in deep thought; he would "wake up" to find light had been shed on a previously "dark spot" (Freud's words in a letter to Lou Andreas-Salomé).[1]

Bion found it useful to consider the existence of a thought without a thinker. On a tape, recorded before a visit to Rome in 1977, he said:

> If a thought without a thinker comes along, it may be a stray thought, or it could be a thought with the owner's name and address on it, or it could be a wild thought. The problem is, what to do with it. Of course, if it is wild, one might try to domesticate it. [Volume X, p. 175]

If its owner's name and address are attached, it could be restored to its owner, or the owner could be told that you had it and he could collect it any time he felt inclined. Or, of course, you could purloin it and hope either the owner would forget it, or that he would not notice the theft, and you could keep the idea all to yourself.

A word about the Grid: when he was working on its construction in the early 1960s, I remember that he became very enthusiastic about its possible use as a tool for the analyst – but not, as he pointed out, for use during the analytic session. An unpublished paper he wrote in 1963 has recently been brought to my attention.[2] It is a more detailed

---

[1][Letter dated 25 May 1916; in Pfeiffer, 1972. *Ed.*]

[2][The paper was subsequently published in 1997 as 'The Grid' (see Volume V). It was brought to Francesca Bion's attention by Rosa Beatriz Pontes Miranda de Ferreira (see Volume V, p. 97). *Ed.*]

explanation and discussion of the Grid paper given in Los Angeles in 1971 (and published in 1977).

He says:

> The procedures I . . . advocate do help to keep the analyst's intuition in training, so to speak, and do help in impressing the work of the sessions on the memory. [Volume V, p. 101]

There are those who have found it of value, and continue to do so, but he gradually became dissatisfied with it as he realized its shortcomings. In Rio de Janeiro in 1974 he said,

> The Grid is a feeble attempt to produce an instrument – not a theory. I think it is good enough to know how bad it is, how unsuitable for the task for which I have made it . . . for me it is a waste of time because it doesn't really correspond with the facts I am likely to meet. [Volume VII, pp. 125–126]

As regards the writing of patient notes, he ultimately found them useless and irrelevant. This was, of course, his personal opinion and not necessarily a recommendation to others. He recognized the risk in not being able to produce detailed information about a patient as evidence in a court of law, but was willing to take it. There was a time when he made lengthy, detailed notes; finding them unsatisfactory, he tried other methods, but gradually discarded them all. He found that what might have helped to clarify his thoughts immediately after sessions clarified nothing at all later. The way in which he 'recorded' clinical experience was by incorporating it into his writing – a much more valuable method of "thinking through" the associated problems. As he says in the introduction to *Second Thoughts:*

> Memory is born of, and only suited to, sensuous experience. As psychoanalysis is concerned with experience that is not sensuous – who supposes that anxiety has shape, colour or smell? – records based on perception of that which is sensible are records only of the psychoanalytically irrelevant. Therefore in any account of a session, no matter how soon it may be made after the event or by what means, memory should not be treated as more than pictorialized communication of an emotional experience. [Volume VI, pp. 53–54]

During the late 1970s he used another method of re-experiencing sessions by drawing captioned caricatures of patients. I suspect that

this may have been as good a way as any. It is a pity that, for obvious reasons, they cannot be published.

While on holiday in France, six months before he died, he recorded some thoughts on tape. Part of what he said makes a fitting conclusion to these reminiscences of him and of our years together.

> Comparing my own personal experience with the history of psychoanalysis, and even the history of human thought, it does seem to be rather ridiculous that one finds oneself in a position of being supposed to be in that line of succession, instead of just one of the units in it. It is still more ridiculous that one is expected to participate in a sort of competition for precedence as to who is top. Top of what? Where does it come in this history? Where does psychoanalysis itself come? What is the dispute about? What is this dispute in which one is supposed to be interested? I am always hearing – as I always have done – that I am a Kleinian, that I am crazy; or that I am not a Kleinian, or not a psychoanalyst. Is it possible to be interested in that sort of dispute? I find it very difficult to see how this could possibly be relevant against the background of the struggle of the human being to emerge from barbarism and a purely animal existence, to something one could call a civilized society. [Volume XI, pp. 347–348]

Offices and Appointments Held by Wilfred R. Bion

Education

Bishop's Stortford College
The Queen's College, Oxford
University College Hospital, London

Degrees and Awards

BA History (Oxon)

Gold Medal: Surgery (University College Hospital, London)

Membership, Royal College of Surgeons (MRCS)

Licentiate, Royal College of Physicians (LRCP)

War Service

1916–18	Royal Tank Regiment
1940–45	Psychiatrist, Davy Hulme Military Hospital
	Chester Military Hospital
	Officer-in-Charge, Northfield Military Hospital Training Wing
	Senior Psychiatrist, War Office Selection Board

Decorations

Distinguished Service Order (DSO)

Légion d'Honneur

Mentioned in Dispatches

Appointments

1933–39	Secretary, Medical Section, British Psychological Society
1945	Chairman, Medical Section, British Psychological Society
1946	Chairman, Executive Committee, Tavistock Clinic, London
1956–62	Director, London Clinic of Psychoanalysis
1962–65	President, British Psychoanalytical Society
1966–68	Member, Training Committee, British Psychoanalytical Society
	Chairman, Publications Committee
	Chairman, Melanie Klein Trust
1978	Hon. Member, Los Angeles Psychoanalytical Society
1979	Hon. Fellow, A.K. Rice Institute

APPENDIX C

'Catastrophic Change' and 'Container and Contained Transformed': A comparison

by Chris Mawson

'Catastrophic Change' was presented by Bion on 4 May 1966 to a Scientific Meeting of the British Psychoanalytical Society. Until the publication of *The Complete Works of W. R. Bion*, this important paper had not been widely available.

In 1970, an adaptation of the paper was reproduced, with one or two expanded segments, as Chapter 12, 'Container and Contained Transformed', of *Attention and Interpretation: A Scientific Approach to Insight in Psycho-Analysis and Groups* (see Volume VI). Because the two texts are so similar – identical for many passages – the places at which Bion has thought to elaborate in the 1970 version are likely to be of interest to those studying his work in detail, in a manner similar to the way in which historians and cartographers superimpose maps of similar scale but from different historical periods in order to study small but significant variations.

Accordingly I have arranged in this appendix the text of 'Catastrophic Change' alongside that of 'Container and Contained Transformed' in a manner suited to close comparison of the two.

As I wrote in the 'Introduction' in Volume I, there is considerable repetition across Bion's writings and in his talks and seminars concerning his core clinical and theoretical ideas, but in many instances additional meaning may be gleaned from the variations on a theme, modulations in the 'angle of approach', and the 'binocular vision' of comparing apparently small differences, something very much in keeping with Bion's beliefs concerning what he was attempting to do with his communications, both spoken and written.

'Catastrophic Change' (1966)

In this paper I describe a configuration which constantly recurs in psychoanalysis. Although I may resort to formulations which appear to be descriptions of events in psychoanalysis or history, I do not claim for them the status of historical narrative. They are what I call C category elements, descriptions made up of sensuous images derived from a background of experience or reported experience reassembled for my purposes.

I shall give no psychoanalytic interpretations; these should be given only by the psychoanalyst in the course of a psychoanalysis when the facts which are to be interpreted are available and when he only is available to give them.

Description 1. This consists of two signs ♂ and ♀ which I call the contained and the container. The use of male and female symbols is deliberate but must not be taken to mean that other than sexual implications are excluded. These signs designate a relationship between ♀

'Container and Contained Transformed' (1970)

In this chapter I repeat the configuration in formulations that appear to be descriptions of events in psychoanalysis or history but have not the status of historical narrative. They are C category elements, images derived from a background of experience or reported experience, reassembled for my purpose.

Description 1: The signs ♂ and ♀ I call the contained and the container. The use of the male and female symbols is deliberate but must not be taken to mean that other than sexual implications are excluded. These signs designate a relationship between ♀ and ♂ The

and ♂: The link may be commensal, symbiotic, or parasitic.

Description 2. A word contains a meaning; conversely, a meaning can contain a word – which may or may not be discovered. This could be represented as the word (♀) containing the meaning (♂). Or vice versa, the meaning (♀) containing the word (♂). The relationship is established by the nature of the link.

A constant conjunction of elements in a psychoanalysis can be bound by the attribution to it of a word, or a theory or other formulation. The word by which it is bound can have such a powerful pre-existing penumbra of associations that it squeezes the meaning out of the constant conjunction it is supposed to mark. Conversely the constant conjunction can destroy the word, theory, or other formulation which the formulation is intended to 'contain'.

Thus ♀♂ can be so powerful that they destroy the meaning I want them to contain. Conversely the conjunction they are to represent may be so powerful that the sign cannot contain it. Equally the link may be symbiotic or commensal. Describing it in yet other C category terms:

> a man is attempting to express such powerful feelings that his capacity for verbal expression

link may be commensal, symbiotic, or parasitic.

Description 2: A word contains a meaning; conversely, a meaning can contain a word – which may or may not be discovered. The relationship is established by the nature of the link.

A constant conjunction of elements in a psychoanalysis can be 'bound' by the attribution to it of a word, a theory, or other formulation. The word by which it is bound can have such a powerful pre-existing penumbra of associations that it squeezes the meaning out of the constant conjunction it is supposed to mark. Conversely, the constant conjunction can destroy the word, theory, or other formulation that the formulation is intended to 'contain'.

For example, a man is attempting to express such powerful feelings that his capacity for verbal expression disintegrates into a stammer or a meaningless, incoherent babble of words.

disintegrates into a stammer or becomes a meaningless and incoherent babble of words.

Description 3. The container (♀) extracts so much from the contained (♂) that the contained is left without substance. A psychoanalysis is so long continued that the patient can get no further meaning from it. A converse example would be the continuation until the patient had no more patience, tolerance, fortitude or money left. The container can squeeze everything 'out of' the contained. Conversely the 'pressure' may be exerted by the contained so that the container disintegrates. An illustration would be the word used as a metaphor until finally the genetic background is lost and the word loses its meaning. (See Fowler's Modern English Usage [2nd edition] for illustrations.)

Description 4. The marriage *in* which the sexual relationship ♀♂ plays such a part that there is *no room* for any of the other activities in which the married couple might engage. Conversely, the other (i.e. 'other than sexual') activities play such a part that there is *no room* for sexual fulfilment. (The metaphors used in this description exemplify the inside – the outside, container – contained, ♀♂ pattern).

Description 3: The container (♀) extracts so much from the contained (♂) that the contained is left without substance. A psychoanalysis is so long continued that the patient can get no further meaning from it. A converse example would be the continuation until the patient had no more patience, tolerance, fortitude, or money left. The container can squeeze everything 'out of' the contained; or the 'pressure' may be exerted by the contained so that the container disintegrates. An illustration would be the word used as a metaphor until the background is lost and the word loses its meaning.[1]

Description 4: The marriage *in* which the sexual relationship ♀♂ plays such a part that there is *no room* for any of the other activities in which the married couple might engage. Conversely, the other (i.e. 'other than sexual') activities play such a part that there is *no room* for sexual fulfilment. (The metaphors used in this description exemplify the outside-inside, container–contained, ♀♂ pattern.)

[1]See H. W. Fowler's *Dictionary of Modern English Usage*, 2nd edition, 'Metaphor' 2D.

Expansions of 1–4

Memory may be represented by ♀ or ♂. Thus regarding it as the container ♀ it is filled with 'memories' derived from sensuous experience. The sensuous background is dominant and 'memories' with such a background are tenacious. The memory ♀ is therefore saturated. The analyst who comes to a session with an active memory is therefore in no position to make 'observations' of mental phenomena because these are unknown and cannot be sensuously apprehended. Anxiety is known to us all but it has no shape or smell, colour or sound. An obtrusion of memory therefore obstructs intuition of the unknown phenomena. But, it may be said, do not analysts remember, and ought they not to remember, what has been said?

♀ or ♂ may represent memory. The container ♀ is filled with 'memories' derived from sensuous experience. The sensuous background is dominant and 'memories' with such a background are tenacious. The ♂ memory is saturated accordingly. The analyst who comes to a session with an active memory is therefore in no position to make 'observations' of unknown mental phenomena because these are not sensuously apprehended.

There is certainly something which has often been called 'remembering' and which is essential to psychoanalytic work. But this must be sharply distinguished from what I have been calling memory.

There is something that has often been called 'remembering' and that is essential to psychoanalytic work; this must be sharply distinguished from what I have been calling memory.

I want to make a distinction between (1) remembering a dream or having a memory of a dream and (2) the experience of the dream in which it seems to float into the mind as if it were a whole which was at one moment absent and at the next present.

I want to make a distinction between (1) remembering a dream or having a memory of a dream and (2) the experience of the dream which seems to cohere as if it were a whole, at one moment absent, at the next present.

This experience, which I consider to be part of an evolution of the

This experience, which I consider to be essential to evolution of the

emotional reality of the session, is often called a memory, or remembering a dream, but is to be sharply distinguished from the dream remembered or the experience of remembering it.

Indeed what I am describing is a good example of the meaning ♀ in which is embedded the unknown word or formulation ♂, for what I would like would be to find a word that most people would regard as appropriate to represent the meaning I want to convey.

The term 'memory' I shall use with its ordinary conversational meaning and it represents something I consider to be out of place in the psychoanalyst's conduct of a psychoanalysis. A patient's close relatives are burdened with memories which make them quite unreliable judges of the patient's personality and unfit to be the patient's analyst.

So far I have examined the configuration as it appears in the limits of words themselves. I shall not spend time in detailed examination of its appearance in more complex formulation except to indicate the degree of its persistence.

The psychoanalytic situation would be expected to evoke examples of the configuration and it does so. But it is also a situation in which it is likely that difficulties will arise for both analysand and analyst in finding methods of communication.

emotional reality of the session, is often called a memory, but it is to be distinguished from the experience of remembering. In memory, time is of the essence. Time has often been regarded as being of the essence of psychoanalysis; in the growth process it has no part. Mental evolution or growth is catastrophic and timeless.

I shall use 'memory' with its ordinary conversational meaning; it represents something that is out of place in the psychoanalyst's conduct of a psychoanalysis. A patient's close relatives are burdened with memories which make them unreliable judges of the patient's personality and unfit to be the patient's analyst.

So far, I have examined the configuration as it appears in the limits of words themselves; its appearance in more complex formulation indicates the degree of its persistence.

The psychoanalytic situation provides and evokes examples of the configuration; it pervades difficulties which analysand and analyst find in communication.

Conversely there will be emotional experiences to be conveyed or represented, some of great intensity. It is likely therefore that we shall find in the subject matter instances of the configuration I mention and the same configuration in the psychoanalytic procedure designed to deal with it.

Thus we arrive at another description.

Description 5. The patient will be at a loss to convey his meaning or, the meaning he wishes to convey will be too intense to express properly, or the formulation will be so rigid that he feels that the meaning conveyed is devoid of any interest or vitality.

Similarly the interpretations given by the analyst, in this instance ♂, will meet with a reception from the patient which, by an apparently co-operative response of repeating the interpretation for confirmation, he deprives of meaning by compression or denudation.

Which it is will depend on whether the link between ♀ and ♂ is commensal, symbiotic or parasitic.

Failure to observe or demonstrate the point may produce an apparently inexplicable lack of progress in what is outwardly a progressive analysis. The clue lies in the observation of the fluctuations which make the analyst at one moment ♀

There are emotional experiences to be conveyed or represented, some of great intensity. Therefore, we find instances of the configuration in the subject-matter and in the psychoanalytic procedure designed to deal with it.

Description 5: The patient will be at a loss to convey his meaning, or the meaning he wishes to convey will be too intense for him to express properly, or the formulation will be so rigid that he feels that the meaning conveyed is devoid of any interest or vitality.

Similarly, the interpretations given by the analyst (♂) will meet with the apparently co-operative response of being repeated for confirmation, which deprives ♂ of meaning either by compression or by denudation.

Failure to observe or demonstrate the point may produce an outwardly progressive but factually sterile analysis. The clue lies in the observation of the fluctuations which make the analyst at one moment ♀ and the analysand ♂,

and the analysand ♂ and at the next reverse the roles.

At the same time as this pattern is observed – worked out in words or persons – there must also be noted which link is operating, commensal, symbiotic or parasitic.

Expansions of 1–5

The more familiar the analyst becomes with the configuration of events, which I represent by the relationship between ♀ and ♂, the more often and the more readily will observe them.

There is a difference between ♀ and ♂ which is I hope sufficiently clear to make it possible to distinguish between events in the session which approximate to these two representations.

The essential experience for the analyst is not the reading of this paper but the matching of the real event in the psychoanalysis which approximates to these formulations. Aided by the frequent references made by patients and himself to events which occur 'in analysis' or 'in the past' or 'inside' or 'outside', it should be easy to recognize with increasing frequency the realizations to which these signs relate.

The recognition of the category of link which is operating may be more difficult unless a lead-in can be obtained by considering the kind of event which takes the place of ♀ or ♂. Thus an extremely greedy patient may want to obtain

and at the next reverse the roles.

When this pattern is observed the links (commensal, symbiotic, or parasitic) within the pattern must also be observed.

The more familiar the analyst becomes with the configuration ♀, and ♂, and with events in the session that approximate to these two representations, the better. The essential experience is not the reading of this volume but the matching of the real event in the psychoanalysis that approximates to these formulations. The frequent references made to events that occur 'in analysis', or 'in the past', or 'inside' or 'outside', should aid recognition of the realizations to which these signs relate.

The recognition of the category of link that is operating may be more difficult unless a lead-in can be obtained by considering the kind of event that takes the place of ♀ or ♂. Thus an extremely greedy patient may want to obtain as much as he

as much as he can from his analysis while giving as little as possible: we should expect this to show itself by frequent events in which the container was denuding the contained object and vice versa.

The patient might show that he made enormous demands on his family but resented doing anything for it. Many patients might show behaviour of this kind on relatively rare occasions but some might show it in many activities and in striking degree as, for example, by habitual incoherence while demanding great precision of interpretation from the analyst. This kind of patient cannot well be described in terms of narrative recording actual events, first, because any such formulation is suspect for reasons I have given in discussing memory, and, second, because it is impossible to predict what form his greed will take.

Therefore the psychoanalyst, who may have such a patient, or a patient showing such patterns of behaviour relatively rarely, or anything between these extremes, needs formulations of theory that enable him to have as wide as possible a spectrum of observation so that these configurations do not pass unnoticed. If these formulations are too abstract they lack body.

Therefore I give them body by using C category description but these are liable to produce so great

can from his analysis while giving as little as possible; we should expect this to show itself by frequent events in which the container was denuding the contained object, and vice versa.

The patient might show that he made enormous demands on his family but resented doing anything for it. If these formulations are too abstract they lack body.

Accordingly I give them body by using C category descriptions, but these are liable to produce so great

a penumbra of association that the formulations become saturated and narrow the analyst's perspicacity.

a penumbra of associations that the formulations become saturated and narrow the psychoanalyst's perspicacity.

Before leaving the expansion of descriptions 1–5 it will be as well to look at claustrophobia, agoraphobia and acting-out as illustrations of the appearance of the configuration.

Descriptions 1-5 could include claustrophobia, agoraphobia, and acting-out as illustrations of the configuration.

Acting-out, as it is ordinarily understood, takes place 'in' the analysis and the analysis is then itself a part of acting-out. In claustrophobia the patient identifies himself with an object which is inside a container. An ability to see the ♀♂ configuration in both these states reveals the relationships between one element and another of the patient's personality which otherwise would remain unknown.

Acting-out, as it is ordinarily understood, takes place 'in' the analysis and the analysis is then itself a part of acting-out. The claustrophobic-agoraphobic patient identifies himself with an object which is inside or outside a container. An ability to see the configuration reveals relationships within the patient's personality that otherwise would remain unknown.

When a patient can be said to be acting-out the analysis is 'in' a situation of which the boundaries are unknown. If the behaviour characterized as 'acting-out' is brought to the analysis it can be accompanied by claustrophobic symptoms in the patient.

When a patient can be said to be acting out, the analysis is 'in' a situation of which the boundaries are unknown. If the behaviour characterized as 'acting-out' is brought to the analysis it can be accompanied by claustrophobic symptoms in the patient.

The coherence of these symptoms may not be detected if the underlying configuration is not realized. As this last point touches on group behaviour I shall make my next description a formulation in terms of history. As I intend to broaden the scope of the configuration

The coherence of these symptoms may not be detected if the underlying configuration is not realized. As this last point touches on group behaviour I shall make my next description a formulation in terms of history. The description will appear to be complex because

the description will appear to be complex but its complexity will be less if it is borne in mind that the description has the same fundamental configuration even if at first sight it appears that this is not so. It may help if I explain that new ideas may appear to be presented in this description; their novelty or otherwise is a function of the reader's personality and must not be supposed to inhere in the communication.

I intend to broaden the scope of the configuration, but its complexity will be less if it is borne in mind that the description has the same fundamental configuration even if at first sight it appears that this is not so. It may help if I explain that new ideas may appear to be presented in this description; their novelty or otherwise is a function of the reader's personality and must not be supposed to inhere in the communication.

Description 6. From time to time men appear in history who are variously described as mystics or men of genius. Some attract notice as outstanding personalities but some must be supposed to attract virtually no attention because the conditions for their existence are not propitious. A similar fate attends upon ideas.

A study of these conditions may at some time be carried out but I am only concerned here to formulate their existence.

Description 6: This section is mostly recapitulation and expansion of the model of mystic and group. Some mystics attract notice but others do not because the conditions are not propitious.

The same is true of ideas; the idea which I consider to be the counterpart of the mystic or genius, I call the 'messianic idea'.

The idea which I consider to be a counterpart of the mystic or genius I shall call the 'messianic idea'. The idea that is messianic may be confused with the idea that he, she or it is the Messiah. The person I shall call 'the mystic'; the idea I shall call 'the messianic idea'. I shall use the terms 'mystic' and 'genius' as interchangeable.

The idea that is messianic may be confused with the person; he may believe he is the messiah. The person, I call 'the mystic'; the idea, I call the 'messianic idea'. The terms 'mystic' and 'genius' are interchangeable.

Mystics have appeared in all religions, at all times, in all places and

Mystics appear in any religion, science, time, or place. Such persons

in all centres of scientific discussion. Such persons 'contain' the 'messianic idea', or the 'messianic idea' may 'contain' the person who is sought to incarnate, represent or manifest the Messiah in a manner analogous to the meaning which is felt to 'contain' the word which is to represent its. (See Expansion 1–4 and Description 2.)

'contain' the 'messianic idea', or the 'messianic idea' may 'contain' the person who is sought to incarnate, represent, or manifest the messiah in a manner analogous to the meaning that is felt to 'contain' the word that is to represent it.

The society in which the mystic appears has been described by Nietzsche as a body whose function it is to produce a genius. I shall adopt this view as part of my formulation. But I consider it also to be the function of the society to make the mystic or the messianic idea available to the members of the group. This is done by laws (in society), dogma (in religion), rules or laws (in mathematics or science). The governing body of the society I shall call the Establishment. The counterpart of this in the domain of thought would be the pre-existing disposition or pre-conception.

The society in which the mystic appears has been described by Nietzsche as a body whose function it is to produce a genius. It is also the function of the society to make the mystic or messianic idea available to the members of the group. This is effected by laws (in society), dogma (in religion), rules or laws (in mathematics or science). The governing body of the society I call the Establishment; the counterpart in the domain of thought would be the pre-existing disposition or pre-conception.

The mystic makes direct contact with, or – as with certain Christian mystics (one of whom, Meister Eckhart, I shall mention again) – is at one with, God. This is not possible for the ordinary member of the group. Hence the need for the Establishment to pronounce dogmatically, make laws or rules, by which the advantages of the mystic's communion with God or ultimate truth or reality may, as it

The mystic makes direct contact with, or is 'at one' with, God. This capacity is not attributed to the ordinary member of the group. The Establishment must pronounce dogmatically, make laws or rules, so that the advantages of the mystic's communion with God or ultimate truth or reality may be shared at one remove by the ordinary members.

were, be shared at one remove by the ordinary members.

This the Establishment may fail to do either by lack of discrimination which loads to the furtherance of false views or by rigid adherence to an existing framework which sets up a parasitic link between mystic and group, ♂ and ♀. The life is then squeezed out of the mystic or messianic idea, or the society is disrupted. This brings me to catastrophic change and my next description.

Description 7. The conflict between the mystic and his group is exhibited in its most exaggerated, and therefore most easily studied, form in the account of Jesus and his relationship with the group. He himself claimed, in a manner typical of many mystics, that his teachings were in conformity with the existing Establishment: "Think not that I am come to destroy the law or the prophets: I am not come to destroy but to fulfil". (Matthew 5. 17. A.V.)

This claim is often associated with an awareness of the disruptive force which is being brought to bear upon the group from within.

It was a charge which St. Augustine felt obliged to refute four centuries later in *The City of God* when the sack of Rome by Alaric was attributed to the pernicious influence of Christians and their doctrines.

This the Establishment may fail to do through lack of discrimination, leading to the furtherance of false views, or through rigid adherence to an existing framework, so that a parasitic link is set up between mystic and group, ♂ and ♀. The life is then squeezed out of the mystic or messianic idea, or the society is disrupted.

Description 7: The conflict between the mystic and his group is exhibited in its most exaggerated, and therefore most easily studied, form in the account of Jesus and his relationship with the group. He himself claimed, in a manner typical of many mystics, that his teachings were in conformity with the existing Establishment: 'Think not that I am come to destroy the law or the prophets: I am not come to destroy but to fulfil' (Matthew 5:17. A.V.).

This claim is often associated with an awareness of the disruptive force that is being brought to bear upon the group from within.

The mystic does not necessarily claim to conform to the group. He may appear in the guise of a destroyer from within or without. He does not claim peaceable intentions or methods.

It would be possible to make a distinction between the nihilistic mystic who disrupts the community which is his own creation and the creative mystic who appears to eschew violent methods particularly against his own group. We need not trouble about these claims because I wish to stress the disruptive quality of the mystic, whether he claims to be disruptive or not, for it is this disruptive quality which is associated with the group's hostility to the mystic and vice versa. It is, furthermore, the quality which I wish to emphasize in this description.

The reaction of the Establishment is to prevent the disruption and this it does as follows: It can load the mystic with such honours that he sinks without a trace. This is expressed in the biblical illustration by the temptation in the wilderness where the rewards of conformity are clearly stated. Conformity can be renunciation of the messianic ideas, or acceptance of the role of the messianic idea. Alternatively, the mystic can be destroyed and an attempt made to ensure the same fate for his ideas.

The failure of the rabbinical

The mystic does not always claim to conform to the group. He may appear in the guise of a destroyer from within or without. He does not claim peaceable intentions or methods.

A distinction is sometimes made between the nihilistic mystic, who disrupts the community, and the creative mystic, who denies violent methods particularly against his own group. I wish to stress the disruptive quality of the mystic, whether he claims to be disruptive or not, for it is this disruptive quality that is associated with the group's hostility to the mystic, and vice versa. It is, furthermore, the quality that I wish to emphasize in this description.

The reaction of the Establishment is to prevent the disruption, and this it does by incorporating the mystic within itself. This is expressed in the biblical illustration by the temptation in the wilderness where the rewards of conformity are clearly stated. Conformity can be renunciation of the messianic idea or acceptance of the role of the messiah. Alternatively, the mystic can be destroyed and an attempt made to ensure the same fate for his ideas.

directorate had disastrous consequences for this group.

The functions of containment – I use the word with its military implication of one force containing another – had to be assumed by the split factions of the group, one ostensibly against, and the other for, Jesus. Gradually a fresh group was formed and a fresh Establishment to contain the mystic, or rather the messianic idea. The Jewish group learned to handle the mystic with consequences which were less disastrous for itself. The Christian group, though finding a different solution of the problem, achieved a similarly satisfactory result. Neither system was free from recurrences of the problem. One Christian Establishment restored the disruptive structure and ensured its continuity by taking over the festivals of paganism and thus mollifying the hostility which might otherwise have followed the loss of holidays and feasts which were beloved and valued.

The theme could be stated as bigger and brighter paganism with gods refurbished and rejuvenated as saints and devils. (Milton expresses this very clearly in his representation of Pandemonium in Books I and III of *Paradise Lost*).

The problems of the Christian Establishment developed even in the lifetime of Jesus. The first were:

The functions of containment – I use the word with its military implication of one force containing another – had to be assumed by the split factions of the group, one ostensibly against and the other for Jesus. Gradually a fresh group was formed and a fresh Establishment to contain the mystic or rather the messianic idea. The theme could be stated as bigger and brighter paganism, with gods refurbished and rejuvenated as saints and devils. (Milton expresses this very clearly in his representation of Pandemonium in Books I and III of *Paradise Lost*.)

The problems of the Christian Establishment developed in the lifetime of Jesus. They were: deline-

delineation of the borders of the group, selection and training, and stabilization of the hierarchy.

To take the last point first: In the account in Mark's Gospel, Chapter 10, v. 35-45, the problem was clearly posed by James and John with their request for status. In his reply Jesus seems to suggest a kind of initiation or test, but the alacrity with which the two accept the conditions makes it hard to know what the initiation was, though it is clear that Jesus regarded its performance as beyond them. He also adumbrates a change in the function of the Establishment as it existed amongst the Gentiles of that time. The proposal put forward by James and John seems to be for status, and status appears to be a substitute for qualification. The point is that their desires were to be satisfied, as it were, 'ex officio'.

The reply given by Jesus seems to indicate that the 'position' achieved *ex officio* was an alternative the pair produced to undergoing the experience of the mystic himself. In this respect the rejected solution meets one of the requirements of society, namely, to make the fruits of the mystic's work available to ordinary members who do not have the mystic's qualifications for atonement with the deity.

The problem of membership of the group and how to decide whether a

ation of the borders of the group, selection and training, and stabilization of the hierarchy.

To take the last point first. In the account in Mark's Gospel (10:35–45), the problem was clearly posed by James and John with their request for status. In his reply Jesus seems to suggest a kind of initiation or test, but the alacrity with which the two accept the conditions makes it hard to know what the initiation was, though it is clear that Jesus regarded its performance as beyond them. He also adumbrates a change in the function of the Establishment as it existed among the Gentiles of that time. The proposal put forward by James and John seems to be for status, and status appears to be a substitute for qualification. Their desires were to be satisfied as it were *ex officio*.

The reply given by James seems to indicate that the 'position' achieved *ex officio* was an alternative preferred by the pair to undergoing the experience of the mystic himself. In this respect the rejected solution meets one of the requirements of society, namely, to make the fruits of the mystic's work available to ordinary members who do not have the mystic's qualifications for at-one-ment with the deity.

The problem of membership of the group and how to decide whether

man was to call himself a Christian or not also arose early. Characteristically it hinged on the question of the therapeutic efficiency of the Christian and his brand of Christianity. The problem was brought to a head through the apparently successful therapeutic effects obtained by persons who were not qualified members of the group (Mark 9. 38).

In the instance quoted the criterion proposed by Jesus seems to be the successful cure and its attribution by the therapist to Jesus. The issues involved are: membership of the group as itself being a symbol of status; status – expressed by the locution, "In Thy name" as a therapeutic agent; therapeutic result as a criterion of membership of the group. The solution was empirical but it accepted the criterion of therapeutic efficiency. For the time being the test of membership seems to be two-fold, namely, medical or therapeutic and capacity for achieving results. This last requirement always seems to have been something of a nightmare throughout history. It might be described as a demand that the group leader should (1) be able to foretell the future, (2) render adequate someone alleged to have been adequate in the past, and (3) guarantee continued adequacy to all future contingencies.

or not a man was to call himself a Christian[1] also arose early. Characteristically, it hinged on the question of the therapeutic efficiency of the Christian and his brand of Christianity. The problem was brought to a head through the apparently successful therapeutic effects obtained by persons not qualified members of the group (Mark 9:38).

In the instance quoted, the criterion proposed by Jesus seems to be the successful cure and its attribution by the therapist to Jesus. For the time being the test of membership seems to be twofold, namely, medical or therapeutic, and capacity for achieving results. This last requirement has been a problem throughout history. It might be described as a demand that the group leader should be able to forestall the future, confer adequacy on someone already supposed to be suitable, and guarantee his adequacy in future contingencies.

[1]The modern Israeli state has met the same problem of deciding who is, or is not, a Jew.

The Christian hierarchy soon found itself faced by the same problems that had defeated the rabbinical directorate. The same forces were involved: on the one side the need to control the messianic idea and make it available to ordinary people through dogmatic formulation, and on the other side the messianic idea or its incarnation perpetually breaking through the barriers intended to control it and threatening to disrupt the society in which it became manifest. The Reformation was a spectacular example of this but only one of many such. (See Knox on *Enthusiasm*.)

The Christian hierarchy soon found itself faced by the same problems that had defeated the rabbinical directorate. The same forces were involved: on the one side, the need to control the messianic idea and make it available to ordinary people through dogmatic formulation; on the other side, the messianic idea or its incarnation perpetually breaking through the barriers intended to control it and threatening to disrupt the society in which it became manifest. The Reformation was a spectacular example of this (Knox, 1950).

Expansion of 6–7

I have used for my 6 and 7 descriptions material familiar to all, for a configuration which is repeated in many forms and at many times.
It is not limited to religious societies, or therapeutic societies, or artistic societies, or scientific societies, but – as far as my limited experience can tell – is discernible in all societies.

I have used for descriptions 6 and 7 material familiar to all, for a configuration that is repeated in many forms and at many times. It is not limited to religious societies, or therapeutic or artistic or scientific societies, but is discernible in many.

My intention, however, is not to express any opinion upon the nature of diverse groups. I must remind the reader that I am not purporting to write history but to formulate a pattern in picturesque C category terms.

My intention is, however, not to express any opinion upon the nature of diverse groups. I am not purporting to write history but to formulate a pattern in picturesque C category terms;

That is to say, to represent a configuration in terms which will give body to an idea which might otherwise seem to be a meaningless

. . . that is to say, to represent a configuration in terms that will give body to an idea that might otherwise seem to be a meaning-

elaboration of abstractions. Naturally I suppose that people other than psychoanalysts would profit from a recognition of the configuration and the underlying group to which one suspects that it belongs. But here I am concerned only as an analyst with the configuration as it might be discerned by other analysts. Descriptions 6 and 7 must therefore not be supposed to have a sociological or political application but to be by way of fables or mythological constructs (C category) which, if formulated with greater precision and sophistication, represent a pattern to which the human personality would be found to approximate. The fable, constructed in terms of the group, must be regarded as a pictorialization of man's inner world.

For those familiar with Kleinian theory my description can be seen as a dramatized, personified, socialized and pictorialized representation of the human personality. It may clarify my procedure to contrast this pictorial view with accepted morphology of classical analysis.

The theory formulated in terms of ego, super-ego, and id differs in two respects: first, it is an F category formulation whereas the pictorialized formulation I am representing verbally is a C category formulation – primitive and based on sensuously derived terminol-

less elaboration of abstractions. Naturally, I suppose that people other than psychoanalysts would profit from a recognition of the configuration and the underlying group to which one suspects that it belongs. Descriptions 6 and 7 must not, therefore, be supposed to have a sociological or political application, but to be by way of fables or mythological constructs (C category) which, if formulated with greater precision and sophistication, represent a pattern to which the human personality would be found to approximate. The fable, constructed in terms of the group, must be regarded as a pictorialization of man's inner world (Money-Kyrle, 1961).

For those familiar with Kleinian theory my description can be seen as a dramatized, personified, socialized, and pictorialized representation of the human personality. It may clarify the procedure to contrast this pictorial view with the accepted morphology of classical analysis.

The theory formulated in terms of ego, super-ego, and id differs in two respects. First, it is an F category formulation whereas the pictorialized formulation I am representing verbally is a C category formulation, primitive and based on sensuously derived terminol-

ogy; second, it is a theory of which the realization that approximates to it is to be found in psychopathology and psycho-morphology. The realization approximating to the C category formulation is to be found in material which is superficial and easily accessible to the conscious. Its unconscious roots are to be discovered through psychoanalytic investigation.

The Messianic Idea

The nature of the messianic idea can be only very approximately represented by the C category formulations I have been using. In addition to Jesus I shall speak of Meister Eckhart and Isaac Luria. They represent in different ways the problem of reconciling the messianic idea and the Establishment.

The rabbinical directorate appears to have learned caution so that when it had to adjust to the Lurianic doctrine and to the injuries which Lurianic doctrine was alleged by its opponents to have inflicted on Judaism, it did not contribute to an explosion. Luria for his part insisted on his conservatism and related all he said to older authorities.

Significantly he left no writings and when questioned by a disciple about his reasons for not setting out his teaching in book form he replied, ˝It is impossible, because all things are inter-related: I can hardly open my mouth to speak without

ogy. Second, it is a theory of which the realization that approximates to it is to be found in psychopathology and psycho-morphology. The realization approximating to the C category formulation is to be found in material that is superficial and easily accessible to the conscious. Its unconscious roots are to be discovered through psychoanalytic investigation.

The nature of the messianic idea can be only very approximately represented by the C category formulations I have been using. Jesus, Meister Eckhart, and Isaac Luria represent in different ways the problem of reconciling the messianic idea and the Establishment.

The rabbinical directorate learned caution, so that when it had to adjust to the Lurianic doctrine, and to the injuries that Lurianic doctrine was alleged by its opponents to have inflicted on Judaism, it did not contribute to an explosion. Luria for his part insisted on his conservatism and related all he said to older authorities.

Significantly, he left no writings and, when questioned by a disciple about his reasons for not setting out his teaching in book form, he replied: ‘It is impossible because all things are interrelated. I can hardly open my mouth to speak without

feeling as though the sea burst its dams and overflowed. How then shall I express what my soul has received, and how can I put it down in a book?"[1] Meister Eckhart wrote extensively but the obscurity of his writing and perhaps the matter led to the condemnation as heretical of some 28 propositions from his later writings.

The main question seems to centre on his forthright statements of identity with the deity – "We are transformed and changed into God."[2]

The fate of Jesus himself has been crucifixion as a criminal on the one hand and deification on the other. Both Isaac Luria and Jesus were alike in being followed by a proliferation of hagiographical biography, much of it, in the instance of Jesus, not being included in the canon.

It is not necessary to pursue this topic for my prevent purpose but it can be followed in detail in *Enthusiasm* by R.A. Knox. O.U.P.

The common features are the containment of the messianic idea in the individual, the containment of the messianic individual in the group and the problem for the Establishment that is concerned

[1]G. Scholem, *Major Trends in Jewish Mysticism* (Thames and Hudson). p. 254.

[2]See J. Copleston, *History of Philosophy*, Vol. VI, p. 193.

feeling as though the sea burst its dams and overflowed. How then shall I express what my soul has received, and how can I put it down in a book?' (Scholem, 1955, p. 254). Meister Eckhart wrote extensively, but the obscurity of his writing and perhaps the matter led to the condemnation as heretical of some twenty-eight propositions from his later writings.

The main question seems to centre on his forthright statements of identity with the deity – 'we are transformed and changed into God'. The fate of Jesus himself had been crucifixion as a criminal on the one hand, and deification on the other. Both Isaac Luria and Jesus were alike in being followed by a proliferation of hagiographical biography; much of it, in the instance of Jesus, not being included in the canon.

The common features are: containment of the messianic idea in the individual; containment of the messianic individual in the group; the problem for the Establishment that is concerned with the group on the one hand and the messianic idea and individual on the other. It is now necessary to return to the word.

with the group on the one hand, and the messianic idea and individual on the other. It is now necessary to return to the word.

Description 2 (cycle 2). If it were necessary to express descriptions 6 and 7 by one word a choice could be made from terms such as 'religion' or 'Christianity' or 'God'. If none of these term is considered suitable an attempt could be made to find the suitable terms by introspection. This attempt is a search in the mind for the term supposed to exist or it is a search in the meaning for the term; the latter is an instance of the meaning containing the word.

The difficulties attendant on finding the word are described in the terms used by Poincaré searching for a mathematical formula, or by Luria in the passage quoted above.

A better idea of the problem is obtained by substituting the term 'statement' for 'word' and including in its definition any act of expression whatsoever. In C category terms the problem is analogous to that of the sculptor finding his form in the block of his material, the musician finding the formula of musical notation within the sounds he hears, the man of action finding the actions which represent his thoughts.

One of the peculiarities of this dis-

Description 2 (cycle 2): If it were necessary to express descriptions 6 and 7 by one word, a choice could be made from terms such as 'religion' or 'Christianity' or 'God'. If none of these terms were considered suitable, an attempt could be made to find the suitable term by introspection. This attempt is a search in the mind for the term supposed to exist, or it is a search in the meaning for the term; the latter is an instance of the meaning containing the word.

The difficulties attendant on finding the word are described in the terms used by Poincaré, searching for a mathematical formula, or by Luria in the passage quoted above (p. 115).

A better idea of the problem is obtained by substituting the term 'statement' for 'word' and including in its definition any act of expression whatever. In C category terms the problem is analogous to that of the sculptor finding his form in the block of his material, of the musician finding the formula of musical notation within the sounds he hears, of the man of action finding the actions that represent his thoughts.

One of the peculiarities of this dis-

cussion lies in its being an example of the problem being discussed. It is an attempt to find a verbal formulation to which psychoanalytic realizations approximate. I restate the problem thus: psychoanalysis, the thing-in-itself, existed. It remained for Freud to reveal the formulation embedded in it. Conversely, once formulated by Freud it remains for others (including Freud himself) to discover the meaning of the conjunction bound by his formulation.

It is necessary to postulate 'thinking' without supposing a thinker to be essential. I shall not at this point try to explain why. All thinking and all thoughts are true when there is no thinker. In contrast to this, for lies and falsities a thinker is absolutely necessary. In any situation where a thinker is present the thoughts when formulated are expressions of falsities and lies. The only true thought is one which has never found an individual to 'contain' it.

The messianic ideas may be supposed to have a counterpart, the absolute truth, to which a thinker is not necessary: this I shall mark by a sign O.

Falsity is the characteristic of thought within an individual, or thought within a container. It follows that all thought as it is ordinarily known, that is as an attribute of the human being, is false, the problem associated with it being

cussion lies in its being an example of the problem being discussed. It is an attempt to find a verbal formulation to which psychoanalytic realizations approximate. I restate the problem thus: psychoanalysis, the thing-in-itself, existed; it remained for Freud to reveal the formulation embedded in it. Conversely, once formulated by Freud, it remains for others (including Freud himself) to discover the meaning of the conjunction bound by his formulation.

It is necessary to postulate 'thinking' without supposing a thinker to be essential. I shall not at this point try to explain why. All thinking and all thoughts are true when there is no thinker. In contrast to this, for lies and falsities a thinker is absolutely necessary. In any situation where a thinker is present the thoughts when formulated are expressions of falsities and lies. The only true thought is one that has never found an individual to 'contain' it.

The messianic idea may be supposed to have a counterpart, the absolute truth, O, for which a thinker is not necessary.

Falsity is the characteristic of thought within an individual, or thought within a container. It follows that all thought as it is ordinarily known, that is, as an attribute of the human being, is false, the problem associated with it being

the degree and nature of the falsity. The lie is a falsity associated with 'morals'.

The messianic idea is a term representing O at the point at which its evolution and the evolution of a thinker intersect. The mystic, as seen in descriptions 6 and 7 is a thinker who claims the capacity for direct contact with O. The degree of falsity depends on whether the relationship with O is commensal, symbiotic or parasitic.

Commensal. The thought O and the thinker exist quite independently of each other. There is no reaction, or, as we should say ordinarily – identifying ourselves with the thinker – the truth has not been discovered though it 'exists'.

Symbiotic. The thought and the thinker correspond and modify each other through the correspondence. The thought proliferates and the thinker develops.

Parasitic. Thought and thinker correspond but the correspondence is category 2, meaning that the formulation is known to be false but is retained as a barrier against a truth

the degree and nature of the falsity. The lie is a falsity associated with 'morals'.

The messianic idea is a term representing O at the point at which its evolution and the evolution of a thinker intersect. The mystic, as seen in descriptions 6 and 7, is a thinker who claims the capacity for direct contact with O. The degree of falsity depends on whether the relationship with O is commensal, symbiotic, or parasitic.

It is not often enough recognized that a patient in whom resistance is active can be reacting against what he feels to be a thought in search of a thinker. It is supposedly his own thought (classical resistance theory), but it does not have to be so.

The thought O and the thinker exist independently of each other – there is no reaction. Or, as we should ordinarily say (identifying ourselves with the thinker) the truth has not been discovered though it 'exists'.

In symbiosis the thought and the thinker correspond, and modify each other through the correspondence. The thought proliferates and the thinker develops.

In a parasitic relationship between thought and thinker there is a correspondence but the correspondence is category 2, meaning that the formulation is known to be false,

which is feared as annihilating to the container or *vice versa*. The falsity proliferates until it becomes the lie. The barrier of the lie increases the need for the truth and *vice versa*.

The commensal position changes when thought and thinker approximate. In more usual terms, a critical situation arises when a 'discovery' threatens. It is commonly said that messianic hopes were more than usually active at the birth of Jesus, and it is a matter for remark that often more than one investigator seems to be approaching a discovery at the time when a discovery is made. The resistance of the thinker to the unthought thought is characteristic of category 2 thinking. The crucial problem appears to be the relative strength of the messianic idea and the personality who is to 'contain' it. We must therefore reconsider the personality. To do this I shall use the descriptions 6 and 7 as pictorial representations (C category) of the parts composing the totality of the individual, not the group. I am assuming that the reader keeps in mind existing theories of personality structure. It is not to be supposed that they are to be abandoned or even modified by what follows. Existing theories are F category formulations; what takes place in the consulting room is an emotional situation which is itself the intersection of an evolving O with another evolving O.

but is retained as a barrier against truth which is feared as annihilating to the container or vice versa. The falsity proliferates until it becomes the lie. The barrier of the lie increases the need for the truth, and vice versa.

Existing theories are F category formulations; what takes place in the consulting-room is an emotional situation which is itself the intersection of an evolving O with another evolving O. The

The description I am giving is, as it has been through this paper, a C category formulation intended to bridge the gap between a unique event on the one hand and a generalized F category formulation on the other.

Description 3 (cycle 2). The messianic idea clothes itself, or is clothed, in a great variety of forms.

There is no reason why it should not take any form, and yet there appears to be great difficulty for form and idea to achieve a symbiotic or commensal relationship.

Therefore I shall not succeed in this description in finding a formulation by which I can convey my meaning to the reader. At most I can find a sign pointing him to the consulting room or other domain where he may intuit it for himself.

Similarly I can direct him to seek out and carefully observe the word 'cure' when he hears it pronounced; for 'within' this word he may be able to intuit the messianic idea.

He should allow his attention to dwell on formulations in which he himself is described in positive terms; for 'within' these statements he may be able to intuit the 'contained' messianic idea. Whether the statement appears outwardly to be representing a summer holiday or a car or a person or a state – in time he should be able by degrees to

description I am giving is, as it has been throughout this chapter, a C category formulation intended to bridge the gap between a unique event on the one hand and a generalized F category formulation on the other.

Description 3 (cycle 2): The messianic idea clothes itself in a variety of forms.

Though it may take any form there appears to be difficulty for form and idea to achieve a symbiotic or commensal relationship.

Therefore it is difficult to find a formulation by which I can convey my meaning to the reader, but I can point to the consulting-room or group where he may intuit it for himself.

Similarly, I can direct him to observe the word 'cure' when he hears it; for 'within' this word he may be able to intuit the messianic idea.

His attention should dwell on formulations in which he is described in positive terms; for 'within' these statements he may be able to intuit the 'contained' messianic idea. Whether the statement appears outwardly to be representing a summer holiday, a car, a person, or a state in time, he should be able by degrees to intuit the frequent occur-

intuit the messianic idea with sufficient frequency to be persuaded of its reality and his ability to feel its presence.

rence of the messianic idea and be persuaded of its reality and his ability to feel its presence.

When I said I might find a sign pointing the reader 'to the consulting room or other domain' I was deliberately restricting the field of search to provide a 'container' wherein the search might be pursued without too much difficulty. In this way the reader might experience the ineffable relatively quickly.

When I say the reader might search the consulting-room or group, I am restricting the field of search to provide a 'container' wherein the search may be pursued without difficulty and relatively quickly.

Yet it is doubtful whether intuition of a constant conjunction occurring in the domain of psychic reality can ever be said to be attainable quickly or easily unless it is by virtue of exceptional capacity.

Yet it is doubtful whether intuition of a constant conjunction in the domain of psychic reality can be attainable quickly or easily.

It must be accepted therefore that there can be no short-cut for the psychoanalyst. He can hope that years of experience may enable him to intuit the messianic idea when he sees it or recognize that this hope is a formulation containing the messianic idea.

Therefore there can be no short cut for the psychoanalyst; he can hope that experience may enable him to intuit the messianic idea or recognize that this hope is itself a formulation containing it.

The idea that the messianic idea is contained within the analysis, or that descriptions 6 and 7 can be used as C category statements or formulations of the individual personality, implies that the personality can be represented by a ♀♂ relationship and that the personality has a ♀♂ relationship with a psychoanalysis. Such a formulation is useful if it assists the psychoana-

The notion that the messianic idea is contained within the analysis, or that descriptions 6 and 7 can be used as C category statements or formulations of the individual personality, implies that the personality can be represented by a ♀♂ relationship and that the personality has a ♀♂ relationship with a psychoanalysis. Such a formulation assists the psychoanalyst to intuit

lyst to intuit, in the course of a psychoanalysis, a personality external to the psychoanalysis which is present in the analysis only by 'hearsay'. The patient becomes little more than a voice reporting that the messianic idea is abroad.

I mention it as a typical complexity of the ♀♂ relation which is significant for its bearing on phenomena named collectively as 'acting-out'. I wish to relate these phenomena to beta-elements lying outside the domain of thought proper and only appearing to belong to it because they are represented 'in' the analysis by C3 statements made by the analysand.

The psychoanalyst and his analysand therefore appear to be excluded from domain of action and confined within the domain of thought in such a way that they are not in a position to pursue their psychoanalytic aims by psychoanalytic means. What then *are* their psychoanalytic aims?

Psychoanalytic practice shows that the motives for any human activity are numerous and complex. They are derived from a background of sensuous desires; as fast as one is demonstrated it is apparent that further desires lie unknown. The aims of the psychoanalytic couple are arrived at by conjecture and formulated, at least as far as the analysand is concerned, in terms representative of sensuous experience.

a personality, external to the psychoanalysis, which is present in the psychoanalysis only by 'hearsay'; the patient becomes a voice reporting that the messianic idea is abroad.

A typical complexity of the ♀♂ relation, significant for its bearing on 'acting-out', relates to beta-elements lying outside the domain of thought proper, but appearing to belong to it because they are represented 'in' the psychoanalysis by C3 statements made by the analysand. The psychoanalyst and his analysand appear, therefore, to be excluded from the domain of action and 'confined within' the domain of thought in such a way that they are not in a position to 'psychoanalyse', but only to substitute 'psychoanalysis' for psychoanalytic thinking, which is a prelude to interpretations – the psychoanalytic counterpart of action.

Psychoanalytic practice shows that the motives for any human activity are numerous and complex. They are derived from a background of sensuous desires; as fast as one is demonstrated it is apparent that further desires lie unknown. The aims of the psychoanalytic couple are arrived at by conjecture and are formulated, at least as far as the analysand is concerned, in terms representative of sensuous experience.

Even the objects of curiosity are formulated in terms suitable to a sensuous background. Insofar as the desires can be stated they will be sensuous desires and sensuous aims – the over-riding aim being to keep alive.

Without exception these aims and desires are not relevant to psychoanalysis. Nor have they proved relevant either to Judaism or Christianity. It is true that their place has not been taken by any formulations which are more satisfactory. So long as thinking is regarded as subordinate to the senses there is no difficulty. If thinking is a primary activity the *aims* of contemplation or meditation are presumed to exist because thinking is associated with its genetic history as subordinate to muscular activity, and muscular activity is presumed to have an aim in accord with the dominance of the pleasure principle.

It is possible that the vacuity, produced by the subordination of sensuous aims to growth of a capacity for contemplation or meditation, was filled in the course of his teaching by Jesus. But as his teaching was subjected to the twin pressures I have described – namely, annihilation by physical destruction on the one hand, and divine honours on the other – we do not know what such a solution might have been. In practice the problem is shelved as thinking remains a function subordinate to the satisfaction of sensu-

Even the objects of curiosity are formulated in terms suitable to a sensuous background. In so far as desires can be stated they will be sensuous desires and sensuous aims, the overriding aim being to keep alive.

Without exception these aims and desires are not relevant to psychoanalysis. Nor have they proved relevant in either Judaism or Christianity. Their place has not yet been taken by any formulations that are more satisfactory. So long as thinking is regarded as subordinate to the senses there is no difficulty. If thinking is a primary activity, the *aims* of contemplation or meditation are presumed to exist because thinking is tied to its genetic history as subordinate to muscular activity; similarly, muscular activity is presumed to have an aim in accord with the dominance of the pleasure principle.

It is possible that the vacuity produced by the subordination of sensuous aims to growth of a capacity for contemplation or meditation was filled, in the course of his teaching, by Jesus. But as his teaching was subjected to the twin pressures I have described, namely, annihilation by physical destruction on the one hand and divine honours on the other, we do not know what such a solution might have been. In practice the problem is shelved; thinking remains subordinate to the satisfaction of sensuous desires.

ous desires as a means to physical survival.

The consequence is that psychoanalysis is saddled with an aim which, according to their various desires, is attributed to it by both analyst and analysand. Both are debarred from fulfilling their aim when the aim is pursued in the domain of action and the analysis is confined to the domain of thought in which thought is the only means of fulfilment.

The 'conflict' is between action and thought, the counter-part – in descriptions 6 and 7 – being the conflict expressed in St. Augustine's refutation of the responsibility of Christianity for the Fall of Rome.

In the individual the demands for action and sensuous gratifications associated with physical survival conflict with the demand for mental 'activity'. The latter cannot justify itself in terms comprehensible to the former. The former cannot justify itself to the latter, for its apparatus of sensuous fulfilment is irrelevant to the domain of thought.

I have used the term 'conflict', in describing action and thought as a reminder of the accepted view. The object of using ♀♂ is to differentiate the states of containment which, as with thought and action, prevent conflict by containing thought and containing action in a mutually

In consequence, psychoanalysis is saddled with an aim that, according to their various desires, is attributed to it by both analyst and analysand. Both are debarred from fulfilling their aim when the aim is pursued in the domain of action and the psychoanalysis is confined to the domain of thought in which thought is the only means of fulfilment.

The 'conflict' is between action and thought, the counterpart (in descriptions 6 and 7) being the conflict expressed in Saint Augustine's refutation of the responsibility of Christianity for the fall of Rome.

In the individual, demands for action and sensuous gratifications associated with physical survival conflict with the demand for mental 'activity'. The latter cannot justify itself in terms comprehensible to the former. The former cannot justify itself to the latter, for its apparatus of sensuous fulfilment is irrelevant to the domain of thought.

I have used the term 'conflict', in describing action and thought, as a reminder of the accepted view. The object of using ♀♂ is to differentiate the states of containment which, as with thought and action, prevent conflict by containing thought and action in a mutu-

exclusive commensal state. In this condition thought and action do not modify each other but persist commensally in the same personality. Actions which appear to be compulsive are in reality beta-elements confined to the domain of action and thus insulated against thoughts which are confined to the domain of thought – which includes psychoanalysis. Similarly thoughts are within the domain of thought and cannot be influenced by beta-elements confined within the domain of action.

An apparent exception, not real, is provided by C3 elements in thought which appear to bring A category into the realm of thought but are only C category *records* of action; there is no conflict.

The domains of thought and action are so close, when the musculature used in talking is involved with beta-elements, that the distinction between them becomes confused. The same confusion arises if intolerance of frustration leads to a substitution of thought for action.

The associated omnipotence of thought obstructs the proper use of the musculature, as a feeling of helplessness stimulated by ineffectual muscular action is often the genetic base of omnipotence: when one is active the other is present.

In the previous paragraphs I have

ally exclusive commensal state. In this condition thought and action do not modify each other but persist commensally in the same personality. Actions that appear to be compulsive are in reality beta-elements confined to the domain of action and thus insulated against thoughts, which are confined to the domain of thought – including psychoanalysis. Similarly, thoughts are within the domain of thought and cannot be influenced by beta-elements confined within the domain of action.

An apparent exception, not real, is provided by C3 elements in thoughts that appear to bring A category into the realm of thought but are only C category *records* of action; there is no conflict.

The domains of thought and action are so close, when the musculature used in talking is involved with beta-elements, that the distinction between them becomes confused. The same confusion arises if intolerance of frustration leads to a substitution of thought for action.

The associated omnipotence of thought obstructs the proper use of the musculature, as a feeling of helplessness stimulated by ineffectual muscular action is often the genetic base of omnipotence: when one is active the other is present.

In the previous paragraphs I have

given examples of ♀♂ associated with inside and outside: (1) the personality, (2) the analytic situation, (3) domain of action, (4) domain of thought. Although such instances have a psychological value in giving body to a formulation which might otherwise lack it, their use is bad if it encourages the reader to expect further instances instead of consulting his practice to provide them. According to his background a patient will name various objects as containers, such as 'his mind', the 'unconscious', the 'nation' and many others as 'contained', such as his projections, his money, his ideas. The objects are innumerable but the relationships are not.

The individual always displays some aspect of his personality which is stable and constant even though it may sometimes be very difficult to detect in the welter of evidence for instability; it may appear only in the regularity with which the patient attends his sessions. In this stability will be found the counterpart of what, in descriptions 6 and 7, I have called the Establishment. It will be maintained with great tenacity as the only force likely to contain the counterpart of the messianic idea. Reciprocally the messianic idea is the only force likely to withstand the pressures of the counterpart in the individual of the Establishment. Fears of megalomanic identification with the messianic idea are associated with an inability to be at one with

given examples of ♀♂ associated with outside and inside. They have a psychological value in giving body to a formulation that might otherwise lack it, but the reader should seek further instances from his practice. According to his background a patient will describe various objects as containers, such as his mind, the unconscious, the nation; others as contained, such as his money, his ideas. The objects are many but the relationships are not.

The individual always displays some aspect of his personality that is stable and constant even though it may sometimes be very difficult to detect in the welter of evidence for instability; it may appear only in the regularity with which the patient attends his sessions. In this stability will be found the counterpart of what, in descriptions 6 and 7, I have called the Establishment. It will be maintained with great tenacity as the only force likely to contain the counterpart of the messianic idea. Reciprocally, the messianic idea is the only force likely to withstand the pressures of the counterpart of the Establishment in the individual. Fears of megalomanic identification with the messianic idea are associated with an inability to be at one with the

the omnipotent Father. The counterpart of the Establishment in the individual is not related to father or mother but can be related to fragments of both.

In the ♀♂ configuration, decision is synonymous with selection for inclusion or exclusion. Thus the psychoanalyst has to decide whether to include or exclude himself from various groups, to include or exclude a patient from his practice, to include or exclude a given interpretation, to include or exclude given associations, ideas, experiences and so forth. The Establishment of the group has to decide to include or exclude certain individuals.

The personality decides to include or exclude certain characteristics or, failing that, to include or exclude awareness of their existence. Dislike of the onus of decision, or of awareness of responsibility for the decision, contributes to the formulation of selection-procedures by which selection, like dogma, laws of science, are made to act as substitutes for judgement or scapegoats for the guilt attendant on overtly acknowledged exercise of responsibility.

The configuration to which I have drawn attention can be seen to have a penumbra of associations which retain an illuminating function in the circumstances on which they are brought to bear. At other

omnipotent Father. The counterpart of the Establishment in the individual is not related to father or mother, but can be related to fragments of both.

In the ♀♂ configuration, decision is synonymous with selection for inclusion or exclusion. Thus the psychoanalyst has to decide whether to include himself in or exclude himself from various groups; to include or exclude given associations, ideas, experiences, and so on. The Establishment of the group has to decide to include or exclude certain individuals.

The personality decides to include or exclude certain characteristics or, failing that, to include or exclude awareness of their existence. Dislike of the onus of decision, or awareness of responsibility for the decision, contributes to the formulation of selection procedures by which selection, like dogma and laws of science, is made to act as a substitute for judgement or a scapegoat for the guilt attendant on overtly acknowledged exercise of responsibility.

The configuration to which I have drawn attention can be seen to have a penumbra of associations which retain an illuminating function in the circumstances on which they are brought to bear. At times the

times the light they shed distorts by over-emphasis of the past – and therefore irrelevant – elements, and occlusion of the unknown – and therefore relevant – elements. Once the constancy of the configuration is recognized its nature can be assessed and related to psychoanalytic theory. Reciprocally, theory can be reformulated when it requires readjustment.

The primitive formulation of ♀♂ in C category terms of breast and mouth, penis and vagina, has the simplicity of all C category formulations.

Although descriptions 6 and 7 appear more complex, they too share the stamp of all C category formulations. Both appear to differ from the configuration represented by the Kleinian theory of paranoid–schizoid and depressive position interplay. I am unwilling to accept this apparent cleavage though I cannot suggest any satisfactory formulation which would display the underlying harmony.

The approach to its discovery may lie through investigation of the disruptive effect of creative synthesis. Or, to put it in C category terms, the relationship between the mystic and his group.

light they shed distorts by over-emphasis of the irrelevant past and occlusion of the unknown (and therefore relevant) present and future. Once the constancy of the configuration is recognized its nature can be assessed and related to psychoanalytic theory. Reciprocally, theory can be reformulated when it requires readjustment.

Although descriptions 6 and 7 appear more complex, they too share the stamp of all C category formulations. Both appear to differ from the configurations represented by the Kleinian theory of paranoid–schizoid and depressive position interplay. I am unwilling to accept this apparent cleavage.
The most satisfactory formulation that displays the underlying harmony relates to the practice of psychoanalysis.

The discussion of the configuration of container and contained has occupied a considerable space in this book. It may, therefore, seem surprising if, at this stage and in relatively few sentences, I describe what is perhaps the most important mechanism employed by the practising psychoanalyst. It requires less description and is relatively

more easily grasped. It is for these reasons only that it occupies what may appear to be an insignificant place in this book. It is derived from Melanie Klein's descriptions of the paranoid–schizoid and depressive positions, and to these the reader should refer.

Here, briefly, is my formulation of this matter as it concerns the practising analyst:

In every session the psychoanalyst should be able, if he has followed what I have said in this book, particularly with regard to memory and desire, to be aware of the aspects of the material that, however familiar they may seem to be, relate to what is unknown both to him and to the analysand. Any attempt to cling to what he knows must be resisted for the sake of achieving a state of mind analogous to the paranoid–schizoid position. For this state I have coined the term 'patience' to distinguish it from 'paranoid–schizoid position', which should be left to describe the pathological state for which Melanie Klein used it. I mean the term to retain its association with suffering and tolerance of frustration.

'Patience' should be retained without 'irritable reaching after fact and reason' until a pattern 'evolves'. This state is the analogue to what Melanie Klein has called the depressive position. For this state I use the term 'security'.

This I mean to leave with its association of safety and diminished anxiety. I consider that no analyst

is entitled to believe that he has done the work required to give an interpretation unless he has passed through both phases – 'patience' and 'security'. The passage from the one to the other may be very short, as in the terminal stages of analysis, or it may be long. Few, if any, psychoanalysts should believe that they are likely to escape the feelings of persecution and depression commonly associated with the pathological states known as the paranoid–schizoid and depressive positions. In short, a sense of achievement of a correct interpretation will be commonly found to be followed almost immediately by a sense of depression. I consider the experience of oscillation between 'patience' and 'security' to be an indication that valuable work is being achieved.

APPENDIX D

Standardized Bibliography of the Works of W. R. Bion

Compiled by Harry Karnac

The 24 published books of W. R. Bion (prior to the Complete Works), referred to as WRB 1–WRB 24

WRB 1 *Experiences in Groups and Other Papers*
London: Tavistock Publications and New York: Routledge, 1961. Reprinted Hove: Brunner-Routledge, 2001

WRB2 *Learning from Experience*
London: William Heinemann Medical Books, 1962. (Reprinted in *Seven Servants* with WRB 3, WRB 4, & WRB 6. New York: Aronson, 1977.) Reprinted London: Karnac, 1984

WRB 3 *Elements of Psycho-Analysis*
London: William Heinemann Medical Books, 1963. (Reprinted in *Seven Servants* with WRB 2, WRB 4, & WRB 6. New York: Aronson, 1977.) Reprinted London: Karnac, 1984

WRB 4 *Transformations: Change from Learning to Growth*
London: William Heinemann Medical Books, 1965. (Reprinted in *Seven Servants* with WRB 2, WRB 3, & WRB 6. New York: Aronson, 1977.) Reprinted London: Karnac, 1984

WRB 5 *Second Thoughts: Selected Papers on Psycho-Analysis*
London: William Heinemann Medical Books, 1967. Reprinted London: Karnac, 1984

WRB 6 *Attention and Interpretation: A Scientific Approach to Insight in Psycho-Analysis and Groups*
London: Tavistock Publications, 1970. (Reprinted in *Seven Servants* with WRB 2, WRB 3, & WRB 4. New York: Aronson, 1977.) Reprinted London: Karnac, 1984

WRB 7 *Bion's Brazilian Lectures 1 – São Paulo*
Rio de Janeiro: Imago Editora, 1973. Reprinted in *Brazilian Lectures* (revised & corrected edition) with WRB 8 in one volume, London: Karnac, 1990

WRB 8 *Bion's Brazilian Lectures 2 – Rio de Janeiro/São Paulo*
Rio de Janeiro: Imago Editora, 1974. Reprinted in *Brazilian Lectures* (revised & corrected edition) with WRB 7 in one volume, London: Karnac, 1990

WRB 9 *A Memoir of the Future, Book 1: The Dream*
Rio de Janeiro: Imago Editora, 1975. Reprinted in *A Memoir of the Future* (revised & corrected edition) with WRB 10, WRB 13, & WRB 15 in one volume, London: Karnac, 1991

WRB 10 *A Memoir of the Future Book, 2: The Past Presented*
Rio de Janeiro: Imago Editora, 1977. Reprinted in *A Memoir of the Future* (revised & corrected edition) with WRB 9, WRB 13, & WRB 15 in one volume, London: Karnac, 1991

WRB 11 *Two Papers: The Grid and Cæsura*
Rio de Janeiro: Imago Editora, 1977. Reprinted (revised and corrected edition) London: Karnac, 1989

WRB 12 *Four Discussions with W. R. Bion*
Strath Tay: Clunie Press, 1978. Reprinted in *Clinical Seminars and other works* with WRB 18 in one volume (edited by Francesca Bion), London: Karnac, 2000

WRB 13 *A Memoir of the Future, Book 3: The Dawn of Oblivion*
Rio de Janeiro: Imago Editora, 1977. Reprinted in *A Memoir of the Future* (revised & corrected edition) with WRB 9, WRB 10, & WRB 15 in one volume, London: Karnac, 1991

WRB 14 *Bion in New York and São Paulo*
Strath Tay: Clunie Press, 1980

WRB 15 *A Key to A Memoir of the Future*
Rio de Janeiro: Imago Editora, 1977. Reprinted in *A Memoir of the Future* (revised & corrected edition) with WRB 9, WRB 10, & WRB 13 in one volume, London: Karnac, 1991

WRB 16 *The Long Weekend: 1897–1919 (Part of a Life)* (edited by Francesca Bion)
Abingdon: Fleetwood Press, 1982. Reprinted London: Free Association Books, 1986; reprinted London: Karnac, 1991

WRB 17 *All My Sins Remembered: Another Part of a Life* and *The Other Side of Genius: Family Letters* (edited by Francesca Bion)
Abingdon: Fleetwood Press, 1985. Reprinted London: Karnac, 1991

WRB 18 *Clinical Seminars and Four Papers*
Abingdon: Fleetwood Press, 1987. Reprinted in *Clinical Seminars and other works* with WRB 12 in one volume (edited by Francesca Bion), London: Karnac, 2000

WRB 19 *Cogitations* (edited by Francesca Bion)

General Index

"This index, like the rest of the book, is the outcome of an attempt at precision. The failure of the attempt will be clear; what may not be clear is the following dilemma: 'precision' is too often a distortion of the reality. 'imprecision' too often indistinguishable from confusion." – W. R. Bion, 1970
